April 19, 1885, he performed intubation for the first time according to the method of Dr. O'Dwyer. August, 1886, he reported 83 cases with 23 recoveries, or a percentage of 27.71; since the latter report it had been his privilege to perform the operation 51 times, with 12 recoveries, making a total of 134 cases with 35 recoveries, or 26.11 per cent. There were 71 cases three years old, or under, with 15 recoveries, or 21 per cent., while there were 63 cases over three years old with 20 recoveries, or 31 per cent. The youngest patient to recover was an infant about nine months old; the oldest a child of nine years. Dr. Waxham said, in the whole history of tracheotomy where can we find a record of 71 cases of three years or under, with recoveries amounting to 21 per cent? Indeed, tracheotomy is so rarely successful at this age, that many consider it a contra-indication to the operation. Many speak slightingly of intubation, and insinuate that the operation is always performed early and often unnecessarily. Such is not the case. In his own experience the operation has always been delayed, and accepted only as a last resource. It has not been performed until there has been absolutely no hope without surgical interference. Many with limited experience report a much higher percentage of recoveries than has been given above. Some report as high as 30, 40, and even 50 per cent. of recoveries. In his practice at one time 17 successive operations were followed by 8 recoveries, or 47 per cent. In another series of cases 13 successive operations were followed by 6 recoveries, or 46 per cent.. Take the age, conditions, and grades of severity, and we can hardly hope to save more than about 25 per cent., which is a larger proportion than can be saved by the majority of physicians with tracheotomy.

Dr. C. W. Earle, of Chicago, said great credit was due Dr. Waxham for the introduction or revival of intubation, and the skill with which he practices it. He favors the operation sometimes, not always. A large number of parents will permit the operation to be performed in preference to tracheotomy.

Dr. J. A. Larabee, of Kentucky, thought the statistical showing exceedingly rare, and the remarkable results due to the skill of the operator. In three cases in which the operation was performed in Louisville the tube was buried with the patient.

Dr. J. S. Knox, of Chicago, asked what were the factors which make the operation of intubation so unfavorable in the hands of the unskillful. He knew of a surgeon in Chicago who had introduced the tube one hundred times without a single recovery, and had advised him not to undertake it.

Dr. Waxham replied that he did not know why some met with almost uniform failure, while others met with good success. Tracheotomy is frequently followed by failure in the hands of some. He knew of one physician who had performed the operation fifty times without a recovery; another, twenty times without a recovery; indeed, he could not ascribe the unfavorable results to lack of skill; and he confessed it was impossible to explain the matter.

Dr. H. Landis Getz, of Marshalltown, Iowa, read a paper on

Diphtheria.

Admitting the disease to be of the zymotic class, highly infectious, slightly contagious. The early symptoms are *malaise* of a few hours' duration, with or without chills, followed by a slight fever. There is seldom vomiting or convulsions at this stage, and the local symptoms are so slightly painful or inconvenient as to cause the inexperienced to overlook the real trouble. Physicians are often called to give a reason why a patient does not feel well as late as twenty-four hours after the membrane formation has set in, which I believe always exists as early as any noticeable fever. The severity of the attack can not usually be discovered by the constitutional symptoms found to exist during the first thirty-six hours, but it is determined alone by the soil in which it develops—the blood, and other elements in some systems affording barren soil which renders them proof against constitutional contamination, while in others it is fertile and becomes rapidly saturated unless active measures are taken to destroy the germs of disease. Consequently two classes of remedies are required — germicides and fortifiers. The former may be applied locally, and are termed direct or indirect; the indirect so altering the character of the blood that the germs

perish on reaching it. Fortifiers are: (1) Remedies which place the tissues in such condition as to prevent the lodgment of the disease; (2) the second class of germicides (3) remedies, surrounding and elements which tend to strengthen the blood and system, rendering it a nearly barren soil for the disease. As the disease is a rapid one, terminating usually in four or six days, the treatment must be prompt and thorough. If the disease is not constitutional at the outset, it becomes so, and the treatment resolves itself into local and constitutional. If treatment is commenced within twelve hours from the beginning of the formation there should be no fatal results; if twenty hours after you must expect to lose a patient occasionally; but if twenty-four hours have elapsed you must expect many fatal results. The malignancy of the malady depends more on the quantity than the quality of the germs, and in prevention of their development lies the secret of success in treatment.

There is much diversity of opinion as to whether membranous croup and croupous diphtheria are not the same disease, but, properly, there is no such disease as diphtheritic croup (as croupous diphtheria is sometimes called), but it is diptheria of a croup type, consisting of an inflammatory condition and exudation of the larynx.

In the treatment Dr. Getz uses quinine and tinct. of the chloride of iron, which are not new, but have not until recently been given the credit they deserve. He would give an adult for the first dose 15 or 20 grains of quinine, subsequently ten grains every six hours during the first 36 or 48 hours; after that enough to cause a slight ringing in the ears, care being taken to not overdose. Tincture of iron may be used as a direct germicide and constitutionally as a fortifier by preserving the purity of the blood. It can be used as a local application, varying in strength from one part of iron to three of glycerine and so on to full strength as the case requires. Applications should be made by the physician personally, twice or three times in twenty-four hours, if possible; never trust to the nurse or others in attendance. Twenty drops of the muriated tincture of iron should be given an adult in a teaspoonful of water every two hours as long as the stomach is capable of retaining it. If the stomach becomes irritable, lengthen the intervals. Hot applications are thought injurious, causing more rapid development of germs. Stimulants may be given when needed. Ice may be used in the mouth. The principal feature in the treatment is that to insure success, medicines, stimulants, and food must be given on the hour and all local applications be made by the doctor himself.

SECTION ON OBSTETRICS AND DISEASES OF WOMEN.

Dr. George F. French, Minneapolis, read a paper on

The Chief Source of Danger in the Use of the Uterine Sound,

and said the prevailing opinion of the medical profession is that the chief danger to guard against in probing or sounding the uterus is traumatic lesion from incautious handling of the instrument. Emmet says many a poor woman has endured years of bad health from the carelessness of her physician in overlooking a latent cellulitis, which became rekindled by the unskillful use of the probe or sound. Surgeons like Tait and Mundé are so absolutely clean in their methods of doing surgical work, that no septic results occur, though they are so unconscious of septic danger as to ignore its existence in their writings. Mundé sounded the uterus 5,000 times without a catastrophe, which only proves that he practices better than he preaches; a criticism equally true of the great pyo-salpingist of Birmingham. I would not detract one iota from the importance of delicate manipulation in exploring the uterine cavity, but I maintain that the danger from traumatism lesion is completely overshadowed by that from septic infection.

Nöggerath's doctrine of latent gonorrhœa is just beginning to be fully recognized, but instead of being an isolated, exceptional fact, it is one of a large group of facts which illustrate a general principle. From the researches of D. Berry Hart, Lindgren, and Leopold, it has been demonstrated that the intra-uterine mucous membrane is really a lymphatic gland, or a lymphatic surface intersected with glands and blood vessels. To Hart belongs the distinction of being the first among English-speaking writers to call attention to this comparatively unrecognized danger. He says, "The great dangers to the patient from the passage of the uterine sound are abortion and abrasion of the mucous membrane with absorption of septic matter, and resulting cellulitis and peritonitis. Two cases of this nature are reported by Sänger, of Leipsic. Manifestly a gonorrhœal pyo-salpinx might be communicated as readily by an infected sound as by the extension of the disease from the vagina. So, too, a septic pyo-salpinx, non-gonorrhœal, whether derived from the virus of erysipelas,

pyæmia, diphtheria, or scarlet fever, may be carelessly transferred from the gynæcologist's hand to the sound, and give rise to a pelveoperitonitis with more or less systemic infection."

Fritsch says, "Always before introducing the uterine sound, dip it into a three or five per cent. solution of carbolic acid, even though properly cleansed directly after its previous use."

SECTION ON SURGERY AND ANATOMY.

Dr. Edmund Andrews, of Chicago, read a paper on

Solution of Necrosed Bone in Spinal Abscess by Dilute Hydrochloric Acid,

and maintained that the necrosed bone could be removed by means of the acid, thus doing away with surgical procedures. While eminent authority was against him in the textbooks, condemning such treatment because of the injury to the living bone with which the acid came in contact, still he considered such a statement rested on purely theoretical grounds, for his practice proved that this was not the case.

Dr. H. O. Walker, of Detroit, Mich., read a paper on

External Perineal Urethrotomy. (*See p.* 771).

Dr. Robert Newman, of New York, reported a hundred cases of stricture of the urethra treated by electrolysis.

Dr. J. B. Hamilton read a paper on

Surgical Treatment of Suppurative Pleuritis in Children,

in the absence of the author, Dr. A. Y. P. Garnet.

The operation for the removal of pleuritic effusion, whether of pus, serum or blood, was practised by the ancients as far back as the time of Hippocrates, but not until 1665 was the ordinary trocar introduced and draining the pleural sac by this means resorted to. Professor Gross, who used the trocar in empyema, states that out of 820 recorded cases but one death occurred from hæmorrhage. Of 498 cases reported by Günther in 1861, 302 were cured, 149 died, and 16 were improved; and in 1879 Dr. Blake, of Boston, reported 18 cases operated on by incision as a means of introducing the tube, with 15 recoveries. It is to be regretted that these cases were not classified according to age, to show the relative rate of mortality in adults and in children. It is fair to suppose the majority of the cases reported were those of adults, and if such gratifying results were obtained with the advanced and chronic condition of the disease in the adult, how much more gratifying would have been the results had the operations been confined to children. The author never deems exsection of the rib necessary in children, and with his experience his judgment on this point should be regarded as conclusive. Exsection of a portion of one or more ribs for empyema, as a substitute for the operation, is of comparatively modern date, Dr. Warren Stone, of New Orleans, being the first to perform it in this country. The speaker's criticisms had exclusive reference to operation on young children, as he desired to call attention to the importance of discriminating carefully, in the surgical treatment of these cases, between adults and children.

Dr. W. Hutchinson read a paper on

The Physical Basis of Brain Work.

Mind is not matter; but the brain, the thought organ, is material and may be studied as such. It is a part of the body, and increases in the same proportion as the other tissues increase. A good physique is likely to be surmounted by a good brain. The brains of great men are larger than the average. The great men of the age, such as Lincoln, Sumner, Webster, Beecher, Gladstone, Gambetta, Huxley, Bismarck, etc., are larger, taller and stronger by far than the average. Good physique means good possibility of brain-work, because the voluntary muscles determine the blood supply to the brain.

June 9th—Third Day—General Session.

Dr. Morris, of Baltimore, read the report on

Cremation,

in the absence of Dr. Keller, of Arkansas.

A report made to the American Public Health Association at Toronto last October largely embodies the views of the committee. It advocated the adoption of municipal and state laws compelling the use of destructive agents to bring about the rapid disintegration of the dead body. Caustic lime, or chloride of zinc, are especially adapted to this end. This process of immediate destruction of the dead body is particularly desirable in cases of persons dying of zymotic diseases. The burial of persons dying of these diseases should be placed by law in the hands of the health authorities. The old-fashioned triple coffin and vault should be entirely discarded.

After an animated discussion, the Association subscribed $1,000 for the International Medical Congress.

SECTION ON PRACTICE OF MEDICINE.

Dr. G. W. McCaskey, of Fort Wayne, Ind., read a paper on

A New Method of Intra-pulmonary Medication.

In what forms and conditions can various medicinal agents be introduced in such a way as to insure their influence on the deep bronchial structures? The author is not in favor of powders, gases, or sprays, for introducing such medicinal agents, but relies on saturated vapors at a temperature of 158° Fah., or in exceptional cases, a somewhat lower temperature.

Dr. McCaskey exhibited a special apparatus, which comprises a double-walled chamber, with a capacity of one cubic foot, the hot air of which can be saturated with the vapor of any soluble agent. Respiration is carried on continuously by a combination of valves; the patient inspiring from the chamber and expiring into the air of the room. He uses a wet and dry bulb thermometer to determine when saturation is complete. Its use with the pneumatic cabinet the author believes to be of great advantage. He has had considerable experience in the treatment of bronchitis and phthisis, and apparently has had more gratifying results than are usually obtained with the pneumatic cabinet alone.

SECTION ON MEDICAL JURISPRUDENCE.

Dr. H. C. P. Alexander, of Chicago, read a paper on

The Forensic Relations of the Puerperal Mental State.

The puerperal state is a pathological one since its symptoms are pathological in character. It produces imperative conceptions, suspicion, emotional mobility, ideas of poisoning and perversion of the propensities varying from pica to anthropophagy. The mental perturbations are the result of irritation, of exhaustion, of fluxionary pelvic changes which disturb the monarchical vasomotor centre and result in nymphomania, dipsomania, kleptomania, sanguinary sexual furor, infanticide, murder.

Dr. S. H. Stevenson, of Chicago, dwelt upon the causes of the puerperal state, which she considered pathological, due either to nature or society, principally the latter.

Dr. Longshaw, of Kansas, disagreed with the view that pregnancy is a pathological state. Pregnant women are often afflicted with peculiar longings.

Dr. Quimby said that dress has much to do with making pregnancy pathological.

Dr. J. G. Kiernan, of Chicago, agreed with Dr. Alexander.

Dr. Foster, of Portland, Maine, did not consider that pregnancy is a pathological state, which should be treated as such, although there is a possibility of pregnancy becoming pathologically complicated.

Dr. Berg, of Brooklyn, also maintained that pregnancy is associated with a pathological condition, but of itself it is not pathological.

SECTION ON SURGERY AND ANATOMY.

Dr. T. A. McGraw, of Detroit, Mich., read a paper on

Some Points in Laparotomy for Visceral Injuries,

and presented the following conclusions:

1. There are many viscera in the abdomen which are practically immovable—so immovable as to forbid operation upon them through the median line. When a gunshot wound is so located and so directed as to make the injury of the immovable viscus probable, external incision should be made with reference to that fact.

2. The cause of a gunshot wound is determined not by chance but by the operation of immutable laws.

3. When a gunshot wound is deflected from its course, it is always at an acute angle, and when deflected by a very soft substance of little resistant power, the angle of deflection must be exceedingly small. When, therefore, a shot passes into the abdominal cavity, the deflection of the ball from the time it leaves the aperture of entrance until it strikes the opposite wall cannot be sufficient to appreciably alter its course.

4. The initial direction of the ball through the abdominal wall indicates very nearly its subsequent direction through the abdominal cavity. Careful study of the wound of entrance is therefore of the greatest importance, and no surgeon should open the abdomen for the repair of visceral wounds without first exploring the wound of entrance sufficiently to make sure of its course through the parietes.

5. The ball, after passing through the abdominal cavity, may be deflected by the bones or soft tissues, but as in the vast majority of cases it pursues the remainder of its course outside of the abdominal cavity, these deflections should have no influence in determining the line of incision.

6. Gunshot wounds of tortuous course frequently owe their apparent deviations from a straight line to a change in the shape of the abdominal wall subsequent to the shooting.

7. In general the course of the bullet through the abdominal wall, prolonged by a line drawn on the external abdominal sur-

face, will indicate the course of the bullet through the cavity, according to its velocity. If, at angles of five or of not more than ten degrees with this line, two other lines are drawn on either side of it, beginning at the wound of entrance, we will have represented on the abdominal surface the greatest deflections of which the bullet is capable during its passage through the abdominal cavity. The incision therefore along the whole length of the first straight line could not fail to uncover every part of the course of the bullet, provided that there had been no subsequent displacement of the injured tissue.

8. For this reason the incision beginning at the wound of entrance and prolonged to a sufficient distance in its course is often the very best which the surgeon can make. This is especially true of such wounds as begin at a distance from the linea alba, and pass in a direct line away from that line.

9. The immovable viscera can be best exposed by incisions made parallel to their long diameters.

10. When abdominal section is made for penetrating wounds, every organ and part of an organ which could possibly have lain in the path of the ball or weapon should be thoroughly explored by the surgeon, but to examine the exposed viscera or portions of viscera which could not possibly have been injured would be an error in practice.

11. The prognosis of wounds of the empty stomach is not necessarily bad.

12. Large accumulations of fat in the abdominal wall and cavity may sometimes contra-indicate laparotomy for visceral wounds.

Dr. J. Mc.F. Gaston, of Atlanta, Ga., presented a paper on the

Pathology, Diagnosis and Treatment of Diseases of the Appendix Vermiformis,

which will be presented in full in an early number of the REPORTER.

Fourth Day—June 10th.—General Session.

The nominating committee reported the names of the following gentlemen to prepare papers for next year's convention: On Medicine, R. Beverly Cole, of California; Surgery, E. M. Moore, of Rochester, New York; State Medicine, J. M. Cable, of Virginia.

Dr. John S. Marshall, of Chicago, chairman of the Section on Oral and Dental Surgery, then read his address.

Dr. I. N. Quimby, of New York, chairman of the Section on Medical Jurisprudence, read his address, and closed it with a recommendation that a committee be appointed on criminal fœticide, whose duty it shall be to prepare an enactment to be recommended to the various legislatures for adoption, looking to the stamping out of this prevalent crime; also a special committee to prepare a law compelling coroners and prosecuting attorneys to make thorough investigations of alleged malpractice.

Dr. Bell, of New York, moved that the committees recommended in the paper be appointed, and it was so ordered.

Dr. J. M. Toner, of Washington, chairmain of the Committee on Necrology, said it was proposed that a necrological report be made for the last ten years, and urged the members to send him data.

Dr. N. S. Davis made a verbal report on meteorological conditions, and their relations to the prevalence of disease, saying the committee had not yet completed its investigations, and therefore was not ready to make its final report. The committee was continued.

The Committee on Immigration, of which Dr. Bell, of New York, was chairman, was continued.

Dr. Roberts, of Tennessee, offered the following:

"*Resolved*, That five members of the Association be appointed to report at the next meeting as to the best plan of promoting an advanced and thorough method of education in the United States."

The resolution was referred to the section on state medicine.

Dr. E. A. Wood, of Pittsburgh, offered the following, which was adopted:

"*Resolved*, That a special committee of three be appointed to report on the subject of dietetics at the next annual meeting."

The Committee appointed was as follows: Dr. E. A. Wood, of Pittsburgh; Dr. J. T. Whittaker, of Cincinnati; Dr. Frank Woodbury, of Philadelphia.

Dr. A. Y. P. Garnet, of Washington, the newly-elected President of the Association, sent a telegram thanking the body for the honor conferred upon him.

The thanks of the Association were tendered to the citizens of Chicago, who had received them with hospitality and kindness; to Dr. L. H. Montgomery and the committee on transportation for their work; to Dr. De Wolf, for his kindness and attention; to the President and Secretary. for the promptness and impartiality with which they discharged their duties.

Retiring President Gregory then made a few fitting and exceedingly appropriate remarks, wishing all the members God-speed.

OFFICERS FOR 1888.

President—A. Y. P. Garnet, of Washington, D. C.

First Vice-President—Duncan Eve, Nashville, Tenn.

Second Vice-President—Darwin Colville, New York.

Third Vice-President—Charles J. O'Hagan, North Carolina.

Fourth Vice-President—A. Stedman, Colorado.

Librarian—C. H. Kleinschmidt, District of Columbia.

Treasurer—Richard H. Dunglison, Pennsylvania.

Assistant Secretary—J. S. Ransohoff, Cincinnati.

Trustees of the Journal—L. Connor, Detroit; E. O. Shakespeare, Penn.; W. T. Briggs, Nashville, Tenn.

Judicial Council—J. Murphy, Minn.; J. M. Toner, D. C.; J. R. Bartlett, Wisconsin; A. B. Sloane, Missouri; X. C. Scott, Ohio; A. W. McClure, Iowa; J. W. Stormant, Kansas.

On motion, the Association adjourned to meet in Cincinnati on the second Tuesday in May, 1888. W. W.

Notes and Comments.

Bloody Spermatic Fluid.

F. B. Harrington, M. D., in the *Boston Med. and Surg. Jour.*, says:

The seminal fluid may be discolored in several ways. An admixture of pus changes its color from gray to white or cream color. An admixture of blood may change the color to a bright red, an orange, a light brown, a dark brown, or a dark red. A dark blue color is occasionally seen, but its origin is not clearly understood. The origin of the blood is generally believed to be in the seminal vesicles. An admixture may take place with blood from an inflamed urethra, but such a case would not be one of true hemospermatism. There are several causes for the appearance of the blood. Vibert says that slight capillary hemorrhages in the vesiculæ seminales are of frequent occurrence among the continent and among old men. The cause is here an overdistension and irritation of the vesicles. Many authors (Lallemand, Ricord, Velpeau, Fournier, Gosselin, etc.,) speak of bloody seminal fluid occurring after gonorrhœa. An extension of the inflammation to the seminal vesicles is a rare occurrence. Such inflammation is usually unilateral, affecting but one of the vesicles. Some authors claim that the blood comes from the epididymis or from the testicle, but it seems to be proven that the seminal vesicles are the usual source. A third cause, generally recognized by all writers upon this subject, is excessive coitus or masturbation. The treatment is rest, removal of the cause, and some vaso-motor tonic.

The Micro-Organisms of Sulphur Springs.

These have been studied by Olivier, who found bacteria always present about the outlets of such springs; they developed and increased rapidly, even when the water was of quite an elevated temperature. In the cold waters the micro-organisms appear as thread-like bodies, but are globular in the warmer waters, and, at least in the sediment between the source and basins, seem similar to the micrococcus of leptothrix. In both there appears to take place a certain accretion of sulphur. They find their nourishment in the sulphur water itself, which is proved to contain organic matters.—*Allgemeine Medecinische Central-Zeitung, May* 14, 1887.

Remedy for Superficial Burns.

M. Dubois de Villers-Bretonneaux, in the *Reportoire de Pharmacie*, recommends seltzer or carbonic acid water for superficial extended burns. The pain is stopped instantly. The water is allowed to run over the burn from a siphon bottle.

Correspondence.

Is Homœopathy Increasing?

EDS. MED. AND SURG. REPORTER:

In reply to your inquiry, in the June 4th issue of the REPORTER, "Is Homœopathy Increasing?" I would answer, that I came to this city in the spring of 1865, then a city of 16,000 inhabitants, with six homœopaths in practice. In 1870 there were nine, and now (1887) Springfield has a population of 36,000 inhabitants, four of the same homœopaths as those of 1870, and this year an addition of a young man, a son of one of the older physicians.

The number of people taking homœopathic treatment is less than it was ten years ago, and the tendency is annually lessening in that direction. This is to be explained: 1. That the State Law of Illinois regulating the practice of medicine requires the prac-

titioner to pass an examination before the State Board, or exhibit to the State Board a diploma from an accredited medical college, as evidence of qualification to practice. 2. When it comes to liberal education as a basis for the practice of medicine, the regular school has the advantage over all others, because the training is more thorough, the medical education more complete, and the status of its practitioners more satisfactory to the people and the profession at large. 3. The required education as a qualification to practice dispels the delusion of mysticism in the practice, and places the profession where it belongs, among the arts and sciences, where "*cæteris paribus*," the best educated in this direction are the safest and best practitioners, and the people soon know it.

B. M. Griffith.

Springfield, Ill., June 6, 1887.

Ferric Salicylate.

Eds. Med. & Surg. Reporter:

Sirs: Will you kindly allow me the use of your columns to answer my several correspondents who have requested "directions to druggist" for preparing the salicylate of sodium and iron mixture, the formula of which I recently published in your journal. The following is the best method of preparation:

Dissolve the sodium salicylate in the solution of ammonium nitrate, add the citric acid, and rub up in the mortar; decant; rub up well the glycerin and the oil of gaultheria; pour back into the mortar the solution decanted; rub well; add little by little the chloride of iron, rubbing each portion clear, as added.

If these directions are carefully followed, there need be no difficulty in getting a clear mixture; the color of which will vary from wine-red to reddish-brown, according to the amount of iron used. I have never tried to put in more than a drachm to the ounce, but that quantity can easily be incorporated.

Yours very truly,

Solomon Solis-Cohen.

Philadelphia, June 7, 1887.

On Paragraphing.

Eds. Med. and Surg. Reporter:

The idea seems yet to prevail among physicians that contributions to medical literature mean long essays written in the most approved style of the art. It matters not how occult or incomprehensible they may be to the reader, and even to the writer thereof; if they contain the requisite amount of technical language, interspersed here and there with a Latin or French quotation, and cover a sufficient number of pages, the *sine qua non* is obtained. It is a great mistake. Our contributors should learn to paragraph, to condense, to concentrate. Many valuable ideas, opinions, hints, suggestions, and thoughts of every description which enter the minds of physicians in the performance of their daily duties, are lost to the profession because of the idea they entertain that unless they are enlarged upon, "written up"—to use the conventional phrase—they will not be acceptable to practitioners. A naked fact, idea or proposition of any importance, is and ever will be gladly accepted in spite of its nudity, and far more speedily than if clothed with scores of pages of tiresome verbosity. It is a pity also that medical language is not more simplified. We have many words in our professional vocabulary that are ridiculously extended, some of them being almost as long as the intestines of their authors. In every instance of such nonsense words of one or two syllables should be substituted. As we advance in learning we should make a proportionate progress in simplicity. Science and simplicity are in a peculiar sense often synonymous. I believe that more frequent paragraphing will simplify our language.

Dr. H. V. Sweringen.

Fort Wayne, Ind., May 22, 1887.

News and Miscellany.

Baked Beans.

Dr. Ephraim Cutter, in a recent article (*Medical Annals*) on the nutritive value of this favorite New England dish, gives the following rules for preparing it in the genuine "down-East" style:

"1st. Soak a quart of beans over night in two quarts of cold water.

"2d. In the morning turn off the water, add fresh water, and boil them till the membranes begin to separate; turn off the water.

"3d. Put the beans in a baking pot, with half a pound of salt pork buried in the beans; add two tablespoonfuls of molasses, and cover the whole with water. Bake in a slow oven all day; a baker's oven is best. Watch the beans, and, if they become too dry, add more water. When thoroughly cooked, it will be known by the softness of the beans in the mouth between the teeth, by the taste, and by the microscope showing the starch-grains broken up and mixed in

one homogeneous mass that will not polarize light with a selenite plate.

"4th. Take time to eat, and chew thoroughly.

"5th. After eating, go out in the open air and walk or work. Do not go to church right after eating baked beans; they will stay in the stomach, and their indigestion will do much towards spoiling the enjoyment of the exercises there. Dyspepsia and religion do not go together well, but good digestion and holiness are twins. Holiness, health, whole and hale, come from the same root. A holy man is a healthy, whole man, with all the functions in good order, and no dyspepsia. Dyspepsia is a physiological sin."

A Deadly Joke.

The New York *World*, May 31, 1887, reports from Nashville that an old man, very much addicted to joking, went into a drug store, and going back to where the clerk was putting up medicine, said: "I'm tired of living; what will kill me?" The clerk, who was measuring aconite, said: "Here's something that will kill you mighty quick—aconite—if you drink enough." "All right," said the old man, "get me something to drink it out of." The clerk then poured out an ounce graduate full, and said: "All right; here she is." He did not notice the man, who took it up and drank it. Looking up a moment later, and seeing the empty glass, he said: "My God! Did you drink that?" "Yes," was the reply. "Then you'll die," said the clerk, and rushed off for help. Six or seven physicians were summoned, and did all they could, but it was too late. The unfortunate victim said he had no idea of killing himself, and no idea that the glass contained poison. His wife and two grown sons were called, and were with him when he died. The clerk is much depressed, and claims that he knew the old man was joking, but thought he would not drink the poison after being told what it was.

Such stupendous folly is almost inconceivable. How any man should drink what he had been told would kill him, or how any drug clerk could offer poison to another as a joke, we cannot understand.

Uses for Peppers.

Dr. S. F. Landrey writes that, according to personal experience, the various kinds of peppers have a value, each of its own, with which mankind cannot dispense. The varieties used in ordinary "pepper-sauce" are certainly the most useful when used in food. Aside from constitutional idiosyncrasies and certain inflammatory conditions of the digestive organs, peppers may be freely used at times to the benefit of both body and brain. Three to eight peppers, from the common sauce of the tables, finely divided and mingled with potatoes (mashed), on meat or on eggs, will certainly, in atonic dyspepsia, produce an aperient, and often a severely cathartic effect. I have many a time, he says, produced an appetite for food, when my stomach loathed the very sight of it on sitting down to eat, by merely eating a few peppers, or by the use of the sauce on beans, potatoes, or meat. It is an excellent stimulant in cold weather, and in feeble bodies better than any of the alcoholic poisons.

It is *always* best to use the vinegar off, and refill once or twice, before venturing on the use of the peppers themselves. The strong tincture applied around the edges of the feet and on the soles with a feather, but not between the toes, nor where the skin is broken, is the best foot-warmer in the world. Apply twice daily till benefited. The oil is too strong to use without proper advice.—*Popular Science News.*

The Doctor Must Be Paid.

A decision has recently been rendered in the suit of a New York physician against the executors of the estate of Alexander Sterling for services from July 1, 1882, to February 6, 1885, for which he claims $4,577, the value of 917 visits. The decision was in favor of the plaintiff. Sterling was a member of the Singer Sewing Machine Company, and when he died the income of his estate was $125,000. He bought a physician's diploma, at the age of 50. At his death he bequeathed to his daughter the sum of $200,000. The physician made nearly a thousand visits to the millionaire; but when he presented his bill he was informed that Mr. Sterling was a doctor, and according to the ethics of the profession, services of that sort were considered gratuitous. The suit followed, and the heiress will have to pay $4,577.

The Old Status Restored at Jefferson Medical College.

The trustees of Jefferson Medical College have restored the chair of anatomy to its original equality with the chairs of surgery and clinical surgery in the control of the

clinics. This resolution has just been adopted by the trustees:

"*Resolved.* That hereafter the duties which relate to and are connected with the holding of the surgical clinics shall be performed by the professor of anatomy in equal association with the professors of the principles and practice of surgery and clinical surgery."

This is highly complimentary to Prof. Wm. S. Forbes, M. D., who now fills the chair of anatomy.

A $60,000 Hospital.

At a meeting of the Board of Managers of the Philadelphia Lying-in Charity and Nurse School, held June 6th, a committee was appointed to select plans, obtain estimates, and construct the new building. It is contemplated to build a new hospital, costing fifty or sixty thousand dollars, at Eleventh and Cherry streets. It is the intention of the managers to erect the building five stories high, with all the modern improvements. Thorough clinical courses in Obstetrics will be given. More than half of the necessary fund is now in hand.

The Riberi Prize.

The Academy of Medicine in Turin will award the Riberi Prize of 20,000 francs ($4,000) for researches concerning the nature and prophylaxis of one or more of the infectious diseases of man. Manuscripts may be in Latin, French, or Italian, and will be received up to the end of the year 1891. Works already published are admissible.—*Deutsche Medizinal Zeitung, May* 26, 1887.

Delegates to the Medical Society of the State of Pennsylvania

Are notified that orders for railroad tickets for the round trip to and from Bedford, at the rate of two cents per mile, will be furnished them on application to Dr. W. B. Atkinson, Secretary, 1400 Pine street, Philadelphia.

Prize Essay on Diphtheria.

The Spanish Gynecological Society has offered a prize of 250 pesetas ($50) for the best essay upon diphtheria. Manuscripts may be sent to Madrid until August 31, 1888.

—The Atlanta University for colored people has established a training school for nurses, which is doing good work.

Items.

—The New Orleans Polyclinic, a school for the special instruction of students and practitioners, has been thoroughly organized. The course will open the first Monday in April, 1888.

—The mayor of Columbus, Ohio, has given notice that for every violation of the law requiring physicians to report contagious diseases he will fine and imprison the offender.

—A recent estimate shows that about one-fourth of the population of New York, Boston and London receive free treatment at the medical clinics; in Philadelphia one-fifth, and in Liverpool over one-half the population.

—The town of Trenton, Missouri, and its neighborhood have been infested for a week past by swarms of insects apparently identical with the Spanish-fly of the dispensatory. They devour vegetation and blister human beings. "Fully a thousand people in Trenton are at present nursing blisters caused by this insect, and lights in residences at night have been almost abandoned for fear of attracting the poisonous insect."

OBITUARY NOTICE.

On May 15th, of typhoid pneumonia, at the age of 50 years, Dr. John Fulton, of Toronto, who, for seventeen years was editor of the *Canada Lancet.*

SOLUBLE

PILLS AND GRANULES

UNEQUALLED FOR

Purity in Composition, Solubility in Coating, Uniformity in Size, Perfection in Form and Finish.

We desire to call the attention of physicians and others to the following points:

1. The best materials are used in their manufacture.
2. No article required by a formula is ommitted on account of its high cost.
3. No Pills are deficient in weight.
4. The Pills are Coated while soft.
5. There is but one Coating, which is perfectly soluble, and there is no sub-coating of resinous character.
6. The coating is so thin that the Pills are not perceptibly increased in size, and yet it is entirely sufficient to protect the Pills from atmospheric influences, and effectually covers any nauseous taste, thus rendering the Pill easy to be swallowed.
7. The Coating is so transparent as to clearly reveal the color of the mass, and its solubility is not impaired by age.
8. The various masses are so thoroughly worked that the materials are perfectly distribute.
9. Vegetable or organic matters are not charred, nor are volatile principles lost by the use of heat at any time throughout the process of manufacture.
10. The excipients are peculiarly adapted to the permanent solubility of the mass and its efficient therapeutic action.

GREEN SPRING SANITARIUM,

AND

WATER CURE.

For the treatment of all forms of Nervous Diseases, including the Alcohol and Opium habit; also diseases incident to Women, Rheumatism, Skin Diseases and Dyspepsia. Seventy miles west of Cleveland, in a natural grove of ten aces. Sixteen years successful operation. Means and appliances complete. Treatment by baths, electricity and massage, a specialty. One of the largest medicinal springs in America. Elegant apartments. Moderate terms. For particulars address **JOHN S. MARSHALL, M. D., Superintendent, Green Spring, Ohio.**

BELLEVUE HOSPITAL MEDICAL COLLEGE,

CITY OF NEW YORK.

SESSIONS OF 1887-88.

The REGULAR SESSION begins on Wednesday, September 21, 1887, and ends about the middle of March, 1888. During this Session, in addition to the regular didactic lectures, two or three hours are daily allotted to clinical instruction. Attendance upon at least two regular courses of lectures is required for graduation.

The SPRING SESSION consists of recitations, clinical lectures and exercises, and didactic lectures on special subjects. This Session begins about the middle of March and continues until the middle of June. During this Session, daily recitations in all the departments are held by a corps of Examiners appointed by the Faculty.

The CARNEGIE LABORATORY is open during the collegiate year, for instruction in microscopical examinations of urine, practical demonstrations in medical and surgical pathology, and lessons in normal histology and pathology, including bacteriology.

For the annual Circular and Catalogue, giving requirements for graduation and other information, address Prof. AUSTIN FLINT, Secretary, Bellevue Hospital Medical College, foot of East 26th Street, New York City.

Lecture.

ON THE TREATMENT OF DROPSIES DUE TO DISEASES OF THE HEART.*

A CLINICAL LECTURE BY PROFESSOR DUJARDIN-BEAUMETZ.

Of Paris, France.

(*Concluded from page* 771.)

Thus far I have spoken of medicaments given singly; but often the physician, to obtain a more complete action, will find it more advantageous to associate several diuretics in one prescription. Thus you have often seen me give acetate or nitrate of potash along with vegetable infusions which of themselves have a reputation for facilitating diuresis, such as parietaria, scoparium, pareira brava, etc., and there are certain wines, syrups, and oxymels containing several diuretic ingredients combined.

The diuretic wines are in very general use, and one of the best known is that of Trousseau, which is given in the dose of from half a fluid ounce to two fluid ounces daily, in divided portions. The formula of Trousseau's diuretic wine is as follows:

℞.	Dried digitalis leaves,	10 parts.	
	Squills,	5	"
	Juniper berries,	50	"
	White wine,	750	" M.

Macerate four days, add of acetate of potash, 15 parts. Filter. Dose, 1 to 2 tablespoonfuls three times a day.

Prof. Gubler has given to the profession an oxymel called the diuretic oxymel of Beaujon, the formula of which is as follows:

℞.	Tincture of digitalis,		
	Fluid ext. of ergot, āā	10 parts.	
	Gallic acid,	5	"
	Bromide of potassium,	30	"
	Syrup of wild cherry,	100	"
	Vinegar of squills,	515	" M.

Dose.—A tablespoonful three times a day.

Lastly, *the syrup of five roots* (a popular preparation of the French codex) has been happily modified by Bouchardat, by the introduction of acetate of potash (50 parts by weight per 1,000 of the syrup).*

You can then vary your treatment to avoid fatiguing the stomachs of your patients and turning them against the medicine, alternating the administration of one remedy with that of another, and then in a little while returning to milk, which increases diuresis, has a calmative local action, and combats irritation of the stomach when provoked by the digitalis or other diuretic agents employed.

Debreyne (*Bulletin de Thérapeutique*, 1843), who has given valuable therapeutic formulæ for diseases of the heart, was in the habit of associating digitalis with nitrate of potash in the following way: He prescribed tincture of digitalis in increasing doses, and insisted that the medicine should be faithfully given at stated hours during the day. Thus a dose of the tincture (and he would generally begin with four drops) was to be given morning, noon, and night; this dose was gradually increased till 20 drop doses were given three times a day (60 drops in the 24 hours). Each dose was taken in a glass of water in which twenty grains of nitre had previously been dissolved.

Such was Debreyne's method. On my

*From advance sheets.

*The syrup of five roots contains holly, asparagus, fennel, smallage, and parsley.

part I advise you, if you adopt this way of associating these two diuretic agents, to give the digitalis, not in increasing, but in decreasing doses, beginning with the largest dose and diminishing the number of drops each day till you come down to the smallest dose. By following these directions you will be able to continue the administration of these diuretics longer than you otherwise could.

What effects will you obtain from this kind of treatment? Effects often truly marvellous. In fact, three or four days after the administration of the digitalis, you will see the urine augment, often in remarkable proportions, and the œdema and effusions disappear as if by magic. Then, when the patient is delivered of his dropsical encumbrance, you will see the quantity of urine return to its normal figure.

Unfortunately, one does not always, it is true, obtain so complete a success; everything, in fact, depends on the state of the kidneys, which, if they are intact, respond energetically to the stimulation of diuretics. Recall to your minds, for instance, a patient who recently entered our wards for general dropsy, associated with a mitral affection. Already in previous years he had been three times admitted to the hospital by our colleague Mesnet, for the same symptoms, and each time, under the influence of diuretics, his dropsical swelling disappeared. Again, the treatment has had a happy result, and the patient has left the hospital in a satisfactory condition. But it is not so when the kidney is altered in its structure, or is "smitten with imbecility," to use Gubler's expression; it no longer responds to diuretics, and the treatment remains inefficacious.

Without stopping to consider other diuretic agents, which have been proposed in affections of the heart, some of which are odd and absurd, like the "blatta orientalis," we will pass on to another group of medicaments, and you will see that, thanks to the tolerance of the digestive tube in cardiac affections, you will find in purgatives an important adjuvant to combat the dropsies.

Just as it was in the case of diuretics, we find purgatives divided into several groups; thus, we have the mild purgatives, such as castor oil and salines, and others called drastics, which determine an enormous secretion from the digestive tube. As in the affections of the heart you desire an energetic and prolonged effect, an out-pouring of serum, in fact, from the whole digestive tube in order to remove the serous effusion in the cellular tissue and great cavities, it is to these drastic purgatives that you should resort.

One of the most vaunted is scammony, which, given in milk in the dose of from 7 to 15 grains, produces copious stools.* Jalap† possesses the same properties, and there is a preparation of jalap much in vogue, which may render you service in the treatment of dropsies. I refer to the *Eau de vie Allemande,* or compound tincture of jalap, which is given in the dose of one or two tablespoonfuls. The celebrated purgative "Médecine Leroy," which was once in so great favor, was nothing but the compound tincture of jalap sweetened with syrup of senna. Guillié has formulated an "evacuant syrup" similar to the tincture of jalap, in which nitre is one of the ingredients. You can also make use of the electuary of Cruveilhier, the good effects of which you have seen in my service.‡

Ordinarily I make use of the following mixture, which has always given me excellent results:

℞. Tincture jalap co.,
Syrup of senna,
Syrup of buckthorn, āā f℥j.
M. Dose.—One to three tablespoonfuls.

*Scammony (Aleppo Scammony) is a gum resin obtained from the *convolvulus scammonia.* The top of the root is cut off just below the origin of the stems, the milky juice which exudes is collected in shells. According to various chemical authorities scammony contains resin, extractive matters, gum, starch, bassorin, gluten, albuminose, cellulose, and salts. According to Spirgalis, the resin is identical with that of male jalapin, and it is to this that scammony owes its medicinal properties.

The resin is a powerful drastic purgative given in the dose of from 6 to 9 grains in mucilage or in sweetened milk.

Scammony in powder may be given in the dose of 7 to 30 grains. According to Rayer and Villemin, scammony acts better in small doses than in large doses.

†Jalap also belongs to the *convolvulaceæ.* The root only is employed; from this a resin is extracted which contains (Buchner and Herberger) jalapin and jalapic acid. Like scammony, jalap is somewhat uncertain in its action. The root may be given pulverized, in the dose of 15, 30, or 45 grains. The dose of the resin is 3 to 9 grains.

EAU DE VIE ALLEMANDE.

(Comp. Tincture of Jalap.)

Take of jalap root, 8 parts.
Turpeth root (ipomæa turpethum), 1 part.
Scammony, 2 parts.
Alcohol at 60°, 96 parts.
Mix. Macerate ten days and filter.
Dose.—Half a fluidounce to an ounce.

The "purgative medicine of Leroy" contains scammony, turpeth, and alcohol, and is a powerful drastic cathartic. [The compound tincture of jalap is a preparation much employed, and which might well find a place in the U. S. Ph. Tr.]

‡The formula of the electuary of Cruveilhier is as follows:

℞.	Powdered senna,	40 parts.
	Scammony,	10 "
	Gamboge,	3 "
	Jalap,	40 "
	Syrup of buckthorn,	300 "
	Honey,	300 "

M. Dose.—A teaspoonful in the morning on rising.

[A useful preparation of jalap, much in use in the United States, is the compound jalap powder (one part of jalap to two of cream of tartar), of which the dose is one drachm. It is a good hydragogue purge. Of scammony, the official preparations are the Confection, the Pil. Colocynth Co., the Pulvis Scammoniæ Co., and the resin.]

Some patients object to taking syrups and electuaries; in such cases you can give purgative pills, such as the Pil. Scammoniæ Co., and Trousseau's pills, which are powerful hydragogue cathartics.*

When I spoke of diuretics I showed you that Debreyne was in the habit of combining digitalis with nitrate of potash; he completed the treatment by the administration of two wines; the *vinum major* and the *vinum minor*.†

Of the *vinum major* he was in the habit of giving morning, noon and night, at first, a tablespoonful, then two, then three tablespoonfuls. As for the *vinum minor* he would give it in larger doses, ordering as much as a wineglassful three times a day.

I have made trials of these wines of Debreyne, and have observed that when taken willingly by patients they give good results, but they soon produce an irritation of the digestive tube. This leads me to speak to you of the action of drastic purgatives on the economy.

You must have often been struck by the tolerance of the digestive tube in cardiac patients, who are able for months, and even (it may be) years, to take powerful cathartics without much injury. But along with these facts of observation, it must be confessed that in many cases these purgatives soon produce a violent irritation of the whole alimentary canal. These disadvantages were especially apparent, when, during the time of its popularity, physicians were in the habit of giving the "Médecine Leroy," and when you make free use of drastic cathartics in your practice you will often witness such untoward results.

In fact, this faith in drastic purgatives is widespread, and when we see nostrum venders vaunt the cleansing and evacuant properties of their drugs, they cater to the popular notion that certain "humors" or secretions are the cause of the diseases, and that in expelling these they cure the disease. This is a profound error; the glairy mucous secretions which are expelled are but the result of inflammation of the digestive tubes, provoked by the irritating medicaments.

Whether you practice in the city or in the country, you will see patients with cardiac or other diseases who have been too much dosed with drastic cathartics. You should combat this tendency to overmuch "physicking," and show the danger that attends such treatment; and if, in diseases of the heart, you may often derive benefit from drastics, do not forget to be chary in their employment. Watch, then, the action of the medicament; reduce to a minimum the irritation which it occasions; and when the symptoms of inflammation appear, set aside your hydragogue cathartics, and resort to other forms of treatment. Remember moreover, that these drastics sometimes determine colicky pains which you must seek to prevent or lessen by a skilful combination of your medicaments.

Diuretics on the one hand, purgatives on the other—such is the therapeutic armamentarium which the physician may use in combating cardiac dropsies.

We have just seen the advantages derivable from medicines which drain off serum from the cellular tissues and great cavities, by the kidneys and intestines. The skin has also been utilized, and sudorifics have been vaunted in the treatment of cardiac œdema. The external means, such as dry fumigations or vapor baths, should be abandoned, because, while being generally inefficacious, they may be dangerous in individuals with cardiac affections.

Are you likely to be more successful with internal sudorifics? I will be brief on this head; for there exists, properly speaking, but one substance really possessing this quality, namely, jaborandi. Since the discovery of the active principle of this plant, *i. e.*, pilocarpine (which may be injected under the skin in the dose of one-eighth grain to two grains and given by mouth under the form of nitrate of pilocarpine) jaborandi has given place to its alkaloid. Notwithstanding the diaphoretic and sialagogue effects of this medicine, it has been little used in the treatment of cardiac dropsies, for if you refer to the trials made by Hardy and Gallais, Gillet of Grandmont, and especially by Vulpian, you will be convinced that pilocarpine has a paralyzing effect on the heart. You ought then to abandon sudorifics almost entirely in heart affections and to stick to purgatives and diuretics.*

---

*Trousseau's pills:

℞. Extract colocynth co., 10 parts.
Extract rhei, 10 "
Gamboge, 10 "
Extract hyos., 2 "
Oil of anise, 29 "
M. Divide in pil. No. xx.

†DEBREYNE'S VINUM MAJOR.

℞. Jalap, 8 parts.
Scillæ pulv., 8 "
Pot. nit., 16 "
White wine, 1000 "
Mix. Macerate twenty-four hours and filter.

DEBREYNE'S VINUM MINOR.

℞. Juniper berries, 20 parts.
Nitrate of potash, 6 "
White wine, 500 "
M. Macerate the berries four or five days, filter and express, then add the nitrate of potash and filter.
The dose of these two wines is one or two tablespoonfuls.

*When you inject under the skin of a chloralized dog a

Thus far we have been occupied with the internal treatment of cardiac dropsies. I shall now show you that this complication of affections of the heart also demands a local treatment which merits a few minutes' consideration.

You have seen, that by diuretics and purgatives one may combat the dropsies resulting from affections of the heart; but in certain cases these dropsies present a special character, whether from the over-distension which they effect in the cellular tissue of the lower limbs or genital organs, or from the fact that, accumulating in one of the great serous cavities, they oppose the functional operations of the different viscera.

Let us examine these conditions, and see what the physician is to do under such circumstances. When the skin becomes distended and shining, and ready to burst under the pressure of extravasated serum, and the patient can no longer move by reason of the swelling of his limbs, it is the duty of the physician to interfere and favor the evacuation of the serum.

Two methods accomplish this result. The first, and much the most employed, is punctures; a simple procedure often put in practice in our wards. You have, in fact, often seen me, with a fine and well-oiled needle, prick the lower extremities at different points, and by this operation, which is unattended with pain, cause an abundant flow of serum from the minute openings thus made. These punctures should be some little distance apart, and their number should be limited to twenty or thirty for each limb. You can also prick the genital organs in several places. It has even been advised, in order to diminish the chances of inflammation, and to keep the openings from closing up, that the point of the needle, before being used, should be heated to a red heat in the flame of a lamp. This is a good precaution, and one which in some cases I would recommend.

The great inconvenience attending this method is the incessant flow of serum, which wets and soils the bed-clothes and linen of the patient, and keeps up a constant dampness about the œdematous members. You must, as far as possible, prevent the permanent contact of the exuded serum with the patient's body, and you will attain this result by enveloping the limbs with those rubber wrappings which render so great service in the treatment of the diseases of the skin.

Recommend also, especially, that the patient keep in a sitting posture in his bed, or that he be in a semi-reclining posture in an arm-chair. Here in our hospitals we obtain this result by bending the mattress, and thus transforming it into a chair, which allows the legs to hang, permitting a free flow of the serum. In private practice, you can use those mechanical reclining chairs which have been so perfected of late, and with which you can obtain all the positions desirable.

You can also evacuate serum by incisions with the lancet or bistoury; but you must not make long ones, which are dangerous, and may be accompanied by phlegmons, which are more grave from the fact that the distended skin has lost much of its vitality. Moreover, these incisions readily become complicated with sphacelus; often, even after having taken all the necessary precautions, and having used a very sharp instrument, you may be mortified by seeing gangrenous or erysipelatous inflammation invade the inferior extremities.*

This is one of the most serious objections against this method, which, for this reason, ought to be limited to cases in which all other means have failed to rid the patient of his burdensome œdema. However, despite all these disadvantages, I do not hesitate to say that this little operation may give excellent results; and you have seen in our hospital wards—as I myself often saw when I was interne under Dr. Moissenet—astonishing cures effected by this local treatment, joined to an appropriate general treatment. But the favorable action of these punctures is not long-continued. In fact, at the end of a certain time, a veritable induration (sclerema) of the cellular tissue takes place, when even the deepest punctures do not give issue to any serosity.

To avoid the employment of sharp-pointed instruments, another method has been proposed in order to give vent to serum. This method consists in rubbing the lower limbs of the patient with a few drops of croton oil,

large dose of jaborandi (60 to 90 grains of the leaves infused in a fluidounce of water), the pulse falls to 39 or 40 per minute, and sometimes even lower. In frogs the extract of jaborandi applied upon the heart arrests its movements like muscarine. When pilocarpine is given internally to these animals the heart-beat falls from 50 to 7 or 8 per minute.

The blood pressure diminishes in animals under the influence of jaborandi, as in man, and Gillett of Grandmont has given tracings which are very instructive in this regard.

* To combat the accidents which may result from punctures of the limbs, Wilkens proposes the following means: After having well oiled the limb, he rapidly makes 20 or 30 punctures with a fine needle, taking care that the points shall penetrate the subcutaneous tissue; then these punctures are covered with sponges which have been wrung out in a solution of salicylic acid. As fast as these sponges fill, their contents are squeezed out, and they are again wrung out in the salicylic solution and replaced. This is done every two or three hours. (*Lancet*, Jan. 25, 1879.)

which gives rise to a crop of vesicles, whose rupture allows serum to escape. Trousseau, who devised this method, has much extolled it. For my part, however, I prefer the punctures. Croton oil, in fact, either determines too active an inflammation, which overpasses its end, or has an uncertain action, by reason of the little vitality of the skin. Moreover, it has not been proved that these little openings in the skin, caused by croton oil, are less liable to inflammation than those made with a needle.*

Some little time ago, at one of the medical congresses (the Congress of Havre), Dr. Southey proposed another means of evacuating serum, which consists in the introduction into the cellular tissue of fine drainage cannulas, whose free extremity fits into a rubber tube which communicates with a vessel by the side of the bed. This way of conducting the serosity into an outside receptacle enables one to do away with the great inconvenience which I have before pointed out, namely, the incessant contact of the exudation with the œdematous members. I have not made trial of this mode of treatment, and am not prepared to judge concerning it. I should fear, however, that the presence of a foreign body, such as a capillary trochar, in an œdematous and ill-nourished limb, would set up considerable inflammation of the tissues. I would therefore advise you, before adopting this method in your practice, to wait for more certain proofs of its harmlessness.

In other circumstances, it is not in the cellular tissue that the serum accumulates, but in the great visceral cavities. In fact, under the influence of uncompensated mitral diseases, you will see passive non-inflammatory effusions in the pleura and peritoneum. These effusions sometimes become so abundant that they hinder the regular functional operations of organs most necessary to life. Allow me here to study separately this question in its relation to the two great serous cavities.

* Applied to the healthy skin (10 to 40 drops), croton oil produces, after several hours, pain, redness, heat, and swelling. Then, after about twenty-four hours ordinarily, appear vesicles, whose contents, at first clear and transparent, rapidly become turbid and purulent. On the diseased skin, according to Trousseau, there are two different effects. If the skin in cardiac affections is œdematous but hard, the croton oil application produces but an insignificant eruption. If the skin be distended, smooth, transparent, a copious eruption appears. The vesicles break almost immediately, and occasion an enormous loss of serum. The lesion of continuity which results from the rupture of the vesicles has at first an ugly look, but soon heals.

Trousseau recommends to make this friction only on the legs, and to take care that the croton oil does not touch the scrotum, lest severe ulceration should ensue. The patient should be seated in an arm-chair, and the legs wrapped with cloths after the application. If no result is witnessed, another application must be made on the next day, and so on, till a sufficient vesicular eruption is produced.

In certain diseases of the heart, to the trouble of the circulation, and especially to the concomitant albuminuria, are added pulmonary œdema and a double pleuritic effusion which is not generally large in amount. There are, moreover, cases in which you will observe a one-sided effusion, constituting a hydrothorax, which seriously aggravates the respiratory distress already produced by the heart disease itself. In these cases, despite the persistence of the cause of the hydrothorax, and the almost absolute certainty that there will be a return of the effusion, do not hesitate to aspirate the chest if asphyxia threaten.

This operation may indeed render signal service; it restores equilibrium to the circulation and respiration, and enables you again to apply your medicines to advantage. You may be able, by this means, not only to relieve the patient, but to prolong his life for months. Siredy has reported instances of the kind, and for my part, when such cases occur, I do not hesitate to aspirate.

As for ascites, this is a question which presents far greater difficulty, and demands much fuller consideration.

The affections of the heart, as you know, are often accompanied by a special cirrhosis, called *cardiac cirrhosis*, characterized by the fact that the venous net-work of the portal vein is choked up by the swelling of the radicles of the hepatic veins, which participate in the mechanical stasis of the inferior cava. This condition is the opposite of that in true cirrhosis, in which the compression of the radicles of the portal vein takes place at the periphery of the lobule. Here we see the pressure beginning in the center of the lobule, and operating from the center to the periphery, causing that post-mortem appearance in the liver known as *nutmeg liver*. In these cases, whether of true or of cardiac cirrhosis, the circulatory disturbances in the portal and hepatic veins always manifest themselves by a more or less abundant outpouring of serum into the abdominal cavity. Hence you will not be surprised to see in cardiac cirrhosis, ascitic effusions quite as pronounced as in true cirrhosis.

What treatment should be pursued in such cases? From past experience I cannot but regard paracentesis or aspiration in ascites connected with true cirrhosis, as an operation more injurious than useful, and in my hospital service you very seldom see me resort to this operation in such dropsies. I have in fact always observed that patients rapidly become enfeebled under the influence of this operation, and as the obstruction in the liver ne-

cessarily remains the same, reproduction of the effusion soon takes place in the abdominal cavity after tapping, and this kind of "white bleeding" only exhausts the patient, and cuts short his days. Hence, deaf to the importunities of the patient, I defer tapping as long as possible, and only resort to it in the event of impending asphyxia.

Is this mode of procedure, which I regard as good in cases of true cirrhosis, also applicable to cardiac cirrhosis? One might be tempted to reply in the affirmative, when having in mind the heart lesion and the consecutive hepatic lesion. Paracentesis, in fact, is a palliative measure which has no action on the primary and determining cause. I am disposed, however, to be less rigorous on this point, and to regard abdominal paracentesis as of more utility in cardiac than in true cirrhosis. Let me explain: Cardiac cirrhosis, which is due, I repeat, to the mechanical congestion of the hepatic radicles, is not to be compared, from the point of view of its persistency and importance, with true cirrhosis, resulting from gradual and progressive development of the connective tissue elements.

It is, in fact, easy to understand that if you can succeed in modifying the circulation in the vena cava, you may diminish the varicose development of the intra-lobular and sub-lobular veins, and the hepatic radicles generally, and thus lesson the pressure on the portal system. So when you are in presence of a patient suffering from a cardiac affection, if the cachectic state be not too advanced, if the œdema of the lower limbs be not too great, and at the same time the ascites is abundant, you can perform paracentesis with advantage, especially if the effusion impedes the functions of the diaphragm, and thus augments the trouble of the cardiac circulation.

These cases are less rare than you would think; and you will see, if you have not already seen, patients sufferering from mtral affection, who present this peculiarity, that while having but little œdema of the lower extremities, they have considerable ascites. It is true that the diagnosis is often doubtful, and that one may well ask if he has not to deal with a disease of the heart co-existing with true cirrhosis.

Cirrhosis is, you know, an affection depending on a chronic inflammation of the liver, an inflammation often having for its origin the passage through the lobules of the liver of alcohol which has been ingested in excess. Your patient then may have been a hard drinker, and you readily see how both of these affections may exist together: cirrhosis with the mitral affection. In these cases the diagnosis is very difficult, though the course of the disease, and the signs derived from an attentive examination of the patient, may help to clear up the diagnosis. In presence of these facts, whether doubtful or not as to the pathological condition, do not hesitate to tap and relieve the heart. If you have to do with true cirrhosis, its course will be but little modified, while, on the contrary, if you have to do with cardiac cirrhosis, the operation will permit an active medicinal treatment to have its effect, and thus prolong life.

Such, gentlemen, are the rules which you are to follow in the general and local treatment of dropsies.

COMMUNICATIONS.

A POSSIBLE DANGER IN THE USE OF THE RING AND STEM PESSARY.

BY E. C. BAILEY, M. D.,
Of Philadelphia.

The victim of the accident which forms the subject of this paper, was a lady over 70 years of age, who had been wearing a ring and stem pessary for more than 30 years. The mother of several children, her perineum had been torn, in one of her labors, down to the sphincter ani muscle, and the cervix uteri lacerated bilaterally to the vaginal junction on each side. These mishaps had resulted in a subinvoluted uterus, with all the discomfort and disability which such a condition of affairs entails. The womb had not undergone the usual senile atrophy, and was larger than is commonly found in healthy multiparæ during menstrual life, requiring artificial means to prevent it from escaping from her body. The instrument in question consisted of a hollow ring of block-tin 1½ inches in its internal diameter, attached to a Y-shaped vaginal stem of the same material, and supported by a perineal band and an abdominal belt. This she was accustomed to adjust before rising and to remove after retiring, thus keeping the uterus in place most of the time, and enabling her to attend to her household duties with comparative ease.

She spent the morning of the day on which the accident occurred in shopping, and the afternoon and evening at the house of a relative. Shortly after tea she began to suf-

fer pain in the region of the uterus. This pain she described as resembling that of the expulsive stage of labor. It soon changed in character, becoming more like the cramp of colic; and, attributing it to indigestion, she took some simple domestic remedy, without relief. Later in the evening her suffering became so great that she reached home with difficulty, at once undressed, and as usual attempted to remove the supporter after getting into bed. The firm traction she exerted, instead of dislodging it, pulled the womb completely outside, and gave her intense pain. Answering a hurried summons, I found her writhing in agony, her features pinched, her face covered with cold, clammy sweat, her pulse quick, rapid, and feeble, and every indication of impending collapse. Protruding from the vulva was a tumor fully six inches in length, purple, and exquisitely tender. Examination showed the ring and stem deeply imbedded in the swollen and œdematous tissues, the former encircling the base of the mass just within the orifice of the vagina. The uterus had passed through the lumen of the pessary with such force as to bend the Y-shaped stem from its original position at right-angles with the plane of the ring it supported to one nearly parallel with it. The attempts to remove the instrument had made the trouble worse by burying the constricting metal still deeper into the sodden vaginal walls; the dislocation of the womb had increased the congestion, and complete strangulation was the result. The condition of the incarcerated organ was such that I did not feel justified in losing the time necessary to obtain and administer ether. I therefore went to work at once with a pair of small bone forceps, in spite of the pain my efforts gave, and finally succeeded in cutting and removing the ring. All suffering ceased as soon as the womb was replaced, and I had the satisfaction of seeing my patient recover without a bad symptom, after a few days of rest in bed. I subsequently introduced a large Gemrig pessary, which kept the uterus in good position, and have heard of no further trouble from the procidentia.

Examined after all swelling and tenderness had subsided, the uterine walls were found to be hard and gristly from fibrous change in the muscular tissue, and the size of the mass that protruded when the patient assumed the erect position seemed to preclude the possibility of such an accident. The mechanism of the process and the source of the power which drove so large a body through so small a ring with sufficient force to bend the stiff metal support, are to me unsolved problems.

The facts above related point out a danger in the use of these clumsy and untidy instruments, which is, I believe, usually overlooked by their advocates. There are also other and serious objections to them which merit consideration. A pessary of this sort is a source of constant annoyance to the wearer. The perineal band must be removed whenever the bowels are evacuated, and is difficult to keep clean. If the support is anterior, it interferes with micturition and necessitates great care to prevent the urine from soiling the person and clothing. Leather or canvas belts become offensive in warm weather, and add to the bulk of a woman's apparel, confining and pressing upon the abdomen. The unyielding character of the support exposes the vagina to injury, and severe and painful ulceration often results. For the same reason, it is likely to cause leucorrhœa and to become corroded and roughened by the irritating discharge it provokes. It is moreover expensive, and requires frequent repair because of its complicated nature.

Although these supporters are in common use, especially in the rural districts, there are but few cases in which they are indispensable. When the displacement is due to a ruptured perineum or subinvolution of the uterus following a bad laceration of the cervix, or both, the integrity of the mutilated structures should be restored by operative means, unless this is contraindicated by the age or ill health of the patient. The danger of malignant disease makes the closing of a cervical tear still more imperative. When surgical measures are out of the question, many sufferers may be made comfortable by the use of a Gemrig, or a large Hodge pessary, or an ordinary ring of sufficient size to distend the vagina and prevent it from turning inside out.

The use of a pessary retained in position by external appliances is only justifiable in cases in which all other methods have failed to relieve; and, when once inserted, it requires careful watching lest it injure the parts and cause far greater discomfort than the displacement it is intended to prevent. In such a contingency, the uterus should rest upon a cup, perforated to allow the escape of its secretion, and under no circumstances should a small ring be firmly held against a womb deprived of ligamentous and perineal support. I believe the time is not very far distant when this unwieldly and disgusting instrument will share the fate of the Fer-

guson speculum and the intra-uterine syringe.

1030 *Green street.*

THE COLD WATER TREATMENT OF TYPHOID FEVER, ACCORDING TO THE METHOD OF BRAND.

BY SOLOMON SOLIS-COHEN, M. D.,
Of Philadelphia.

The treatment of typhoid fever is a subject of perennial interest, nor can a more important one engage the attention of practicing physicians. No apology is necessary therefore for the presentation, though at this time without comment, of the views of Dr. E. Brand, of Stettin, who in 1861 recalled attention to the value of cold bathing as an antipyretic measure, and especially to the great reduction in the mortality of typhoid fever, effected by the systematic use of cold water; from which fact this plan of treatment in typhoid fever is known as the "Brand" method. For more than twenty-five years, the author has labored to secure the general adoption of his treatment, and while he has seen it followed by some of his colleagues, by others it has been modified or improperly employed; and he therefore naturally resents the condemnation passed upon the method by those who have ineffectually, because incorrectly, applied it. In a very long and controversial article in recent numbers of the *Deutsche Medizinische Wochenschrift* (Nos. 1 to 11, 1887,) Brand brings forward, among other arguments, a very striking series of statistics, some of which are here reproduced.

In the Garrison Hospital at Munich* during the last forty years, 8,325 cases of typhoid fever have been treated, with 1,486 deaths. These may be divided into two periods: 1841 to 1868, 5,484 cases treated without water, 1,138 deaths, or 20.7 per cent.; 1868 to 1881, 2,481 cases, treated with water, 348 deaths, or 12.2 per cent.; difference in favor of the water treatment, 8.5 per cent.

"Water treatment" in these statistics, however, means that here and there cases were subjected to systematic bathing, but in most instances, merely a "combined treatment" with quinine, sodium salicylate, and *occasional* baths, was instituted.

The difference between *systematic cold bathing* (the Brand method or veritable "water-treatment") and the *occasional* employment of the cold bath, (as, for instance, in the *antipyretic* or Liebermeister method; or the employment of the *graduated bath*, as in the method of Ziemssen) is strenuously and repeatedly insisted upon. The difference between the new and old Liebermeister methods on the one hand, and the Brand method on the other, are thus tabulated:

Brand or Water Treatment.	Liebermeister or Antipyretic Treatment.
1. Severe cases of typhoid are in all respects converted into mild ones, and mild cases into milder.	1. Change into an afebrile typhoid; *i. e.*, one which runs its course without increase of temperature, without regard to disturbances of function.
2. This happens: *a.* By prevention of any rise of temperature, and the gradual establishment of a temperature at or near the normal. *b.* By averting functional disturbances of the organs. *c.* By restriction and suppression of the morbid process. *d.* By prevention of complications.	2. This happens: *a.* By reduction of excessively high temperature. *b.* By conversion of the continued or sub-continued fever into a remittent.
3. Every third hour a bath at 15° R. (39° F.) for fifteen minutes, as long as the temperature exceeds 39° C. (102.2° F.), cold affusions and compresses and good nourishment.	3. *Formerly:* Baths when body heat equals 40° C. (104° F.). Every other evening an antipyretic drug. *At Present:* An antipyretic every evening and baths through the night sufficiently often to keep the temperature nearly normal. During the day nothing, or at least only when there is great excess of temperature, in which case the cold bath.
4. The treatment is directed against the morbid process *in toto*.	4. Here only against one symptom—elevation of temperature.
5. The bath is employed exclusively.	5. Baths and antipyretic drugs.
6. Mortality: When the treatment is begun in time and properly carried out, 0 per cent. In family practice, 1 per cent. In (general) private practice, 3 to 4 per cent. In military hospitals, 4 per cent. In general hospitals, 5 per cent. Without material variation.	6. Mortality: *Formerly:* Average 7 to 8 per cent.; varying from 0 to 23 per cent. *At Present:* 10 to 18 per cent., with considerable variations.

The author adds: "One sees that the two methods have nothing in common but the bath; in all other respects they differ as much as a painting by Rafael and a modern chromo-lithograph." His object in thus insisting and re-insisting upon the difference between *hydrotherapy*, or the exclusive use of cold baths and *antipyresis*, or the employment of cold baths as an adjunct to other measures directed against high temperature only, is both to prevent the mortality of the latter method from being advanced in argument, and to emphasize the fact that system-

* Vogl: Deutsch. Archiv. f. klin. Med., Bd. xxxvi.

atic cold bathing does more than reduce fever; for if that alone were the object, some would argue that we need not take all this trouble, but content ourselves with antipyretic medication.

This argument is borne out by a further comparison of the statistics of the Garrison Hospital at Munich, already cited. The use of cold water was said to have been introduced in 1868, and we have seen that the mortality lessened. It was not until 1875, however, that the method of Brand was employed; and then at only one of the two stations, the Liebermeister method being continued at the other. Thus as the hygienic conditions and the material are exactly similar, and in one case the Brand treatment, in the other the Liebermeister treatment was adopted, we have a perfectly fair basis of comparison.

Vogl (l. c., p. 483,) writes: "With the Liebermeister method, the mortality reached a height of from 10.8 per cent. to 18.8 per cent. In many (more than half) of the years of the preceding period (1841–1868), even with expectant treatment, this was not exceeded. The mean mortality with this method was 7.6 per cent. The Brand method, with a general average mortality of 2.7 per cent., did not once exceed 4.7 per cent., even in years when epidemics prevailed; a result which was not paralelled in a single year of the whole period from 1841 to 1868."

A table of the number of cases treated by each of these methods during each of the years from 1875 to 1882, with the results, is given. We separate the statistics as follows:

Liebermeister Method.				Brand Method.			
Years.....	Cases.....	Deaths.....	Mortality Percentage.	Years.....	Cases.....	Deaths.....	Mortality Percentage
1875–6	76	12	15.8	1875–6	66	3	4.5
1876–7	194	13	6.8	1876–7	141	5	3.5
1877–8	77	3	3.8	1877–8	56	0	0.0
1878–9 both stations	115 / 92	7 / 14	6.1 / 15.2	1878–9	—	—	—
1879–80	110	12	10.8	1879–80	98	3	3.9
1880–81	16	3	18.8	1880–81	25	1	4.0
1881–82	22	2	9.1	1881–82	42	2	4.7
	702	66	9.4		428	14	3.3

The comparative statistics as to complications are suggestive. Thus, in 767 cases treated by the "combined method," were noted 783 instances of complications, or 102.0 per cent.; while in 221 cases treated by systematic cold bathing, but 145 instances of complications were noted, or 65.2 per cent. With the Brand method, pleuritis occurred in one case, against 16 with the Leibermeister method; delirium in 6, against 93; involuntary evacuations in 1, against 18; bloody stools in 2, against 21; and pneumonia, affections of hearing, vomiting, somnolence, muscular tremors, convulsions, suppression of urine, and cystitis, peritonitis and perforation, not at all.

To the consideration of those who would "like to use the bath without wetting the patient," and of those who assert that cold baths are disagreeable to the patient, and that they depress the heart's action, and thus invite danger of collapse, the author commends the following citation from Vogl: "As regards the retardation of the heart's action, under the influence of the cold water treatment, I can fearlessly affirm, as the constant result of our numerous observations, that the evening pulse-rate during the fever heat averages 96 per minute, the highest on admission-day, or in cases ending fatally, 100 and more. Very frequently, however, even in association with a symptomatology otherwise more intense, it has been less than 92, and we have noted throughout the absence of the dicrotic condition. It has been especially noteworthy that only in an exceptionally mild form have we seen any of those symptoms which otherwise play so important a part in the results of lowered cardiac vigor. Even in the most severe cases we have never observed cyanosis, very seldom a pronounced hypostasis, never hemorrhagic tendency, seldom venous thrombosis, never oliguria, in very few cases albuminuria. *What, however, must be emphatically stated, is that in all the thousands of baths we have administered, neither before, during, nor after the procedure has collapse been observed in a single instance.*" Vogl further remarks that the convalescence is speedier, and occurrence of unfortunate sequelæ less frequent, in cases treated after the method of Brand; as is evidenced by the records of soldiers furloughed or discharged as unfit for service, and by the pension rolls.

The statistics of the Royal Prussian Army and the 13th (Royal Würtemburg) Army Corps show a progressive reduction of mortality from enteric fever, coincident with the introduction and spread of the cold-water treatment. Thus from 1820 to 1844, the average mortality was 25.8 per cent.; from 1868 to 1874 (excluding war times) 15 per cent. In 1874 Brand's treatment began to be employed.

In 1874 there were treated	2735	cases	with	329	deaths	=	12	%
" 1875 " " "	3620	"	"	408	"	=	10.9	%
" 1876 " " "	2747	"	"	298	"	=	10.8	%
" 1877 " " "	2081	"	"	206	"	=	9.8	%
" 1878 " " "	2112	"	"	190	"	=	8.9	%
" 1879 " " "	1741	"	"	163	"	=	9.4	%
" 1880 " " "	2534	"	"	226	"	=	8.9	%

Comparing this with military statistics of neighboring nations during the same period, we learn that in the Italian army from 1874 to 1878, the mortality ranged from 28 to 36.8 per cent; in the Austrian army, from 1873 to 1878, it averaged 26.8 per cent., and in the French army from 1875 to 1880, 36.5 per cent.

In the Garrison Hospital at Stralsund,* from 1877 to April 1, 1882, Dr. Büttner treated 257 cases of typhoid fever according to Brand's method, with but one death; that of a patient admitted on the fourteenth day of the disease. From 1873 to 1877, under the same physician, the mortality with Ziemssen's treatment, had averaged 10 per cent.

Jürgensen was one of the first to adopt Brand's treatment, and indeed simplified it. It is to Jürgensen's scientific report of his experience in Bartel's clinic at Kiel,† that the more general resort to hydrotherapy in typhoid is to be ascribed. His later statistics from the Tübingen Policlinic are reported by Betz (Stuttgart, 1885, Inaugural Dissertation) as 220 cases with 4 deaths or 1.8 per cent. Of the fatal cases 2 had not been subjected to the bath, and 1 was treated with occasional baths and antipyretic drugs.

In 1877, in the second edition of his monograph, Brand was able to cite from all sources 8,141 cases treated "with water" in one or another fashion, with 600 deaths, or 7.4 per cent. He now cites in addition enough to make a total of 19,017 cases with 1,489 deaths, or 7.8 per cent. It would be an easy matter to increase this table, he says, by adding the statistics of Liebermeister, v. Ziemssen, and others, who make frequent use of the bath in the treatment of typhoid; but it is unnecessary to do so; for "whoever is not convinced by 19,000 cases will not be convinced by 29,000." "In these 19,017 cases are included all forms of the disease, all primary and secondary complications, all ages, both sexes, epidemic and sporadic, mild and severe cases, hospital and private, military and civil practice, time of war and time of peace—everything, indeed is abundantly represented which can influence the type or the course of the disease. It is a very complete series of statistics, and if, as might easily have been the case, all observers had like Vogl, Tripier and Bouveret, and others, strictly observed Brand's directions, the statistics and the results would have been beyond attack.

This, however, is not the case. One has used Liebermeister's old or new method, another Ziemssen's method, others again Jürgensen's and Brand's; for the most part, however, each his own method, one for every clinician. All these methods, however, have in common the use of the bath, and in so far can have weight as cases 'treated with water.'" The result can be looked upon as a composite one, proving at least that when cold water applications are used in the treatment of typhoid fever, the mortality is lowered; in this great number of cases reaching about half, or indeed only a third of the average mortality of the expectant treatment—about 8 per cent. on the one hand against 15 to 20 per cent. on the other.

Partly from his monograph, partly from new sources, the author is able, however, to collate the very respectable number of 5,573 cases treated systematically by the Brand method, with a mortality of 234, only 3.9 per cent. The lowest percentage in this list is 0 (20 cases reported by Weidner, 66 by Opitz, 21 by Heyfelder, 64 by Rondet and Grabinsky: 171 cases with no deaths); the highest is 8.5 (Tripier and Bouveret, 233 cases, 20 deaths). Thus the average mortality of the systematic cold water treatment is about 4 per cent.; against 8 per cent. as the best showing of the antipyretic method, and 16 to 20 per cent. as the varying mortality of the expectant method. Even with this, however, Brand professes himself dissatisfied. He confidently looks to a greater lowering of the death-rate; citing the experience of Tripier and Bouveret, who have in the table a mortality of 8.5 per cent., due to the fact that at the first, in the Hôpital de la Croix, only the worst cases were treated on this plan, nor were the details strictly followed. As reported by Teissier, in a recent number of the *Lyon Médical* (No. 32), the mortality has since been reduced to 5 per cent. (7 deaths in 139 cases). Brand contends that a mortality still less than 5 per cent. may be secured "at Lyons and in hospitals elsewhere," when the number of conditions considered to be contraindications are reduced, and the treatment of complicated and "degenerate" cases is conducted more in accordance with his directions. Thus at Lyons they disdain to treat relapses with cold water. This is taking a risk, and may result in the death of the patient.

The statistics of the second army corps are of interest. The mortality since 1882 has averaged, under the Brand treatment, 4.3 per cent. During the same period in the whole German army, it has averaged 8.3 per

*Paul Helm: Die Behandlung des Typhus abdominalis in Garnisonlazareth zu Stralsund und deren Resultate. Griefswald, 1881.

†Klinische Studien über die Behandlung des Abdominaltyphus mittelst des kalten Wassers. Leipzig, 1866.

cent., in the French army 32.2 per cent., in the Italian army 28 to 36.8 per cent., in the Austrian army, 27.4 per cent., in the English army 23.8 per cent. The author shows that this great difference is not due either to the less severe nature of the disease, or to mistaken diagnosis. But even 4.3 per cent. he considers too high, and eliminating the year 1883–4, with a record of 429 cases, and 28 deaths or 6.53 per cent.—a result due to other causes than those inherent in the treatment—an average of 3.5 per cent. is exhibited (1057 cases, 37 deaths).

Finally Brand lays down the doctrine, that as, with any treatment or no treatment, a large number of cases will recover—in order to avoid the *post hoc, propter hoc* fallacy and to justify the name of *specific* as applied to any method of treatment, *no case should die in which the treatment has been instituted in time and properly carried out.* This merit he claims for his method of treating typhoid fever: "The reëstablishment of a mild course in every individual case of typhoid fever, is the object of the systematic water treatment, and the non-occurrence of a single death, the proof that it fulfills its purpose."

Hospital statistics are deceptive from the fact that for the most part patients are admitted late in the disease; and so with various other classes of statistics, each has greater or less sources of error. The statistics of family practice, and of certain military hospitals are considered free from fallacy.

Collating the statistics of the most reliable character the following table is given:

1. Jürgensen (Tübingen),	217	cases,	1 death.
2. Vogl (Munich),	221	"	6 deaths.
3. Military Hospital, Stralsund, 1877–1882,	257	"	1 death.
4. Military Hospital, Stettin, 1877–1882,	186	"	3 deaths.
5. Brand (family practice),	342	"	1 death.
	1223	"	12 deaths=1.0%

It is to be noted that of Jürgensen's statistics three deaths have been rejected because the cases were treated expectantly.

Brand's own 342 cases were treated in one town in the course of thirty years. Of the cause of death in the twelve fatal cases in the table the following is stated:

a. Jürgensen. 1. Treatment instituted on ninth day. Death from perforation and peritonitis.

b. Vogl. 2. Instituted on eighth day, Death from fever.
3. Instituted sixth day. Death from phlegmonous glossitis.
4. Instituted in second week. Heart failure.
5. Day unknown. Hemorrhagic diathesis.
6. Instituted second week. Heart failure.
7. Day not given. Temperature 41° C.; probably quite late. Laryngeal complication and pulmonary œdema.

c. Stralsund. 8. Fourteenth day. Intestinal hemorrhage; diphtheria; petechiæ, bilateral hypostasis.

d. Stettin. 9. Fourteenth day. Pneumonia and intestinal hemorrhage.
10. Sixth day. Treatment not carried out on account of articular inflammation.
11. Sixth day. Retro-pharyngeal abscess.

e. Brand. 12. Fifth day. Death during relapse from unknown cause.

Of the twelve cases, therefore, Nos. 10 and 12 should be excluded; the other ten died from complication or fever.

These statistics certainly challenge attention. There is much else in Dr. Brand's article worthy of study, but the object of the present paper is simply to lay before American practitioners without comment the results claimed for the hydro-therapeutic treatment of typhoid fever, deferring discussion of its indications, its methods, and its philosophy.

DIPHTHERITIC CONJUNCTIVITIS.

BY L. WEBSTER FOX, M. D.,
Of Philadelphia.

All ophthalmic surgeons agree that diphtheritic conjunctivitis is one of the most serious affections of the eye. It is fortunately an extremely rare disease, and its cause, according to one of the most distinguished teachers of ophthalmology, M. Galezowski, has not been thoroughly studied. Often, in fact, its origin cannot be found. In the interesting case reported by Dr. Changarnier in *Récueil d' Ophthalmologie* for January, 1887, the origin of the disease was an attack of croup. Several cases which came under observation by the writer were of croupous origin.

Miss M., age 25, presented herself to Dr. Martin, with the following history: She had been sick two days, but the ravages of the disease were already striking. The right cornea was perforated, with prolapse of iris; the hard, rigid, and absolutely bloodless eyelids were the seat of deep infiltration; the surface was smooth and yellowish, with the characteristic lardaceous appearance. The upper lid could be inverted with great difficulty, causing intense pain. The day following there was perforation of the left cornea. The course of the disease was checked by powerful antiseptic treatment: iodoform and sublimate lotions, and the use of warm compresses for the reabsorption of the fibrinous exudations. The eyelids softened, the cornea became clearer, and at the end of ten days the patient returned home, not cured, but out of danger as to the total loss of vision. At a short interval leucomata of the corneæ, with anterior synechiæ, were noticed. Two intractable ulcers, 3 to 4 mm. in diameter, re-

mained on each cornea for three months. The anterior synechiæ in the right eye were broken down by frequent instillations of atropia, and the leucoma is slowly disappearing under the use of the iodide of sodium and the yellow oxide of mercury applied alternately. In the left eye the adherence of the iris resisted the action of the atropia, and it will be necessary to resort to an iridectomy in order to re-establish vision.

The conclusion arrived at is, that if the diphtheritic conjunctivitis is an extremely grave affection, we can, by applying powerful antiseptics, if not prevent, at least lessen those grave accidents pointed out by the author.

New Instruments.

A SEMI-NATURAL OR DIGITAL (VOLSELLA) FORCEPS.

BY H. V. SWERINGEN, A. M., M. D.,

Fort Wayne, Indiana.

The practitioner, who has had much to do in the specialty of gynecology, has not only appreciated the great service rendered him by his own fingers properly manipulated, but has ever and anon desired that he could do just a little more with them, or that he could upon certain occasions be invested with a third hand.

It is wonderful to what a state of perfection the sense of digital touch alone can be educated, in the various vaginal and uterine manipulations. Take for example, the introduction of tents into the cervix. In addition to the inconvenience of the necessity of an assistant to retract the perineum with Sims' speculum, there exists the difficulty in fixing the os uteri in a manner sufficiently immovable to resist the force necessary for their introduction, the entire womb invariably being pushed up by the tent without entering the cervix to any great extent. It is true that we have the volsella forceps, by which through the speculum—and by the way, the blades or bill of our specula are too long for this purpose—and the aid of sight, we can seize either lip of the cervix and hold it more or less firmly until we can more or less perfectly introduce the tent, necessitating the traction of the entire uterus almost if not quite to the vulva. In not a few instances the cervix has thus been torn and lacerated considerably, offering numerous puncta or sites for the ingress of septic germs.

I now offer to the profession a very simple remedy for these obstacles and inconveniences, which I do not remember ever to have seen even suggested, much less put in practice. I have no patent upon it, nor have I applied for one, nor do I expect to apply. I give it for what it is worth, hoping that it may be found of value for the purpose for which it is intended, viz., the introduction and removal of tents, etc., etc.

It consists simply in two rings, bands, or thimbles, armed with teeth similar to those of the volsella forceps, which are slipped over the ends of the index and middle finger of the left hand and properly secured or fastened by tape or rubber bands around the wrist, the teeth in each being approximated relatively to each other so as to form simply a pair of forceps, the fingers themselves constituting the handles thereof. It will be seen at a glance how great is the advantage of this simple contrivance under certain circumstances — how firmly the cervix can be held at less risk of laceration than by the old method, how readily we can detect any deviation of the course of the canal, how little traction is necessary, and how independent of assistant and speculum we can be in the introduction of tents, relying entirely upon the sense of touch. The work can often be done with but a single thimble thus armed, the remaining three fingers being free to steady the parts or exercise the function of touch, so important in all procedures of this character.

The value of this contrivance, so readily carried in the pocket, in cases of abortion, in which the membranes or some part of the fœtus is presenting at the os externum, but insufficient for an ordinary finger grasp, is also apparent.

Society Reports.

MEETING OF THE MASSACHUSETTS MEDICAL SOCIETY.

REPORTED BY E. P. HURD, M. D.

The one hundred and sixth annual meeting of the Massachusetts Medical Society was held in Huntington Hall, Boston, Tuesday and Wednesday, June 7th and 8th, 1887.

Tuesday, p. m., papers were read as follows:

"Tumors of the Bladder," by George W. Davis, M. D., of Holyoke.

"Cases of Burns, with Special Reference to Complications, Sequelæ and Treatment," by James E. Cleaves, M. D., of Medford.

"Laparotomy for Pus in the Abdominal Cavity, and for Peritonitis," by John C. Irish, M. D., of Lowell.

"Fracture of the Spine: Its Immediate Treatment by Rectification of the Deformity and Fixation by Plaster-of-Paris Jacket," by Herbert L. Burrell, M. D., of Boston.

"Observations on the Puerperal Pelvic Ligaments," by Stephen W. Driver, M. D., of Cambridge.

"The Relation of Tea Drinking to Disorders of the Nervous System," by William N. Bullard, M. D., of Boston.

"Pulmonary Tuberculosis as a Sequel to Ordinary Pleurisy with Effusion," by Herman F. Vickery, M. D., of Boston.

"The Surgical Treatment of Chronic Empyemas," by Maurice H. Richardson, M. D., of Boston.

The paper of Dr. Irish, on Laparotomy, was of special interest in showing, by carefully compiled statistics, the fair proportion of recoveries by abdominal section in circumscribed or diffuse peritoneal inflammations. Laparotomy, followed by drainage, has given especially good results in peritoneal abscesses from whatever cause. The operation should be performed early, and an incision should be made over the most prominent part of the abscess, then a drainage tube inserted. In acute general peritonitis, according to Dr. Irish, one-half of the cases might be saved by laparotomy. The results thus far have been 8 recoveries and 3 deaths. Even in tuberculous peritonitis, the surgical treatment has given some brilliant results. In peritonitis due to abortion, the operation would hardly be feasible, as in these cases there is always general blood poisoning.

Dr. John Homans, of Boston, in reviewing the foregoing paper, generalized peritoneal abscesses as due in the immense majority of cases either to external violence, or to communication of the suppurating region with some mucous cavity. These abscesses are often connected with the appendix vermiformis (typhlo-enteritis); sometimes they seem to be occasioned by a fall. In a case occurring in his practice, he cut down on the induration and found a circumscribed abscess among the folds of the intestines; he evacuated a large quantity of pus, put in a drainage-tube, and the patient made a good recovery. In short, the treatment of peritoneal abscesses is the treatment of abscesses everywhere.

Dr. Elliot, of Boston, believed in laparotomy even for tuberculous peritonitis, and reported a case where marked benefit followed abdominal section and the removal of tuberculous growths.

Dr. Barret's paper was a plea for an early attempt at the rectification of special deformities by suspension and careful manipulations, with fixation by a plaster-of-Paris jacket. Out of sixteen cases treated in the Massachusetts General Hospital, ten were cured by plaster-of-Paris treatment, three died, and three were in no way benefited.

Tuesday evening, June 7th, there was an interesting gathering at the Mass. Institute of Technology of the Suffolk branch of the Mass. Med. Society, Section for Clinical Medicine, Pathology and Hygiene, at which meeting papers were read by the following gentlemen:

"Cascara Sagrada, and its Use in the Treatment of Constipation," by Dr. J. W. Farlow.

"The Measurement of the Galvanic Current, with Some Remarks upon Electrodes," by Dr. P. C. Knapp.

"A Case of Agarophobia," by Dr. Albert N. Blodgett.

Dr. F. W. Page exhibited a gall stone successfully expelled after impaction of eighteen months.

Wednesday morning at 9 o'clock, the Society met in Huntington Hall, when the following highly practical papers were read:

"A Contribution to the Study of the Etiology of the Summer Diarrhœa of Infants," by Henry C. Haven, M. D., of Boston.

"Sepsis and Antisepsis in Summer Diarrhœa," by S. Allen Potter, M. D., of Roxbury.

"Training Nurses," by Alfred Worcester, M. D., of Waltham.

"The Value of Public Health Measures to the State," by Samuel W. Abbott, M. D., of Wakefield.

The venerable Dr. H. I. Bowditch, in an enthusiastic impromptu address, condemned an almost universal practice of the modern instructor. He referred to the matter of the so-called higher education of the mind at the expense of a healthy physical body. He pronounced it to be the simplest nonsense to proceed in this way, and won hearty applause from those present by his scathing rebukes of that portion of our present system of school education.

At the close of the reading of the papers, the names of officers elect for the ensuing year were announced: President, Thomas H. Gage, Worcester; Vice-President, William G. Breck, Springfield; Treasurer, Frank

W. Draper, Boston; Corresponding Secretary, Charles W. Swan, Boston; Recording Secretary, Francis W. Goss, Roxbury; Librarian, Edwin H. Brigham, Boston; Orator, B. J. Jeffries, Boston; Annual Chairman, C. B. Porter, Boston.

The delegates were next introduced, and, after an intermission of fifteen minutes, the annual discourse was delivered by Dr. George J. Townsend, of South Natick. His subject was: "The Massachustts Medical Society, its Relations to Medical Progress, and to the Community in which we Practice."

It was a ramble over a wide field, with reminders of how little was once known, and how much is now known, and how much still remains unknown.

In reviewing the past history of the Massachusetts Medical Society, the speaker said: "There is hardly a general charity in the State that does not number among its workers one or more Fellows of our Society. The strictly medical charities are largely administered by them. Our dispensaries are officered by our younger Fellows, who, fresh from their student work, devote themselves with a zeal which often imperils health, and even life, in the treatment of the squalid poor. What is their compensation? A stipend that would not pay their office rent. * * *

"The staff of our hospitals is composed of men who have already acquired a position for themselves in the community, many of them known to fame. Pay they have none, in the ordinary sense of the word. * * * Our teachers labor earnestly and faithfully in our schools that they may fit others to succeed them in a work they do so well themselves. Their reward is a pittance that a first-class book-keeper would scorn. * * *

"In what sense are we *regulars?* This is an unfortunate term, its converse occurring in our by-laws as conveying to the minds of the community the idea that the Massachusetts Medical Society enjoins upon its Fellows a definite course or system of pathology and practice, deviation from which constitutes irregularity—than which nothing can be more erroneous. The term in its application is rather negative than positive. We are regular, just so far is we conform to our by-laws, to which we have all given our written assent; and we are irregular when we violate those by-laws, and are guilty of practices forbidden to Fellows. These practices are, in brief, the professing to cure diseases by any exclusive system of medicine, the advertising or offering for sale of secret medicines, and the pretending to cure diseases by such secret medicines, or by any secret treatment. * * * *

"We belong to no school whatever—certainly, in view of the developments in medicine within the last half century, not to the "old school." As to *allopathy*, what the term may mean I am sure that I do not know; but if, as defined by Dunglison, it means 'a method of curing diseases by remedies, the action of which in healthy men produces morbid phenomena, different from those that we observe in the sick person,' very few of the Fellows of our Society would attempts such a feat as that described."

The speaker alluded to the good work which had been done in the past by the Jacksons, the Bigelows, the Haywards, the Warrens, the Williamses, the Wymans, and others of the Massachusetts Medical Society, in medicine, in surgery, in obstetrics, in ophthalmology, and other departments. The first operation ever done under an anæsthetic was performed by a senior surgeon of the Massachusetts Medical Society; rapid lithotrity was originated and perfected by a member of this Society; the modern treatment of iritis and ophthalmia neonatorum was first established by our senior opthalmologist. In dermatology, our specialists have also done valuable work.

The annual dinner was held in Winslow's Rink, Clarendon street, where were arranged over a score of tables covered with inviting delicacies; on a platform in front of the rink were tables for the invited guests and officers of the Society. After-dinner speeches were made by President Gage, Governor Ames, Hon. George M. Stearns, Rev. Brooke Herford, Dr. John P. Reynolds, Colonel T. W. Higginson, Hon. Roger Wolcott, and Harvey N. Shepard.

THE MEDICAL SOCIETY OF NEW JERSEY.

The one hundred and twenty-first meeting was held at Beach Haven on June 14 and 15, 1887.

First Day.

The Society met at the Baldwin House, and was called to order by President Chas. J. Kipp at 4 o'clock p. m.

After prayer by the Right Rev. Bishop Scarborough, the President thanked the Society for the honor conferred upon him, and called upon the committee of arrangements for their report, which was made in an address of welcome by Dr. T. T. Price, in which was mentioned the fact that the Soci-

ety would be entertained at a complimentary banquet by Mr. Parry, of Philadelphia.

After reading of the minutes, the following gentlemen were invited to sit with the Society as corresponding members: Dr. John B. Roberts, Frank Fisher, Carl Seiler, Samuel Ashhurst, Prof. Leidy, Bishop Scarborough, Drs. Wood and Grant.

The Committee on Business reported the following questions for discussion at the next meeting:

1. What treatment is most effective in acute rheumatism?

2. The relation of laundry and wash water to the spread of disease.

3. The treatment of phthisis by gaseous enemata.

This committee further reported a communication from the New Jersey Pharmaceutical Association, with a tender of mutual courtesies, and an invitation to attend by delegate their next annual session, to be held at Morristown, May 19, 1888.

The Committee on Fellows' Prize Essay reported as follows:

"One essay has been presented on the subject of 'Climatology and Diseases of Essex County.' While it shows no particularly original researches, a large amount of painstaking labor has been given to it. The statistics given and the deductions drawn from them are of great interest, and if such a paper could be prepared for every county in the state, the facts thus prepared would be of lasting value. The committee would recommend that the sum of one hundred dollars be given to the writer signing himself 'Hopeful.'"

The writer was Dr. J. W. Stickler, of Essex.

Dr. H. R. Baldwin presented the report on nominations for honorary membership, recommending the names of Drs. D. Hayes Agnew and Joseph Leidy. These gentlemen were elected honorary members and introduced to the Society.

Evening Session, 8 *P. M.*

After the introduction of delegates from other State Societies, the President read the annual address. The subject was "The Treatment of Purulent Inflammation of the Middle Ear and its Consequences."

For the pain of acute inflammations, he recommended rest in bed and puncturing the membrane, not only to relieve pain, but to prevent destruction of the membrane and caries of the ossicles and the petrous portion of the temporal.

The incision should be made with a broad lance-shaped needle, or a narrow sharp-pointed knife. At either the most prominent point or lower posterior quadrant, the incision should be oblique. Later, syringing should be used with care either alone or combined with inflation, thorough cleansing being most important.

He would also treat the concurrent disease of the naso-pharynx, using weak sprays of ammonium chloride, and external applications of ice—together with these measures cocaine may be used in 4 to 10 per cent. solution. In making this application it is necessary to thoroughly cleanse the canal, even to inflate the tympanic cavity so as to draw in some of the solution.

Occasionally he has to reopen the perforation, or make a new one at the most dependent point.

When pain is due to furuncles, or diffuse inflammation of the canal, he would use leeches, morphine, and nitrate of silver. Periostitis of the mastoid he treats with leeches, iodine, and incision. In chronic purulent inflammation he considers astringents harmful, as long as there is any pain; but after pain has all subsided he uses the usual astringents, insuring their entrance into the middle ear by inflation when the canal is full of solution, or by repeatedly pressing on the tragus.

In the management of intra-cranial disease and pyæmia, he has used the usual remedies, with a few recoveries. He fully believes in the future of the surgical treatment of cerebral abscess.

He does not use the dry treatment of packing the canal with boracic acid, as he has seen many bad results of its use by others. Occasionally he has found washing out the tympanic cavity by means of the eustachian catheter the only remedy.

After the cure of the suppuration, where great impairment of hearing remains, he has had few good results from trying to close the perforation by freshening the edges or skin-grafting. He has found Toynbee's artificial drum membrane useful, although it often causes too much irritation. The cotton pellet, kept moist with glycerine, is very good.

For the cure of purulent inflammation of the mastoid cells he has invariably opened the outer shell of the process. He believes in early operation, even when no pus is found, as pain and other symptoms are relieved. He believes that the operation is indicated not only when there is pus in the cells with signs of cerebral irritation, but also in cavities of the petrous portion, or in

deep abscess in that neighborhood, or when there is violent persistent pain in the mastoid. In 25 operations he has not seen a fatal case where the death was due to the operation.

He uses the Schwartze method, with chisel and hammer.

Dr. Smith presented the report of the Standing Committee.

The regular discussion on the use of antipyrin was introduced by Dr. H. R. Baldwin, and discussed by Drs. Helfer, Godfrey, and Quimby.

Adjourned at 10 p. m.

Second Day, 10 *o'clock A. M.*

The Committee on Nominations made their report, and the following officers for the ensuing year were elected:

President—Dr. J. D. Ward.

1*st Vice-President*—Dr. A. J. Taylor.

2*d Vice-President*—Dr. B. A. Watson.

3*d Vice-President*—Dr. J. S. Green.

Corresponding Secretary—Dr. Wm. Elmer.

Recording Secretary—Dr. Wm. Pierson.

Treasurer—Dr. W. W. L. Philips.

Standing Committee—Drs. T. J. Smith, E. J. Marsh and D. C. English.

Committee on Arrangements—Drs. J. G. Ryerson, W. H. Resk, S. D. Miller, and B. H. Brokeley.

The next place of meeting to be at Lake Hopatcney, the time of meeting to be announced later.

The following resolution was then passed:

"*Resolved*, That in view of the non-concurrence of other State Societies in the recommendations on the subject of preliminary education, it is not expedient that further action be taken by this Society in reference thereto."

Dr. B. A. Watson read an essay entitled, "Rational Medicine versus Empiricism," in which the errors and absurdities of the founder of homœpathy were turned over, analyzed, and held up to public view in all their barrenness. The doctor presented the principles of rational medicine, detailed its claims to recognition, and illustrated its results by the successes of modern surgery. He portrayed by quotation the faith in charlatanism that still exists in the world, and urged upon his hearers their adherence to the great principles of scientific medicine.

Dr. Ill, of Newark, was appointed essayist for the next meeting.

The following resolutions were passed:

"Whereas, While the laws of the State of New Jersey do not directly prohibit dissections of the human body, they yet do, by various provisions regulating burials and the transportation of dead bodies into and through the State, practically prohibit such dissections; and,

"Whereas, Such anomaly often tends to retard the progress of medical science within the State, if not to a disregard of the existing laws; therefore,

"*Resolved*, That a committee be appointed to secure such modification of the state laws as may be necessary to permit and regulate the practice of dissections within the State."

"*Resolved*, That we receive the overtures of the New Jersey Pharmaceutical Association, and extend to them mutual courtesies, Dr. P. C. Barker being hereby appointed to represent us at their next annual meeting.

"*Resolved*, That the thanks of this Society be extended to Governor Robert S. Green, whose attendance here with his staff has added interest to our meeting.

"To the Right Reverend Bishop Scarborough, for his kind attendance and for the interest and pleasure he has contributed to our exercises.

"To the officials of the Pennsylvania and the Tuckertown R. R. for the courtesy extended to our members in reaching and returning from Beach Haven.

"To our genial host, Mr. Jos. Page, who during our brief stay has been so indefatigable in his attention to our comfort, and who has demonstrated his knowledge of human nature by securing our hearty goodwill through the medium of our stomachs.

"To Chas. T. Parry, Esq., of the Baldwin Locomotive Works, the owner of this admirable hostelry, who even while on the bed of suffering could think so much of our creature comfort as to provide for us the elegant banquet of last evening.

"To the Committee of Arrangements for the wise, judicious manner in which they have performed their labors.

"*Resolved*, That our thanks be extended to the members of the Beach Haven Yacht Club, officially and individually, who, without money and without price, tendered their services and their vessels for the baptism of such of our members as chose to avail themselves of the privilege of a sail on the beautiful bay."

Meeting adjourned.

—A Russian medical commission has recently been sent from St. Petersburg to investigate a disease called "Pendel's tumor," which has for several years attacked Russian soldiers near the Caspian Sea. It is believed to be caused by microbes.

EDITORIAL DEPARTMENT.

PERISCOPE.

Vicarious Menstruation Cured with Permanganate of Potash.

The unusual occurrence of this class of cases, together with the phenomenal success of the permanganate of potash in arresting the trouble, is a sufficient basis for a full report of the following case.

In March, 1887, I was sent for to see Miss S., a robust and healthy-looking girl of about eighteen years of age. I could see she was suffering more or less from dyspnœa, but the seizure resembled a fit more than true dyspnœa. I quickly raised her to the sitting posture, when suddenly a slight gush of blood came from her mouth, which relieved her present distressing symptoms. For some time afterwards she continued to spit blood, and had a hacking cough. A few sups of cold water relieved her very much.

About eleven months ago she was caught in the rain the eve before her catamenia. The temperature fell quite rapidly, and being some distance from her home she was severely chilled. The next evening came, and there was no sign of menstruation, and she had pain in her back and pelvis. A physician ordered hot hip-baths, and some pills, but not until the tenth day did any flow come. At the following periods she suffered in like manner. But not until the last five periods has she had the dyspnœa and spitting of blood.

At first I concluded that I had that "Protean female infirmity," hysteria, to deal with. The flow of blood, and the relief it afforded, altered my diagnosis, and I began to inquire into the family history for phthisis, but failed to find any trace of that trouble. It was not until repeated examinations were made that I was satisfied that her lungs were normal, and that this was a case of vicarious menstruation.

I ordered permanganate of potash in 2 gr. doses every 6 hours. When I saw her the next a. m.; three doses had been taken, but without any effect. As there was no gastric irritation, I ordered the same doses to be repeated, and an anodyne cough mixture to allay the distressing cough. I returned the next a. m., and her courses were all right, and she was entirely relieved of all her trouble. About five days before her next time to become unwell, I was sent for, and found her complaining of headache and dizziness, and a slight increase in temperature. I prescribed the permanganate in 2 gr. doses three times a a day for the next four days. I met her two weeks afterwards, when she told me that she had had a normal menstruation, and considered herself entirely well. I asked her to continue her medicine once more, and to let me know if anything went wrong. I have not heard from her, so I suppose she menstruated all right.

Here was a girl, healthy and robust in the intervals of menstruation, which would exclude any grave constitutional disease. She did not suffer from chlorosis, plethora, or anemia. There was no abnormal condition of the generative organs, because she had previously menstruated perfectly. But she suffered from an exposure, the effect of which was aggravated by the exchange of an outdoor country life for the sedentary life and vitiated atmosphere of a city.

It is with just such cases of amenorrhœa, the result of exposure or giving up country life, that the manganese salts have produced the most striking results.—*Dr. F. W. Samuels, in the Southwestern Med. Gazette, June*, 1887.

The Actual Cautery in Certain Chronic Neuroses.

Dr. T. J. Hutton, in the *Medical Register*, June 18th, 1887, reports the successful employment of the actual cautery in a number of troublesome conditions. He says his paper is a contribution to the literature of harsh treatment. Its object is to call attention to the value of the actual cautery in certain vicious nervous affections which do not yield readily, if at all, to ordinary remedies. The cases are few, but the results merit attention.

One of his patients, aged forty-five, had, within a brief period, suffered the loss of husband, children, and means. Under this profound shock she sat motionless and dazed, and was apparently drifting into imbecility or cerebral softening. The actual cautery was applied to the spine, four marks about the size of a ten-cent piece being made on both sides of the spine, an inch or two outside the spinous processes. The result was a speedy cure.

In the early and middle stages of self-abuse, before the mind becomes besotted and embruted, Dr. Hutton thinks the cautery

produces a profound impression on the entire nervous system, and aids in restoring the power of self-control. He obtained good results from the cautery in two such instances—in a boy, aged sixteen, who had been addicted to the habit several years, and in a young man, aged twenty-four, who had been a victim of the habit for nearly ten years.

In impotence he had also seen it do good. A man, aged forty-eight, who had practised self-abuse when a boy, became impotent. He had quit his home and family, and repeatedly threatened self-destruction. One application of the cautery, supplemented by galvanism, coca, and damiana, restored him to health and home.

Retention of Urine in a Fœtus with Open Urethra.

A case of this kind was described by Lefour, of Bordeaux, in the Paris Academy of Medicine, April 5, 1887. The head and chest was born, but something prevented the extraction of the lower part of the body. The child having died, and the nature of the distention being recognized, the thorax was opened and the bladder was punctured through the diaphragm. About sixteen hundred grammes of liquid escaped, and the birth was at once completed. The autopsy showed that, with one ureter ligated, air blown through the other into the bladder escaped through the urethra. Moreover, as the urethra was pervious to the catheter, there could be no doubt that it was normal. As the pelves of the kidneys and the ureters were not distended in the least, it seemed conclusive that the discharge of urine in this fœtus took place only by mechanical overflow of the bladder, and not by muscular contraction of its wall. In view of the possibility of retention of urine when the urethra is pervious, it becomes the duty of the accoucheur, in case the delivery of a living fœtus is prevented by a distended bladder, to attempt the evacuation of the same by means of a capillary trocar.— *Deutsche Medizinal Zeitung, May* 16, 1887.

Effects of Pleuritic Effusion.

In Virchow's Archiv, Bd. CV. Heft 2, O. Rosenbach details the results of his experimental researches into the effects of pleuritic effusions upon the circulation and blood-pressure. The experiments were made upon rabbits and dogs, and consisted in injections of oil and the introduction of rubber air-bags in the thoracic space, and the results, as given by the author are as follows: A limitation of the pleural cavity to a degree sometimes so great as nearly two-thirds of its capacity, produced no fall of the arterial pressure during an extended time of observation. If this effect does take place, it is because of the damming up of the venous flow to the heart. Under certain circumstances, the reduction of the thoracic space produces such a displacement of the heart and the vessels that the action of the diaphragm in inspiration brings about a complete turn on itself of the vena cava. This reduction of the pleural cavity, by producing venous stasis, brings on the phenomenon of engorged kidney, albumin and red corpuscles appearing in the urine. Under favorable conditions the limitation of pleural space may result in decided *pulsus paradoxus.* This is due to the action of the diaphragm, which, during inspiration, temporarily narrows or even obliterates the lumen of the vena cava inferior, whilst the reduction of the thoracic space furnishes the favoring mechanical conditions for the action of the diaphragm that results in the circulatory paradox alluded to.— *Centralblatt f. d. Med. Wiss., April* 23, 1887.

Traumatic Displacement of the Penis.

Dr. Wagner, of Leipzig, has recently described, in the *Münchener med. Wochenschrift,* a remarkable case which he had seen in 1883 in Professor Thiersch's wards. A child, aged about 5, had his prepuce accidentally torn off. The penis retracted under the scrotal integuments, and it appears that the surgeon who first attended the case did not recognize this condition, probably believing that the penis had been torn away with the prepuce. For twelve years the patient continued to pass urine through a fistulous depression above the scrotum. Professor Thiersch then performed a plastic operation, having discovered the position of the penis. He cut down on the incarcerated organ, separated the adhesions, and adjusted the integuments around the glans. The result was perfectly satisfactory, and the penis was completely restored to its functions.—*British Med. Journal, June* 4, 1887.

—The German Association of Public Health will convene in Vienna September 26th to October 28th, to meet with the International Hygienic and Demographic Congress. The latter will meet in the University building. All governments are requested to send delegates.

A correct statement of the circulation of THE MEDICAL AND SURGICAL REPORTER will be published in each number. The regular edition for this week is 6,000 copies.

THE ATTENTION OF OUR READERS IS DIRECTED TO THE ADVERTISING PAGES OF THE REPORTER. THE PUBLISHERS EXERCISE GREAT CARE TO ADMIT ONLY ADVERTISEMENTS WHICH ARE TRUSTWORTHY. SHOULD AN ADVERTISEMENT OF A PERSON OR FIRM NOT IN GOOD STANDING BE INADVERTENTLY INSERTED, THE PUBLISHERS WILL REFUND TO SUBSCRIBERS ANY MONEY WHICH THEY MAY LOSE THEREBY.

BERGEON'S METHOD OF TREATING PHTHISIS.

Although but a short time has elapsed since the medical profession began to use Bergeon's Method, it seems as if its merits can now be pretty fairly estimated. The sanguine hopes with which it was received—especially by the laity, to whom it was loudly heralded by the daily press—have already given place to disappointment, and a reaction is setting in, which may, in its turn, go too far.

Bergeon's method can no longer be expected to fulfil the hopes which it at first aroused; but it is not yet to be regarded as worthless. It may still be of service itself, or it may lead to the discovery of some principle, the application of which will be more productive of good than itself has been.

Intelligent and interesting discussions of the results of Bergeon's method have recently taken place in this country, and the conclusion seems clear that much of the good which has undoubtedly been accomplished has been due to the hopes which the new method excited in the mind of the patient. In addition, Bergeon's method seems to have some power to check profuse catarrh of the bronchial tubes, and so to free the patient from part of the cause of cough. In some cases it also lessens the fever and the night-sweats.

How much these advantages may be due to the mental impression made upon the patient cannot, of course, be determined. But it is very significant that Dr. Forchheimer, of Cincinnati, has produced identical results in the same patients by using Bergeon's solutions, carbonic acid gas alone, or simple air alone. The patients were not informed of the changes which were made. Similar effects have also been obtained by the use of water charged with sulphuretted hydrogen, in the manner and by the apparatus suggested by Prof. H. C. Wood, in an article in the MEDICAL AND SURGICAL REPORTER, May 28, 1887.

Whatever method of administering sulphuretted hydrogen be used, it may be expected to relieve a certain proportion of patients with phthisis. Occasionally it may seem to set a patient fairly on the road to recovery. To many it will prove as useless as other remedies which have once been thought to be of great value. But it deserves further trial in order to determine its actual value, as well as the precise kind of cases to which it is applicable.

THE ALLEGED ANTAGONISM BETWEEN OPIUM AND BELLADONNA.

The opposite effects produced by opium and belladonna (or their mutual antagonism) have been made the subject of numerous experimental researches. In 1570, Prosper Alpin published some observations showing

that opium when associated with belladonna enfeebled the action of the latter. Still later were published the investigations of Giacomina, Graves, Corrigais, Cazin, and Anderson, the latter of whom in 1854 also affirmed, with great positiveness, the antagonism of opium and belladonna; then appeared the labors of B. Bell, Behier, Bernard, Blondeau, Dodenil, Camus, and C. Paul.

In France the antagonism between these two substances has been especially maintained by Behier, who has published several observations confirmatory of this view. In one, among several (1869), he insists on this point, that it takes a large dose of opium to antagonize a small dose of belladonna. Trousseau and Pidoux (Therapeutics) also affirm the antagonism, insisting that belladonna causes disappearance of the narcotism of opium, and that, conversely, opium removes the symptoms of belladonna poisoning; they maintain, moreover, that the economy remains indifferent to the action of a combination of the two drugs unless the doses be very large.

AMERICAN ORTHOPÆDIC ASSOCIATION.

First annual meeting, held at the New York Academy of Medicine, June 15 and 16, 1887.

First Day's Proceedings, June 18.

Dr. Virgil P. Gibney, of New York, was elected temporary chairman, and Dr. Louis Hall Sayre, of New York, temporary secretary.

Hypertrophy of the Lower Extremity—Amputation.

Dr. Packard, of Hartford, read the history of a case of enlargement and elongation of one lower extremity in a boy who was first brought to his office four years ago. There was a family history of phthisis. No evidence of syphilis in the parents or child. The affected leg was three-fourths of an inch longer than the other, and the hypertrophic condition seemed to involve all the tissues of the limb, and to a slight extent upon the body. There was no œdema of the skin. The motions of the limb were natural. Dr. Packard applied a rubber bandage, but at the end of the year there was not much improvement. The limb continued to develop in length and size, and at a recent date, when amputation was performed, it was three inches longer than the other limb, the thigh being two inches longer than its fellow; the calf one and a half inches larger than its fellow. Lately the patient was seen in consultation by Dr. Gibney. Amputation of the affected member, taking off fourteen inches below the knee, was performed on account of the disparity in the length of the limb. The points of interest as distinguishing the case from those of elephantiasis seemed to be the length of the limb and the comparatively healthy condition of the skin.

Dr. H. L. Taylor said this case threw some light on one which he saw about two years ago, that of a Swedish girl, aged twenty, one of whose legs was enormously enlarged from the knee down to the ankle; the calf measured about eighteen inches, while the opposite one measured about thirteen inches. The thigh and corresponding part of the body were somewhat enlarged. The limb was an inch and a quarter or more longer than the unaffected member. The skin was not hypertrophied. During the two years she was under observation the leg became a little smaller. He sent her to Dr. Bull, who also confessed ignorance of the nature of the trouble.

Dr. Morton, of Philadelphia, had seen one case similar to that described by Dr. Packard, excepting that there was not so much increase in the length of the limb. He thought it would be well to cut off the nutrition of the limb, and with that object in view stretched the sciatic nerve. The limb grew pale, and diminished much in size. He had been led to adopt this procedure from experience in two cases of elephantiasis of the leg, in one of which he took out a piece of the sciatic nerve, and in the other simply divided it, with the result of diminution in size of the leg. He thought the stretching operation should be preferred, as it did not entirely destroy the function of the member.

Dr. Shaffer, of New York, had seen cases of increased length of an upper or lower extremity, and had been unable to account for the difference. Indeed, it was not easy to say whether the disparity in length of the two limbs was due to over-development in the one or lack of proper development in the other. It certainly would be desirable if some method could be found by which to overcome such atrophy or hypertrophy.

An Instrument for the Forcible Correction of Club-foot.

Dr. Morton, of Philadelphia, made some general remarks upon club-foot, and presented an instrument for the correction of the deformity by mechanical force. There were few cases of congenital club-foot which,

if seen very early, could not be corrected by manipulation without apparatus. But when the condition occurred in robust children from eight to fourteen years of age, we might have to resort to more severe methods. Even division of the tendon may not be sufficient. At any rate, it might involve the necessity for constant manual and instrumental effort to prevent recurrence of the deformity. Much more could be done in a much shorter time by an apparatus which he had employed a number of years, consisting of a block of wood for a foot rest, braces, leather girdles, and screws by which the foot could be forced into the desired position. In the adult, for instance, the tarsus was exceedingly unyielding, and it was almost impossible to bring it into position without an operation on the tarsus or cuboid. But since the introduction of perfected antiseptic methods, excision of the bones could be performed almost with immunity, and in adults this was the preferable method, as it enabled one to accomplish in a short time what other methods could do only after months. In certain cases, however, he had resorted to a second instrument, which he presented, by which great force could be exerted upon the tarsus by means of a screw, breaking the foot into position. The instrument admitted of bringing the foot into exaggerated correction, resolving an equino-varus into an equino-valgus. The operation being performed under ether, there was not the slightest danger; he had known no evil results. Photographs of illustrative cases of the excellent results from excision of the tarsus were shown. He would divide every tendon or band which interfered with the proper rectification of the foot. He would then place the foot into one or the other of the apparatuses shown, and force it at one sitting into position. Afterward he put the foot into a carefully-fitted tin splint.

Dr. Shaffer, of New York, said that many years ago he felt very much as Dr. Morton had expressed himself, regarding the inveterate character of certain cases of club-foot, but he was becoming more and more surprised every day of his experience at the adaptability of traction to the very class of cases described by the author. He did not mean to say that every case which came under his care was cured by traction, but the large majority of cases were so cured, quite a number of them being cases in which other surgeons had deemed tenotomy or osteotomy necessary. He claimed that the apparent loss of time was more than compensated for by the symmetry and function of the foot which followed traction treatment. It was wonderful to what a degree the contracted tissues became elongated under persistent traction force. He would present his apparatus the following day.

Talipes Equinus Treated by Division of the Tendo-Achillis.

Dr. L. H. Sayre, of New York, presented a boy whose tendo-achillis he had recently divided for talipes equinus, with the result of being able to bring the foot fully to a right angle. He first saw the patient four years ago, when, as a result of infantile paralysis, there was extension of the foot, power having been lost in the anterior group of muscles, but the foot could be flexed by the hand. He saw him again two years ago, when the tendo-achillis was contracted. He advised division of the tendon and plantar fascia, but it was not permitted. Afterward the patient was treated about seven months by traction apparatus in the hands of another surgeon, but unsuccessfully. Three weeks ago, Dr. Sayre divided the tendon and plantar fascia, and now the boy could flex the foot to a right angle. The tendo-achillis had united.

Dr. Ketch had applied the traction apparatus in this case, but he had seen the patient only about twice during the treatment, and he did not think it could be regarded as a case in which traction treatment had been properly tried.

Dr. Ridlon, of New York, said that when treating such cases by the traction shoe they were never satisfied simply to get the foot at a right angle, but they carried it as far beyond a right angle as was possible.

Dr. Sayre said that he was very well satisfied with the result in this case, but in keeping up passive motion the effort would be made to get still further flexion, and to avoid any tendency to recurrence of contraction.

Dr. A. S. Roberts, of Philadelphia, asked whether the result obtained in this case by Dr. Sayre, being only of three weeks' duration, should be put on record as permanent. He referred to three cases in which, during the past month, he had divided the plantar fascia, but in each one there had been a positive relapse after an apparent cure.

Dr. Stillman, of New York, spoke of the preparatory treatment of club-foot. He softened the parts by applying a thick poultice, composed of bran and marshmallow, over the leg. This rendered both the immediate and after treatment much easier. The opertive treatment was less important than the after-treatment, or third stage. Formerly

he held the view that every case of club-foot could be cured by mechanical means, but he had changed his opinion. There were certain cases which could not be cured by any amount of stretching.

The case was further discussed by Drs. Morton, Shaffer and Berg. Dr. Berg applied a plaster-of-Paris dressing after tenotomy.

Chronic Osteitis of the Shoulder Joint.

Dr. V. P. Gibney presented two patients, and gave their further history since presenting them at the Orthopædic section of the Academy of Medicine, in 1886. Both patients were now young ladies. In the first, since 1886, an abscess, which had been several months in forming near the axilla, finally opened spontaneously. It continued to discharge two or three months, and then closed. His patient had markedly improved during the past year; the affected arm and shoulder had increased in size, and become fairly mobile, constituting a useful member.

In the second case, in which *brisement forcé* had been formerly employed, the further history was that a small abscess had formed, and the pus had been withdrawn. The arm had continued to atrophy, and there was now a very marked difference between the two members.

(*To be continued.*)

Notes and Comments.

Adulteration of Pepper.

Ground olive stones have for some years past been employed as an adulterant for black pepper. Under the name of poivrette they have become a regular article of commerce, the true inwardness of which was first exposed by Dr. Campbell Brown, of Liverpool, England. To detect this adulterant, Dr. Brown directs to boil a portion of the suspected sample in water, to which has been added a little caustic alkali. Dilute the fluid with much water; allow to stand, and pour off the liquid from the remaining solid particles and wash two or three times by decantation. The hard, yellow particles which remain are poivrette, the dark particles are husk. If any particles of bleached husk cells slightly resemble the poivrette, they can be distinguished by their softness and by the microscope. The poivrette may be still more easily recognized by the toughness of its particles; if a specimen of the adulterated pepper be triturated in a mortar and sifted through bolting-cloth, the poivrette will remain behind, being too tough to pulverize.

Sand, which is often present in much too large a proportion in ground pepper, is easily separated by throwing it into chloroform. The sand sinks while the particles of pepper float.

Colds Taken in the Cars.

In these days when travel by railroad is very common, a few words on the best means to prevent taking colds in the cars will be useful. For men a light cap, one that will cover over the ears, so as to serve as a night cap, will be desirable. In cold weather a woolen cap is best. This cap should be put on as soon as the car is entered. A loose blouse should take the place of the coat usually worn. Slippers must not be worn. If there is a draught in the car, face it; do not let it strike the back. Have the bed made with its head toward the engine; the dust will then be driven to the foot, where it will do the least harm. But be sure to have a sufficient quantity of bedclothes to keep warm. A soft, loose-knit, woolen hood is the best head-wear for women; this should be worn at night also. It should be warmer in winter than in summer months. The corsets should be removed at night, and a loose woolen wrapper worn for a night-dress. The stocking supporters as well as every constricting band around the waist should be loosened. Every adult should take from five to ten grains of quinine (!) on going to bed. It will be well to rub the hands, feet, face and neck with a little vaseline at the same time.—*Journal of Reconstructives.*

Thymol as a Remedy in Tapeworm.

An Italian physician recommends thymol as a remedy for tapeworm. A dose of about half an ounce of castor-oil is given in the evening, when the patient should abstain from food, and take, next morning, two drachms of thymol, divided into twelve doses, one every quarter of an hour. About half an hour after the last dose has been given, a dose of castor-oil should be administered. This is usually followed by the expulsion of the dead worm. Thymol quickly depresses the pulse, respiration, and temperature, and to obviate any ill effects from this cause, frequent doses of brandy or spirits should be given at the same time. The advantages of thymol are said to be that it produces no disturbance of the stomach, is rapid in effect, is both a tænicide and a tæn-

ifuge, and, while certain in action, will do no great harm if an error in diagnosis has been made.—*Chemist and Druggist.*

Disabled Great Men.

The Emperor William is suffering from advancing years, the Crown Prince from a laryngeal papilloma, and Bismarck from rheumatism; Mr. Gladstone has catarrhal troubles of his respiratory organs; Sir Michael Hicks-Beach has cataracts; Mr. Parnell has some unknown malady which makes him an invalid; Lord Randolph Churchill married an American lady, and has the (alleged) American disease, neurasthenia; Mr. Blaine is reported to be a *Brightique;* Mr. Manning is hemiplegic; President Cleveland is rheumatic and lipomatosic; the Emperor of Russia is suffering from mental depression.

Correspondence.

Pleasant to Take.

Eds. Med. and Surg. Reporter:

* * * I have been a subscriber to Reporter for several years, and can say that among the numerous journals which I have read and subscribed to I like the Reporter best of all; and while I liked it under the management of its former editors, it seems to me that the numbers which the new editors have issued are fuller than usual of select practical matter, such as interests a general practitioner.

J. W. Clarke, M. D.

Clayton, Ala.

Eds. Med. and Surg. Reporter:

* * * I have taken the Reporter for eighteen years, and find it just what the practitioner needs.

Very respectfully yours,

Jas. Baker, M. D.

Minneapolis, Minn., June 16, 1886.

Prognosticating the Sex of the Unborn.

Eds. Med. & Surg. Reporter:

Can we foretell, by any symptom, the sex of a child in utero? I have found the following symptoms to invariably treat me kindly in diagnostic results. If the mother feels the weight of the child nearly continually on the *left* side, the sex will be *male.* If, on the contrary, the weight is on the *right* side, the sex will be *female.* There are frequently times when the mother cannot say which side the child is mostly felt, but if requested to tell which side the greatest weight is felt when the child is quiet, she can always remember. If the preference is for a particular position on the left side, result boy; if on the right side, result girl. In the last twenty-five cases, I have not made a failure in foretelling the sex. Richard B. Steward.

Warren, Pa., June 6, 1887.

Epistaxis.

Eds. Med. and Surg. Reporter:

Have just read in the Reporter extracts from Dr. Ingals' paper on epistaxis (read before the Illinois State Medical Society), and will say for the benefit of the readers of your valuable journal that ordinary chewing gum, rapidly chewed for a few minutes, will relieve almost every case of epistaxis.

Yours resp., S. C. Stone, M. D.

Milton, Or., June 11, 1887.

News and Miscellany.

Members of the American Orthopædic Association.

The Climate of Colorado.

In reference to an inquiry recently inserted in the columns of the *Lancet*, Mr. T. Laffan, of Cashel, sends to that journal a letter, from which is made the following extract: "I must say, from experience and a long residence in Colorado and the adjoining territories, that the climate is unsurpassed. To those suffering from incipient consumption, by proper attention to exercise, such as hunting, fishing, etc., there is no question but in a short time all traces of the disease will disappear. I have known young men who went there eight or nine years ago as hopeless invalids, and after a few months' sojourn returned to their eastern homes rugged and robust men. Those far advanced in consumption will have a hard time of it as regards breathing, owing to the extreme lightness of the atmosphere. For such the equable temperature of New Mexico is more suitable. As a resort I would recommend the San Louis Park; it is a beautiful valley, extending several hundred miles, running north and south, from Del Norte, Colorado, to Santa Fé, New Mexico, and over twenty miles wide, between the Sangré de Christo and Conejos ranges of the Rockies, with an average of about 4,000 feet elevation above sea level. Game abounds, and fishing in the Rio Grande river, which runs through the valley, is excellent. The winters are not quite so rigorous as in the mountains. I have seen men in that country who were so emaciated physically that their life was not worth a cent. Profuse expectoration appeared to trouble them most. In a short time they became hale and hearty. Persons in an advanced state or period of the disease suffer much; they even bleed from the nose and mouth on the least exertion. This is owing to the high altitude and light air. But the Mexican people say that by drinking tea made from the wild mountain sage all traces of the disease are eradicated; and no Mexican is troubled with consumption that is to be attributed to climatic influences."

Leprosy in South Africa.

U. S. Consul Seiler, at Cape Town, has sent to the State Department a report on leprosy in South Africa. The first case of leprosy in Cape Colony was introduced by Malay slaves more than one hundred years ago, but not until 1845 was any attempt made by the Government to stamp out the disease. In that year a leper asylum was established at Robben Island, seven miles from Cape Town, and, up to 1884, 744 lepers had been admitted to the institution, and comprised but a very small proportion of the leper population, as the segregation of lepers was not made compulsory. The rapid increase of the disease, particularly among the European population, as described in the reports of district surgeons, has aroused the Colonial Government to action, and a second and larger asylum is in process of construction, the present accommodations being wholly inadequate to provide for all the afflicted applying for admission.

Washing Out the Stomach.

This operation, such a novelty a few years ago, is coming quite in vogue in the treatment of certain forms of dyspepsia. The following is the way in which it is carried out: A soft red rubber tube is passed gently down into the stomach, quite to the pylorus; with this tube is connected about a yard of flexible tubing and a glass funnel, which is held on a level with the patient's breast. Tepid water is poured slowly into the funnel until a sensation of fulness is experienced. The funnel is then lowered to the level of the waist, and the fluid allowed to siphon out. The process it repeated until the water returns quite clear.

Good Advice to Druggists.

At the recent meeting of the Pennsylvnia Pharmaceutical Association, Mr. Kennedy dwelt upon the facts that the customer comes to the druggist with confidence in his ability and integrity, and that the former should be made to feel that he is being conscientiously and honestly dealt with. This could be accomplished by charging fair remunerative prices and dispensing only what are believed to be absolutely pure medicines. It is always well to impress upon customers the danger of trifling with disease, and the importance of seeking medical advice, and to discountenance the use of proprietary medicines.

Typhoid Fever.

The increased number of cases of typhoid fever at Mount Holly has induced the physicians there to apply to the State Board of Health for aid in finding out the cause, and removing it, if possible. The President of the Board gave as his opinion that the water of the Rancocas river, which is used to supply the town, had been made impure by sewage from houses at Smithville, where there have been a number of cases of typhoid fever, and that some of the trouble was caused by cesspools that had been improperly constructed.

Payment in Kind.

A Scotch country minister, during a pretty long illness, was most assiduously attended by the village doctor, who ultimately sent in a large bill for medicines and attendance. The minister at once transmitted the money for the drugs; but, "as to the visits," he wrote, "now that I am well, I shall not fail to repay them *in kind*."

Consultations by Telephone.

Several medical men in Paris are reported to have adopted the telephone, and give consultations to such patients as shall have subscribed beforehand for the purpose. The practice, however, is not likely to be productive of much else than a number of funny remarks in the comic papers.

Items.

—The *Journal of Hydrotherapeutics* is the title of a new monthly journal published in London.

—There is one admirable feature about a wire-fence. The patent-medicine men can't paint a legend on it in regard to his liver cure.—*Puck.*

—The first Danish lady physician, Miss Nielsen, has just begun to practise at Copenhagen. She took her degree with the highest honors.

—One of the largest medical fees recorded is that of $40,000 recently paid to Dr. Anderson Critchett for visiting and treating an Indian prince.

—The largest dose of quinine ever given, according to Dr. C. E. F. Knight, of Dublin, was administered by himself in 1883, and was 131.25 grains in twenty-four hours.

—A prevalence of rabies among dogs and cattle is reported in Calhoun county, Florida. Several persons have been bitten by rabid dogs, and "dog and cattle killing parties are organizing."

—A prize of 10,000 francs is offered by the Académie de Médecine, Paris, for the best work on the treatment of stricture of the urethra, or on the therapeutic methods for diseases of the urethra.

—On June 13th there had been twenty-six cases of yellow fever in all at Key West, Fla. One or two new cases appear daily, but it does not seem likely that the epidemic will be an extensive one.

—A country hotel proprietor, who had advertised for city boarders, was astonished the other day at receiving a letter from a Philadelphia gentleman asking him to send him samples of his drinking water for analysis.

—A new medical journal is to be published shortly in Paris, under Professor Grancher's direction. It will be called the *Univers Médical*, and the editor intends to devote a much larger part to foreign news than is usually given in French papers.

—Prof. Hyrtl, of Vienna, who is now seventy-five years old, has been suffering for some time with cataract, and he has had his right eye operated on by Prof. Fuchs, apparently with success. His left eye is also affected, and will have to be operated on before long.

—"Reuben," said Mrs. Stubbs, laying down the evening paper, "what is meant by optimism?" "Optimism?" "Yes. The paper says that optimism is not a characteristic of the modern age." "Optimism, Hannah, is a disease of the eye; an' you'll git it the fust thing you know, if you keep on a-readin' that fine print."

—An authority on canned goods reveals the interesting fact that most of the jellies in the market are made of apple-parings and cores. Sometimes the stock is kept so long that it will not make jelly; then they make strained honey out of it. This is called enterprise in America. In France they call it criminal, and send the men who practise it to jail.

—The practice of the healing art is an occupation intrinsically dignified. It cannot be divested of this quality by the humble condition of the practitioner or the lowly sphere of his patient. Requiring from its votaries the possession of every exalted qualification that can adorn the heart and grace human nature, there is no profession nobler than that of the physician. Cicero has truly

said, that in nothing does man approach nearer to the gods than in giving health to his fellow-man. A physician of genius is the noblest gift which nature can bestow upon humanity. He is the equal everywhere of the highest in society.—*Dr. J. H. Thompson.*

—In an interesting article on cream, its value and use, Professor Arnold, of Cornell University, says: The superiority of cream over butter or any other solid fat consists, first, in its being not exactly in a liquid form, but in a condition allowing of great mobility between its particles, permitting the gastric juice to mix with it in the most perfect manner, and with whatever else the stomach contains, thereby aiding digestion. Its behavior is quite different in this respect from that of butter and other pure fats. As soon as they become melted they grease over the other contents of the stomach, obstructing, in a measure, the contact of gastric juice, and hindering, rather than hastening, the progress of their digestion.

OBITUARIES.

Dr. John Q. Bird.

Dr. John Q. Bird, who was for three years President of the Jersey City Police Board, died on June 17th of blood poisoning. Two weeks ago he was made one of the medical staff of the Jersey City Hospital. In making an autopsy upon the first patient he attended there, he made a small cut on one of his fingers. He bathed the hand in carbolic acid solution, and gave the wound no more thought till the next day, when the injured finger began to swell, and the inflammation spread to his hand and arm. Dr. Theodore R. Varick, who was called, lanced the wound and tried to arrest the inoculation of his patient's system, but without avail. Dr. Bird leaves a widow and two children. He was about forty years of age, and for seventeen years had been connected with the Jersey City Police Department, either as a member of the Governing Commission or as Police Surgeon.

Joseph-Dieudonné Boussingault.

The death is announced from Paris of the eminent French chemist, Professor Joseph-Dieudonné Boussingault. The deceased, who was born in 1802, occupied the chair of Agriculture in the Paris Conservatoire of Art and Industry. M. Boussingault was the author of a large number of papers on physics and chemistry, and of treatises on "Chemistry and Physiology in Agriculture." His name is familiar to all medical students through his feeding experiments, in which he deprived animals of salt.

Official List of Changes

OF STATIONS AND DUTIES OF OFFICERS.

Medical Department U. S. Army, June 12 to June 18, 1887:

Col. J. H. Baxter, chief medical purveyor, to proceed to New York city for the purpose of inspecting the medical purveying department of that place, S. O. 133, A. G. O., June 10, 1887.

Par. 15 S. O., 52 A. G. O., March 5, 1887, is so amended by Par. 9 S. O., 133 A. G. O., June 10, 1887, as to direct that Major Chas. H. Alden, surgeon, be relieved from duty in Div. of Dakota about June 20, 1887, and he is granted leave of absence from the date when so relieved, to include August 27, 1887.

Major B. E. Fryer, surgeon, found incapacitated for active service by an Army Retiring Board, and granted leave of absence until further orders on account of disability, S. O. 133, A. G. O., June 10, 1887.

Capt. Jno. D. Hall, assistant surgeon, leave of absence extended one month, S. O. 136, A. G. O., June 14, 1887.

First Lieutenant W. C. Borden, assistant surgeon, granted leave of absence for one month, S. O. 138, A. G. O., June 16, 1887.

In the Medical Corps of the Navy for the week ending June 18, 1887.

Surgeon Thomas C. Walton ordered, June 15, for examination preliminary to promotion as medical inspector.

Surgeon A. F. Price detached from special duty, Annapolis, Md., to proceed home, and wait orders.

Surgeon James M. Flint detached from the "Albatross," and ordered to the Smithsonian Institution.

P. A. Surgeon W. G. G. Willson ordered to the Receiving Ship "Independence," Mare Island, Cal.

U. S. Marine Hospital Service, for the two weeks ended June 18, 1887:

Bratton, W. D., assistant surgeon. To proceed to Seattle, W. T., on special duty, June 8, 1887. When relieved to rejoin station at San Francisco, Cal., June 11, 1887.

Watkins, R. B., assistant surgeon. Granted leave of absence for thirty days, June 8, 1887.

Heath, F. C., assistant surgeon. To proceed to Marine Hospital, Detroit, Mich., for temporary duty, June 17, 1887.

Press of Inquirer Printing Company, Lancaster, Pa.

A NEW EMMENAGOGUE.

The following is an abstract from a letter written by one of the most prominent gynæcologists of the country, to another:

"Thus far no perfect emmenagogue has been discovered, but I regard the manganese as the best I have met with. It should be styled a regulator of menstruation rather than a pure emmenagogue, for it is useful in the absence of the menses, irregularity of their recurrence, and even in excess of flow.

"The preparation which I now employ is McKesson & Robbins' pills of the binoxide of manganese. Of this preparation I give two grains three times a day throughout the month and during the period.

"I also employ manganese in chlorosis and anæmia, and I think that by its use I obtain better results than I have heretofore done by iron." (See *Medical Record* of March 6th, page 274.)

Specify McK. & R.'s Pills Manganese Binoxide.

Important additions to McK. & R.'s list of Gelatine Coated Pills:

McK. & R. *Cascara Sagrada* and *Nux Vomica*: Ext. Cas. Sagr. gr. ii; Ext. Nux Vom. gr. 1-5.

McK. & R. Cascara Sagrada, Nux Vomica and Belladonna: Ext. Cas. Sag. gr. ii; Ext. Nucis Vom. gr. 1-8; Ext. Bellad. gr. 1-16.

McK. & R. Hydrobromide of Hyoscin 1-100 gr.

McK. & R. Binoxide of Manganese 2 grs.

McK. & R. Valerianate of Quinine ½, 1, 2, and 3 grs.

McK. & R. Valerianates Iron, Quinine, and Zinc: Ferri Valer., Quin. Valer., Zinci Valer., āā gr. i.

McK. & R. Oleate of Manganese 20 per cent. May be used to advantage when the pills cannot be administered.

Always specify McK. & R's.

COCAINE.

Although only eighteen months have elapsed since Koller's announcement of his discovery of the anæsthetic properties of this alkaloid, Cocaine already ranks among the most important agents of the practitioner. In general and dental surgery, ophthalmology, laryngology and general therapeutics, its value is everywhere attested.

We began its manufacture immediately after the announcement of Dr. Koller, and samples of our product were submitted to many noted specialists for their experiments, and the results were highly gratifying. The demand for our manufacture of the salt, solutions, and oleates, has continued to increase, and we desire to express our sincere thanks to the medical, pharmaceutical, and dental professions for their kind encouragement as shown in their recognition of the merits of our preparations. Our appreciation of this will be shown in our constant efforts to supply all their requirements in chemicals and pharmaceuticals, of a quality worthy of their entire confidence.

Special quotations on Terebene and Cocaine for specified quantities. Very respectfully,

McKESSON & ROBBINS.

TEREBENE.

McKESSON & ROBBINS

WERE THE FIRST IN THIS COUNTRY TO MANUFACTURE THIS VALUABLE REMEDY FOR

Winter Cough, Bronchial and Chest Affections, Flatulency, Acidity, and other forms of Dyspepsia.

It may be used as an inhalation, or taken internally in doses of five or six drops on sugar every four hours, gradually increasing the dose to twenty minims.

Terebene was brought to the notice of the medical profession as far back as 1873, by M. Riban, who read a series of papers on this and similar substances before the Pharmaceutical Society of Paris. It has lately been brought into prominence by Dr. Wm. Murrell, of London, who has given it in over 114 cases; he has also notes of its value in 81 out of 94 cases. Dr. Murrell says that much of the Terebene now being sold may be described as inferior, and to this fact he ascribes some irritating effects noted in a few of his cases.

We would therefore caution the physician in prescribing and the druggist in ordering to, in all cases,

BELLEVUE HOSPITAL MEDICAL COLLEGE,

CITY OF NEW YORK.

SESSIONS OF 1887-88.

The REGULAR SESSION begins on Wednesday, September 21, 1887, and ends about the middle of March, 1888. During this Session, in addition to the regular didactic lectures, two or three hours are daily allotted to clinical instruction. Attendance upon at least two regular courses of lectures is required for graduation.

The SPRING SESSION consists of recitations, clinical lectures and exercises, and didactic lectures on special subjects. This Session begins about the middle of March and continues until the middle of June. During this Session, daily recitations in all the departments are held by a corps of Examiners appointed by the Faculty.

The CARNEGIE LABORATORY is open during the collegiate year, for instruction in microscopical examinations of urine, practical demonstrations in medical and surgical pathology, and lessons in normal histology and pathology, including bacteriology.

For the annual Circular and Catalogue, giving requirements for graduation and other information, address Prof. AUSTIN FLINT, Secretary, Bellevue Hospital Medical College, foot of East 26th Street, New York City.

GATE CITY STONE FILTER CO.

Manufactory and Depot at Union Porcelain Works, Greenpoint, N. Y. Salesrooms, 839 Broadway, and 63 East 13th Street, New York City.

DON'T drink impure water BEST FILTER EVER INVENTED. Cheap ones for the kitchen. Fine PORCELAIN, with ICE CHAMBERS, for Dining-rooms and Offices.

LASTS a lifetime, WITHOUT CHANGE. NO METAL USED. All COMMON METALS generate POISON when in contact with water.

No CHARCOAL, SAND, or other COMPOUND USED. They all ABSORB, RETAIN, and Become FOUL with LIVING ORGANISMS. CHARCOAL has no CHEMICAL EFFECT on WATER.

Our ICE CHAMBER does not allow the melted ice to mingle with the Filtered Water. The Filtering Medium is a NATURAL STONE, as easily cleaned as a water-pail.

30,000 PHYSICIANS
NOW PRESCRIBE

HYDROLEINE

(HYDRATED OIL,)

For Consumption and Wasting Diseases. It Produces Immediate Increase in Flesh and Weight.

FORMULA.

Each Dose of Two Teaspoonfuls, equal to 120 Drops, contains:

Pure Cod Liver Oil	80 m. (drops)	Soda	½ Grain.
Distilled Water	35 "	Boric Acid	½ "
Soluble Pancreatin	5 Grains.	Hyocholic Acid	⅛ "

DOSE:

Two teaspoonfuls alone, or with twice the quantity of water, to be taken thrice daily after meals.

Hydroleine (Hydrated Oil) is not a simple alkaline emulsion of oleum morrhua, but a hydro-pancreated preparation containing acids and a medicum of soda. Pancreatin is the digestive principle of fatty foods, and, in the soluble form here used, completely saponifies the oleaginous material so necessary to the reparative process in all wasting diseases.

Lautenbach's researches on the function of the liver would show the beautiful adjustment of therapeutics in preparation of Hydroleine, furnishing, as it does, the acid and soda necessary to prevent self-poisoning by reabsorption of morbid tubercular detritus and purulent matters into the general circulation.

Each bottle in nutritive value exceeds ten times the same bulk of cod liver oil. It is economical in use and certain in result.

Sold at all Drug Stores at $1.00 per Bottle.

The principles upon which this discovery is based have been described in a treatise on "The Digestion and Assimilation of Fats in the Human Body," by H. C. BARTLETT, Ph. D., F. C. S., and the experiments which were made, together with cases illustrating the effect of Hydrated Oil in practice, are concisely stated in a Treatise on "Consumption and Wasting Diseases," by G. OVEREND DREWRY, M. D.

Copies of these Works sent free on Application.

WM. F. KIDDER & CO., 83 John Street, New York.

Agents for U. S.

Also exclusive Agents for SVAPNIA, or Bigelow's purified Opium, in SCALES and HALF-GRAIN GRANULES.

TAMAR INDIEN GRILLON.

A laxative, refreshing, and medicated Fruit Lozenge, very agreeable to take, and never causing irritation. Its physiological action assures the immediate relief and effectual cure of

CONSTIPATION,

HÆMORRHOIDS, BILE,
CEREBRAL CONGESTION, HEADACHE,
LOSS OF APPETITE,
INTESTINAL OBSTRUCTIONS, ETC.,

by augmenting the peristaltic movement of the intestine without producing undue secretion of the liquids. Unlike pills and the usual purgatives, it does not predispose to intestinal sluggishness, and the same dose always produces the same effect, that is to say, never needs increasing.

It is recommended by the most eminent physicians of Paris, notably Drs. BELIN and JARDIEU, who prescribe it constantly for the above complaints, and with most marked success.

Paris: E. GRILLON, 27 Rue Rambuteau.

SOLD BY ALL DRUGGISTS.

FREDERICK STEARNS & CO.,

Mnf'g Pharmacists, DETROIT, MICH., U. S. A.

RECTAL ALIMENTATION.

Peptonized Milk the Ideal Substance for Nutritive Enemas.

It would be difficult to conceive of a substance more perfectly adapted for feeding per rectum than thoroughly peptonized milk. It is perfectly absorbable, non-irritant, and may be continuously used for long periods without local disturbance and with entirely adequate nutrition; patients even sometimes increasing in weight.

The artificial digestion of the milk may be carried to the point of complete conversion of the caseine into peptone, or the process may be left to proceed in the alkaline secretion of the rectum. Peptonized Milk *Gruel*—of arrow-root and milk—may be used if preferred, the PEPTONIZING TUBES digesting both starch and milk.

PEPTONIZING TUBES

are sold in boxes at retail for 50 cents, one dozen tubes in a box, each tube peptonizing a pint of milk.

FAIRCHILD BROS. & FOSTER,

82 and 84 FULTON STREET, NEW YORK.

Infantile Atrophy.

"INFANTILE ATROPHY, or the slow wasting which is a familiar symptom in hand-fed babies, is one of the commonest causes of death in early infancy."

"INFANTILE ATROPHY is the consequence of insufficient nourishment. The child wastes because he is starved. But it is not to actual lack of feeding that the starvation is usually to be ascribed. A baby fed from a breast which secretes milk poor in quality and insufficient for the child's support, will, of course, grow slowly thinner; but an infant supplied largely with farinaceous compounds, from which his feeble digestive organs fail to derive even a minimum of nourishment, will waste with startling rapidity."

"Mellin's Food may be used from the first, and is almost always well digested. Farinaceous matters, unless guarded by malt, as in Mellin's Food, should not be given to a child younger than six months."

From "Disease in Children," by Eustace Smith, M. D., F. R. C. P., London, England.

A sample of Mellin's Food, sufficient for trial, will be sent free to any Physician desiring it.

Friedrichshall.

THE WELL-KNOWN APERIENT MINERAL WATER.

IMPORTANT NOTICE.

By reason of an improved method of caption, by which dilution avoided, FRIEDRICHSHALL WATER will be found now to be of **considerably greater strength** *and* **efficacy** *than heretofore.*

The ordinary dose is a large wineglassful (4 ounces). Most efficacious when taken fasting and mixed with an equal quantity of hot water.

"I know nothing at all equal to Friedrichs all. The LONGER it is taken, the SMALLER is the quantity necessary to effect the purpose."

Sir HENRY THOMPSON, F.R.C.S., London.

OF ALL DRUGGISTS AND MINERAL WATER DEALERS.

BOVININE,

BUSH'S FLUID FOOD,

CONTAINING 26.58 PER CENT. OF SOLUBLE ALBUMINOIDS.

The vital principles of Beef and Mutton concentrated. A highly condensed Raw Food Extract. Acceptable to the most delicate taste and smell. Retained by delicate stomachs that reject all other Foods. It assimilates more readily than any other Food known to the Medical Profession. BOVININE under the microscope shows the blood corpuscles in their normal condition strongly marked, while in all other Foods or Extracts this vitally important element is destroyed by the action of heat in cooking.

OSCAR OLDBERG, PH.D., PROF. OF CHEMISTRY AND TOXICOLOGY, AND DEAN OF THE CHICAGO COLLEGE OF PHARMACY, says of it:—I have analyzed Bush's Fluid Food or BOVININE, to find that it contains 26.58 per cent. of soluble Albuminoids."

A. L. LOOMIS, M. D., PROF. OF BELLEVUE MEDICAL COLLEGE, says:—"I prescribe Bush's Fluid Food or BOVININE and prefer it to similar preparations."

J. S. JEWELL, M. D., CHICAGO, says of "BOVININE:"—"I am delighted with it; it is what I have been looking for these twenty years, and it supplies a want that nothing else has been able to fill."

DRS. WARD AND FEWSMITH, speaking for themselves and their colleagues of the HOSPITAL OF ST. BARNABAS, NEWARK, say:—"BOVININE was readily taken by the patients, was easily retained, and in many cases by stomachs which had rejected all other forms of nourishment. We believe BOVININE contains more nutriment, relatively to bulk, than any other preparation known to the Medical Profession."

DR. J. M. RAND, SURGEON TO THE HOSPITAL FOR WOMEN AND CHILDREN, OF NEWARK, N. J., says:—BOVININE has been used with very satisfactory results after many important surgical operations; and, for all patients whose stomachs can't retain or tolerate other foods, we find the BOVININE invaluable."

During the last four months of his sickness, the principal food of my father, GEN'L GRANT, was BOVININE and Milk.
Oct. 1st, 1885. FRED. D. GRANT.

BOVININE is carefully prepared from the formula of the late JAS. P. BUSH, by the

J. P. Bush Mfg. Co., Chicago, Ill., and 2 Barclay St., Astor House, New York.

MURRAY'S CHARCOAL TABLETS.

The increasing demand for a chemically pure CHARCOAL, prepared from only young and tender willow shoots, for medicinal use, has led to the manufacture of these Tablets.

CHARCOAL is so simple and so valuable that it seems ridiculous to extol its qualities, but in our Charcoal Tablets we have the purest form of charcoal from young willow shoots, and in a form that people take with a relish.

PRICE, 25 CENTS A BOX.

Very Popular as a Dentifrice.

Removes the bad odor and taste after the use of Tobacco.

A. J. DITMAN, Chemist,

Broadway and Barclay St., NEW YORK CITY.

DITMAN'S SEA SALT.

A Sea Bath at Home,

By dissolving the Sea Salt in ordinary water. Used as a luxury for its exhilarating influence, and as a valuable remedy in Debility, Languor, Rheumatism, and Weakness of the Joints, Tender Feet, Nasal Catarrh, etc. Extracted directly from the "foaming billows" by evaporation, at one of the most salubrious spots on the coast. It possesses all the medicinal advantages of the natural water, and, at the same time, is entirely freed from all organic impurities that are usually found in the surf.

A. J. DITMAN, Chemist,

Broadway and Barclay St., NEW YORK CITY.

CELERINA

NERVE-TONIC, STIMULANT AND ANTISPASMODIC.

FORMULA.—Every Fluid-Drachm represents FIVE grains EACH—Celery, Coca, Kola, Viburnum and Aromatics.

INDICATIONS.—Impotency, Spermatorrhea, Loss of Nerve-Power (so usual with Lawyers, Preachers, Writers and Business Men), Nervous Headache, Neuralgia, Paralysis, Dysmenorrhea, Hysteria, Opium-Habit, Inebriety, Prostatitis, Dyspepsia, and ALL LANGUID or DEBILITATED conditions of the System.—*Indispensable to restore a patient after alcoholic excess.*

DOSE.—One or two teaspoonfuls three or more times a day, as directed by the Physician.

ALETRIS CORDIAL

UTERINE TONIC AND RESTORATIVE.

PREPARED FROM THE ALETRIS FARINOSA OR TRUE UNICORN.

INDICATIONS.—Amenorrhea, Dysmenorrhea, Leucorrhea, Prolapsus Uteri, Sterility, to PREVENT Miscarriage, Etc.

DOSE.—One teaspoonful three or four times a day.

Unrivaled as a Uterine Tonic in Irregular, Painful, Suppressed and Excessive Menstruation,

IT RESTORES NORMAL ACTION TO THE UTERUS, AND IMPARTS VIGOR TO THE ENTIRE UTERINE SYSTEM.

☞ Where Women have aborted during previous Pregnancies, or in any case where abortion is feared, the Aletris Cordial is indicated, and should be continuously administered during entire gestation.

ACID MANNATE

A MILD, SAFE AND PLEASANT APERIENT.

☜ Prepared from Manna, Purified Cathartic Acid, and Fruit Juices. ☞

INDICATIONS.—Constipation, Biliousness, Congestions, Etc. **INDISPENSABLE AS AN APERIENT FOR WOMEN DURING PREGNANCY.** In teaspoonful doses, 3 times a day, it favors the SECRETION and EXCRETION of bile, and gradually removes the congested and torpid states of the liver, and keeps the bowels in a regular and soluble condition.

DOSE.—ONE or MORE teaspoonfuls as directed by the Physician.

S. H. KENNEDY'S
CONCENTRATED EXTRACT OF
PINUS CANADENSIS

DARK — A NON-ALCOHOLIC LIQUID. — WHITE

A MOST VALUABLE NON-IRRITATING MUCOUS ASTRINGENT.

INDICATIONS.—Albuminuria, Diarrhea, Dysentery, Night-Sweats, Hemorrhages, Profuse Expectoration, Catarrh, Sore Throat, Leucorrhea, and other Vaginal Diseases, Piles, Sores, Ulcers, Burns, Scalds, Gonorrhea, Gleet, Etc.

When Used as an Injection to Avoid Staining of Linen, the WHITE Pinus should be Used.

Recommended by DR. J. MARION SIMS, and other Prominent Physicians.

RIO CHEMICAL CO., ST. LOUIS: LONDON: PARIS.

Samples FREE to any Physician who will pay Express charges, and mention this Journal.

PACKER'S TAR SOAP.

ABSOLUTELY PURE AND NON-IRRITATING.

MADE FROM VEGETABLE OILS, PINE TAR, AND GLYCERINE.

A perfect soap should be made from pure and sweet oils, and clean, well-washed alkalies. Such is **Packer's Tar Soap.** It is combined with distilled **pine-tar,** and hence has had the most gratifying effects in the treatment of Dermatic Diseases, as chafing, eczema, erythema, seborrhea, herpes, etc.

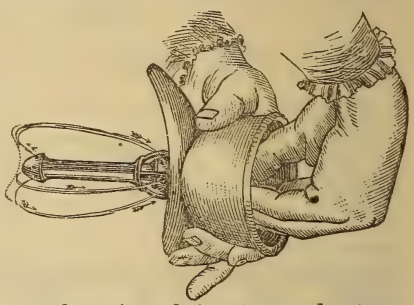
As a Disinfectant, Antiseptic, and Detergent, it is admirably adapted for use in ulcers, foul wounds, fetid discharges, bed sores, and similar conditions. For the bath, toilet, and shampoo, it is unrivaled. 25 cents per cake, from Druggists.

It is supplied to Hospitals, Asylums, and Physicians, in one pound bars, at reasonable prices.

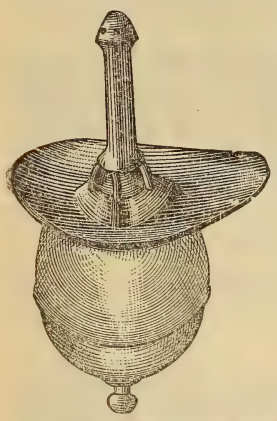
P. O. Box 2985. **THE PACKER MFG. CO., 100 Fulton St., New York.**

"PALLAS" SYRINGE.

VAGINAL AND RECTAL.



A MOST PERFECT and simply constructed Syringe for medicating and irrigating the vaginal cavity. The novel bulb of this Syringe, when doubled upon itself, as shown in the cut, will cause no fluid to be left, as is so apt to happen with the ordinary bulbs, and when filled will contain just enough fluid for the expansion of the vaginal folds. The hard rubber labial shield, with its plug, when firmly pressed against the labia, will both prevent spilling and soiling of linen, and the fluid can therefore be kept in circulation and in contact with the parts by repeating the pumping motion of the bulb. It will also be noticed that the fluid escapes as a spray from the large holes at the point of the stem and returns through the holes at the root of same, which is provided with hard rubber screen-bars, preventing the folds from interfering with the rapid return of the fluid into the bulb. In filling the bulb, a couple of turns will unscrew it. In handsome case, satin lined. Retail price, $3.75. To physicians, $3.00.



CHRISTIAN JENSEN & CO.,

2207 Fairmount Avenue,

PHILADELPHIA, PA.

PRIVATE SCHOOL FOR THE DEAF.

Deaf Children Taught to Speak and Educated through Lip Reading. Aural Training and Defective Speech treated and improved. A Kindergarten Department for Deaf Children from three to six years old. A Training Class for Teachers of Articulation.

School re-opens September 20, 1886, at No. 7 South Merrick Street (opposite Public Buildings), Philadelphia, Pa.

Directions to Parents of Deaf Children for their Treatment from Infancy in order that they may learn Speech and Lip Reading, furnished free on application to **MARY S. GARRETT, Principal.**

NOTABLE POINTS

RELATIVE TO

Lactated Food.

IT IS A COOKED FOOD.

By the use of high steam heat the gluten flour used is partially torrefied. This is done while the flour is dry, and during the process it is in constant motion, which insures perfect cooking to every particle.

Routh says, (Infant Feeding, page 380) that by this process, "the starch granules are rendered more separable, the gluten is reduced to a more porous condition, readily acted on by the gastric juice, and as an aliment, therefore, is more nutritious and digestible."

IT IS A PREDIGESTED FOOD.

"You state that it is self-digestive as regards the conversion of insoluble starch into soluble dextrine and maltose. My experiments with it lead me to hold that this is correct." J. MILNER FOTHERGILL.

IT CONTAINS NO UNCHANGED STARCH.

By the peculiar process of manufacture, every particle of the gluten flour is subjected to the action of the malto-diastase, and by it all the starch contained is transformed into soluble carbo-hydrates.

Professor CARL SEILER says, "Examination has proved that all the starch granules are converted, as shown by their behavior to polarized light."

NO CANE SUGAR USED.

The basis of Lactated Food is the pure sugar of milk made by the improved processes of the American Milk Sugar Co. The great value of this article has been shown conclusively. Cane sugar is not used in the composition or preparation of the Food on account of its liability to cause irritation by reason of the acetic fermentation which it creates in the stomach. Milk sugar never causes this fermentation or irritation.

IT IS NON-IRRITATING.

By reason of the fact that Lactated Food is partially digested in process of Preparation, it is assimilated by the feeblest stomach, and no undigested particles pass into the bowels to irritate, and thus cause troublesome and dangerous bowel disorders.

IT IS HIGHLY NUTRITIOUS.

The nutritive elements of Lactated Food are derived from the three great cereals, Wheat, Barley, and Oats. From the Wheat is taken the pure gluten, the most nourishing substance known for the muscles and tissues; from the Barley, all the soluble albuminoid and extractive matter resulting from the most careful malting; and from the Oat, the strengthening properties for which it is so well known. The result is a food which never disappoints, and under which the feeble child or invalid rapidly rallies.

FOR CHOLERA INFANTUM.

It is the chief reliance of many eminent practitioners, and it is the safest food in summer for all young or delicate children.

Another important consideration is its low price, it being much more economical than other foods. We make four sizes, selling for 25 cents, 50 cents, $1 00, and $2.50. *A dollar can will furnish one hundred and fifty meals for an infant.*

If any physician that has not yet made a trial of the Lactated Food will write us, we will send a package of our regular size, postpaid, without charge, with the understanding that it will be given a careful trial as soon as possible.

We shall use every precaution to maintain the high standard of this Food, and to insure perfect satisfaction to the profession in its use.

WELLS, RICHARDSON & CO.,

McINTOSH GALVANIC AND FARADIC BATTERY CO.,

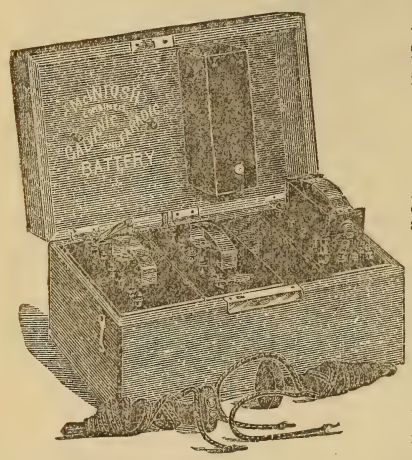
MANUFACTURERS OF THE CELEBRATED

McIntosh Combined Galvanic and Faradic Batteries,

Table, Office, and Family Batteries, Electrodes, Electric Bath Apparatus, Statical Electric Machines, Stereopticons, Solar, Monocular, and Binocular Microscopes.

AND ALL KINDS OF

PHILOSOPHICAL ELECTRICAL APPARATUS.



Schools, Colleges, Physicians, or Hospitals wanting new Apparatus, will do well to favor us with correspondence and obtain estimates. Men of scientific experience have charge of the manufacturing department. We employ the most skillful mechanics, and have the largest facilities in America for manufacturing.

We would call the Special Attention of the Medical Profession to our

Combined Galvanic and Faradic Batteries.

These Batteries are recommended by the Medical Faculty of both America and Europe, and have been adopted by the United States Government for use in Medical Department of the Army and Navy. They are

The First and Only Portable Batteries ever Invented which Give both the Galvanic and Faradic Current,

TWO DISTINCT BATTERIES IN ONE CASE.

No Physician can afford to be without one.

This celebrated Battery is constructed on an improved plan. The zincs and carbons are fastened to hard-rubber plates in sections of six each; this manner of connecting brings the plates nearer together than in any other battery, thus giving less internal resistance. The cells are composed of one piece of hard rubber, and are made in sections of six each with a drip-cup, thus one section can be handled, emptied, and cleaned, as easily and quickly as one cell. The drip-cup is to receive the elements when the battery is not in use. The fluid cannot spill or run between the cells, and there is no danger of breaking, as with glass cells. This is the only battery in which the zinc and carbon plates can be kept clean and always in order by simply rinsing them.

An extra cell (with a zinc and carbon element) is added to the combined batteries, for the purpose of producing the Faradic current. This cell gives as much force as is ever needed, and avoids exhausting the current from the Galvanic cells. All the metal work is finely nickel-plated and highly polished, and every part is put together so that it can be easily replaced by the operator. Our batteries weigh less, occupy less space, give a current of greater intensity and quantity, than any other battery manufactured.

Our illustrated Catalogue, a handsome book giving full description of all our goods, and other valuable information, sent free on application.

McINTOSH GALVANIC AND FARADIC BATTERY CO.

WHEELER'S TISSUE PHOSPHATES

Bone-Calcium Phosphate $Ca_3 2P.O._4$, Sodium Phosphate $Na_2 H.P.O._4$, Ferrous Phosphate $Fe_3 2P.O._4$, Trihydrogen Phosphate $H_3 P.O._4$.

WHEELER'S COMPOUND ELIXIR OF PHOSPHATES AND CALISAYA. A Nerve Food and Nutritive Tonic, for the treatment of Consumption, Bronchitis, Scrofula, and all forms of Nervous Debility.

The Lactophosphates prepared from the formula of Prof. Dusart, of the University of Paris. Combines with a superior Pemartin Sherry Wine and Aromatics in an agreeable cordial easily assimilable and acceptable to the most irritable stomachs.

Phosphorus, the oxidizing element of the Nerve Centres for the generation of Nerve Force; Lime Phosphate, an agent of Cell Development and Nutrition; Soda Phosphate, an excitant of Functional Activity of Liver and Pancreas, and Corrective of Acid Fermentation in the Alimentary Canal; Iron, the Oxidizing Constituent of the Blood for the Generation of Heat and Motion; Phosphoric Acid, Tonic in Sexual Debility; Alkaloids of Calisaya, Anti-Malarial and Febrifuge; Extract of Wild Cherry, uniting with tonic power the property of Calming Irritation and Diminishing Nervous Excitement.

THE SUPERIORITY OF THE ELIXIR consists in uniting with the Phosphates the special properties of the Cinchona and Prunus, of Subduing Fever and Allaying Irritation of the Mucous Membrane of the Alimentary Canal, which adapts it to the successful treatment of Stomach Derangements and all diseases of Faulty Nutrition, the outcome of Indigestion. Malassimilation of Food, and *failure of supply* of these essential elements of Nerve Force and Tissue Repair.

The special indication of this combination of Phosphates in Spinal Affections, Caries, Necrosis, Ununited Fractures Marasmus, Poorly Developed Children, Retarded Dentition, Alcohol, Opium, Tobacco Habits, Gestation and Lactation, to promote Development, etc., and as a *physiological restorative* in Sexual Debility, and all used up conditions of the Nervous System, should receive the careful attention of good therapeutists.

There is no strychnia in this preparation, but when indicated, the Liquor Strychniæ of the U. S. Dispensatory may be added, each fluid drachm of the solution to a pound bottle of the Elixir making the 64th of a grain to a half fluid ounce, an ordinary dose, a combination of a wide range of usefulness.

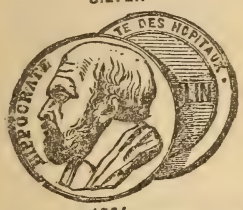
DOSE—For an adult, one tablespoonful three times a day, after eating; from seven to twelve years of age, one dessertspoonful; from two to seven, one teaspoonful. For infants, from five to twenty drops, according to age.

Prepared at the Chemical Laboratory of T. B. WHEELER, M. D., Montreal, D. C.

Put up in pound bottles and sold by all Druggists at One Dollar.

MATHEY-CAYLUS' GLUTEN

SILVER



1854

CAPSULES

OF

PURE COPAIBA AND OTHER MEDICINES.

SILVER

1854

Adapted and recommended for the cure recent or chronic Gleets, Fluor Albus, etc., etc.

The MATHEY-CAYLUS' CAPSULES, *coated with gluten*, present the most perfect mode for administering Copaiba, Cubebs, Norway Tar, Turpentine, and other remedies, the disagreeable odor and taste of which are often a hindrance to their use. This mode of preparing capsules, which has been approved by the Academy of Medicine, has been recommended in their clinical lectures by eminent Professors in the hospitals of Paris, as well as in those of New York and London.

By the first physicians of the hospitals of Paris, London, and New York.

SPECIAL ADVANTAGES OF MATHEY-CAYLUS' GLUTEN CAPSULES.—Being formed of thin, transparent, and readily assimilated coating, they so cover and disguise the medicine to be given, that it can be taken without disgust, but with ease. In this respect, they differ widely from the gelatine capsules, which have a hard, thick coating, which swells beyond measure, in the stomach, are hard to be swallowed, and which is of great importance, they create disturbance in the digestive functions.

The special advantage of the coating of gluten consists in the fact that, notwithstanding its extra thinness, and although it softens under the action of the gastric juice, it can pass the stomach without breaking, and only in the intestines is the medicinal matter liberated; this accounts for the fact that Mathey-Caylus' Capsules never cause the nausea, eructations, and dyspeptic symptoms, which are complained of by many persons using other preparations.

Finally, their regular ovoid form, which is so favorable to swallowing, their pleasant appearance, which dispels all disgust, and the advantage of being entirely free from taste and smell, recommend the use of these capsules even to the most delicate persons.

Thankful to the Medical Profession for the liberal patronage heretofore bestowed upon us, we hope that they will continue their favors, and we are convinced that they will never have any reason to regret the generous welcome they have given to our preparations.

MATHEY-CAYLUS' CAPSULES are never sold, except in bottles having the following inscription printed in the glass: MATHEY-CAYLUS A PARIS. And each bottle contains 64 capsules, making them the cheapest capsules in the market.

The following different kinds of Mathey-Caylus' Gluten Capsules are now offered:

COPAIBA AND TANNIC ACID,
COPAIBA AND S. N. OF BISMUTH,
COPAIBA AND CATECHU,
COPAIBA AND MAGNESIA,
COPAIBA, CUBEBS AND ALUM,
COPAIBA, CUBEBS AND RHATANY,
COPAIBA AND RHATANY,
COPAIBA AND CITRATE OF IRON,
COPAIBA AND CUBEBS,
COPAIBA PURE,
COPAIBA, CUBEBS AND CARB. OF IRON,
VENICE TURPENTINE, NORWAY TAR, PURIFIED,
CUBEBS AND TURPENTINE,
CUBEBS AND TANNATE OF IRON,
CUBEBS AND ALUM,
CUBEBS PURE,
COPAIBA AND MATICO,
COPAIBA, IRON AND OIL OF SANDAL,
COPAIBA AND OIL OF SANDAL,
COPAIBA, PEPSIN AND BISMUTH,
COPAIBA AND TAR,
COPAIBA, CUBEBS AND OIL OF SANDAL.

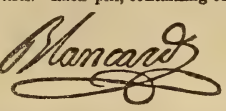
BLANCARD'S PILLS

OF UNCHANGEABLE IODIDE OF IRON.

Blancard's Pills of Iodide of Iron are so scrupulously prepared, and so well made, that none other have acquired a so well deserved favor among physicians and pharmaceutists. Each pill, containing one grain of proto-iodide of iron, is covered with finely pulverized iron, and covered with balsam of tolu. Dose, two to six pills a day. The genuine have a *reactive silver seal* attached to the lower part of the cork, and a green label on the wrapper, bearing the fac-simile of the signature of



Pharmacien, No. 40 Rue Bonaparte, Paris.

Without which none are genuine.

TANRET'S PELLETIERINE

For the Treatment of Tape-Worm (Tænia Solium.)

This New Tænifuge, the Active Alkaloid of Pomegranate Bark, has of late come into extensive use in France for the treatment of Tape-Worm (Tænia Solium). The results of numerous experiments with it at the Marine Hospitals of Toulon, St. Mandrier, etc., and in the Hospitals of Paris, St. Antoine, La Charite, Necker, Beaujon, etc., have all been most satisfactory. Doctor Dujardin Beaumetz, Member of the Academy of Medicine, and Prof. Laboulbene, in their report to the Society of Therapeutics, have given it their unqualified approval after the most searching experiments. This preparation is pleasant to administer, and if certain preliminaries are observed success will be insured.

Sold only in Bottles containing one dose.

TANRET'S ERGOTININE.

ALKALOID AND ACTIVE PRINCIPLE OF SPURRED RYE.

This is a well defined Alkaloid that must not be confounded with Ergotine or other extracts; it is given in doses of from ¼ to ½ Milligramme (1-240th to 1-120th of a grain), in all cases where Ergot is indicated, viz.: Flooding, Post-partum Hemorrhages, Metrorrhagia, etc., etc.

It is put up in the following forms:

Syrup Containing ¼ Milligramme to each teaspoonful; DOSE from 1 to 6 teaspoonsfuls per day.

Solution for hypodermic purposes, Containing 1 Milligramme to each cubic Centimeter; DOSE, from 8 to 10 drops.

The Institute of France has awarded one of its Prizes to Mr. Chas. Tanret for the discovery of these Alkaloids.

Tanret's Pelletierine and Ergotinine are only prepared by Mr. Chas. Tanret, Laureate of the Institute of France, 64 Rue du Rempart, Paris.

Sole Agents for the United States, E. FOUGERA & CO., 30 North William St., N. Y.

PAMPHLET ON PELLETIERINE AND ERGOTININE SENT ON APPLICATION.

BOUDAULT'S PEPSINE

The Only Pepsine Used in the Hospitals of Paris for the Last 30 Years.

Unlike the various substitutes which, in most cases, are but unscientific or incompatible compounds, forced upon the Medical Profession as aids to digestion by extensive advertising, but which, when submitted to the proper tests, are found to be useless as digestive agents, Pepsine is constantly gaining in the esteem of the careful practitioner.

Since the introduction of Pepsine by Boudault and Corvisart, in 1854, the original BOUDAULT'S PEPSINE HAS BEEN AT ALL TIMES CONSIDERED THE BEST, as is attested by the awards it has received at the Expositions of 1867, 1868, 1872, 1873, in 1876 at the Centennial Exposition of Philadelphia, and in 1878 at the Paris Exposition.

The most reliable tests, carefully applied, will satisfy every one that BOUDAULT'S PEPSINE HAS A MUCH HIGHER DIGESTIVE POWER than the best Pepsines now before the Profession, and is therefore especially worthy of their attention.

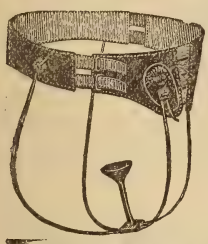
BOUDAULT'S PEPSINE is prepared in the form of Pepsine Acid and Pepsine Neutral. It is sold in bottles of one ounce, with a measure containing exactly five grains; also in bottles of 4, 8, and 16 ounces for dispensing.

BOUDAULT'S WINE OF PEPSINE.

Formula of Dr. Corvisart.

The taste of Pepsine being perfectly disguised in this Wine, it may be recommended to persons who have difficulty in taking Pepsine in the form of powder. This Wine is tested so that a tablespoonful of it is equal in digestive power to ten grains of Boudault's Pepsine in powder. Sold only in 8 oz. Bottles.

Agents for the United States, E. FOUGERA & CO., New York.



PHYSICIANS!

YOUR ATTENTION IS INVITED

—TO THE—

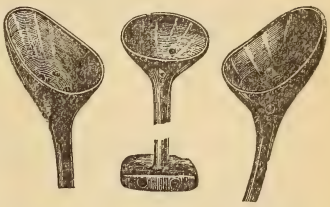
DR. McINTOSH NATURAL UTERINE SUPPORTER.

THIS INSTRUMENT MEETS THE WANTS OF THE PROFESSION MORE PERFECTLY than any other Uterine Supporter ever made. This is proven by the fact that during the past fifteen years more have been sold than of all other Supporters combined. *It never fails to give perfect satisfaction, even in the most difficult cases,* where any instrument can be used.

The **ABDOMINAL PORTION** is a broad morocco leather belt with elastic straps to buckle around the hips, with concave front, so shaped as to hold up the abdomen.

The **UTERINE PORTION** is a cup and stem made of highly-polished hard rubber, very light and durable, shaped to fit the neck of the womb, with openings for the secretions to pass out, as shown by the cuts. Cups are made with extended lips to correct flexions and versions of the womb.

The cup and stem is suspended from the belt by two soft elastic rubber tubes, which are fastened to the front of the belt by simple loops, pass down and through the stem of the cup and up to the back of the belt. These soft rubber tubes being elastic adapt themselves to all the varying positions of the body and perform the service of the ligaments of the womb.



Anteversion. Prolapsus. Retroversion

The instrument is very comfortable to the patient, can be removed or replaced by her at will, can be worn at all times, will not interfere with nature's necessities, will not corrode, and is lighter than metal. It will answer for all cases of Anteversion, Retroversion, or Prolapsus of the Womb. It is used by our leading physicians with never-failing success.

OUR REDUCED PRICE TO PHYSICIANS IS $5.00 EACH.

Instruments sent by mail at our risk on receipt of price; or we can send by express, C. O. D., with express charge for returning money added.

CAUTION.

Owing to the great success of our Supporter, several worthless imitations have been made which are often substituted for our instruments, to the detriment of the patient and the disappointment of the physician. To protect our patrons from imposture, we stamp each pad of the Abdominal belt in gilt letters, "Dr. McIntosh N. U. Supporter, Chicago, Ill."; the base of each cup is stamped "Dr. McIntosh N. U. S. Co., Chicago, Ill., U. S. A."

The box in which the instrument is put up contains directions for the application of the instrument pasted inside the cover, having the fac simile signature of Dr. L. D. McIntosh.

For further information in regard to the instrument, address

DR. McINTOSH NATURAL UTERINE SUPPORTER CO.,

300 AND 302 DEARBORN STREET, CHICAGO, ILL.

Our valuable Pamphlet on "Displacement of the Womb," giving a more complete description of the Instrument, will be sent you free on application.

LEVIS'S METALLIC SPLINTS.

FLEXIBLE, PERFORATED, NICKEL-PLATED, Conformable to every size and condition of Limbs. VERY LIGHT, INDESTRUCTIBLE, and INEXPENSIVE. The complete set consists of **21 pieces** in a neat, compact case. Full descriptive circulars sent on application. **PRICE, $15.00 Per Set.**

BROMIDIA

The Hypnotic.

FORMULA:

Every fluid drachm contains 15 grains EACH of pure Chloral Hydrat. and purified Brom. Pot., and ⅛ grain EACH of Gen. Imp., Ext. Cannabis Ind., and Hyoscyam.

DOSE:

One-half to one fluid drachm, in WATER or SYRUP, every hour, until sleep is produced.

INDICATIONS:

Sleeplessness, Nervousness, Neuralgia, Headache, Convulsions, Colic, Mania, Epilepsy, Irritability, etc. In the restlessness and delirium of Fevers, it is absolutely invaluable.

It does not Lock Up the Secretions.

PAPINE

The Denarcotized Opiate.

Papine is the Anodyne or pain-relieving principle of Opium, the Narcotic and Convulsive elements being eliminated. It has less tendency to cause Nausea, Vomiting, Constipation, etc.

INDICATIONS:

Same as Opium or Morphia.

DOSE:

One fluid drachm represents the Anodyne principle of ½ grain of Morphia.

IODIA

The Alterative and Uterine Tonic.

FORMULA:

Iodia is a combination of Active Principles obtained from the Green Roots of STILLINGIA, HELONIAS, SAXIFRAGA, MENISPERMUM, AND AROMATICS. Each fluid drachm also contains five grains Iod. Pot., and three grains Phos. Iron.

DOSE:

One to two fluid drachms (more or less, as indicated,) three times a day, before meals.

INDICATIONS:

Syphilitic, Scrofulous and Cutaneous Diseases, Dysmenorrhœa, Menorrhagia, Leucorrhœa, Amenorrhœa, Impaired Vitality, Habitual Abortion, and General Uterine Debility.

EVERY PHYSICIAN SHOULD USE THE BEST!

OLEO-CHYLE

THE ONLY PREPARATION OF NORWEGIAN COD LIVER OIL WHICH CONTAINS

70 PER CENT. OF OIL IN A DIGESTED FORM.

FORMULA OF OLEO-CHYLE.

Peptonized Cod Liver Oil.....85 Min.	Oleic Hypophosphites.....5 Grs.
Pancreatine.....2 Grs.	Sodium Hyocholate.....¾ Grs.
Water.....25 Min.	MIX.

DOSE: Two teaspoonfuls thrice daily at meal times.—It is preferable to take *Oleo-Chyle* in milk.

OLEO-CHYLE is **NOT AN EMULSION,** neither is it a simple admixture of Cod Liver Oil with Pepsin and Pancreatine; *it is* **Pure Norwegian Cod Liver Oil, perfectly digested with both Pepsin and Pancreatine** in exactly the same manner and consuming about the same length of time under the same conditions as to temperature, etc., as oil would be subjected to by the **human stomach and duodenum** before being presented to the **lacteals for absorption into the blood.**

OLEO-CHYLE contains **no gum, sugar, glycerine, Irish moss or any viscid substance whatever** to hold the oil in suspension as in all artificial Emulsions, (with all of these ingredients **Oleo-Chyle** is incompatible.)

In the preparation of **OLEO-CHYLE** we use none but the

Pure "Lafoten" Norwegian Cod Liver Oil,

manufactured on the Island of Lafoten, Norway, and imported by ourselves direct, thus avoiding the liability of adulteration while in the hands of Cod Liver Oil Dealers in London or Hamburg. We therefore guarantee its purity.

This Oil is by far the richest in **IODINE** and all **FAT PRODUCING** and **LIFE SUSTAINING** qualities as well as the most pleasant to the taste.

——OPINIONS OF THE MEDICAL PROFESSION.——

Spencer, Ind., Feb. 19th, 1886.

Messrs. Geo. W. Laird & Co.

The patient to whom I gave "**OLEO-CHYLE**" was suffering from mal-assimilation of food, loss of weight, with variable appetite, giving such strong symptoms of Consumption that we thought she could survive but a few months at most. *She had taken Pepsin and Cod Liver Oil in many forms but did not gain a pound,* but after taking "**OLEO-CHYLE**" in fresh milk for two weeks she gained thirteen pounds in weight, and so much in looks and spirits that she is like an entirely different person. This is a strong letter, but I know of what I speak, as the patient is my wife, E. N. MULLINNIX, M.D.

Irvington, N. J., Jan. 14th, 1886.

Messrs, Geo. W. Laird & Co.

In its adaptation to Chronic Pulmonary Diseases its ready assimilation, its non-disturbance of the gastric functions, and its general benefit in all cases of debilitated constitutional diseases,

"OLEO-CHYLE" FURNISHES THE DESIDERATUM.

Easily taken, and readily compatible with milk, it supplies all that is required by nature to build anew the wasting tissues. JOSEPH L. WADE, M.D.

913 7th Ave., N. Y. City, Dec. 30th, 1884.

Messrs. Geo. W. Laird & Co,

I have fully tested your "**OLEO-CHYLE**" upon myself with entire satisfaction. For several years I have been advised to take Cod Liver Oil for faulty assimilation and deficiency of fat in the body. I have never been able to digest any form of oil from the plain oil to the *elegant emulsions*(?) so-called. *Your preparation, which is a permanent milky fluid,* I take and assimilate with ease, and already feel the good effects thereof. F. S. GRANT, M.D.
Med. Ex. Provident Life Ass. Society.

Victoria, Texas, July 17th, 1886.

Messrs. Geo. W. Laird & Co.

The sample of "**OLEO-CHYLE**" you sent me on Dec. 4th, 1884, has just been used by a patient, who has been greatly benefitted by it, so much so that I send $2.00 for two more bottles by express.

THOS. R. COCKE, M.D.

This sample was 19 months and 13 days old, but its medicinal value and palatability were not impaired.

If your Druggist does not keep **OLEO-CHYLE** in stock, do not wait for him to obtain it, but send us One Dollar by mail and we will send a Bottle by return express prepaid.

WRITE TO US FOR PAMPHLET AND MENTION THIS JOURNAL.

FLUID

32° Fah. 0° Cent.

Fluid Cosmoline [*Petroleol*] is a fixed oil of Petroleum, a pure hydro-carbon prepared expressly for medical use. From it all the volatile and otherwise offensive properties of the crude Petroleum have been separated, without the aid of chemicals. Perfectly indifferent to atmospheric action, it remains inalterable in any climate. It is neutral in reaction, bland, soothing, cooling, and may therefore be applied to the most sensitive conditions without irritation. Flowing at 32° Fahr., it may be used may be warmed to any temperature the body can endure. It will be found excellent to relax the skin, to protect irritated surfaces from the air, and to use as a constituent in liniments, ointments and plasters, where an emollient is needed. For these and many other purposes, obvious to the medical profession, it will be found superior to olive oil, or to any vegetable or animal oils, which undergo decomposition and turn rancid. It contains no foreign ingredient.

SAMPLES FURNISHED UPON APPLICATION.

(McARTHUR.)

For the treatment of Consumption and Tubercular Diseases.

"Dr. McArthur is a sanguine advocate of the Churchill Method. His Syrup of the Hypophosphites is an excellent and PURE preparation; and though we do not concede all the virtues claimed for it as a remedy for Consumption, yet we can testify to its great value from actual trial."

HENRY GIBBONS, M. D.,
Professor of the Principles and Practice of Medicine, University College, San Francisco, editor "Pacific Medical and Surgical Journal."

"I do not hesitate to commend it to the profession as worthy of confidence."

PROFESSOR HARVEY L. BIRD, Baltimore.

"I now prescribe it habitually in my private practice, and ALWAYS WITH BENEFIT when the cases are properly selected."

PROFESSOR JOHN H. LYNCH, M. D., Baltimore, Md.

"Dr. McArthur's chemically pure Syrup of Hypophosphites is becoming thoroughly recognized as an efficient remedy in the treatment of consumption and wasting diseases."

"Dr. McArthur is not only a good chemist and physiologist; he is, above all, a practical physician, who, after years of medical experience, is convinced that, in the treatment of Pulmonary Phthisis and kindred diseases, his preparation of Hypophosphites possesses greater therapeutic efficacy than any medicine hitherto used; and the results of treatment with his Syrup appear amply to bear out his views."

J. J. LAWRENCE, A. M., M. D.,
Editor St. Louis "Medical Brief."

℞ SYR: HYPOPHOS: COMP: McARTHUR, ONE BOTTLE.

SUCCUS ALTERANS.

(McDADE).

SUCCUS ALTERANS is a purely vegetable compound of the preserved juices of Stillingia Sylvatica, Lappa Minor, Phytolacca Decandra Smilax Sarsaparilla, and Xanthoxylum Fraxineum, as collected by DR. GEO. W. MCDADE exclusively for ELI LILLY & CO., and endorsed by DR. J. MARION SIMS.

SUCCUS ALTERANS continues to gain favor from its remarkable Alterative and Tonic properties, *eliminating specific poison from the blood*, and *increasing the proportion of red corpuscles in anæmic patients* to a wonderful degree.

SUCCUS ALTERANS in venereal and cutaneous diseases is fast supplanting Mercury, the Iodides and Arsenic; and is a certain remedy for Mercurialization, Iodism, and the dreadful effects often following the use of Arsenic in skin diseases.

SUCCUS ALTERANS is also strongly recommended for its Tonic and Alterative effects in the myriad forms of scrofulous disease, and in all cases where anæmia is a factor. Such patients rapidly develop a good appetite, sleep soundly, and gain flesh rapidly Many cases are on record where patients increased ten to twenty-five pounds in weight i a few weeks.

SUCCUS ALTERANS may be given for any length of time without injury to the patien

SUCCUS ALTERANS is now endorsed by leading members of the medical profession, an in use by many hospitals of note.

SUCCUS ALTERANS is put up only in round amber bottles holding sixteen fluid ounce which is sufficient for from two to six weeks' treatment.

ANY PHYSICIAN who has not received DR. MCDADE'S latest publication, the MONOGRAPHIA SYPHILITICA for JANUARY, 1887, should send their address, mentioning th journal, and we will mail a copy. It contains a paper, illustrated with colored plates, b Dr. D. H. GOODWILLIE, of New York, on the "Sequelæ of Syphilis," reports of cases i practice, and many other valuable papers.

SUCCUS ALTERANS is supplied by reputable wholesale and retail druggists everywhere. Agency for Great Britain, etc., JOHN M. RICHARDS, 46 HOLBORN VIADUCT, LONDON, E. C.

COCA CORDIAL!

A Palatable Preparation of Coca Erythroxylon,

Containing, in an agreeable vehicle, the active medicinal principle, free from the bitter astringent constituents of the drug.

The sedative, tonic, and stimulant effects of coca erythroxylon and its preparations, and their wide application in medical practice, are now too well known to the medical profession to need extended comment.

Coca has been extensively used with gratifying success for the relief of morbid conditions depending on nervous exhaustion, in the nervous irritability following excesses of any kind, in neurasthenia, to facilitate digestion in dyspepsia, to relieve the morbid depression of spirits resulting from exhausting mental labor, in nausea and vomiting of reflex origin, and in the treatment of the alcohol and opium habits.

In a great variety of affections it has proved itself to be a drug ranking in therapeutic importance with opium and quinine.

The Coca Cordial presents the drug in a palatable form, commending it especially to the large class of persons of delicate nervous organization, for whom it is most often indicated.

In its preparation the astringent and bitter constituents of Coca, which are not essential to its medicinal action, have been eliminated, while care has been taken to retain unchanged the active principle cocaine. One fluidounce of the cordial represents 60 grains of coca leaves of good quality, the vehicle employed being an agreeable cordial of a rich vinous flavor.

☞ **We shall be pleased to send on application a circular more fully descriptive of Coca Cordial and its application, and we trust physicians will communicate to us the results of their experience in the use of this preparation, so far as it is likely to be of general interest to the profession.**

PARKE, DAVIS & CO.,

THE BEST

—ANTI-SEPTIC—

For Internal and External Use.

FORMULA.—Listerine is the essential Antiseptic constituent of Thyme, Eucalyptus Baptisia, Gaultheria, and Mentha Arvensis in combination. Each fluid drachm also contains two grains of refined and purified Benzo-boracic Acid.

ANTISEPTIC, PROPHYLACTIC, DISINFECTANT, NON-TOXIC, NON-IRRITANT, NON-ESCHAROTIC, AGREEABLE, STRICTLY PROFESSIONAL and SCIENTIFIC.

Listerine comes nearer the Ideal Antiseptic than any preparation now before the Medical World.

Send for New Formula Book and General Reports, establishing its value externally in Surgery, Obstetrics, Gynecology, Leucorrhœa, Gonorrhœa, and all Mucous Membrane Catarrhs; internally in Typhoid and other Fevers, Zymotic Diseases, Diphtheria, Scarlet Fever, Dyspepsia, Dysentery, Diarrhœa, and forms of Cholera, etc., and as a general Prophylactic

THE BEST

—ANTI-LITHIC—

For the Uric Acid Diathesis.

FORMULA.—Each fluid drachm of "Lithiated Hydrangea" represents thirty grs. of Fresh Hydrangea, and three grs. of Chemically Pure Benzo-Salicylate of Lithia. Prepared by our improved process of osmosis, it is invariably of definite and uniform therapeutic strength, and hence can be depended upon in clinical practice.

KIDNEY-ALTERATIVE AND ANTI-LITHIC, RELIABLE, UNIFORM, AND DEFINITE.

The solution and elimination of an excess of uric acid and urates is best attained by an intelligent combination of certain forms of Lithia and a Kidney Alterative.

The ascertained value of Hydrangea in Calculous Complaints and Abnormal Conditions of the Kidneys through the earlier reports of Drs. Alice, Horsley, Monkur, Butler, and others, and the well known utility of Lithia in the diseases of the uric acid diathesis, at once justified the therapeutic claims for Lambert's Lithiated Hydrangea when first announced to the Medical Profession, and it is now regarded by Physicians generally as the best and most soothing Kidney Alterative and Anti-lithic Agent yet known in the treatment of Urinary Calculus, Gout, Rheumatism, Bright's Disease, Diabetes, Cystitis, Hæmaturia, Albuminuria, and Vesical Irritations generally.

LAMBERT PHARMACAL CO., 116 OLIVE ST., ST. LOUIS.

30,000 PHYSICIANS
NOW PRESCRIBE

HYDROLEINE

(HYDRATED OIL,)

For Consumption and Wasting Diseases. It Produces Immediate Increase in Flesh and Weight.

FORMULA.

Each Dose of Two Teaspoonfuls, equal to 120 Drops, contains:

Pure Cod Liver Oil	80 m. (drops)	Soda	½ Grain.
Distilled Water	35 "	Boric Acid	½ "
Soluble Pancreatin	5 Grains.	Hyocholic Acid	⅒ "

DOSE:

Two teaspoonfuls alone, or with twice the quantity of water, to be taken thrice daily after meals.

Hydroleine (Hydrated Oil) is not a simple alkaline emulsion of oleum morrhua, but a hydro-pancreated preparation containing acids and a medicum of soda. Pancreatin is the digestive principle of fatty foods, and, in the soluble form here used, completely saponifies the oleaginous material so necessary to the reparative process in all wasting diseases.

Lautenbach's researches on the function of the liver would show the beautiful adjustment of therapeutics in preparation of Hydroleine, furnishing, as it does, the acid and soda necessary to prevent self-poisoning by reabsorption of morbid tubercular detritus and purulent matters into the general circulation.

Each bottle in nutritive value exceeds ten times the same bulk of cod liver oil. It is economical in use and certain in result.

Sold at all Drug Stores at $1.00 per Bottle.

The principles upon which this discovery is based have been described in a treatise on "The Digestion and Assimilation of Fats in the Human Body," by H. C. BARTLETT, Ph. D., F. C. S., and the experiments which were made, together with cases illustrating the effect of Hydrated Oil in practice, are concisely stated in a Treatise on "Consumption and Wasting Diseases," by G. OVEREND DREWRY, M. D.

Copies of these Works sent free on Application.

WM. F. KIDDER & CO., 83 John Street, New York.

Agents for U. S.

Also exclusive Agents for SVAPNIA, or Bigelow's purified Opium, in SCALES and HALF-GRAIN GRANULES.

SCOTT'S EMULSION

OF PURE COD LIVER OIL WITH HYPOPHOSPHITES OF LIME AND SODA.

THE STANDARD EMULSION OF COD LIVER OIL.

The ONLY Preparation of its class that will not SEPARATE nor SPOIL in any climate.

IT IS MADE FROM THE PUREST NORWEGIAN COD LIVER OIL, COMBINED WITH CHEMICALLY PURE HYPOPHOSPHITES AND GLYCERINE.

Acknowledged by leading Physicians in the U. S. and many other Countries to be the most ELEGANT most PALATABLE and EASILY DIGESTED preparation in the World, and can be tolerated longer by Children and persons with delicate stomachs than any other.

WE ASK A CAREFUL COMPARATIVE TEST WITH ANY OR ALL SIMILAR PREPARATIONS.

FORMULA: 50 per cent. of Pure Cod Liver Oil, 6 grs. of the Hypophosphites of Lime, and 3 grs. of the Hypophosphite of Soda to a fluid ounce. Emulsified with mucilage and Glycerine.

S. & B's BUCKTHORN CORDIAL, RHAMNUS FRANGULA.

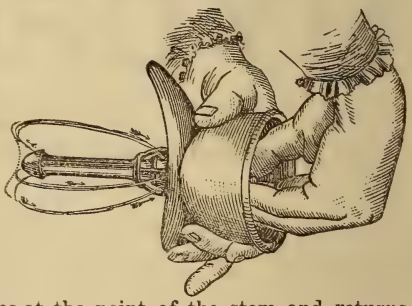
Is giving universal satisfaction to the profession, for its mild but certain and efficient cathartic action. It seems to be *almost* a *specific* for *habitual constipation*, and we are constantly in receipt of the most flattering reports regarding it. The care we use in its preparation—having the bark always the proper age, and properly exhausted—makes it always reliable in its action. Be sure and specify S & B. Buckthorn Cordial.

To those who have for any reason never yet tried these preparations, we will be pleased to send samples free by express.

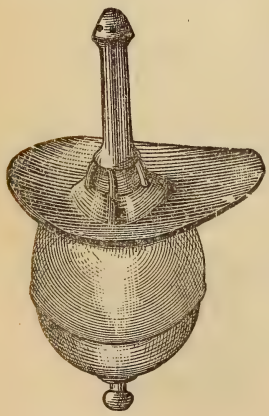
SCOTT & BOWNE, Mfg. Chemists, 132 & 134 S. 5th Ave., N. Y

"PALLAS" SYRINGE.

VAGINAL AND RECTAL.



A MOST PERFECT and simply constructed Syringe for medicating and irrigating the vaginal cavity. The novel bulb of this Syringe, when doubled upon itself, as shown in the cut, will cause no fluid to be left, as is so apt to happen with the ordinary bulbs, and when filled will contain just enough fluid for the expansion of the vaginal folds. The hard rubber labial shield, with its plug, when firmly pressed against the labia, will both prevent spilling and soiling of linen, and the fluid can therefore be kept in circulation and in contact with the parts by repeating the pumping motion of the bulb. It will also be noticed that the fluid escapes as a spray from the large holes at the point of the stem and returns through the holes at the root of same, which is provided with hard rubber screen-bars, preventing the folds from interfering with the rapid return of the fluid into the bulb. In filling the bulb, a couple of turns will unscrew it. In handsome case, satin lined. Retail price, $3.75. To physicians, $3.00.



CHRISTIAN JENSEN & CO.,

2207 Fairmount Avenue,

PHILADELPHIA, PA.

COLDEN'S Liquid Beef Tonic.

Established 15 Years.
OBSERVE the NAME.
Beware of Imitations.

ORIGINAL LABEL:
"Colden's Liebig's Liquid Extract of Beef and Tonic Invigorator."

An Invaluable Aid in Medical Practice.

Differs Essentially from all other Beef Tonics.

COLDEN'S **Liquid Beef Tonic** is endorsed by scores of physicians, who are growing to realize more and more its importance in repairing, in accordance with the principles of dietetics, the **waste which disease entails.** It consists of the extract of Beef (by Baron Liebig's process) spirit rendered non-injurious to the most delicate stomach by extraction of the Fusel Oil, soluble Citrate of Iron, Cinchona, Gentian and other bitter tonics. An official analysis of this preparation by the eminent Chemist, ARTHUR HILL HASSALL, M. D., F. R. S., and an endorsement by the late SIR ERASMUS WILSON, F. R. S., is printed on the label of each bottle.

As a **blood food,** and a **reliable tonic** in all cases of debility and weakness, Malarial Fever, Anæmia, Chlorosis, Incipient Consumption, etc., it is the best preparation ever used. It acts directly on the sentient Gastric Nerves, stimulating the follicles to secretion, and gives to weakened individuals that first prerequisite to improvement—an appetite. It strengthens the nervous system when unstrung by disease, and has been employed with remarkable success as a remedy for Drunkenness and the Opium Habit.

Its Range of Action Embraces all Cases of Debility.

In order that physicians may form some idea of the nature of its ingredients, I will upon application in person, or by letter (enclosing a card), send a sample bottle of COLDEN'S LIQUID BEEF TONIC to any physician in regular standing, in the United States. Please ask your Dispensing Druggist (if he has not already a supply) to order it. In prescribing this preparation, physicians should be particular to mention "COLDEN'S"—*viz.:* "***Ext. carnis, fl. comp. (Colden's.)***" It is put up in pint bottles, and can be had of Wholesale and Retail Druggists generally throughout the United States.

C. N. CRITTENTON, Sole Agent, 115 Fulton St. New-York.

GLENN'S Sulphur Soap.

ALL physicians know that ***skin diseases*** are more or less constitutional, or dependent upon some specific poison in the blood, which if eradicated by internal treatment needs something to remove its appearance from the surface. Experience has proved that the best possible aid in the accomplishment of this end is obtained by the use of ***Sulphur in soap.*** GLENN'S SULPHUR SOAP is the best combination of its kind, and the one now generally used. It is for sale by all Druggists, at **25** cents a cake, or 3 cakes for **60** cents.

CONSTANTINE'S PINE TAR SOAP

Has been on trial among physicians for very many years as a toilet Soap and Healing Agent, and its superior virtues have been unanimously conceded **in all cases where the use of tar is indicated.** Unsolicited expressions of its excellence have been received from the Medical Faculty generally. IT IS THE BEST TAR SOAP MADE. None genuine unless stamped "A. Constantine's Persian Healing Pine-Tar Soap." For sale by all Druggists.

Samples of either of the above-named Soaps will be sent free upon application in person or by letter (enclosing card) to any physician in regular standing in the United States. C. N. Crittenton, 115 Fulton Street, New York. Please mention "THE MEDICAL AND SURGICAL REPORTER."

Carl L. Jensen

Sole Originator of

Pepsin in Scales

OR

"Crystal" Pepsin

2039 Green St.
Philadelphia.

Physicians desirous of obtaining the genuine article, when prescribing Scale Pepsin or "Cryst." Pepsin, will not alone lend their aid and encouragement to the inventor, but will benefit themselves and patients as well, by simply prescribing this Pepsin thus: "Jensen's Pepsin," drawing a heavy line under the name "Jensen."

The profession generally takes it for granted that druggists are well aware that the physicians never intend to prescribe the imitations of preparations of established merits, which are brought to light solely through the knowledge and technicalities of the inventor or originator, acquired by protracted study and experiments. Imitations have never yet been known to supersede the article imitated, but furnish most convincing testimony to the worth of the article counterfeited. I am continually improving this valuable preparation. Besides its enormous digestive strength, it possesses a keeping quality not before found in any Pepsin preparation, owing to its being of a brittle, scaly texture, reduced to the shape of small granular fragments, it is perfectly soluble and pulverizes easily. It contains no foreign matter like preparations of other make, as Pepsin Manufacturers, heretofore, could not accomplish this without adding large quantities of either starch or sugar of milk.

Physicians who have not yet tried this preparation, or who have been imposed upon, will meet with gratifying results by simply prescribing this Pepsin, thus: "Jensen's Pepsin," as it will prevent substitutions.

Samples promptly forwarded, post-paid.

Faithfully

CARL L. JENSEN.

Apollinaris

"THE QUEEN OF TABLE WATERS,"

HAS RECEIVED THE

HIGHEST AWARD

LONDON, 1884,

AND IS SUPPLIED UNDER

ROYAL WARRANT

TO

H. R. H. THE PRINCE OF WALES.

ANNUAL SALE, 10 MILLIONS.

Of all Grocers, Druggists & Min. Wat. Dealers.

BEWARE OF IMITATIONS.

Friedrichshall.

THE WELL-KNOWN APERIENT MINERAL WATER.

IMPORTANT NOTICE.

By reason of an improved method of caption, by which dilution avoided, FRIEDRICHSHALL WATER will be found now to be of considerably greater strength *and* efficacy *than heretofore.*

The ordinary dose is a large wineglassful (4 ounces). Most efficacious when taken fasting and mixed with an equal quantity of hot water.

"I know nothing at all equal to Friedrichs all. The LONGER it is taken, the SMALLER is the quantity necessary to effect the purpose."

Sir HENRY THOMPSON, F.R.C.S., London.

OF ALL DRUGGISTS AND MINERAL WATER DEALERS.

SAVORY & MOORE beg to call the attention of the Profession to some of their Special Preparations, the purity and uniform strength of which are guaranteed.

Pancreatic Emulsion. In Consumption, Wasting, LOSS OF THE POWER OF DIGESTION AND ASSIMILATION, this pure drug is the MOST POTENT REMEDY. This is now attested by the published records of numerous medical men, extracts of which accompany each bottle.

Peptodyn, the New Digestive, is a combination of the whole of the digestive secretions, forming an invaluable remedy in the treatment of all forms of Dyspepsia, and all diseases arising from imperfect nutrition. Peptodyn is intended as a general promoter of digestion for persons not necessarily considered in bad health; thus, when taken about a quarter of an hour after a meal, it will be found to assist digestion in a remarkable manner, and prevent the discomfort which often follows the partaking of a full meal by persons in good health.

Pancreatine Powder, for Indigestion and Loss of APPETITE. This palatable and popular remedy effects the digestion and assimilation of all food, especially of FATTY SUBSTANCES, and is therefore invaluable to patients who are unable to digest Cod Liver Oil, and who are thus deprived of its nourishing and invigorating properties.

Gelatine Discs for Hypodermic Use—Of Morphia, CODEIA, ERGOTINE, ATROPIA, STRYCHNIA, APOMORPHIA, etc. The chief features of these discs are their instant solubility, by which hypodermic solutions can be instantly obtained of uniform and reliable strengths; they keep good for an unlimited period in their dry state, and are extremely portable. (Prepared in accordance with Dr. Sansom's recommendation.)
In tubes, each containing 25 discs.

Etherodine (Substitute for Chlorodyne). A clear, bright fluid, pleasant to the taste, readily miscible with water or any suitable menstruum. The therapeutical properties of ETHERODINE are identical with those of CHLORODYNE, but the former is an elegant preparation, and more convenient for use.

Gelatine Discs for Ophthalmic Purposes.
"Much smaller doses of medicaments such as Atropine, Calabar Bean Extract, Sulphate of Zinc, Morphia, etc., etc., suffice to produce a marked effect by this form of application, than when drops are introduced."—*The Lancet.*
In tubes, each containing 100 discs.

Gelatine Lamels for Internal Administration, consist of thin, pliable, and, in most cases, transparent sheets of uniform thickness, accurately divided into squares by raised lines, each square containing an exact dose of the medicine with which the sheet is impregnated.
In sheets, each consisting of 24 squares.

Datura Tatula, for Asthma, Hay Fever, and Chronic BRONCHITIS. Recommended by the Profession as a remedy of great power and usefulness in cases of short and difficult breathing, spasmodic coughing, etc. The most convenient forms for use are—
Datura Tatula Cigars. Datura Tatula—prepared for use by means of a pipe.
Datura Tatula Cigarettes. Datura Tatula Pastilles—for Inhalation.

PHYSICIANS!

YOUR ATTENTION IS INVITED

—TO THE—

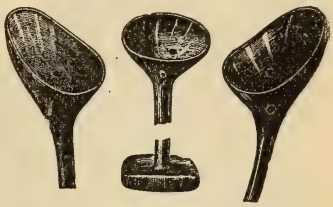
DR. McINTOSH NATURAL UTERINE SUPPORTER.

THIS INSTRUMENT MEETS THE WANTS OF THE PROFESSION MORE PERFECTLY than any other Uterine Supporter ever made. This is proven by the fact that during the past fifteen years more have been sold than of all other Supporters combined. *It never fails to give perfect satisfaction, even in the most difficult cases,* where any instrument can be used.

The **ABDOMINAL PORTION** is a broad morocco leather belt with elastic straps to buckle around the hips, with concave front, so shaped as to hold up the abdomen.

The **UTERINE PORTION** is a cup and stem made of highly-polished hard rubber, very light and durable, shaped to fit the neck of the womb, with openings for the secretions to pass out, as shown by the cuts. Cups are made with extended lips to correct flexions and versions of the womb.

The cup and stem is suspended from the belt by two soft elastic rubber tubes, which are fastened to the front of the belt by simple loops, pass down and through the stem of the cup and up to the back of the belt. These soft rubber tubes being elastic adapt themselves to all the varying positions of the body and perform the service of the ligaments of the womb.



Anteversion. Prolapsus. Retroversion

The instrument is very comfortable to the patient, can be removed or replaced by her at will, can be worn at all times, will not interfere with nature's necessities, will not corrode, and is lighter than metal. It will answer for all cases of Anteversion, Retroversion, or Prolapsus of the Womb. It is used by our leading physicians with never-failing success.

OUR REDUCED PRICE TO PHYSICIANS IS $5.00 EACH.

Instruments sent by mail at our risk on receipt of price; or we can send by express, C. O. D., with express charge for returning money added.

CAUTION.

Owing to the great success of our Supporter, several worthless imitations have been made which are often substituted for our instruments, to the detriment of the patient and the disappointment of the physician. To protect our patrons from imposture, we stamp each pad of the Abdominal belt in gilt letters, "Dr. McIntosh N. U. Supporter, Chicago, Ill."; the base of each cup is stamped "Dr. McIntosh N. U. S. Co., Chicago, Ill., U. S. A."

The box in which the instrument is put up contains directions for the application of the instrument pasted inside the cover, having the fac simile signature of Dr. L. D. McIntosh.

For further information in regard to the instrument, address

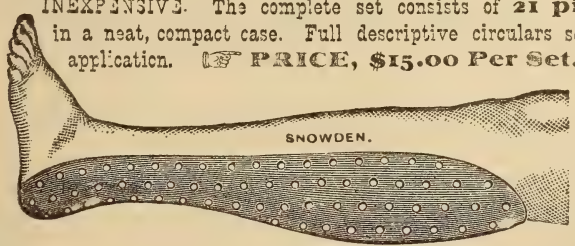
DR. McINTOSH NATURAL UTERINE SUPPORTER CO.,

300 AND 302 DEARBORN STREET, CHICAGO, ILL.

Our valuable Pamphlet on "Displacement of the Womb," giving a more complete description of the Instrument, will be sent you free on application.

LEVIS'S METALLIC SPLINTS.

FLEXIBLE, PERFORATED, NICKEL-PLATED, Conformable to every size and condition of Limbs. VERY LIGHT, INDESTRUCTIBLE, and INEXPENSIVE. The complete set consists of **21 pieces** in a neat, compact case. Full descriptive circulars sent on application. **PRICE, $15.00 Per Set.**



The Polyclinic Never-Leaking Ether Bottle

Price, $1.00.

McINTOSH GALVANIC AND FARADIC BATTERY CO.,

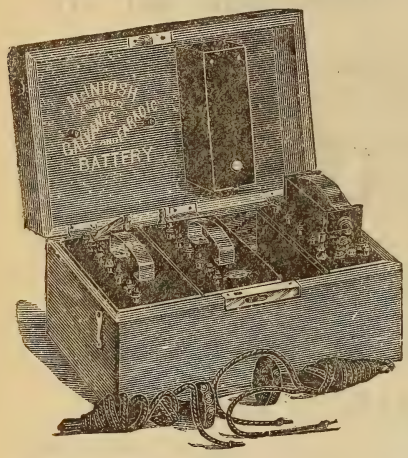
MANUFACTURERS OF THE CELEBRATED

McIntosh Combined Galvanic and Faradic Batteries,

Table, Office, and Family Batteries, Electrodes, Electric Bath Apparatus, Statical Electric Machines, Stereopticons, Solar, Monocular, and Binocular Microscopes.

AND ALL KINDS NF

PHILOSOPHICAL ELECTRICAL APPARATUS.



Schools, Colleges, Physicians, or Hospitals wanting new Apparatus, will do well to favor us with correspondence and obtain estimates. Men of scientific experience have charge of the manufacturing department. We employ the most skillful mechanics, and have the largest facilities in America for manufacturing.

We would call the Special Attention of the Medical Profession to our

Combined Galvanic and Faradic Batteries.

These Batteries are recommended by the Medical Faculty of both America and Europe, and have been adopted by the United States Government for use in Medical Department of the Army and Navy. They are

The First and Only Portable Batteries ever Invented which Give both the Galvanic and Faradic Current,

TWO DISTINCT BATTERIES IN ONE CASE.

No Physician can afford to be without one.

This celebrated Battery is constructed on an improved plan. The zincs and carbons are fastened to hard-rubber plates in sections of six each; this manner of connecting brings the plates nearer together than in any other battery, thus giving less internal resistance. The cells are composed of one piece of hard rubber, and are made in sections of six each with a drip-cup, thus one section can be handled, emptied, and cleaned, as easily and quickly as one cell. The drip-cup is to receive the elements when the battery is not in use. The fluid cannot spill or run between the cells, and there is no danger of breaking, as with glass cells. This is the only battery in which the zinc and carbon plates can be kept clean and always in order by simply rinsing them.

An extra cell (with a zinc and carbon element) is added to the combined batteries, for the purpose of producing the Faradic current. This cell gives as much force as is ever needed, and avoids exhausting the current from the Galvanic cells. All the metal work is finely nickel-plated and highly polished, and every part is put together so that it can be easily replaced by the operator. Our batteries weigh less, occupy less space, give a current of greater intensity and quantity, than any other battery manufactured.

Our illustrated Catalogue, a handsome book giving full description of all our goods, and other valuable information, sent free on application.

McINTOSH GALVANIC AND FARADIC BATTERY CO.
300 & 302 DEARBORN STREET, CHICAGO, ILL.

WHEELER'S TISSUE PHOSPHATES

Bone-Calcium Phosphate $Ca_3 2P.O._4$, Sodium Phosphate $Na_2H.P.O._4$, Ferrous Phosphate $Fe_3 2P.O._4$, Trihydrogen Phosphate $H_3P.O._4$.

WHEELER'S COMPOUND ELIXIR OF PHOSPHATES AND CALISAYA. A Nerve Food and Nutritive Tonic, for the treatment of Consumption, Bronchitis, Scrofula, and all forms of Nervous Debility.

The Lactophosphates prepared from the formula of Prof. Dusart, of the University of Paris. Combines with a superior Pemartin Sherry Wine and Aromatics in an agreeable cordial easily assimilable and acceptable to the most irritable stomachs.

Phosphorus, the oxidizing element of the Nerve Centres for the generation of Nerve Force; Lime Phosphate, an agent of Cell Development and Nutrition; Soda Phosphate, an excitant of Functional Activity of Liver and Pancreas, and Corrective of Acid Fermentation in the Alimentary Canal; Iron, the Oxidizing Constituent of the Blood for the Generation of Heat and Motion; Phosphoric Acid, Tonic in Sexual Debility; Alkaloids of Calisaya, Anti-Malarial and Febrifuge; Extract of Wild Cherry, uniting with tonic power the property of Calming Irritation and Diminishing Nervous Excitement.

THE SUPERIORITY OF THE ELIXIR consists in uniting with the Phosphates the special properties of the Cinchona and Prunus, of Subduing Fever and Allaying Irritation of the Mucous Membrane of the Alimentary Canal, which adapts it to the successful treatment of Stomach Derangements and all diseases of Faulty Nutrition, the outcome of Indigestion. Malassimilation of Food, and *failure of supply* of these essential elements of Nerve Force and Tissue Repair.

The special indication of this combination of Phosphates in Spinal Affections, Caries, Necrosis, Ununited Fractures Marasmus, Poorly Developed Children, Retarded Dentition, Alcohol, Opium, Tobacco Habits, Gestation and Lactation, to promote Development, etc., and as a *physiological restorative* in Sexual Debility, and all used up conditions of the Nervous System, should receive the careful attention of good therapeutists.

There is no strychnia in this preparation, but when indicated, the Liquor Strychniæ of the U. S. Dispensatory may be added, each fluid drachm of the solution to a pound bottle of the Elixir making the 64th of a grain to a half fluid ounce, an ordinary dose, a combination of a wide range of usefulness.

DOSE—For an adult, one tablespoonful three times a day, after eating; from seven to twelve years of age, one dessertspoonful; from two to seven, one teaspoonful. For infants, from five to twenty drops, according to age.

Prepared at the Chemical Laboratory of T. B. WHEELER, M. D., Montreal, D. C.

Put up in pound bottles and sold by all Druggists at One Dollar.

THREE MORE MEDALS IN 1886.

The recent International Expositions at Edinburgh and Liverpool, and the American Institute, New York, each awarded us the Highest Silver Medal, which swells our list to about

THIRTY-FIVE GOLD, SILVER AND BRONZE MEDALS

FROM ALL PARTS OF THE WORLD.

THE REASON FOR IT IS PLAIN.

We make but one quality, and that the best. WE SCRUPULOUSLY CONFORM TO THE PHARMACOPŒIAL, or other recognized standards, in the incorporation of medicinal ingredients. We command perfect skill in manipulation, we use pure and superior fabrics, our packages are neat, elegant, and convenient, and our prices are not only uniform, but the most reasonable that can be placed on honest goods of the first quality.

THE STATUS OF THE WHOLE PLASTER BUSINESS

is well shown by the analyses of Belladonna Plasters, the leading article on the list of spread goods, made in March, 1886 by Dr. Albert B. Prescott, Prof. of Chemistry at the University of Michigan, and President of the American Chemical Society, from goods purchased by him in open market. The analyses were made by the same process, in parallel operations, for the quantity of total Belladonna alkaloids, estimated as atropine, and show our Belladonna plaster to contain 0.543 of a grain of alkaloid, which represents the strength of a plaster made after the standard prescribed by the U. S. P. from the highest grade of belladonna root. The same analyses showed the next highest belladonna plaster to contain but 0.264 grains of alkaloid, or less than half U. S. P. strength; while the several other brands examined contained from 0.230 grains to 0.045 grains, proving the S. & J. plaster to contain more than twice as much belladonna as the one approaching nearest to it, the rest falling below the line of any valid comparison, a number having scarcely a trace of belladonna alkaloid.

IN FURTHER PROOF OF OUR DESIRE AND PURPOSE

to maintain, and, if possible, to enhance, the high standard and reputation of our goods, we cite the fact that we have recently erected one of the most complete and best equipped laboratories in the United States, and we shall hereafter manufacture every medicinal extract incorporated in our specialties, and can guarantee, through our own analyses, the strength and quality of all drugs we employ; thus, also, ensuring the perfect uniformity of all our products. For many years, physicians have preferred our goods because they always found them therapeutically reliable, as others were not; and our new departure will set up a stronger safeguard than ever against cheap and worthless plasters and dressings.

WE HAVE ESTABLISHED THE STANDARD.

Failing to make goods equal to ours, and which would sell on their merits, our competitors have heretofore striven to introduce their goods to the notice of the trade and the medical profession by imitating our trade-marks, packages, circulars, and price lists. Now, certain plaster makers have evidently found it necessary to adopt more desperate tactics, since we learn from retailers in Pennsylvania and New Jersey that jobbing-house salesmen have solicited them to buy other goods when ours were indicated on their order. In one case the salesmen said the house he represented no longer stocked our goods; in another, that we no longer made some of the articles desired. On inquiry, we learn that the representatives of these desperate plaster manufacturers offered these men a personal consideration to perform this dishonorable service. In one or two cases a direct money bribe was tendered and refused. The whole scheme shows to what straits our competitors are reduced, and indicates clearly the necessity for physicians specifying "S. & J." goods when prescribing, if they would be assured of obtaining the therapeutic results expected from medicinal plasters, or the strict reliability of goods for surgical use.

NOTABLE POINTS

RELATIVE TO

Lactated Food.

IT IS A COOKED FOOD.

By the use of high steam heat the gluten flour used is partially torrefied. This is done while the flour is dry, and during the process it is in constant motion, which insures perfect cooking to every particle.

Routh says, (Infant Feeding, page 380) that by this process, "the starch granules are rendered more separable, the gluten is reduced to a more porous condition, readily acted on by the gastric juice, and as an aliment, therefore, is more nutritious and digestible."

IT IS A PREDIGESTED FOOD.

"You state that it is self-digestive as regards the conversion of insoluble starch into soluble dextrine and maltose. My experiments with it lead me to hold that this is correct." J. MILNER FOTHERGILL.

IT CONTAINS NO UNCHANGED STARCH.

By the peculiar process of manufacture, every particle of the gluten flour is subjected to the action of the malto-diastase, and by it all the starch contained is transformed into soluble carbo-hydrates.

Professor CARL SEILER says, "Examination has proved that all the starch granules are converted, as shown by their behavior to polarized light."

NO CANE SUGAR USED.

The basis of Lactated Food is the pure sugar of milk made by the improved processes of the American Milk Sugar Co. The great value of this article has been shown conclusively. Cane sugar is not used in the composition or preparation of the Food on account of its liability to cause irritation by reason of the acetic fermentation on which it creates in the stomach. Milk sugar never causes this fermentation or irritation.

IT IS NON-IRRITATING.

By reason of the fact that Lactated Food is partially digested in process of Preparation, it is assimilated by the feeblest stomach, and no undigested particles pass into the bowels to irritate, and thus cause troublesome and dangerous bowel disorders.

IT IS HIGHLY NUTRITIOUS.

The nutritive elements of Lactated Food are derived from the three great cereals, Wheat, Barley, and Oats. From the Wheat is taken the pure gluten, the most nourishing substance known for the muscles and tissues; from the Barley, all the soluble albumino d and extractive matter resulting from the most careful malting; and from the Oat, the strengthening properties for which it is so well known. The result is a food which never disappoints, and under which the feeble child or invalid rapidly rallies.

FOR CHOLERA INFANTUM.

It is the chief reliance of many eminent practitioners, and it is the safest food in summer for all young or delicate children.

Another important consideration is its low price, it being much more economical than other foods. We make four sizes, selling for 25 cents, 50 cents, $1.00, and $2.50. *A dollar can will furnish one hundred and fifty meals for an infant.*

If any physician that has not yet made a trial of the Lactated Food will write us, we will send a package of our regular size, postpaid, without charge, with the understanding that it will be given a careful trial as soon as possible.

We shall use every precaution to maintain the high standard of this Food, and to insure perfect satisfaction to the profession in its use.

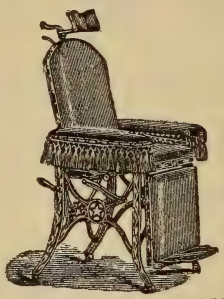
WELLS, RICHARDSON & CO.,

BURLINGTON, VT.

THE CANTON SURGICAL

AND

GYNÆCOLOGICAL CHAIR.



A chair especially constructed for the use of the general practitioner, as well as for the specialist in the treatment of gynæcological cases. For treating diseases of the Eye, Ear, Throat, and Chest, it has no equal. Every chair fully warranted to be first-class.

As a speculum chair it secures ease and comfort to the patient, and at the same time gives the operator such perfect control of all the various changes and positions, that it robs gynæcology of its usual embarrassment and annoyance.

Send for descriptive catalogue.

DR. RABUTEAU'S

[Laureate of the Institute of France]

DRAGEES, ELIXIR, AND SYRUP OF IRON.

"The experiments made in the hospitals of Paris have demonstrated that *Dr. Rabuteau's Dragees, Elixir, and Syrup* regenerate the red globules of the blood with a rapidity never observed with the use of the other ferruginous preparations. These results have been proved by the various *Compt-Globules.*

"The ferruginous preparations of *Dr. Rabuteau* do not cause any constipation, and are perfectly tolerated by the weakest persons."—*Gazette des Hopitaux.*

Dr. Rabuteau's Elixir is prescribed when some difficulty is experienced in swallowing the Dragees; it is especially adapted to weak persons, whose digestive functions need strengthening or stimulating.

Dr. Rabuteau's Syrup is especially prepared for children, who take it readily because of its agreeable taste.

A sample of Rabuteau's Dragees will be sent free to any Physician mentioning *The St. Louis Medical and Surgical Journal.*

Prepared by CLINN & Co., Pharmacists, Paris.

E. FOUGERA & Co., Agents for the United States.

Ducro's Alimentary Elixir,

A COMBINATION UNITING THE PROPERTIES OF

ALCOHOLIC STIMULANTS AND RAW MEAT

This preparation, which has been used with great success in the hospitals of Paris, since 1868, is adapted to the treatment of all diseases requiring the administration, in a small volume, of a tonic able to stimulate and support the vital forces, as *Pulmonary Phthisis, Depression and Nervous Debility, Adynamia, Malarious Cachexia,* etc.

Prepared by EMILE DURIEZ & Co., Successors to DUCRO & CIE, Paris.

KIRKWOOD'S INHALER,

This is the only complete, reliable, and effective inhaler in use, arranged for the direct application of Muriate of Ammonia and other remedial agents in the state of vapor to the diseased parts of the air passages in the treatment of catarrh and diseases of the throat and lungs. No heat or warm liquids required in its use.

It is entirely different from the various frail, cheap instruments that have been introduced.

KIRKWOOD'S INHALER is accompanied by testimonials of the highest professional character, together with carefully-prepared formulas for use.

Retail Price, complete, $2.50.

☞A liberal discount allowed to the trade and profession.

☞For descriptive pamphlets or other information, address

E. FOUGERA & CO., 30 North William Street, New York.

Rigollot's Mustard Paper

is one of the most important and useful discoveries of the age. It is the only preparation which has been adopted by the civil and military hospitals, and the armies and navies of France and England, and which has obtained a medal at the Centennial Exposition at Philadelphia. All other mustard plasters or leaves, of whatever name, are but imitations of the original.

Physicians will find it the most reliable sinapism, prompt and certain in its action, and will therefore always prescribe it. Every sheet, in order to be genuine, must bear the annexed signature of the inventor.

Sold in tin boxes containing 10 sheets, also 25 and 100 sheets, by all respectable chemists throughout the world.

E. FOUGERA & CO., New York Depositaries.

TAMAR INDIEN GRILLON.

A laxative, refreshing, and medicated Fruit Lozenge, very agreeable to take, and never causing irritation. Its physiological action assures the immediate relief and effectual cure of

CONSTIPATION,

HÆMORRHOIDS, BILE, CEREBRAL CONGESTION, HEADACHE, LOSS OF APPETITE, INTESTINAL OBSTRUCTIONS, ETC.,

by augmenting the peristaltic movement of the intestine without producing undue secretion of the liquids. Unlike pills and the usual purgatives, it does not predispose to intestinal sluggishness, and the same dose always produces the same effect, that is to say, never needs increasing.

It is recommended by the most eminent physicians of Paris, notably Drs. BELIN and TARDIEU, who prescribe it constantly for the above complaints, and with most marked success.

Paris: E. GRILLON, 27 Rue Rambuteau.

SOLD BY ALL DRUGGISTS.

PRIVATE SCHOOL FOR THE DEAF.

Deaf Children Taught to Speak and Educated through Lip Reading. Aural Training and Defective Speech treated and improved. A Kindergarten Department for Deaf Children from three to six years old. A Training Class for Teachers of Articulation.

School re-opens September 20, 1886, at No. 7 South Merrick Street (opposite Public Buildings), Philadelphia, Pa.

Directions to Parents of Deaf Children for their Treatment from Infancy in order that they may learn Speech and Lip Reading, furnished free on application to **MARY S. GARRETT, Principal.**

THE VALUE OF MURDOCK'S LIQUID FOOD IS RECOGNIZED IN ALL COUNTRIES, AND IS ENDORSED BY ALL NATIONAL MEDICAL SOCIETIES THAT HAVE INVESTIGATED ITS VALUE.

There never was an essay read before any Medical Society on Raw Food Extracts, except on Murdock's Liquid Food, and counterfeit manufacturers of Extracts have published many of our essays to show the value of their counterfeits.

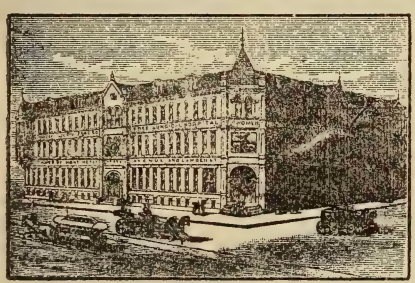
Send for Essay and DISCUSSION before the British Medical Association at Brighton, England, 1886 (Essay), by the Vice-President of the American Medical Association, and others, on the value of MURDOCK'S LIQUID FOOD over all Foods and Extracts known, it being the ONLY Raw Condensed Food free from insoluble matter.

Also essay read before the American Medical Association at Richmond, Va., and Washington, D. C.

Its value was recognized by the profession from results obtained in the Free Hospitals that have been established and supported by our Mr. A. L. Murdock during the last four years.

They now equal

140 FREE BEDS,



And contain 38,000 feet of floor.

Our Liquid Food can be retained by the weakest stomach. Four tablespoonfuls daily will make eight per cent. new blood weekly. When used for infants, never change their food, but add five or more drops of Liquid Food at each feeding, and their lost or needed vitality will be restored in less than thirty days.

Send for the Report of the Chairman of the Section of Obstetrics of the American Institute of Homœopathy, read at Saratoga at the annual meeting of 1886.

Circulars were sent by him to all the Physicians in the United States, asking what their experience was with Murdock's Liquid Food in its use for infants under, as well as over, one year old.

Then what results, with all the different Milk preparations, Grain Foods, Peptonoid Foods, and Beef Extracts, compared with MURDOCK'S LIQUID FOOD.

The returns show that it is the Standard Food and Extract, as the percentage of lives restored was the largest when used.

We extract from the report. After calling attention to the fact that one-quarter of the homœopathic profession are accustomed frequently to prescribe this food for children less than a year old, as well as over, he remarks:

"It is singularly adapted to scrofulous, syphilitic, and tubercula constitutions, its life-restoring power manifesting itself in each with a relative clearness and power corresponding to the order of enumeration. For fair-haired children who are inclined to grow fleshy it is more symptomatically recommended, while Duncan's *acid* babies find it particularly useful. Accordingly, it is chiefly employed for marasmus and anæmic conditions resulting either from non-assimilation of food, or from simple summer complaints. Should a child vomit all milk food and suffer synchronously with diarrhœa or dysentery, the demand for this food is emphatic and unmistakable; also in general irritability of the stomach, particularly if there be sour-smelling diarrhœa, the food passing through undigested. For the prematurely born it stands pre-eminent. For those 'weak and debilitated from any cause. Murdock's Food is probably the best in the world.' Should any indication of cerebral hyperæmia appear, the quantity of food must be diminished; so, too, if after its protracted use vomiting and diarrhœa ensue, the child has been overfed. Should the taste or odor of any given bottle chance to be disagreeable, add water until they disappear, and let the purchaser congratulate himself upon getting more nutriment than he paid for. When given in combination with milk in cases of indigestion, the quantity of milk should be diminished until all curds disappear from the stool, the quantity of Food, of course, being proportionately increased."

The Surgical Staff at MURDOCK'S FREE HOSPITAL FOR WOMEN are in daily attendance, except Saturdays, to examine patients and assign beds.

EVERY BED FREE.

Our Free Surgical Hospital for Women, located on Huntington avenue, above West Chester park, contains fifty (50) beds, in charge of a staff of five surgeons, members of the Massachusetts Medical Society.

Our Free Surgical Hospital for Women, located on Gainsborough street, corner of Huntington avenue, contains 50 beds, in charge of a staff of five surgeons, members of the Massachusetts Homœopathic Medical Society.

Our Free Home for Homeless Boys contains 40 beds, and is located at 11 to 21 Causeway street. Many of these boys suffer from Scrofula, Eczema, and other skin diseases, which yield quickly by the use of our Liquid Food.

From the fact that no two beeves or sheep are alike, is the reason of our different brands being different in flavor.

All brands are made by the same formula. The letter represents the day of make, and the figure the tank.

If richer, it is stronger in smell and flavor, and will bear a greater reduction. It cannot be reduced so low but it will be superior to all other preparations in treating chronic cases.

If you cannot obtain Murdock's Liquid Food from your druggist we deliver, free of express, 12 oz for $1. Any physician that has not used our Liquid Food, we will deliver free to the Boston express 12 oz.

MURDOCK'S LIQUID FOOD CO.,

BOSTON.

CELERINA

NERVE-TONIC, STIMULANT AND ANTISPASMODIC.

FORMULA.—Every Fluid-Drachm represents FIVE grains EACH—Celery, Coca, Kola, Viburnum and Aromatics.

INDICATIONS.—Impotency, Spermatorrhea, Loss of Nerve-Power (so usual with Lawyers, Preachers, Writers and Business Men), Nervous Headache, Neuralgia, Paralysis, Dysmenorrhea, Hysteria, Opium-Habit, Inebriety, Prostatitis, Dyspepsia, and ALL LANGUID or DEBILITATED conditions of the System.—*Indispensable to restore a patient after alcoholic excess.*

DOSE.—One or two teaspoonfuls three or more times a day, as directed by the Physician.

ALETRIS CORDIAL

UTERINE TONIC AND RESTORATIVE.

PREPARED FROM THE ALETRIS FARINOSA OR TRUE UNICORN.

INDICATIONS.—Amenorrhea, Dysmenorrhea, Leucorrhea, Prolapsus Uteri, Sterility, to PREVENT Miscarriage, Etc.

DOSE.—One teaspoonful three or four times a day.

Unrivaled as a Uterine Tonic in Irregular, Painful, Suppressed and Excessive Menstruation,

IT RESTORES NORMAL ACTION TO THE UTERUS, AND IMPARTS VIGOR TO THE ENTIRE UTERINE SYSTEM.

☞ **Where Women have aborted during previous Pregnancies, or in any case where abortion is feared, the Aletris Cordial is indicated, and should be continuously administered during entire gestation.**

ACID MANNATE

A MILD, SAFE AND PLEASANT APERIENT.

Prepared from Manna, Purified Cathartic Acid, and Fruit Juices.

INDICATIONS.—Constipation, Biliousness, Congestions, Etc. **INDISPENSABLE AS AN APERIENT FOR WOMEN DURING PREGNANCY.** In teaspoonful doses, 3 times a day, it favors the SECRETION and EXCRETION of bile, and gradually removes the congested and torpid states of the liver, and keeps the bowels in a regular and soluble condition.

DOSE.—ONE or MORE teaspoonfuls as directed by the Physician.

S. H. KENNEDY'S
CONCENTRATED EXTRACT OF
PINUS CANADENSIS
DARK A NON-ALCOHOLIC LIQUID. **WHITE**

A MOST VALUABLE NON-IRRITATING MUCOUS ASTRINGENT.

INDICATIONS.—Albuminuria, Diarrhea, Dysentery, Night-Sweats, Hemorrhages, Profuse Expectoration, Catarrh, Sore Throat, Leucorrhea, and other Vaginal Diseases, Piles, Sores, Ulcers, Burns, Scalds, Gonorrhea, Gleet, Etc.

When Used as an Injection, to Avoid Staining of Linen, the WHITE Pinus should be Used.

Recommended by DR. J. MARION SIMS, and other Prominent Physicians.

BELLEVUE HOSPITAL MEDICAL COLLEGE,

CITY OF NEW YORK.

SESSIONS OF 1887-88.

The REGULAR SESSION begins on Wednesday, September 21, 1887, and ends about the middle of March, 1888. During this Session, in addition to the regular didactic lectures, two or three hours are daily allotted to clinical instruction. Attendance upon at least two regular courses of lectures is required for graduation.

The SPRING SESSION consists of recitations, clinical lectures and exercises, and didactic lectures on special subjects. This Session begins about the middle of March and continues until the middle of June. During this Session, daily recitations in all the departments are held by a corps of Examiners appointed by the Faculty.

The CARNEGIE LABORATORY is open during the collegiate year, for instruction in microscopical examinations of urine, practical demonstrations in medical and surgical pathology, and lessons in normal histology and pathology, including bacteriology.

For the annual Circular and Catalogue, giving requirements for graduation and other information, address Prof. AUSTIN FLINT, Secretary, Bellevue Hospital Medical College, foot of East 26th Street, New York City.

Address
D. G. BRINTON,
115 South Seventh Street.

STAUFFER'S
SPRING STEM UTERINE SUPPORTERS.

Price, $7.00.

The engraving shows the Spring Stem Cup, which consists of over a dozen styles. The series contains Spring Stem Balls, Spring Stem Levers, for Anteversions and Retroversions. also Spring Cup with posterior projections, all of assorted sizes.

Explanation.—The stem is screwed on cup A, and when unscrewed, the spring is put in tube *m*, or taken out when it needs cleaning. Thus the coil spring lays between the cup and base *n*. When there is pressure from above, or below, or both, the spring is compressed and again stretches out at the first opportunity. The movement of the base stem *n*, is governed by a slot and pin through tube *m*.

A D.—Represents the cup transformed into a self-sustaining cup, virtually an instrument of double capacity. In most cases after the uterus is held in "health line" for a time by external support, contraction of the walls of the vagina takes place at night or until forced down next day by bodily exertion, against which the stem and bandage guards if applied in time.

Belt Y.—The manner in which belt Y, sets on the abdomen is shown in above engraving. The widest or lifting part is in front. Over each hip as seen at H, are two elastics, and on large belts three. It closes on the back by buckling at B. It is of fine sateen outside, fine lining inside, and a slight stiffening between, and stayed with soft whalebones. Accurate hip measure is to be taken over a thin undergarment; since it needs to fit with a space of one or two inches apart on the back, for the buckle straps to draw. The perineal attachments are short and buckle at F and R.

Belt Z.—This is an elastic waist strap and carries any supporter of this series. Yet the common difficulty presents itself, where long and slender attachments are used, that they do not govern the internal part so efficiently as on the low grasping abdominal supporter Y.

Catalogue.—The catalogue comprises over 150 sizes and styles of uterine examining and supporting instruments, of which the hard rubber parts are exchanged and interchanged at cost, without limit of time. It also contains full directions and explanations for the use of this series of hard rubber gynecological instruments; together with common information collected through many years to simplify this line of treatment.

Guarantee.—The money lost by purchasing uterine supporters, unscientifically constructed, of irritating material, or limited in deficiency of sizes, and in consequence loss of families in practice, has set a large portion of the medical profession against the mechanical support of the uterus. By these conditions the risk of the first purchase by a physician of a stem and bandage supporter of this series is obviated. After the first purchase the instruments are supposed to be known, yet the guarantee is extended by special contract in doubtful cases.

Refunding.—On return of the hard rubber part or parts within six months of purchase, Five Dollars of the purchase money will be refunded. The belt remains with the patient as an abdominal supporter and only risk.

The above Guarantee and Refunding is secured when obtained through this Office. Any other Instrument of STAUFFER'S SERIES is also obtained through this Office at Catalogue Prices, and Catalogue free.

EVERY PHYSICIAN SHOULD USE THE BEST!

OLEO-CHYLE

THE ONLY PREPARATION OF NORWEGIAN COD LIVER OIL WHICH CONTAINS

70 PER CENT. OF OIL IN A DIGESTED FORM.

FORMULA OF OLEO-CHYLE.

Peptonized Cod Liver Oil.....85 Min.	Oleic Hypophosphites.....5 Grs.
Pancreatine.....2 Grs.	Sodium Hyocholate.....¾ Grs.
Water.....25 Min.	MIX.

DOSE: Two teaspoonfuls thrice daily at meal times.—It is preferable to take *Oleo-Chyle* in milk.

OLEO-CHYLE is NOT AN EMULSION, neither is it a simple admixture of Cod Liver Oil with Pepsin and Pancreatine; *it is* **Pure Norwegian Cod Liver Oil, perfectly digested with both Pepsin and Pancreatine** in exactly the same manner and consuming about the same length of time under the same conditions as to temperature, etc., as oil would be subjected to by the **human stomach and duodenum** before being presented to the **lacteals for absorption into the blood.**

OLEO-CHYLE contains **no gum, sugar, glycerine, Irish moss or any viscid substance whatever** to hold the oil in suspension as in all artificial Emulsions, (with all of these ingredients **Oleo-Chyle** is incompatible.)

In the preparation of **OLEO-CHYLE** we use none but the

Pure "Lafoten" Norwegian Cod Liver Oil,

manufactured on the Island of Lafoten, Norway, and imported by ourselves direct, thus avoiding the liability of adulteration while in the hands of Cod Liver Oil Dealers in London or Hamburg. We therefore guarantee its purity.

This Oil is by far the richest in **IODINE** and all **FAT PRODUCING** and **LIFE SUSTAINING** qualities as well as the most pleasant to the taste.

——OPINIONS OF THE MEDICAL PROFESSION.——

Spencer, Ind., Feb. 19th, 1886.

Messrs. Geo. W. Laird & Co.

The patient to whom I gave "**OLEO-CHYLE**" was suffering from mal-assimilation of food, loss of weight, with variable appetite, giving such strong symptoms of Consumption that we thought she could survive but a few months at most. *She had taken Pepsin and Cod Liver Oil in many forms but did not gain a pound*, but after taking "**OLEO-CHYLE**" in fresh milk for two weeks she gained thirteen pounds in weight, and so much in looks and spirits that she is like an entirely different person. This is a strong letter, but I know of what I speak, as the patient is my wife, E. N. MULLINNIX, M.D.

Irvington, N. J., Jan. 14th, 1886.

Messrs. Geo. W. Laird & Co.

In its adaptation to Chronic Pulmonary Diseases its ready assimilation, its non-disturbance of the gastric functions, and its general benefit in all cases of debilitated constitutional diseases,

"OLEO-CHYLE" FURNISHES THE DESIDERATUM.

Easily taken, and readily compatible with milk, it supplies all that is required by nature to build anew the wasting tissues. JOSEPH L. WADE, M.D.

913 7th Ave., N. Y. City, Dec. 30th, 1884.

Messrs. Geo. W. Laird & Co,

I have fully tested your "**OLEO-CHYLE**" upon myself with entire satisfaction. For several years I have been advised to take Cod Liver Oil for faulty assimilation and deficiency of fat in the body. I have never been able to digest any form of oil from the plain oil to the *elegant emulsions(?)* so-called. *Your preparation, which is a permanent milky fluid,* I take and assimilate with ease, and already feel the good effects thereof. F. S. GRANT, M.D.
Med. Ex. Provident Life Ass. Society.

Victoria, Texas, July 17th, 1886.

Messrs. Geo. W. Laird & Co.

The sample of "**OLEO-CHYLE**" you sent me on Dec. 4th, 1884, has just been used by a patient, who has been greatly benefitted by it, so much so that I send $2.00 for two more bottles by express.

THOS. R. COCKE, M.D.

This sample was 19 months and 13 days old, but its medicinal value and palatability were not impaired.

If your Druggist does not keep **OLEO-CHYLE** in stock, do not wait for him to obtain it, but send us One Dollar by mail and we will send a Bottle by return express prepaid.

WRITE TO US FOR PAMPHLET AND MENTION THIS JOURNAL.

Geo. W. Laird & Co

They are put up in Cylindrical Tubes, convenient for carrying in Hypodermic or Pocket Case, ten tubes in a box, with twenty tablets in each Tube.

NOTE.—It will only be necessary, in ordering, to specify the Numbers as above.

These Tablets will be sent by mail, on receipt of the proper amount.

JOHN WYETH & BROTHER,

PHILADELPHIA.

Smithsonian Institute

New Medicaments for Bronchitis and other Respiratory Affections.

CHEKEN.
(Myrtus Chekan.)

THIS PLANT, indigenous to Chili, was introduced to the profession by Dr. Murrell, the famous English therapeutist and collaborator of Ringer. Dr. Murrell found Cheken to be of great value in chronic cough, especially in the "winter cough" of elderly people.

An extensive trial of this remedy has not only confirmed Dr. Murrell's observations, but has widened the range of the therapeutic application of Cheken so that at the present time it is looked upon, on account of its alterative and demulcent properties, as an indispensable addition to "cough mixtures," particularly in those intractable cases of long standing which have assumed a subacute or chronic course. The dose of the fluid extract which we manufacture is from 1 to 2 fluidrachms.

TEREBENE.

TO DR. MURRELL the profession is indebted for the introduction of another remedy which seems to be almost a specific in winter cough or chronic bronchitis, than which there are few more annoying maladies. Terebene facilitates expectoration, relieves the cough and shortness of breath, and also the acidity and flatulency which so often accompany bronchitis. Dr. Murrell, in *British Med. Journal*, Dec. 12th, 1885, states that he has employed Terebene in 114 cases of winter cough, with the most gratifying results.

We furnish *Terebene Pure; Terebene Inhalant* after Murrell's formula, and *Soluble Elastic Capsules Terebene*, each containing 10 minims.

YERBA SANTA.
(Eriodictyon Californicum.)

YERBA SANTA is a demulcent expectorant in harassing cough. Both in hospital and private practice this remedy has been subjected to a thorough trial, and the reports of its use are unanimous in according it a high place among remedial agents in the treatment of the distressing cough accompanying inflammatory affections of the respiratory mucous membrane. Its action has been likened to the combined action of ipecac and balsam of Peru, but it possesses, in addition, through its resinous principles, an action which is wanting in these valuable drugs in irritative bronchitis.

LIPPIA MEXICANA.

IN ITS native habitat this remedy was long known to possess medicinal virtue in the treatment of coughs. Its popular use led to a scientific investigation of its claims which has resulted in its general introduction to the medical profession, and a clinical test of its merits by physicians has confirmed the popular opinion of its value. Alone or in combination with other remedies, such as Yerba Santa, Cheken, etc., it has been found most serviceable in controlling cough.

Working Bulletins and Circulars fully descriptive of above remedies, together with reprints of Dr. Murrell's articles on winter cough, will be mailed on application.

PARKE, DAVIS & CO.,

Manufacturing Chemists,

New York: 60 Maiden Lane, 21 Liberty Street.

DETROIT, MICH.

BROMIDIA

The Hypnotic.

FORMULA:

Every fluid drachm contains 15 grains EACH of pure Chloral Hydrat. and purified Brom. Pot., and ½ grain EACH of Gen. Imp., Ext. Cannabis Ind., and Hyoscyam.

DOSE:

One-half to one fluid drachm, in WATER or SYRUP, every hour, until sleep is produced.

INDICATIONS:

Sleeplessness, Nervousness, Neuralgia, Headache, Convulsions, Colic, Mania, Epilepsy, Irritability, etc. In the restlessness and delirium of Fevers, it is absolutely invaluable.

It does not Lock Up the Secretions.

PAPINE

The Denarcotized Opiate.

Papine is the Anodyne or pain-relieving principle of Opium, the Narcotic and Convulsive elements being eliminated. It has less tendency to cause Nausea, Vomiting, Constipation, etc.

INDICATIONS:

Same as Opium or Morphia.

DOSE:

One fluid drachm represents the Anodyne principle of ½ grain of Morphia.

IODIA

The Alterative and Uterine Tonic.

FORMULA:

Iodia is a combination of Active Principles obtained from the Green Roots of STILLINGIA, HELONIAS, SAXIFRAGA, MENISPERMUM, AND AROMATICS. Each fluid drachm also contains five grains Iod. Pot., and three grains Phos. Iron.

DOSE:

One to two fluid drachms (more or less, as indicated,) three times a day, before meals.

INDICATIONS:

Syphilitic, Scrofulous and Cutaneous Diseases, Dysmenorrhœa, Menorrhagia, Leucorrhœa, Amenorrhœa, Impaired Vitality, Habitual Abortion, and General Uterine Debility.

BELLEVUE HOSPITAL MEDICAL COLLEGE,

CITY OF NEW YORK.

SESSIONS OF 1887-88.

The REGULAR SESSION begins on Wednesday, September 21, 1887, and ends about the middle of March, 1888. During this Session, in addition to the regular didactic lectures, two or three hours are daily allotted to clinical instruction. Attendance upon at least two regular courses of lectures is required for graduation.

The SPRING SESSION consists of recitations, clinical lectures and exercises, and didactic lectures on special subjects. This Session begins about the middle of March and continues until the middle of June. During this Session, daily recitations in all the departments are held by a corps of Examiners appointed by the Faculty.

The CARNEGIE LABORATORY is open during the collegiate year, for instruction in microscopical examinations of urine, practical demonstrations in medical and surgical pathology, and lessons in normal histology and pathology, including bacteriology.

For the annual Circular and Catalogue, giving requirements for graduation and other information, address Prof. AUSTIN FLINT, Secretary, Bellevue Hospital Medical College, foot of East 26th Street, New York City.

D. LANDRETH & SONS,
Philadelphia.

30,000 PHYSICIANS
NOW PRESCRIBE

HYDROLEINE

(HYDRATED OIL,)

For Consumption and Wasting Diseases. It Produces Immediate Increase in Flesh and Weight.

FORMULA.

Each Dose of Two Teaspoonfuls, equal to 120 Drops, contains:

Pure Cod Liver Oil	80 m. (drops)	Soda	½ Grain.
Distilled Water	35 "	Boric Acid	¼ "
Soluble Pancreatin	5 Grains.	Hyocholic Acid	⅛ "

DOSE:

Two teaspoonfuls alone, or with twice the quantity of water, to be taken thrice daily after meals.

Hydroleine (Hydrated Oil) is not a simple alkaline emulsion of oleum morrhua, but a hydro-pancreated preparation containing acids and a medicum of soda. Pancreatin is the digestive principle of fatty foods, and, in the soluble form here used, completely saponifies the oleaginous material so necessary to the reparative process in all wasting diseases.

Lautenbach's researches on the function of the liver would show the beautiful adjustment of therapeutics in preparation of Hydroleine, furnishing, as it does, the acid and soda necessary to prevent self-poisoning by reabsorption of morbid tubercular detritus and purulent matters into the general circulation.

Each bottle in nutritive value exceeds ten times the same bulk of cod liver oil. It is economical in use and certain in result.

Sold at all Drug Stores at $1.00 per Bottle.

The principles upon which this discovery is based have been described in a treatise on "The Digestion and Assimilation of Fats in the Human Body," by H. C. BARTLETT, Ph. D., F. C. S., and the experiments which were made, together with cases illustrating the effect of Hydrated Oil in practice, are concisely stated in a Treatise on "Consumption and Wasting Diseases," by G. OVEREND DREWRY, M. D.

Copies of these Works sent free on Application.

WM. F. KIDDER & CO., 83 John Street, New York.

Agents for U. S.

Also exclusive Agents for SVAPNIA, or Bigelow's purified Opium, in SCALES and HALF-GRAIN GRANULES.

TAMAR INDIEN GRILLON.

A laxative, refreshing, and medicated Fruit Lozenge, very agreeable to take, and never causing irritation. Its physiological action assures the immediate relief and effectual cure of

CONSTIPATION,

HÆMORRHOIDS, BILE,
CEREBRAL CONGESTION, HEADACHE,
LOSS OF APPETITE,
INTESTINAL OBSTRUCTIONS, ETC.,

by augmenting the peristaltic movement of the intestine without producing undue secretion of the liquids. Unlike pills and the usual purgatives, it does not predispose to intestinal sluggishness, and the same dose always produces the same effect, that is to say, never needs increasing.

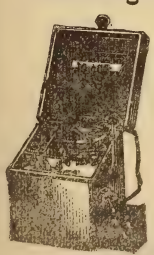
It is recommended by the most eminent physicians of Paris, notably Drs. BELIN and TARDIEU, who prescribe it constantly for the above complaints, and with most marked success.

Paris: E. GRILLON, 27 Rue Rambuteau.

SOLD BY ALL DRUGGISTS.

MEDICAL ELECTRICITY.

Flemming's Electro-Medical Batteries



are considered superior to any in the market at the present time. They received all honors and awards at Exhibitions, and are used and recommended by the highest medical authorities and in many hospitals throughout the country. For illustrated catalogue and price list address

FREDERICK STEARNS & CO.,
Mnf'g Pharmacists, DETROIT, MICH., U. S. A.

HORSFORD'S ACID PHOSPHATE,

(Liquid.)

Prepared according to the directions of Prof. E. N. HORSFORD, of Cambridge, Mass.

FORMULA: Its analysis shows that each fluid drachm contains 5 1-2 grains free Phosphoric Acid (P_2O_5)**, and nearly 4 grains Phosphate of Lime, Magnesia, Iron, and Potash.**

Among the numerous forms of Phosphorus in combination, Horsford's Acid Phosphate seems best adapted as a medicinal remedy, and it has been in use by the medical fraternity of the United States and elsewhere for several years, with the most satisfactory results, in

Dyspepsia, Indigestion,

Mental and Physical Exhaustion,

Insomnia, Nervousness,

Diminished Vitality, etc.

Especially serviceable as a menstruum for the administration of such alkaloids as strychnia, morphia, quinia, and other organic bases which are usually exhibited in acid combination.

It Makes a Refreshing and Nutritious Drink in Fevers,

and with water and sugar a delicious beverage.

We have received a very large number of letters from physicians of the highest standing, in all parts of the country, relating their experience with the Acid Phosphate, and speaking of it in high terms of commendation.

Physicians who have not used Horsford's Acid Phosphate, and who wish to test it, will be furnished a sample on application, without expense except express charges.

BOVININE,

BUSH'S FLUID FOOD,

CONTAINING 26.58 PER CENT. OF SOLUBLE ALBUMINOIDS.

The vital principles of Beef and Mutton concentrated. A highly condensed Raw Food Extract. Acceptable to the most delicate taste and smell. Retained by delicate stomachs that reject all other Foods. It assimilates more readily than any other Food known to the Medical Profession. BOVININE under the microscope shows the blood corpuscles in their normal condition strongly marked, while in all other Foods or Extracts this vitally important element is destroyed by the action of heat in cooking.

OSCAR OLDBERG, PH.D., PROF. OF CHEMISTRY AND TOXICOLOGY, AND DEAN OF THE CHICAGO COLLEGE OF PHARMACY, says of it:—I have analyzed Bush's Fluid Food or BOVININE, to find that it contains 26.58 per cent. of soluble Albuminoids."

A. L. LOOMIS, M. D., PROF. OF BELLEVUE MEDICAL COLLEGE, says:—"I prescribe Bush's Fluid Food or BOVININE and prefer it to similar preparations."

J. S. JEWELL, M. D., CHICAGO, says of "BOVININE:"—"I am delighted with it; it is what I have been looking for these twenty years, and it supplies a want that nothing else has been able to fill."

DRS. WARD AND FEWSMITH, speaking for themselves and their colleagues of the HOSPITAL OF ST. BARNABAS, NEWARK, say:—"BOVININE was readily taken by the patients, was easily retained, and in many cases by stomachs which had rejected all other forms of nourishment. We believe BOVININE contains more nutriment, relatively to bulk, than any other preparation known to the Medical Profession."

DR. J. M. RAND, SURGEON TO THE HOSPITAL FOR WOMEN AND CHILDREN, OF NEWARK, N. J., says:—BOVININE has been used with very satisfactory results after many important surgical operations; and, for all patients whose stomachs can't retain or tolerate other foods, we find the BOVININE invaluable."

During the last four months of his sickness, the principal food of my father, GEN'L GRANT, was BOVININE and Milk.
Oct. 1st, 1885. FRED. D. GRANT.

BOVININE is carefully prepared from the formula of the late JAS. P. BUSH, by the

J. P. Bush Mfg. Co., Chicago, Ill., and 2 Barclay St., Astor House, New York.

MURRAY'S CHARCOAL TABLETS.

The increasing demand for a chemically pure CHARCOAL, prepared from only young and tender willow shoots, for medicinal use, has led to the manufacture of these Tablets.

CHARCOAL is so simple and so valuable that it seems ridiculous to extol its qualities, but in our Charcoal Tablets we have the purest form of charcoal from young willow shoots, and in a form that people take with a relish.

PRICE, 25 CENTS A BOX.

Very Popular as a Dentifrice.

Removes the bad odor and taste after the use of Tobacco.

A. J. DITMAN, Chemist,

Broadway and Barclay St., NEW YORK CITY.

DITMAN'S SEA SALT.

A Sea Bath at Home,

By dissolving the Sea Salt in ordinary water. Used as a luxury for its exhilarating influence, and as a valuable remedy in Debility, Languor, Rheumatism, and Weakness of the Joints, Tender Feet, Nasal Catarrh, etc. Extracted directly from the "foaming billows" by evaporation, at one of the most salubrious spots on the coast. It possesses all the medicinal advantages of the natural water, and, at the same time, is entirely freed from all organic impurities that are usually found in the surf.

A. J. DITMAN, Chemist,

Broadway and Barclay St., NEW YORK CITY.

CELERINA

NERVE-TONIC, STIMULANT AND ANTISPASMODIC.

FORMULA.—Every Fluid-Drachm represents FIVE grains EACH — Celery, Coca, Kola, Viburnum and Aromatics.

INDICATIONS.—Impotency, Spermatorrhea, Loss of Nerve-Power (so usual with Lawyers, Preachers, Writers and Business Men), Nervous Headache, Neuralgia, Paralysis, Dysmenorrhea, Hysteria, Opium-Habit, Inebriety, Prostatitis, Dyspepsia, and ALL LANGUID or DEBILITATED conditions of the System.—*Indispensable to restore a patient after alcoholic excess.*

DOSE.—One or two teaspoonfuls three or more times a day, as directed by the Physician.

ALETRIS CORDIAL

UTERINE TONIC AND RESTORATIVE.

PREPARED FROM THE ALETRIS FARINOSA OR TRUE UNICORN.

INDICATIONS.—Amenorrhea, Dysmenorrhea, Leucorrhea, Prolapsus Uteri, Sterility, to PREVENT Miscarriage, Etc.

DOSE.—One teaspoonful three or four times a day.

Unrivaled as a Uterine Tonic in Irregular, Painful, Suppressed and Excessive Menstruation.

IT RESTORES NORMAL ACTION TO THE UTERUS, AND IMPARTS VIGOR TO THE ENTIRE UTERINE SYSTEM.

☞ Where Women have aborted during previous Pregnancies, or in any case where abortion is feared, the Aletris Cordial is indicated, and should be continuously administered during entire gestation.

ACID MANNATE

A MILD, SAFE AND PLEASANT APERIENT.

☞ Prepared from Manna, Purified Cathartic Acid, and Fruit Juices. ☜

INDICATIONS.—Constipation, Biliousness, Congestions, Etc. **INDISPENSABLE AS AN APERIENT FOR WOMEN DURING PREGNANCY.** In teaspoonful doses, 3 times a day, it favors the SECRETION and EXCRETION of bile, and gradually removes the congested and torpid states of the liver, and keeps the bowels in a regular and soluble condition.

DOSE.—ONE or MORE teaspoonfuls as directed by the Physician.

S. H. KENNEDY'S
CONCENTRATED EXTRACT OF
PINUS CANADENSIS
DARK — A NON-ALCOHOLIC LIQUID. — WHITE

A MOST VALUABLE NON-IRRITATING MUCOUS ASTRINGENT.

INDICATIONS.—Albuminuria, Diarrhea, Dysentery, Night-Sweats, Hemorrhages, Profuse Expectoration, Catarrh, Sore Throat, Leucorrhea, and other Vaginal Diseases, Piles, Sores, Ulcers, Burns, Scalds, Gonorrhea, Gleet, Etc.

When Used as an Injection, to Avoid Staining of Linen, the WHITE Pinus should be Used.

Recommended by DR. J. MARION SIMS, and other Prominent Physicians.

RIO CHEMICAL CO., ST. LOUIS: LONDON: PARIS.

Samples FREE to any Physician who will pay Express charges, and mention this Journal.

PACKER'S TAR SOAP.

ABSOLUTELY PURE AND NON-IRRITATING.

MADE FROM VEGETABLE OILS, PINE TAR, AND GLYCERINE.

A perfect soap should be made from pure and sweet oils, and clean, well-washed alkalies. Such is **Packer's Tar Soap.** It is combined with distilled **pine-tar,** and hence has had the most gratifying effects in the treatment of Dermatic Diseases, as chafing, eczema, erythema, seborrhea, herpes, etc.

As a Disinfectant, Antiseptic, and Detergent, it is admirably adapted for use in ulcers, foul wounds, fetid discharges, bed sores, and similar conditions. For the bath, toilet, and shampoo, it is unrivaled. 25 cents per cake, from Druggists.

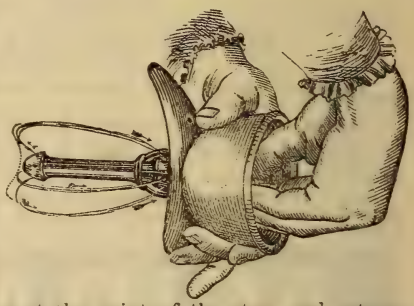
It is supplied to Hospitals, Asylums, and Physicians, in one pound bars, at reasonable prices.

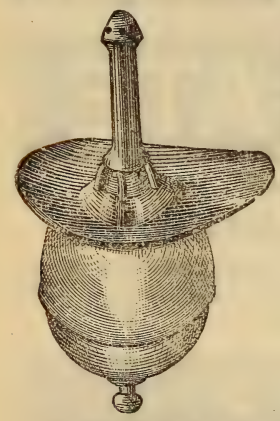
P. O. Box 2985. **THE PACKER MFG. CO., 100 Fulton St., New York.**

"PALLAS" SYRINGE.

VAGINAL AND RECTAL.

A MOST PERFECT and simply constructed Syringe for medicating and irrigating the vaginal cavity. The novel bulb of this Syringe, when doubled upon itself, as shown in the cut, will cause no fluid to be left, as is so apt to happen with the ordinary bulbs, and when filled will contain just enough fluid for the expansion of the vaginal folds. The hard rubber labial shield, with its plug, when firmly pressed against the labia, will both prevent spilling and soiling of linen, and the fluid can therefore be kept in circulation and in contact with the parts by repeating the pumping motion of the bulb. It will also be noticed that the fluid escapes as a spray from the large holes at the point of the stem and returns through the holes at the root of same, which is provided with hard rubber screen-bars, preventing the folds from interfering with the rapid return of the fluid into the bulb. In filling the bulb, a couple of turns will unscrew it. In handsome case, satin lined. Retail price, $3.75. To physicians, $3.00.





CHRISTIAN JENSEN & CO.,

NOTABLE POINTS

RELATIVE TO

Lactated Food.

IT IS A COOKED FOOD.

By the use of high steam heat the gluten flour used is partially torrefied. This is done while the flour is dry, and during the process it is in constant motion, which insures perfect cooking to every particle.

Routh says, (Infant Feeding, page 380) that by this process, "the starch granules are rendered more separable, the gluten is reduced to a more porous condition, readily acted on by the gastric juice, and as an aliment, therefore, is more nutritious and digestible."

IT IS A PREDIGESTED FOOD.

"You state that it is self-digestive as regards the conversion of insoluble starch into soluble dextrine and maltose. My experiments with it lead me to hold that this is correct." J. MILNER FOTHERGILL.

IT CONTAINS NO UNCHANGED STARCH.

By the peculiar process of manufacture, every particle of the gluten flour is subjected to the action of the malto-diastase, and by it all the starch contained is transformed into soluble carbo-hydrates.

Professor CARL SEILER says, "Examination has proved that all the starch granules are converted, as shown by their behavior to polarized light."

NO CANE SUGAR USED.

The basis of Lactated Food is the pure sugar of milk made by the improved processes of the American Milk Sugar Co. The great value of this article has been shown conclusively. Cane sugar is not used in the composition or preparation of the Food on account of its liability to cause irritation by reason of the acetic fermentat on which it creates in the stomach. Milk sugar never causes this fermentation or irritation.

IT IS NON-IRRITATING.

By reason of the fact that Lactated Food is partially digested in process of Preparation, it is assimilated by the feeblest stomach, and no undigested particles pass into the bowels to irritate, and thus cause troublesome and dangerous bowel disorders.

IT IS HIGHLY NUTRITIOUS.

The nutritive elements of Lactated Food are derived from the three great cereals, Wheat, Barley, and Oats. From the Wheat is taken the pure gluten, the most nourishing substance known for the muscles and tissues; from the Barley, all the soluble albuminoid and extractive matter resulting from the most careful malting; and from the Oat, the strengthening properties for which it is so well known. The result is a food which never disappoints, and under which the feeble child or invalid rapidly rallies.

FOR CHOLERA INFANTUM.

It is the chief reliance of many eminent practitioners, and it is the safest food in summer for all young or delicate children.

Another important consideration is its low price, it being much more economical than other foods. We make four sizes, selling for 25 cents, 50 cents, $1 00, and $2.50. *A dollar can will furnish one hundred and fifty meals for an infant.*

If any physician that has not yet made a trial of the Lactated Food will write us, we will send a package of our regular size, postpaid, without charge, with the understanding that it will be given a careful trial as soon as possible.

We shall use every precaution to maintain the high standard of this Food, and to insure perfect satisfaction to the profession in its use.

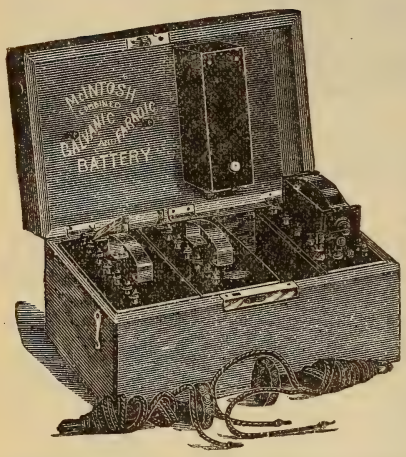
MANUFACTURERS OF THE CELEBRATED

McIntosh Combined Galvanic and Faradic Batteries,

Table, Office, and Family Batteries, Electrodes, Electric Bath Apparatus, Statical Electric Machines, Stereopticons, Solar, Monocular, and Binocular Microscopes.

AND ALL KINDS OF

PHILOSOPHICAL ELECTRICAL APPARATUS.



Schools, Colleges, Physicians, or Hospitals wanting new Apparatus, will do well to favor us with correspondence and obtain estimates. Men of scientific experience have charge of the manufacturing department. We employ the most skillful mechanics, and have the largest facilities in America for manufacturing.

We would call the Special Attention of the Medical Profession to our

Combined Galvanic and Faradic Batteries.

These Batteries are recommended by the Medical Faculty of both America and Europe, and have been adopted by the United States Government for use in Medical Department of the Army and Navy. They are

The First and Only Portable Batteries ever Invented which Give both the Galvanic and Faradic Current,

TWO DISTINCT BATTERIES IN ONE CASE.

No Physician can afford to be without one.

This celebrated Battery is constructed on an improved plan. The zincs and carbons are fastened to hard-rubber plates in sections of six each; this manner of connecting brings the plates nearer together than in any other battery, thus giving less internal resistance. The cells are composed of one piece of hard rubber, and are made in sections of six each with a drip-cup, thus one section can be handled, emptied, and cleaned, as easily and quickly as one cell. The drip-cup is to receive the elements when the battery is not in use. The fluid cannot spill or run between the cells, and there is no danger of breaking, as with glass cells. This is the only battery in which the zinc and carbon plates can be kept clean and always in order by simply rinsing them.

An extra cell (with a zinc and carbon element) is added to the combined batteries, for the purpose of producing the Faradic current. This cell gives as much force as is ever needed, and avoids exhausting the current from the Galvanic cells. All the metal work is finely nickel-plated and highly polished, and every part is put together so that it can be easily replaced by the operator. Our batteries weigh less, occupy less space, give a current of greater intensity and quantity, than any other battery manufactured.

Our illustrated Catalogue, a handsome book giving full description of all our goods, and other valuable information, sent free on application.

McINTOSH GALVANIC AND FARADIC BATTERY CO.
300 & 302 DEARBORN STREET, CHICAGO, ILL.

WHEELER'S TISSUE PHOSPHATES

Bone-Calcium Phosphate $Ca_3 2P.O._4$, Sodium Phosphate $Na_2H.P.O._4$, Ferrous Phosphate $Fe_3 2P.O._4$, Trihydrogen Phosphate $H_3P.O._4$.

WHEELER'S COMPOUND ELIXIR OF PHOSPHATES AND CALISAYA. A Nerve Food and Nutritive Tonic, for the treatment of Consumption, Bronchitis, Scrofula, and all forms of Nervous Debility.

The Lactophosphates prepared from the formula of Prof. Dusart, of the University of Paris. Combines with a superior Pemartin Sherry Wine and Aromatics in an agreeable cordial easily assimilable and acceptable to the most irritable stomachs.

Phosphorus, the oxidizing element of the Nerve Centres for the generation of Nerve Force; Lime Phosphate, an agent of Cell Development and Nutrition; Soda Phosphate, an excitant of Functional Activity of Liver and Pancreas, and Corrective of Acid Fermentation in the Alimentary Canal; Iron, the Oxidizing Constituent of the Blood for the Generation of Heat and Motion; Phosphoric Acid, Tonic in Sexual Debility; Alkaloids of Calisaya, Anti-Malarial and Febrifuge; Extract of Wild Cherry, uniting with tonic power the property of Calming Irritation and Diminishing Nervous Excitement.

THE SUPERIORITY OF THE ELIXIR consists in uniting with the Phosphates the special properties of the Cinchona and Prunus, of Subduing Fever and Allaying Irritation of the Mucous Membrane of the Alimentary Canal, which adapts it to the successful treatment of Stomach Derangements and all diseases of Faulty Nutrition, the outcome of Indigestion Malassimilation of Food, and *failure of supply* of these essential elements of Nerve Force and Tissue Repair.

The special indication of this combination of Phosphates in Spinal Affections, Caries, Necrosis, Ununited Fractures Marasmus, Poorly Developed Children, Retarded Dentition, Alcohol, Opium, Tobacco Habits, Gestation and Lactation, to promote Development, etc., and as a *physiological restorative* in Sexual Debility, and all used up conditions of the Nervous System, should receive the careful attention of good therapeutists.

There is no strychnia in this preparation, but when indicated, the Liquor Strychniæ of the U. S. Dispensatory may be added, each fluid drachm of the solution to a pound bottle of the Elixir making the 64th of a grain to a half fluid ounce, an ordinary dose, a combination of a wide range of usefulness.

DOSE—For an adult, one tablespoonful three times a day, after eating; from seven to twelve years of age, one dessertspoonful; from two to seven, one teaspoonful. For infants, from five to twenty drops, according to age.

Prepared at the Chemical Laboratory of T. B. WHEELER, M. D., Montreal, D. C.

Put up in pound bottles and sold by all Druggists at One Dollar.

MATHEY-CAYLUS' GLUTEN

CAPSULES

OF

PURE COPAIBA AND OTHER MEDICINES.

Adapted and recommended for the cure recent or chronic Gleets, Fluor Albus, etc., etc.

The MATHEY-CAYLUS' CAPSULES, *coated with gluten*, present the most perfect mode for administering Copaiba, Cubebs, Norway Tar, Turpentine, and other remedies, the disagreeable odor and taste of which are often a hindrance to their use. This mode of preparing capsules, which has been approved by the Academy of Medicine, has been recommended in their clinical lectures by eminent Professors in the hospitals of Paris, as well as in those of New York and London.

By the first physicians of the hospitals of Paris, London, and New York.

SPECIAL ADVANTAGES OF MATHEY-CAYLUS' GLUTEN CAPSULES.—Being formed of thin, transparent, and readily assimilated coating, they so cover and disguise the medicine to be given, that it can be taken without disgust, but with ease. In this respect, they differ widely from the gelatine capsules which have a hard, thick coating, which swells beyond measure, in the stomach, are hard to be swallowed, and which is of great importance, they create disturbance in the digestive functions.

The special advantage of the coating of gluten consists in the fact that, notwithstanding its extra thinness, and although it softens under the action of the gastric juice, it can pass the stomach without breaking, and only in the intestines is the medicinal matter liberated; this accounts for the fact that Mathey-Caylus' Capsules never cause the nausea, eructations, and dyspeptic symptoms, which are complained of by many persons using other preparations.

Finally, their regular ovoid form, which is so favorable to swallowing, their pleasant appearance, which dispels all disgust, and the advantage of being entirely free from taste and smell, recommend the use of these capsules even to the most delicate persons.

Thankful to the Medical Profession for the liberal patronage heretofore bestowed upon us, we hope that they will continue their favors, and we are convinced that they will never have any reason to regret the generous welcome they have given to our preparations.

MATHEY-CAYLUS' CAPSULES are never sold, except in bottles having the following inscription printed in the glass: MATHEY-CAYLUS A PARIS. And each bottle contains 64 capsules, making them the cheapest capsules in the market.

The following different kinds of Mathey-Caylus' Gluten Capsules are now offered:

COPAIBA AND TANNIC ACID,
COPAIBA AND S. N. OF BISMUTH,
COPAIBA AND CATECHU,
COPAIBA AND MAGNESIA,
COPAIBA, CUBEBS AND ALUM,
COPAIBA, CUBEBS AND RHATANY,
COPAIBA AND RHATANY,
COPAIBA AND CITRATE OF IRON,
COPAIBA AND CUBEBS,
COPAIBA PURE,
COPAIBA, CUBEBS AND CARB. OF IRON,
VENICE TURPENTINE, NORWAY TAR, PURIFIED,
CUBEBS AND TURPENTINE,
CUBEBS AND TANNATE OF IRON,
CUBEBS AND ALUM,
CUBEBS PURE,
COPAIBA AND MATICO,
COPAIBA, IRON AND OIL OF SANDAL,
COPAIBA AND OIL OF SANDAL,
COPAIBA, PEPSIN AND BISMUTH,
COPAIBA AND TAR,
COPAIBA, CUBEBS AND OIL OF SANDAL.

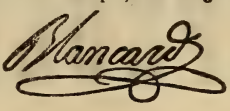
BLANCARD'S PILLS

OF UNCHANGEABLE IODIDE OF IRON.

Blancard's Pills of Iodide of Iron are so scrupulously prepared, and so well made, that none other have acquired a so well deserved favor among physicians and pharmaceutists. Each pill, containing one grain of proto-iodide of iron, is covered with finely pulverized iron, and covered with balsam of tolu. Dose, two to six pills a day. The genuine have a *reactive silver seal* attached to the lower part of the cork, and a green label on the wrapper, bearing the fac-simile of the signature of



Pharmacien, No. 40 Rue Bonaparte, Paris.

Without which none are genuine.

BEWARE OF IMITATIONS.

TANRET'S PELLETIERINE

For the Treatment of Tape-Worm (Tænia Solium.)

This New Tænifuge, the Active Alkaloid of Pomegranate Bark, has of late come into extensive use in France for the treatment of Tape-Worm (Tænia Solium). The results of numerous experiments with it at the Marine Hospitals of Toulon, St. Mandrier, etc., and in the Hospitals of Paris, St. Antoine, La Charite, Necker, Beaujon, etc., have all been most satisfactory. Doctor Dujardin Beaumetz, Member of the Academy of Medicine, and Prof. Laboulbene, in their report to the Society of Therapeutics, have given it their unqualified approval after the most searching experiments. This preparation is pleasant to administer, and if certain preliminaries are observed success will be insured.

Sold only in Bottles containing one dose.

TANRET'S ERGOTININE.

ALKALOID AND ACTIVE PRINCIPLE OF SPURRED RYE.

This is a well defined Alkaloid that must not be confounded with Ergotine or other extracts; it is given in doses of from 1/4 to 1/6 Milligramme (1-240th to 1-120th of a grain), in all cases where Ergot is indicated, viz.: Flooding, Post-partum Hemorrhages, Metrorrhagia, etc., etc.

It is put up in the following forms:

Syrup Containing 1/4 Milligramme to each teaspoonful; DOSE from 1 to 6 teaspoonsfuls per day.

Solution for hypodermic purposes, Containing 1 Milligramme to each cubic Centimeter; DOSE, from 3 to 10 drops.

The Institute of France has awarded one of its Prizes to Mr. Chas. Tanret for the discovery of these Alkaloids.

Tanret's Pelletierine and Ergotinine are only prepared by Mr. Chas. Tanret, Laureate of the Institute of France, 60 Rue du Rempart, Paris.

Sole Agents for the United States, E. FOUGERA & CO., 30 North William St., N. Y.

PAMPHLET ON PELLETIERINE AND ERGOTININE SENT ON APPLICATION.

BOUDAULT'S PEPSINE

The Only Pepsine Used in the Hospitals of Paris for the Last 30 Years.

Unlike the various substitutes which, in most cases, are but unscientific or incompatible compounds, forced upon the Medical Profession as aids to digestion by extensive advertising, but which, when submitted to the proper tests, are found to be useless as digestive agents, Pepsine is constantly gaining in the esteem of the careful practitioner.

Since the introduction of Pepsine by Boudault and Corvisart, in 1854, the original BOUDAULT'S PEPSINE HAS BEEN AT ALL TIMES CONSIDERED THE BEST, as is attested by the awards it has received at the Expositions of 1867, 1868, 1872, 1873, in 1876 at the Centennial Exposition of Philadelphia, and in 1878 at the Paris Exposition.

The most reliable tests, carefully applied, will satisfy every one that BOUDAULT'S PEPSINE HAS A MUCH HIGHER DIGESTIVE POWER than the best Pepsines now before the Profession, and is therefore especially worthy of their attention.

BOUDAULT'S PEPSINE is prepared in the form of Pepsine Acid and Pepsine Neutral. It is sold in bottles of one ounce, with a measure containing exactly five grains; also in bottles of 4, 8, and 16 ounces for dispensing.

BOUDAULT'S WINE OF PEPSINE.

Formula of Dr. Corvisart.

The taste of Pepsine being perfectly disguised in this Wine, it may be recommended to persons who have difficulty in taking Pepsine in the form of powder. This Wine is tested so that a tablespoonful of it is equal in digestive power to ten grains of Boudault's Pepsine in powder. Sold only in 8 oz. Bottles.

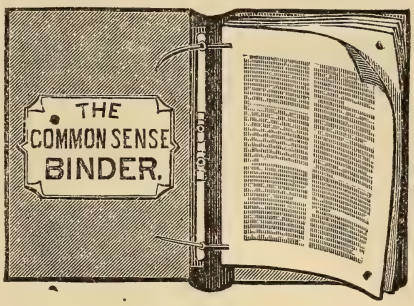
RUSSELL'S COMMON SENSE BINDER.

We give below a cut showing the form of this binder, which we have found the best we have used. A number have been prepared, of a size to fit the REPORTER, and are lettered in gilt, with its name. They will be sent by mail, to suit subscribers, on receipt of seventy-five cents.



At the close of a volume, the numbers can be removed from the binder and regularly bound, or they can with equal convenience be left in it, and another binder be used for the next volume.

D. G. BRINTON, 115 South Seventh St.

STAUFER'S
SPRING STEM UTERINE SUPPORTERS.

Price, $7.00.

The engraving shows the Spring Stem Cup, which consists of over a dozen styles. The series contains Spring Stem Balls, Spring Stem Levers, for Anteversions and Retroversions. also Spring Cup with posterior projections, all of assorted sizes.

Explanation.—The stem is screwed on cup A, and when unscrewed, the spring is put in tube *m*, or taken out when it needs cleaning. Thus the coil spring lays between the cup and base *n*. When there is pressure from above, or below, or both, the spring is compressed and again stretches out at the first opportunity. The movement of the base stem *n*, is governed by a slot and pin through tube *m*.

A D.—Represents the cup transformed into a self-sustaining cup, virtually an instrument of double capacity. In most cases after the uterus is held in "health line" for a time by external support, contraction of the walls of the vagina takes place at night or until forced down next day by bodily exertion, against which the stem and bandage guards if applied in time.

Belt Y.—The manner in which belt Y, sets on the abdomen is shown in above engraving. The widest or lifting part is in front. Over each hip as seen at H, are two elastics, and on large belts three. It closes on the back by buckling at B. It is of fine sateen outside, fine lining inside, and a slight stiffening between, and staved with soft whalebones. Accurate hip measure is to be taken over a thin undergarment; since it needs to fit with a space of one or two inches apart on the back, for the buckle straps to draw. The perineal attachments are short and buckle at F and R.

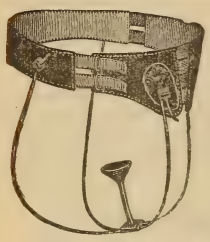
Belt Z.—This is an elastic waist strap and carries any supporter of this series. Yet the common difficulty presents itself, where long and slender attachments are used, that they do not govern the internal part so efficiently as on the low grasping abdominal supporter Y.

Catalogue.—The catalogue comprises over 150 sizes and styles of uterine examining and supporting instruments, of which the hard rubber parts are exchanged and interchanged at cost, without limit of time. It also contains full directions and explanations for the use of this series of hard rubber gynecological instruments; together with common information collected through many years to simplify this line of treatment.

Guarantee.—The money lost by purchasing uterine supporters, unscientifically constructed, of irritating material, or limited in deficiency of sizes, and in consequence loss of families in practice, has set a large portion of the medical profession against the mechanical support of the uterus. By these conditions the risk of the first purchase by a physician of a stem and bandage supporter of this series is obviated. After the first purchase the instruments are supposed to be known, yet the guarantee is extended by special contract in doubtful cases.

Refunding.—On return of the hard rubber part or parts within six months of purchase, Five Dollars of the purchase money will be refunded. The belt remains with the patient as an abdominal supporter and only risk.

The above Guarantee and Refunding is secured when obtained through this Office. Any other Instrument of STAUFER'S SERIES is also obtained through this Office at Catalogue Prices, and Catalogue free.



PHYSICIANS!

YOUR ATTENTION IS INVITED

—TO THE—

DR. McINTOSH NATURAL UTERINE SUPPORTER.

THIS INSTRUMENT MEETS THE WANTS OF THE PROFESSION MORE PERFECTLY than any other Uterine Supporter ever made. This is proven by the fact that during the past fifteen years more have been sold than of all other Supporters combined. *It never fails to give perfect satisfaction, even in the most difficult cases*, where any instrument can be used.

The **ABDOMINAL PORTION** is a broad morocco leather belt with elastic straps to buckle around the hips, with concave front, so shaped as to hold up the abdomen.

The **UTERINE PORTION** is a cup and stem made of highly-polished hard rubber, very light and durable, shaped to fit the neck of the womb, with openings for the secretions to pass out, as shown by the cuts. Cups are made with extended lips to correct flexions and versions of the womb.

The cup and stem is suspended from the belt by two soft elastic rubber tubes, which are fastened to the front of the belt by simple loops, pass down and through the stem of the cup and up to the back of the belt. These soft rubber tubes being elastic adapt themselves to all the varying positions of the body and perform the service of the ligaments of the womb.

Anteversion. Prolapsus. Retroversion

The instrument is very comfortable to the patient, can be removed or replaced by her at will, can be worn at all times, will not interfere with nature's necessities, will not corrode, and is lighter than metal. It will answer for all cases of Anteversion, Retroversion, or Prolapsus of the Womb. It is used by our leading physicians with never-failing success.

OUR REDUCED PRICE TO PHYSICIANS IS $5.00 EACH.

Instruments sent by mail at our risk on receipt of price; or we can send by express, C. O. D., with express charge for returning money added.

CAUTION.

Owing to the great success of our Supporter, several worthless imitations have been made which are often substituted for our instruments, to the detriment of the patient and the disappointment of the physician. To protect our patrons from imposture, we stamp each pad of the Abdominal belt in gilt letters, "Dr. McIntosh N. U. Supporter, Chicago, Ill."; the base of each cup is stamped "Dr McIntosh N. U. S. Co., Chicago, Ill., U. S. A."

The box in which the instrument is put up contains directions for the application of the instrument pasted inside the cover, having the fac simile signature of Dr. L. D. McIntosh.

For further information in regard to the instrument, address

DR. McINTOSH NATURAL UTERINE SUPPORTER CO.,

300 AND 302 DEARBORN STREET, CHICAGO, ILL.

Our valuable Pamphlet on "Displacement of the Womb," giving a more complete description of the Instrument, will be sent you free on application.

LEVIS'S METALLIC SPLINTS.

FLEXIBLE, PERFORATED, NICKEL-PLATED, Conformable to every size and condition of Limbs. VERY LIGHT, INDESTRUCTIBLE, and INEXPENSIVE. The complete set consists of 21 pieces in a neat, compact case. Full descriptive circulars sent on application. ☞ PRICE, $15.00 Per Set. ☜

COSMOLINE

Unguentum Petrolei

Prepared by E.F.Houghton & Co. Philadelphia, U.S.A.

Put up in 1, 5, 10, 25, 50, and 100-lb. cans. Samples furnished on application. The post-office laws forbid anything of an oleaginous nature being sent through the mail.

In chemical composition, Cosmoline (Unguentum Petrolei) is an oleaginous hydrocarbon, corresponding to the heavy petroleum oils, and containing a large amount of the paraffines and olefines of the formulæ $C_{16}H_{34}$ and $C_{16}H_{32}$. It contains but a small percentage of the paraffines and olefines corresponding to the formulæ C_7H_{16} and C_7H_{14}, respectively, and the offensive and irritating properties of the crude oil have been carefully removed. In the process of purification, no acids, alkalies, or other chemicals are employed, and no injurious additions of any kind are made to the natural product. The result is a semi-solid, translucent substance, with a faint odor and unctuous feel.

Cosmoline (Unguentum Petrolei) melts at about 100° Fah. (38° Cent.); and boils at about 625° Fah. (329° Cent.); its specific gravity is about 0.875 at 60° Fah.

As it contains no oxydizable or organic matter capable of change by putrefaction or fermentation, and is absolutely without affinity for moisture, it offers to the profession an admirable unguent, which can never decompose, ferment, or become rancid in any climate or temperature.

PHILADELPHIA, July 10, 1880.

MESSRS. E. F. HOUGHTON & Co.: I have for a number of years made extensive use of Cosmoline (Unguentum Petrolei), and consider it a most valuable article for surgical purposes. Either as a dressing by itself, or as a vehicle for the application of medicaments, it is greatly superior to lard or other fatty matters, especially by reason of its non-liability to change by time or temperature.

Yours truly, JOHN H. PACKARD, M. D.

1031 WALNUT STREET, PHILADELPHIA.

MESSRS. E. F. HOUGHTON & Co.: I have used extensively Cosmoline (Unguentum Petrolei) both in Dispensary and private practice, with very great satisfaction. As a vehicle in making ointments it is invaluable, and far superior to lard, for the reason that it will not become rancid or undergo chemical change like the latter, when exposed to the atmosphere. I cannot too highly commend it as an application in various skin diseases. Yours truly, JOHN V. SHOEMAKER, A. M., M. D.,

Physician to the Pennsylvania Free Dispensary for Skin Disease.

208 WEST 34TH STREET, NEW YORK.

MESSRS. E. F. HOUGHTON & Co.—*Gents:* I fully appreciate the value of your Cosmoline, or Unguentum Petrolei, and prescribe it frequently in ointments. Fluid Cosmoline I have used constantly for several years, as a lubricant of urethral sounds. It is the cleanest oil I know of for this purpose.

Yours truly, GEO. HENRY FOX.

FELLOWS'

HYPO-PHOS-PHITES

(SYR: HYPOPHOS: COMP: FELLOWS)

Contains **The Essential Elements** to the Animal Organization—Potash and Lime;
The **Oxydizing Agents**—Iron and Manganese;
The **Tonics**—Quinine and Strychnine;
And the **Vitalizing Constituent**—Phosphorus,
Combined in the form of a Syrup, with *slight alkaline reaction.*

It Differs in Effect from all others, being pleasant to taste, acceptable to the stomach, and harmless under prolonged use.

It has Sustained a High Reputation in America and England for efficiency in the treatment of Pulmonary Tuberculosis, Chronic Bronchitis, and other affections of the respiratory organs, and is employed also in various nervous and debilitating diseases with success.

Its Curative Properties are largely attributable to Stimulant, Tonic, and Nutritive qualities, whereby the various organic functions are recruited.

In Cases where innervating constitutional treatment is applied, and tonic treatment is desirable, this preparation will be found to act with safety and satisfaction.

Its Action is Prompt; stimulating the appetite and the digestion, it promotes assimilation, and enters directly into the circulation with the food products.

The Prescribed Dose produces a feeling of buoyancy, removing depression or melancholy, and hence is of great value in the treatment of MENTAL AND NERVOUS AFFECTIONS.

From its exerting a double tonic effect and influencing a healthy flow of the secretions, its use is indicated in a wide range of diseases.

Prepared by JAMES I. FELLOWS, Chemist,

48 VESEY STREET, NEW YORK.

Circulars Sent to Physicians on Application.

SYR: HYPOPHOS: COMP: C. P.

(McARTHUR.)

For the treatment of Consumption and Tubercular Diseases.

"Dr. McArthur is a sanguine advocate of the Churchill Method. His Syrup of the Hypophosphites is an excellent and PURE preparation; and though we do not concede all the virtues claimed for it as a remedy for Consumption, yet we can testify to its great value from actual trial."

HENRY GIBBONS, M. D.,
Professor of the Principles and Practice of Medicine, University College, San Francisco, editor "Pacific Medical and Surgical Journal."

"I do not hesitate to commend it to the profession as worthy of confidence."

PROFESSOR HARVEY L. BIRD, Baltimore.

"I now prescribe it habitually in my private practice, and ALWAYS WITH BENEFIT when the cases are properly selected."

PROFESSOR JOHN H. LYNCH, M. D., Baltimore, Md.

"Dr. McArthur's chemically pure Syrup of Hypophosphites is becoming thoroughly recognized as an efficient remedy in the treatment of consumption and wasting diseases."

"Dr. McArthur is not only a good chemist and physiologist; he is, above all, a practical physician, who, after years of medical experience, is convinced that, in the treatment of Pulmonary Phthisis and kindred diseases, his preparation of Hypophosphites possesses greater therapeutic efficacy than any medicine hitherto used; and the results of treatment with his Syrup appear amply to bear out his views."

J. J. LAWRENCE, A. M., M. D.,
Editor St. Louis "Medical Brief."

PHYSICIANS WHEN PRESCRIBING WILL PLEASE WRITE THUS:

℞ SYR: HYPOPHOS: COMP: McARTHUR, ONE BOTTLE.

SUCCUS ALTERANS.

(McDADE).

SUCCUS ALTERANS is a purely vegetable compound of the preserved juices of Stillingia Sylvatica, Lappa Minor, Phytolacca Decandra Smilax Sarsaparilla, and Xanthoxylum Fraxineum, as collected by DR. GEO. W. MCDADE exclusively for ELI LILLY & CO., and endorsed by DR. J. MARION SIMS.

SUCCUS ALTERANS continues to gain favor from its remarkable Alterative and Tonic properties, *eliminating specific poison from the blood*, and *increasing the proportion of red corpuscles in anæmic patients* to a wonderful degree.

SUCCUS ALTERANS in venereal and cutaneous diseases is fast supplanting Mercury, the Iodides and Arsenic; and is a certain remedy for Mercurialization, Iodism, and the dreadful effects often following the use of Arsenic in skin diseases.

SUCCUS ALTERANS is also strongly recommended for its Tonic and Alterative effects in the myriad forms of scrofulous disease, and in all cases where anæmia is a factor. Such patients rapidly develop a good appetite, sleep soundly, and gain flesh rapidly. Many cases are on record where patients increased ten to twenty-five pounds in weight in a few weeks.

SUCCUS ALTERANS may be given for any length of time without injury to the patient.

SUCCUS ALTERANS is now endorsed by leading members of the medical profession, and in use by many hospitals of note.

SUCCUS ALTERANS is put up only in round amber bottles holding sixteen fluid ounces, which is sufficient for from two to six weeks' treatment.

ANY PHYSICIAN who has not received DR. MCDADE'S latest publication, the MONOGRAPHIA SYPHILITICA for JANUARY, 1887, should send their address, mentioning this journal, and we will mail a copy. It contains a paper, illustrated with colored plates, by Dr. D. H. GOODWILLIE, of New York, on the "Sequelæ of Syphilis," reports of cases in practice, and many other valuable papers.

SUCCUS ALTERANS is supplied by reputable wholesale and retail druggists everywhere. Agency for Great Britain, etc., JOHN M. RICHARDS, 46 HOLBORN VIADUCT, LONDON, E. C.

ELI LILLY & CO., PHARMACEUTICAL CHEMISTS, INDIANAPOLIS, IND., U. S. A.

Smithsonian Institute

Concentrated Palatable Nutrients.

PEPTONIZED EXTRACT OF BEEF.

Contains all the nutritive constituents of beef.

The superiority of this preparation over other extracts of beef depends upon:

1. The large proportion of albuminoids which it contains.

2. The fact that its albuminoid constituents are chiefly in the form of peptones, insuring rapid absorption and ready assimilation.

3. Its appetizing flavor.

4. Its perfect and ready solubility in water.

The uses of such a preparation are obvious. It is a concentrated, and at the same time an easily assimilated food, useful in all cases of acute disease where sustaining treatment is indicated, and especially valuable in convalescence, and in chronic conditions of inanition or malnutrition, particularly where the functions of the stomach are not well performed.

One part of the Peptonized Extract of Beef may be said to be the equivalent of eight parts of fresh beef. One teaspoonful (about one-half ounce) will make a pint of excellent beef tea.

A like quantity added to a pint of vegetable soup communicates to it a rich flavor, and converts it into a highly nutritious food.

It may be employed in a still more concentrated form, if desired, but from half an ounce to one ounce of the extract is as much as it is generally advisable to give at one time.

POWDER OF BEEF.

A concentrated food of the highest nutritive value.

It represents in an exceedingly concentrated form the total nutritive value of the beef.

It is tasteless, and can be taken for a longer time than the various extracts of beef, beef juices, etc., without exciting nausea.

It is not only more readily digested and assimilated, but also incomparably easier of administration than other concentrated aliments, and may be added to water, milk, or wine, or beaten up with the yolk of an egg.

Drs. Debove and Dujardin-Beaumetz, of Paris, France, Dr. Lauder Brunton, of London, England, Dr. Henry B. Millard, of New York City, and many others, have given Powder of Beef a most thorough trial, and report that it is a most valuable adjuvant in the treatment of dyspepsia, indigestion, gastritis, ulcer of the stomach, tuberculosis, and in all chronic wasting diseases accompanied by enfeeblement of the digestive and assimilative functions.

PURE POWDERED BONE.

For the treatment of such affections as nervous exhaustion, rickets, and all diseases depending upon a lack of the proper supply of the inorganic elements of the tissues, it is believed that Pure Powdered Bone will be found invaluable.

It has the exact chemical composition required for a true nerve and bone food.

Its mechanical construction is such as to aid digestion to the greatest possible degree.

It is tasteless and odorless.

It is miscible with all ordinary foods in the proportions required, without detection.

It is inexpensive, and therefor adapted for general use.

DETROIT, MICH.

THE BEST

—ANTI-SEPTIC—

For Internal and External Use.

FORMULA.—Listerine is the essential Antiseptic constituent of Thyme, Eucalyptus Baptisia, Gaultheria, and Mentha Arvensis in combination. Each fluid drachm also contains two grains of refined and purified Benzo-boracic Acid.

ANTISEPTIC, PROPHYLACTIC, DISINFECTANT, NON-TOXIC, NON-IRRITANT, NON-ESCHAROTIC, AGREEABLE, STRICTLY PROFESSIONAL and SCIENTIFIC.

Listerine comes nearer the ideal Antiseptic than any preparation now before the Medical World

Send for New Formula Book and General Reports, establishing its value externally in Surgery, Obstetrics, Gynecology, Leucorrhœa, Gonorrhœa, and all Mucous Membrane Catarrhs; internally in Typhoid and other Fevers, Zymotic Diseases, Diphtheria, Scarlet Fever, Dyspepsia, Dysentery, Diarrhœa, all forms of Cholera, etc., and as a general Prophylactic

THE BEST

—ANTI-LITHIC—

For the Uric Acid Diathesis.

FORMULA.—Each fluid drachm of "Lithiated Hydrangea" represents thirty grs. of Fresh Hydrangea, and three grs. of Chemically Pure Benzo-Salicylate of Lithia. Prepared by our improved process of osmosis, it is invariably of definite and uniform therapeutic strength, and hence can be depended upon in clinical practice.

KIDNEY-ALTERATIVE AND ANTI-LITHIC, RELIABLE, UNIFORM, AND DEFINITE.

The solution and elimination of an excess of uric acid and urates is best attained by an intelligent combination of certain forms of Lithia and a Kidney Alterative.

The ascertained value of Hydrangea in Calculous Complaints and Abnormal Conditions of the Kidneys through the earlier reports of Drs. Atlee, Horsley, Monkur, Butler, and others, and the well known utility of Lithia in the diseases of the uric acid diathesis, at once justified the therapeutic claims for Lambert's Lithiated Hydrangea when first announced to the Medical Profession, and it is now regarded by Physicians generally as the best and most soothing Kidney Alterative and Anti-lithic Agent yet known in the treatment of Urinary Calculus, Gout, Rheumatism, Bright's Disease, Diabetes, Cystitis, Hæmaturia, Albuminuria, and Vesical Irritations generally.

LAMBERT PHARMACAL CO., 116 OLIVE ST., ST. LOUIS.

30,000 PHYSICIANS
NOW PRESCRIBE

HYDROLEINE

(HYDRATED OIL,)

For Consumption and Wasting Diseases. It Produces Immediate Increase in Flesh and Weight.

FORMULA.

Each Dose of Two Teaspoonfuls, equal to 120 Drops, contains:

Pure Cod Liver Oil	80 m. (drops)	Soda	½ Grain.
Distilled Water	35 "	Boric Acid	¼ "
Soluble Pancreatin	5 Grains.	Hycholic Acid	⅒ "

DOSE:

Two teaspoonfuls alone, or with twice the quantity of water, to be taken thrice daily after meals.

Hydroleine (Hydrated Oil) is not a simple alkaline emulsion of oleum morrhua, but a hydro-pancreated preparation containing acids and a medicum of soda. Pancreatin is the digestive principle of fatty foods, and, in the soluble form here used, completely saponifies the oleaginous material so necessary to the reparative process in all wasting diseases.

Lautenbach's researches on the function of the liver would show the beautiful adjustment of therapeutics in preparation of Hydroleine, furnishing, as it does, the acid and soda necessary to prevent self-poisoning by reabsorption of morbid tubercular detritus and purulent matters into the general circulation.

Each bottle in nutritive value exceeds ten times the same bulk of cod liver oil. It is economical in use and certain in result.

Sold at all Drug Stores at $1.00 per Bottle.

The principles upon which this discovery is based have been described in a treatise on "The Digestion and Assimilation of Fats in the Human Body," by H. C. BARTLETT, Ph. D., F. C. S., and the experiments which were made, together with cases illustrating the effect of Hydrated Oil in practice, are concisely stated in a Treatise on "Consumption and Wasting Diseases," by G. OVEREND DREWRY, M. D.

Copies of these Works sent free on Application.

WM. F. KIDDER & CO., 83 John Street, New York.

Agents for U. S.

Also exclusive Agents for SVAPNIA, or Bigelow's purified Opium, in SCALES and HALF-GRAIN GRANULES.

SCOTT'S EMULSION

OF PURE COD LIVER OIL WITH HYPOPHOSPHITES OF LIME AND SODA.

THE STANDARD EMULSION OF COD LIVER OIL.

The ONLY Preparation of its class that will not SEPARATE nor SPOIL in any climate.

IT IS MADE FROM THE PUREST NORWEGIAN COD LIVER OIL, COMBINED WITH CHEMICALLY PURE HYPOPHOSPHITES AND GLYCERINE.

Acknowledged by leading Physicians in the U. S. and many other Countries to be the most ELEGANT most PALATABLE and EASILY DIGESTED preparation in the World, and can be tolerated longer by children and persons with delicate stomachs than any other.

WE ASK A CAREFUL COMPARATIVE TEST WITH ANY OR ALL SIMILAR PREPARATIONS.

FORMULA: 50 per cent. of Pure Cod Liver Oil, 6 grs. of the Hypophosphites of Lime. and 3 grs. of the Hypophosphite of Soda to a fluid ounce. Emulsified with mucilage and Glycerine.

S. & B's BUCKTHORN CORDIAL, RHAMNUS FRANGULA.

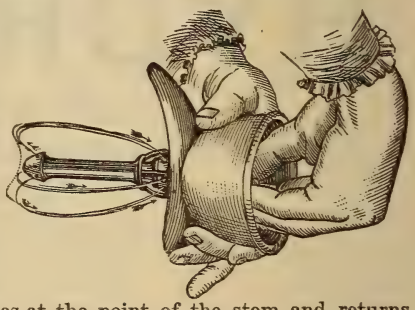
Is giving universal satisfaction to the profession, for its mild but certain and efficient cathartic action. It seems to be *almost* a *specific* for *habitual constipation*, and we are constantly in receipt of the most flattering reports regarding it. The care we use in its preparation—having the bark always the proper age, and properly exhausted—makes it always reliable in its action. Be sure and specify S. & B. Buckthorn Cordial.

To those who have for any reason never yet tried these preparations, we will be pleased to send samples free by express.

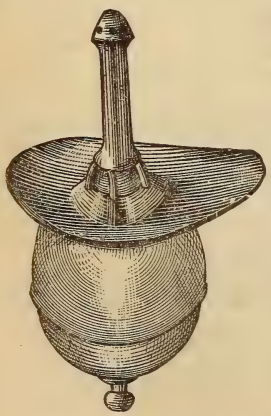
SCOTT & BOWNE, Mfg. Chemists, 132 & 134 S. 5th Ave., N. Y.

"PALLAS" SYRINGE.

VAGINAL AND RECTAL.



A MOST PERFECT and simply constructed Syringe for medicating and irrigating the vaginal cavity. The novel bulb of this Syringe, when doubled upon itself, as shown in the cut, will cause no fluid to be left, as is so apt to happen with the ordinary bulbs, and when filled will contain just enough fluid for the expansion of the vaginal folds. The hard rubber labial shield, with its plug, when firmly pressed against the labia, will both prevent spilling and soiling of linen, and the fluid can therefore be kept in circulation and in contact with the parts by repeating the pumping motion of the bulb. It will also be noticed that the fluid escapes as a spray from the large holes at the point of the stem and returns through the holes at the root of same, which is provided with hard rubber screen-bars, preventing the folds from interfering with the rapid return of the fluid into the bulb. In filling the bulb, a couple of turns will unscrew it. In handsome case, satin lined. Retail price, $3.75. To physicians, $3.00.



CHRISTIAN JENSEN & CO.,

2207 Fairmount Avenue,

PHILADELPHIA, PA.

COLDEN'S Liquid Beef Tonic.

Established 15 Years.
OBSERVE the NAME.
Beware of Imitations.

ORIGINAL LABEL:
"Colden's Liebig's Liquid Extract of Beef and Tonic Invigorator."

An Invaluable Aid in Medical Practice.

Differs Essentially from all other Beef Tonics.

COLDEN'S Liquid Beef Tonic is endorsed by scores of physicians, who are growing to realize more and more its importance in repairing, in accordance with the principles of dietetics, the **waste which disease entails.** It consists of the extract of Beef (by Baron Liebig's process) spirit rendered non-injurious to the most delicate stomach by extraction of the Fusel Oil, soluble Citrate of Iron, Cinchona, Gentian and other bitter tonics. An official analysis of this preparation by the eminent Chemist, ARTHUR HILL HASSALL, M. D., F. R. S., and an endorsement by the late SIR ERASMUS WILSON, F. R. S., is printed on the label of each bottle.

As a **blood food,** and a **reliable tonic** in all cases of debility and weakness, Malarial Fever, Anæmia, Chlorosis, Incipient Consumption, etc., it is the best preparation ever used. It acts directly on the sentient Gastric Nerves, stimulating the follicles to secretion, and gives to weakened individuals that first prerequisite to improvement—an appetite. It strengthens the nervous system when unstrung by disease, and has been employed with remarkable success as a remedy for Drunkenness and the Opium Habit.

Its Range of Action Embraces all Cases of Debility.

In order that physicians may form some idea of the nature of its ingredients, I will upon application in person, or by letter (enclosing a card), send a sample bottle of COLDEN'S LIQUID BEEF TONIC to any physician in regular standing, in the United States. Please ask your Dispensing Druggist (if he has not already a supply) to order it. In prescribing this preparation, physicians should be particular to mention "COLDEN'S"—*viz.:* "***Ext. carnis, fl. comp. (Colden's.)***" It is put up in pint bottles, and can be had of Wholesale and Retail Druggists generally throughout the United States.

C. N. CRITTENTON, Sole Agent, 115 Fulton St. New-York.

GLENN'S Sulphur Soap.

ALL physicians know that ***skin diseases*** are more or less constitutional, or dependent upon some specific poison in the blood, which if eradicated by internal treatment needs something to remove its appearance from the surface. Experience has proved that the best possible aid in the accomplishment of this end is obtained by the use of ***Sulphur in soap.*** GLENN'S SULPHUR SOAP is the best combination of its kind, and the one now generally used. It is for sale by all Druggists, at **25** cents a cake, or 3 cakes for **60** cents.

CONSTANTINE'S PINE TAR SOAP

Has been on trial among physicians for very many years as a toilet Soap and Healing Agent, and its superior virtues have been unanimously conceded **in all cases where the use of tar is indicated.** Unsolicited expressions of its excellence have been received from the Medical Faculty generally. IT IS THE BEST TAR SOAP MADE. None genuine unless stamped "A. Constantine's Persian Healing Pine-Tar Soap." For sale by all Druggists.

Samples of either of the above-named Soaps will be sent free upon application in person or by letter (enclosing card) to any physician in regular standing in the United States. C. N. Crittenton, 115 Fulton Street, New York. Please mention "THE MEDICAL AND SURGICAL REPORTER."

ESTABLISHED 1852.

HYDRASTIS

AND ITS PREPARATIONS.

The WM. S. MERRELL CHEMICAL CO. of Cincinnati—"The largest consumers of Golden Seal Root in the world" (see "Drugs and Medicines of North America")—offer to the medical profession, through the drug trade, the following well-known and highly approved preparations of this leading American drug.

FLUID HYDRASTIS.

A neutral solution of all the active medicinal constituents, forming a perfectly clear solution with alcohol, glycerin, syrup, or water. May be properly and profitably substituted for the Fluid Extract of the U. S. P. in the manufacture of syrup, wine or tincture.

COLORLESS HYDRASTIS.

A neutral solution of the White Alkaloid alone—without color or stain.

SULPHATE HYDRASTIA—CRYSTALLIZED.

[SULPHATE BERBERINA.]

This is the Sulphate of Yellow Alkaloid, which we present in crystals to guard against the substitution of impure and unskillful preparations in a powdered form.

Subsequent to its introduction by us under its present commercial title, this salt was identified as Berberina by Mahla, Durand and others. To avoid confusion with the Alkaloid Bebeerine and its salts, and to fully establish its identity, we continue the name by which it was originally introduced.

SOLUTION BISMUTH AND HYDRASTIA.

A neutral solution of the double Citrate of Bismuth and Hydrastia (White Alkaloid); each fluid drachm containing 2½ grains of the double salt.

Represented in New York City by

LEHN & FINK, 128 William Street.

Prices Current and Descriptive Circulars cheerfully supplied. Correspondence invited.

HAS RECEIVED THE

HIGHEST AWARD

LONDON, 1884,

AND IS SUPPLIED UNDER

ROYAL WARRANT

TO

H. R. H. THE PRINCE OF WALES.

ANNUAL SALE, 10 MILLIONS.

Of all Grocers, Druggists & Min. Wat. Dealers.

BEWARE OF IMITATIONS.

Friedrichshall.

THE WELL-KNOWN APERIENT MINERAL WATER.

IMPORTANT NOTICE.

By reason of an improved method of caption, by which dilution avoided, FRIEDRICHSHALL WATER will be found now to be of considerably greater strength *and* efficacy *than heretofore.*

The ordinary dose is a large wineglassful (4 ounces). Most efficacious when taken fasting and mixed with an equal quantity of hot water.

"I know nothing at all equal to Friedrichs all. The LONGER it is taken, the SMALLER is the quantity necessary to effect the purpose."

Sir HENRY THOMPSON, F.R.C.S., London.

OF ALL DRUGGISTS AND MINERAL WATER DEALERS.

In corresponding with Advertisers, please mention THE MEDICAL AND SURGICAL REPORTER

SAVORY & MOORE beg to call the attention of the Profession to some of their Special Preparations, the purity and uniform strength of which are guaranteed.

Pancreatic Emulsion. In Consumption, Wasting, LOSS OF THE POWER OF DIGESTION AND ASSIMILATION, this pure drug is the MOST POTENT REMEDY. This is now attested by the published records of numerous medical men, extracts of which accompany each bottle.

Peptodyn, the New Digestive, is a combination of the whole of the digestive secretions, forming an invaluable remedy in the treatment of all forms of Dyspepsia, and all diseases arising from imperfect nutrition. Peptodyn is intended as a general promoter of digestion for persons not necessarily considered in bad health; thus, when taken about a quarter of an hour after a meal, it will be found to assist digestion in a remarkable manner, and prevent the discomfort which often follows the partaking of a full meal by persons in good health.

Pancreatine Powder, for Indigestion and Loss of APPETITE. This palatable and popular remedy effects the digestion and assimilation of all food, especially of FATTY SUBSTANCES, and is therefore invaluable to patients who are unable to digest Cod Liver Oil, and who are thus deprived of its nourishing and invigorating properties.

Gelatine Discs for Hypodermic Use—Of Morphia, CODEIA, ERGOTINE, ATROPIA, STRYCHNIA, APOMORPHIA, etc. The chief features of these discs are their instant solubility, by which hypodermic solutions can be instantly obtained of uniform and reliable strengths; they keep good for an unlimited period in their dry state, and are extremely portable. (Prepared in accordance with Dr. Sansom's recommendation.)
In tubes, each containing 25 discs.

Etherodine (Substitute for Chlorodyne). A clear, bright fluid, pleasant to the taste, readily miscible with water or any suitable menstruum. The therapeutical properties of ETHERODINE are identical with those of CHLORODYNE, but the former is an elegant preparation, and more convenient for use.

Gelatine Discs for Ophthalmic Purposes.
"Much smaller doses of medicaments such as Atropine, Calabar Bean Extract, Sulphate of Zinc, Morphia, etc., etc., suffice to produce a marked effect by this form of application, than when drops are introduced."—*The Lancet.*
In tubes, each containing 100 discs.

Gelatine Lamels for Internal Administration, consist of thin, pliable, and, in most cases, transparent sheets of uniform thickness, accurately divided into squares by raised lines, each square containing an exact dose of the medicine with which the sheet is impregnated.
In sheets, each consisting of 24 squares.

Datura Tatula, for Asthma, Hay Fever, and Chronic BRONCHITIS. Recommended by the Profession as a remedy of great power and usefulness in cases of short and difficult breathing, spasmodic coughing, etc. The most convenient forms for use are—
Datura Tatula Cigars. Datura Tatula—prepared for use by means of a pipe.
Datura Tatula Cigarettes. Datura Tatula Pastilles—for Inhalation.

PHYSICIANS!

YOUR ATTENTION IS INVITED

—TO THE—

DR. McINTOSH NATURAL UTERINE SUPPORTER.

THIS INSTRUMENT MEETS THE WANTS OF THE PROFESSION MORE PERFECTLY than any other Uterine Supporter ever made. This is proven by the fact that during the past fifteen years more have been sold than of all other Supporters combined. *It never fails to give perfect satisfaction, even in the most difficult cases,* where any instrument can be used.

The **ABDOMINAL PORTION** is a broad morocco leather belt with elastic straps to buckle around the hips, with concave front, so shaped as to hold up the abdomen.

The **UTERINE PORTION** is a cup and stem made of highly-polished hard rubber, very light and durable, shaped to fit the neck of the womb, with openings for the secretions to pass out, as shown by the cuts. Cups are made with extended lips to correct flexions and versions of the womb.

The cup and stem is suspended from the belt by two soft elastic rubber tubes, which are fastened to the front of the belt by simple loops, pass down and through the stem of the cup and up to the back of the belt. These soft rubber tubes being elastic adapt themselves to all the varying positions of the body and perform the service of the ligaments of the womb.

Anteversion. Prolapsus. Retroversion

The instrument is very comfortable to the patient, can be removed or replaced by her at will, can be worn at all times, will not interfere with nature's necessities, will not corrode, and is lighter than metal. It will answer for all cases of Anteversion, Retroversion, or Prolapsus of the Womb. It is used by our leading physicians with never-failing success.

OUR REDUCED PRICE TO PHYSICIANS IS $5.00 EACH.

Instruments sent by mail at our risk on receipt of price; or we can send by express, C. O. D., with express charge for returning money added.

CAUTION.

Owing to the great success of our Supporter, several worthless imitations have been made which are often substituted for our instruments, to the detriment of the patient and the disappointment of the physician. To protect our patrons from imposture, we stamp each pad of the Abdominal belt in gilt letters, "Dr. McIntosh N. U. Supporter, Chicago, Ill."; the base of each cup is stamped "Dr. McIntosh N. U. S. Co., Chicago, Ill., U. S. A."

The box in which the instrument is put up contains directions for the application of the instrument pasted inside the cover, having the fac simile signature of Dr. L. D. McIntosh.

For further information in regard to the instrument, address

DR. McINTOSH NATURAL UTERINE SUPPORTER CO.,

300 AND 302 DEARBORN STREET, CHICAGO, ILL.

Our valuable Pamphlet on "Displacement of the Womb," giving a more complete description of the Instrument, will be sent you free on application.

LEVIS'S METALLIC SPLINTS.

FLEXIBLE, PERFORATED, NICKEL-PLATED, Conformable to every size and condition of Limbs. **VERY LIGHT, INDESTRUCTIBLE,** and **INEXPENSIVE.** The complete set consists of **21 pieces** in a neat, compact case. Full descriptive circulars sent on application. ☞ **PRICE, $15.00 Per Set.** ☜

McINTOSH GALVANIC AND FARADIC BATTERY CO.,

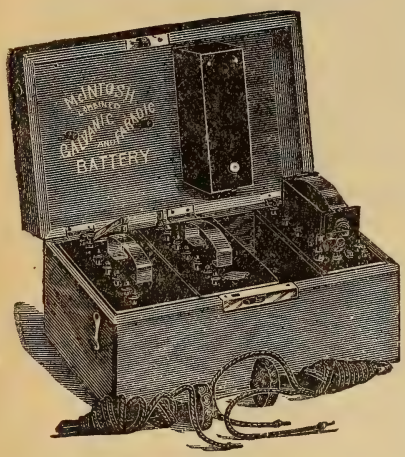
MANUFACTURERS OF THE CELEBRATED

McIntosh Combined Galvanic and Faradic Batteries,

Table, Office, and Family Batteries, Electrodes, Electric Bath Apparatus, Statical Electric Machines, Stereopticons, Solar, Monocular, and Binocular Microscopes.

AND ALL KINDS OF

PHILOSOPHICAL ELECTRICAL APPARATUS.



Schools, Colleges, Physicians, or Hospitals wanting new Apparatus, will do well to favor us with correspondence and obtain estimates. Men of scientific experience have charge of the manufacturing department. We employ the most skillful mechanics, and have the largest facilities in America for manufacturing.

We would call the Special Attention of the Medical Profession to our

Combined Galvanic and Faradic Batteries.

These Batteries are recommended by the Medical Faculty of both America and Europe, and have been adopted by the United States Government for use in Medical Department of the Army and Navy. They are

The First and Only Portable Batteries ever Invented which Give both the Galvanic and Faradic Current,

TWO DISTINCT BATTERIES IN ONE CASE.

No Physician can afford to be without one.

This celebrated Battery is constructed on an improved plan. The zincs and carbons are fastened to hard-rubber plates in sections of six each; this manner of connecting brings the plates nearer together than in any other battery, thus giving less internal resistance. The cells are composed of one piece of hard rubber, and are made in sections of six each with a drip-cup, thus one section can be handled, emptied, and cleaned, as easily and quickly as one cell. The drip-cup is to receive the elements when the battery is not in use. The fluid cannot spill or run between the cells, and there is no danger of breaking, as with glass cells. This is the only battery in which the zinc and carbon plates can be kept clean and always in order by simply rinsing them.

An extra cell (with a zinc and carbon element) is added to the combined batteries, for the purpose of producing the Faradic current. This cell gives as much force as is ever needed, and avoids exhausting the current from the Galvanic cells. All the metal work is finely nickel-plated and highly polished, and every part is put together so that it can be easily replaced by the operator. Our batteries weigh less, occupy less space, give a current of greater intensity and quantity, than any other battery manufactured.

Our illustrated Catalogue, a handsome book giving full description of all our goods, and other valuable information, sent free on application.

McINTOSH GALVANIC AND FARADIC BATTERY CO.
300 & 302 DEARBORN STREET, CHICAGO, ILL.

WHEELER'S TISSUE PHOSPHATES

Bone-Calcium Phosphate $Ca_3 2P.O._4$, Sodium Phosphate $Na_2 H.P.O._4$, Ferrous Phosphate $Fe_3 2P.O._4$, Trihydrogen Phosphate $H_3 P.O._4$.

WHEELER'S COMPOUND ELIXIR OF PHOSPHATES AND CALISAYA. A Nerve Food and Nutritive Tonic, for the treatment of Consumption, Bronchitis, Scrofula, and all forms of Nervous Debility.

The Lactophosphates prepared from the formula of Prof. Dusart, of the University of Paris. Combines with a superior Pemartin Sherry Wine and Aromatics in an agreeable cordial easily assimilable and acceptable to the most irritable stomachs.

Phosphorus, the oxidizing element of the Nerve Centres for the generation of Nerve Force; Lime Phosphate, an agent of Cell Development and Nutrition; Soda Phosphate, an excitant of Functional Activity of Liver and Pancreas, and Corrective of Acid Fermentation in the Alimentary Canal; Iron, the Oxidizing Constituent of the Blood for the Generation of Heat and Motion; Phosphoric Acid, Tonic in Sexual Debility; Alkaloids of Calisaya, Anti-Malarial and Febrifuge; Extract of Wild Cherry, uniting with tonic power the property of Calming Irritation and Diminishing Nervous Excitement.

THE SUPERIORITY OF THE ELIXIR consists in uniting with the Phosphates the special properties of the Cinchona and Prunus, of Subduing Fever and Allaying Irritation of the Mucous Membrane of the Alimentary Canal, which adapts it to the successful treatment of Stomach Derangements and all diseases of Faulty Nutrition, the outcome of Indigestion. Malassimilation of Food, and *failure of supply* of these essential elements of Nerve Force and Tissue Repair.

The special indication of this combination of Phosphates in Spinal Affections, Caries, Necrosis, Ununited Fractures Marasmus, Poorly Developed Children, Retarded Dentition, Alcohol, Opium, Tobacco Habits, Gestation and Lactation, to promote Development, etc., and as a *physiological restorative* in Sexual Debility, and all used up conditions of the Nervous System, should receive the careful attention of good therapeutists.

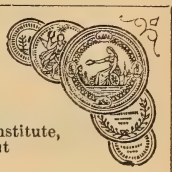
There is no strychnia in this preparation, but when indicated, the Liquor Strychniæ of the U. S. Dispensatory may be added, each fluid drachm of the solution to a pound bottle of the Elixir making the 64th of a grain to a half fluid ounce, an ordinary dose, a combination of a wide range of usefulness.

DOSE—For an adult, one tablespoonful three times a day, after eating; from seven to twelve years of age, one dessert-spoonful; from two to seven, one teaspoonful. For infants, from five to twenty drops, according to age.

Prepared at the Chemical Laboratory of T. B. WHEELER, M. D., Montreal, D. C.

Put up in pound bottles and sold by all Druggists at One Dollar.

THREE MORE MEDALS IN 1886.



The recent International Expositions at Edinburgh and Liverpool, and the American Institute, New York, each awarded us the Highest Silver Medal, which swells our list to about

THIRTY-FIVE GOLD, SILVER AND BRONZE MEDALS

FROM ALL PARTS OF THE WORLD.

THE REASON FOR IT IS PLAIN.

We make but one quality, and that the best. WE SCRUPULOUSLY CONFORM TO THE PHARMACOPŒIAL, or other recognized standards, in the incorporation of medicinal ingredients. We command perfect skill in manipulation, we use pure and superior fabrics, our packages are neat, elegant, and convenient, and our prices are not only uniform, but the most reasonable that can be placed on honest goods of the first quality.

THE STATUS OF THE WHOLE PLASTER BUSINESS

is well shown by the analyses of Belladonna Plasters, the leading article on the list of spread goods, made in March, 1886 by Dr. Albert B. Prescott, Prof. of Chemistry at the University of Michigan, and President of the American Chemical Society, from goods purchased by him in open market. The analyses were made by the same process, in parallel operations, for the quantity of total Belladonna alkaloids, estimated as atropine, and show our Belladonna plaster to contain 0.543 of a grain of alkaloid, which represents the strength of a plaster made after the standard prescribed by the U. S. P. from the highest grade of belladonna root. The same analyses showed the next highest belladonna plaster to contain but 0.264 grains of alkaloid, or less than half U. S. P. strength; while the several other brands examined contained from 0.230 grains to 0.045 grains, proving the S. & J. plaster to contain more than twice as much belladonna as the one approaching nearest to it, the rest falling below the line of any valid comparison, a number having scarcely a trace of belladonna alkaloid.

IN FURTHER PROOF OF OUR DESIRE AND PURPOSE

to maintain, and, if possible, to enhance, the high standard and reputation of our goods, we cite the fact that we have recently erected one of the most complete and best equipped laboratories in the United States, and we shall hereafter manufacture every medicinal extract incorporated in our specialties, and can guarantee, through our own analyses, the strength and quality of all drugs we employ; thus, also, ensuring the perfect uniformity of all our products. For many years, physicians have preferred our goods because they always found them therapeutically reliable, as others were not; and our new departure will set up a stronger safeguard than ever against cheap and worthless plasters and dressings.

WE HAVE ESTABLISHED THE STANDARD.

Failing to make goods equal to ours, and which would sell on their merits, our competitors have heretofore striven to introduce their goods to the notice of the trade and the medical profession by imitating our trade-marks, packages, circulars, and price lists. Now, certain plaster makers have evidently found it necessary to adopt more desperate tactics, since we learn from retailers in Pennsylvania and New Jersey that jobbing-house salesmen have solicited them to buy other goods when ours were indicated on their order. In one case the salesmen said the house he represented no longer stocked our goods; in another, that we no longer made some of the articles desired. On inquiry, we learn that the representatives of these desperate plaster manufacturers offered these men a personal consideration to perform this dishonorable service. In one or two cases a direct money bribe was tendered and refused. The whole scheme shows to what straits our competitors are reduced, and indicates clearly the necessity for physicians specifying "S. & J." goods when prescribing, if they would be assured of obtaining the therapeutic results expected from medicinal plasters, or the strict reliability of goods for surgical use.

NOTABLE POINTS

RELATIVE TO

Lactated Food.

IT IS A COOKED FOOD.

By the use of high steam heat the gluten flour used is partially torrefied. This is done while the flour is dry, and during the process it is in constant motion, which insures perfect cooking to every particle.

Routh says, (Infant Feeding, page 380) that by this process, "the starch granules are rendered more separable, the gluten is reduced to a more porous condition, readily acted on by the gastric juice, and as an aliment, therefore, is more nutritious and digestible."

IT IS A PREDIGESTED FOOD.

"You state that it is self-digestive as regards the conversion of insoluble starch into soluble dextrine and maltose. My experiments with it lead me to hold that this is correct." J. MILNER FOTHERGILL.

IT CONTAINS NO UNCHANGED STARCH.

By the peculiar process of manufacture, every particle of the gluten flour is subjected to the action of the malto-diastase, and by it all the starch contained is transformed into soluble carbo-hydrates.

Professor CARL SEILER says, "Examination has proved that all the starch granules are converted, as shown by their behavior to polarized light."

NO CANE SUGAR USED.

The basis of Lactated Food is the pure sugar of milk made by the improved processes of the American Milk Sugar Co. The great value of this article has been shown conclusively. Cane sugar is not used in the composition or preparation of the Food on account of its liability to cause irritation by reason of the acetic fermentation which it creates in the stomach. Milk sugar never causes this fermentation or irritation.

IT IS NON-IRRITATING.

By reason of the fact that Lactated Food is partially digested in process of Preparation, it is assimilated by the feeblest stomach, and no undigested particles pass into the bowels to irritate, and thus cause troublesome and dangerous bowel disorders.

IT IS HIGHLY NUTRITIOUS.

The nutritive elements of Lactated Food are derived from the three great cereals, Wheat, Barley, and Oats. From the Wheat is taken the pure gluten, the most nourishing substance known for the muscles and tissues; from the Barley, all the soluble albuminoid and extractive matter resulting from the most careful malting; and from the Oat, the strengthening properties for which it is so well known. The result is a food which never disappoints, and under which the feeble child or invalid rapidly rallies.

FOR CHOLERA INFANTUM.

It is the chief reliance of many eminent practitioners, and it is the safest food in summer for all young or delicate children.

Another important consideration is its low price, it being much more economical than other foods. We make four sizes, selling for 25 cents, 50 cents, $1 00, and $2.50. *A dollar can will furnish one hundred and fifty meals for an infant.*

If any physician that has not yet made a trial of the Lactated Food will write us, we will send a package of our regular size, postpaid, without charge, with the understanding that it will be given a careful trial as soon as possible.

We shall use every precaution to maintain the high standard of this Food, and to insure perfect satisfaction to the profession in its use.

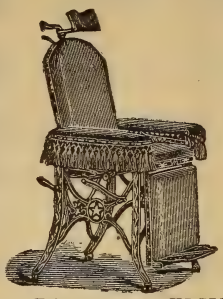
WELLS, RICHARDSON & CO.,

BURLINGTON, VT.

THE CANTON SURGICAL

AND

GYNÆCOLOGICAL CHAIR.



A chair especially constructed for the use of the general practitioner, as well as for the specialist in the treatment of gynæcological cases. For treating diseases of the Eye, Ear, Throat, and Chest, it has no equal. Every chair fully warranted to be first-class.

As a speculum chair it secures ease and comfort to the patient, and at the same time gives the operator such perfect control of all the various changes and positions, that it robs gynæcology of its usual embarrassment and annoyance.

Send for descriptive catalogue.

UNIVERSAL ANKLE JOINT.

NEW PATENT

ADJUSTABLE KNEE SIDE JOINT.

THESE ARE THE MOST PERFECT AND DURABLE JOINTS I USE.

Arms with Finger, Wrist, and Elbow Movements. Also, extension apparatuses for shortened limbs. Illustrated catalogue free. Address C. A. FREES, 766 Broadway, New York.

DR. RABUTEAU'S

[Laureate of the Institute of France]

DRAGEES, ELIXIR, AND SYRUP OF IRON.

"The experiments made in the hospitals of Paris have demonstrated that *Dr. Rabuteau's Dragees, Elixir, and Syrup* regenerate the red globules of the blood with a rapidity never observed with the use of the other ferruginous preparations. These results have been proved by the various *Compt-Globules.*

"The ferruginous preparations of *Dr. Rabuteau* do not cause any constipation, and are perfectly tolerated by the weakest persons."—*Gazette des Hopitaux.*

Dr. Rabuteau's Elixir is prescribed when some difficulty is experienced in swallowing the Dragees; it is especially adapted to weak persons, whose digestive functions need strengthening or stimulating.

Dr. Rabuteau's Syrup is especially prepared for children, who take it readily because of its agreeable taste.

A sample of Rabuteau's Dragees will be sent free to any Physician mentioning *The St. Louis Medical and Surgical Journal.*

Prepared by CLINN & Co., Pharmacists, Paris.

E. FOUGERA & Co., Agents for the United States.

Ducro's Alimentary Elixir,

A COMBINATION UNITING THE PROPERTIES OF

ALCOHOLIC STIMULANTS AND RAW MEAT

This preparation, which has been used with great success in the hospitals of Paris, since 1868, is adapted to the treatment of all diseases requiring the administration, in a small volume, of a tonic able to stimulate and support the vital forces, as *Pulmonary Phthisis, Depression and Nervous Debility, Adynamia, Malarious Cachexia,* etc.

Prepared by EMILE DURIEZ & Co., Successors to DUCRO & CIE, Paris.

KIRKWOOD'S INHALER,

This is the only complete, reliable, and effective inhaler in use, arranged for the direct application of Muriate of Ammonia and other remedial agents in the state of vapor to the diseased parts of the air passages in the treatment of catarrh and diseases of the throat and lungs. No heat or warm liquids required in its use.

It is entirely different from the various frail, cheap instruments that have been introduced.

KIRKWOOD'S INHALER is accompanied by testimonials of the highest professional character, together with carefully-prepared formulas for use.

Retail Price, complete, $2.50.

☞A liberal discount allowed to the trade and profession.

☞For descriptive pamphlets or other information, address

E. FOUGERA & CO., 30 North William Street, New York.

Rigollot's Mustard Paper

Is one of the most important and useful discoveries of the age. It is the only preparation which has been adopted by the civil and military hospitals, and the armies and navies of France and England, and which has obtained a medal at the Centennial Exposition at Philadelphia. All other mustard plasters or leaves, of whatever name, are but imitations of the original.

Physicians will find it the most reliable sinapism, prompt and certain in its action, and will therefore always prescribe it. Every sheet, in order to be genuine, must bear the annexed signature of the inventor.

Sold in tin boxes containing 10 sheets, also 25 and 100 sheets, by all respectable chemists throughout the world.

Rigollot

E. FOUGERA & CO., New York Depositaries.

TAMAR INDIEN GRILLON.

A laxative, refreshing, and medicated Fruit Lozenge, very agreeable to take, and never causing irritation. Its physiological action assures the immediate relief and effectual cure of

CONSTIPATION,

HÆMORRHOIDS, BILE, CEREBRAL CONGESTION, HEADACHE, LOSS OF APPETITE, INTESTINAL OBSTRUCTIONS, ETC.,

by augmenting the peristaltic movement of the intestine without producing undue secretion of the liquids. Unlike pills and the usual purgatives, it does not predispose to intestinal sluggishness, and the same dose always produces the same effect, that is to say, never needs increasing.

It is recommended by the most eminent physicians of Paris, notably Drs. BELIN and TARDIEU, who prescribe it constantly for the above complaints, and with most marked success.

Paris: E. GRILLON, 27 Rue Rambuteau.

SOLD BY ALL DRUGGISTS.

PRIVATE SCHOOL FOR THE DEAF.

Deaf Children Taught to Speak and Educated through Lip Reading. Aural Training and Defective Speech treated and improved. A Kindergarten Department for Deaf Children from three to six years old. A Training Class for Teachers of Articulation.

School re-opens September 20, 1886, at No. 7 South Merrick Street (opposite Public Buildings), Philadelphia, Pa.

Directions to Parents of Deaf Children for their Treatment from Infancy in order that they may learn Speech and Lip Reading, furnished free on application to **MARY S. GARRETT, Principal.**

THE VALUE OF MURDOCK'S LIQUID FOOD IS RECOGNIZED IN ALL COUNTRIES, AND IS ENDORSED BY ALL NATIONAL MEDICAL SOCIETIES THAT HAVE INVESTIGATED ITS VALUE.

There never was an essay read before any Medical Society on Raw Food Extracts, except on Murdock's Liquid Food, and counterfeit manufacturers of Extracts have published many of our essays to show the value of their counterfeits.

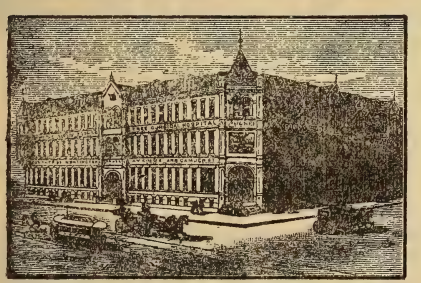
Send for Essay and DISCUSSION before the British Medical Association at Brighton, England, 1886 (Essay), by the Vice-President of the American Medical Association, and others, on the value of MURDOCK'S LIQUID FOOD over all Foods and Extracts known, it being the ONLY Raw Condensed Food free from insoluble matter.

Also essay read before the American Medical Association at Richmond, Va., and Washington, D. C.

Its value was recognized by the profession from results obtained in the Free Hospitals that have been established and supported by our Mr. A. L. Murdock during the last four years.

They now equal

140 FREE BEDS,



And contain 38,000 feet of floor.

Our Liquid Food can be retained by the weakest stomach. Four tablespoonfuls daily will make eight per cent. new blood weekly. When used for infants, never change their food, but add five or more drops of Liquid Food at each feeding, and their lost or needed vitality will be restored in less than thirty days.

Send for the Report of the Chairman of the Section of Obstetrics of the American Institute of Homœopathy, read at Saratoga at the annual meeting of 1886.

Circulars were sent by him to all the Physicians in the United States, asking what their experience was with Murdock's Liquid Food in its use for infants under, as well as over, one year old.

Then what results, with all the different Milk preparations, Grain Foods, Peptonoid Foods, and Beef Extracts, compared with MURDOCK'S LIQUID FOOD.

The returns show that it is the Standard Food and Extract, as the percentage of lives restored was the largest when used.

We extract from the report. After calling attention to the fact that one-quarter of the homœopathic profession are accustomed frequently to prescribe this food for children less than a year old, as well as over, he remarks:

"It is singularly adapted to scrofulous, syphilitic, and tubercular constitutions, its life-restoring power manifesting itself in each with a relative clearness and power corresponding to the order of enumeration. For fair-haired children who are inclined to grow fleshy it is more symptomatically recommended, while Duncan's *acid* babies find it particularly useful. Accordingly, it is chiefly employed for marasmus and anæmic conditions resulting either from non-assimilation of food, or from smple summer complaints. Should a child vomit all milk food and suffer synchronously with diarrhœa or dysentery, the demand for this food is emphatic and unmistakable; also in general irritability of the stomach, particularly if there be sour-smelling diarrhœa, the food passing through undigested. For the prematurely born it stands pre-eminent. For those 'weak and debilitated from any cause, Murdock's Food is probably the best in the world.' Should any indication of cerebral hyperæmia appear, the quantity of food must be diminished; so, too, if after its protracted use vomiting and diarrhœa ensue, the child has been overfed. Should the taste or odor of any given bottle chance to be disagreeable, add water until they disappear, and let the purchaser congratulate himself upon getting more nutriment than he paid for. When given in combination with milk in cases of indigestion, the quantity of milk should be diminished until all curds disappear from the stool, the quantity of Food, of course, being proportionately increased."

The Surgical Staff at MURDOCK'S FREE HOSPITAL FOR WOMEN are in daily attendance, except Saturdays, to examine patients and assign beds.

EVERY BED FREE.

Our Free Surgical Hospital for Women, located on Huntington avenue, above West Chester park, contains fifty (50) beds, in charge of a staff of five surgeons, members of the Massachusetts Medical Society.

Our Free Surgical Hospital for Women, located on Gainsborough street, corner of Huntington avenue, contains 50 beds, in charge of a staff of five surgeons. members of the Massachusetts Homœopathic Medical Society.

Our Free Home for Homeless Boys contains 40 beds, and is located at 11 to 21 Causeway street. Many of these boys suffer from Scrofula, Eczema, and other skin diseases, which yield quickly by the use of our Liquid Food.

From the fact that no two beeves or sheep are alike, is the reason of our different brands being different in flavor.

All brands are made by the same formula. The letter represents the day of make, and the figure the tank.

If richer, it is stronger in smell and flavor, and will bear a greater reduction. It cannot be reduced so low but it will be superior to all other preparations in treating chronic cases.

If you cannot obtain Murdock's Liquid Food from your druggist, we deliver, free of express, 12 oz. for $1. Any physician that has not used our Liquid Food, we will deliver free to the Boston express 12 oz.

CELERINA

NERVE-TONIC, STIMULANT AND ANTISPASMODIC.

FORMULA.—Every Fluid-Drachm represents FIVE grains EACH—Celery, Coca, Kola, Viburnum and Aromatics.

INDICATIONS.—Impotency, Spermatorrhea, Loss of Nerve-Power (so usual with Lawyers, Preachers, Writers and Business Men), Nervous Headache, Neuralgia, Paralysis, Dysmenorrhea, Hysteria, Opium-Habit, Inebriety, Prostatitis, Dyspepsia, and ALL LANGUID or DEBILITATED conditions of the System.—*Indispensable to restore a patient after alcoholic excess.*

DOSE.—One or two teaspoonfuls three or more times a day, as directed by the Physician.

ALETRIS CORDIAL

UTERINE TONIC AND RESTORATIVE.

PREPARED FROM THE ALETRIS FARINOSA OR TRUE UNICORN.

INDICATIONS.—Amenorrhea, Dysmenorrhea, Leucorrhea, Prolapsus Uteri, Sterility, to PREVENT Miscarriage, Etc.

DOSE.—One teaspoonful three or four times a day.

Unrivaled as a Uterine Tonic in Irregular, Painful, Suppressed and Excessive Menstruation,

IT RESTORES NORMAL ACTION TO THE UTERUS, AND IMPARTS VIGOR TO THE ENTIRE UTERINE SYSTEM.

☞Where Women have aborted during previous Pregnancies, or in any case where abortion is feared, the Aletris Cordial is indicated, and should be continuously administered during entire gestation.

ACID MANNATE

A MILD, SAFE AND PLEASANT APERIENT.

Prepared from Manna, Purified Cathartic Acid, and Fruit Juices.

INDICATIONS.—Constipation, Biliousness, Congestions, Etc. INDISPENSABLE AS AN APERIENT FOR WOMEN DURING PREGNANCY. In teaspoonful doses, 3 times a day, it favors the SECRETION and EXCRETION of bile, and gradually removes the congested and torpid states of the liver, and keeps the bowels in a regular and soluble condition.

DOSE.—ONE or MORE teaspoonfuls as directed by the Physician.

S. H. KENNEDY'S
CONCENTRATED EXTRACT OF
PINUS CANADENSIS

DARK A NON-ALCOHOLIC LIQUID. WHITE

A MOST VALUABLE NON-IRRITATING MUCOUS ASTRINGENT.

INDICATIONS.—Albuminuria, Diarrhea, Dysentery, Night-Sweats, Hemorrhages, Profuse Expectoration, Catarrh, Sore Throat, Leucorrhea, and other Vaginal Diseases, Piles, Sores, Ulcers, Burns, Scalds, Gonorrhea, Gleet, Etc.

When Used as an Injection, to Avoid Staining of Linen, the WHITE Pinus should be Used.

Recommended by DR. J. MARION SIMS, and other Prominent Physicians.

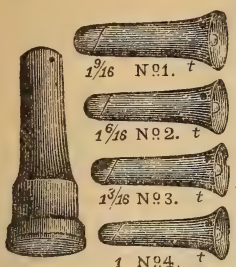
Samples FREE to any Physician who will pay Express charges, and mention this Journal.

STAUFER'S
HARD RUBBER SPECULUMS GUARANTEED.



Prices, Single, $2.50
Series encased, 12.00

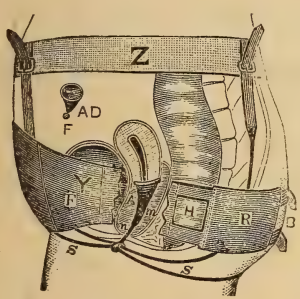
The engraving shows the shape, conductor and case so complete, that scarcely any description is necessary. For compactness there is but one conductor stem, on which each size of bulb screws. Speculums and case are all of the best quality hard rubber, and do not break from ordinary falling. Dental red enamelled inside. The mouth is polished very smooth, and shaped so that the cervix can be brought in entirely by rotation. And when brought in can be rotated to bring into view all the parts. The vaginal portion of the uterus can be seen as clearly as if located externally. When obtained, single, No. 2, is the most useful, since it reveals fully the point of the cervix in almost all multipara, and freely enters, when the position is correct, in many nullipara.

Guarantee.—One or two speculums are guaranteed; thus when returned sound and in the original wooden boxes, within six months of purchase, the money will be refunded without any deduction.

Plates.—The *First* contains 16 engravings and groups of engravings, illustrating the uterine examining instruments. *Second* contains 17 engravings and groups of engravings, illustrating the uterine replacing and supporting instruments.

Catalogue.—The catalogue comprises over 150 sizes and styles of uterine examining and supporting instruments, of which the hard rubber parts are exchanged and interchanged at cost, without limit of time. It also contains full directions and explanations for the use of this series of hard rubber gynecological instruments; together with common information collected through many years to simplify this line of treatment.

STAUFER'S
SPRING STEM UTERINE SUPPORTERS.
GUARANTEED.



Price, on Y, $7.00
" " Z, 6.00

The engraving shows the Spring Stem Cup, which consists of over a dozen sizes. The series contains Spring Stem Balls, Spring Stem Levers, for Anteversions and Retroversions. also Spring Stem Cup with posterior projections, all of assorted sizes.

Explanation.—The stem is screwed on cup A, and when unscrewed, the spring is put in tube *m*, or taken out when it needs cleaning. Thus the coil spring lays between the cup and base *n*. When there is pressure from above, or below, or both, the spring is compressed and again stretches out at the first opportunity. The movement of the base stem *n*, is governed by a slot and pin through tube *m*.

A D.—Represents the cup transformed into a self-sustaining cup, virtually an instrument of double capacity. In most cases after the uterus is held in "health line" for a time by external support, contraction of the walls of the vagina takes place, and it is sufficient at night or until forced down next day by bodily exertion, against which the stem and bandage guards if applied in time.

Belt Y.—The manner in which belt Y, sets on the abdomen is shown in above engraving. The widest or lifting part is in front. Over each hip as seen at H, are two elastics, and on large belts three. It closes on the back by buckling at B. It is of fine sateen outside, fine lining inside, and a slight stiffening between, and stayed with soft whalebones. Accurate hip measure is to be taken over a thin undergarment; since it needs to fit with a space of one or two inches apart on the back, for the buckle straps to draw. The perineal attachments are short and buckle at F and R.

Belt Z.—This is an elastic waist strap and carries any supporter of this series. Yet the common difficulty presents itself, where long and slender attachments are used, that they do not govern the internal part so efficiently as on the low grasping abdominal supporter Y.

The Series.—This series of imstruments has been invented as cases presented themselves, requiring different styles and sizes of instruments, without change of proprietor, unt l it has reached its present efficiency.

Guarantee.—The money lost by purchasing uterine supporters, unscientifically constructed, of irritating material, or limited in deficiency of sizes, and in consequence loss of families in practice, has set a large portion of the medical profession against the mechanical support of the uterus. By these conditions the risk of the first purchase by a physician of a stem and bandage supporter of this series is obviated. After the first purchase the instruments are supposed to be known, yet the guarantee is extended by special contract in doubtful cases.

Refunding.—On return of the hard rubber part or parts within six months of purchase, Five Dollars of the purchase money will be refunded. The belt remains with the patient as an abdominal supporter and only risk.

The above Guarantee and Refunding is secured when the Instrnments are obtained through this Office. Any other Instrument of STAUFER'S SERIES is also obtained through this Office at Catalogue Prices, and Catalogue free, on application.

FLUID

32° Fah. 0° Cent.

Fluid Cosmoline [*Petroleol*] is a fixed oil of Petroleum, a pure hydro-carbon prepared expressly for medical use. From it all the volatile and otherwise offensive properties of the crude Petroleum have been separated, without the aid of chemicals. Perfectly indifferent to atmospheric action, it remains inalterable in any climate. It is neutral in reaction, bland, soothing, cooling, and may therefore be applied to the most sensitive conditions without irritation. Flowing at 32° Fahr., it may be used may be warmed to any temperature the body can endure. It will be found excellent to relax the skin, to protect irritated surfaces from the air, and to use as a constituent in liniments, ointments and plasters, where an emollient is needed. For these and many other purposes, obvious to the medical profession, it will be found superior to olive oil, or to any vegetable or animal oils, which undergo decomposition and turn rancid. It contains no foreign ingredient.

(McARTHUR.)

For the treatment of Consumption and Tubercular Diseases.

"Dr. McArthur is a sanguine advocate of the Churchill Method. His Syrup of the Hypophosphites is an excellent and PURE preparation; and though we do not concede all the virtues claimed for it as a remedy for Consumption, yet we can testify to its great value from actual trial."

HENRY GIBBONS, M. D.,
Professor of the Principles and Practice of Medicine, University College, San Francisco, editor "Pacific Medical and Surgical Journal."

"I do not hesitate to commend it to the profession as worthy of confidence."

PROFESSOR HARVEY L. BIRD, Baltimore.

"I now prescribe it habitually in my private practice, and ALWAYS WITH BENEFIT when the cases are properly selected."

PROFESSOR JOHN H. LYNCH, M. D., Baltimore, Md.

"Dr. McArthur's chemically pure Syrup of Hypophosphites is becoming thoroughly recognized as an efficient remedy in the treatment of consumption and wasting diseases."

"Dr. McArthur is not only a good chemist and physiologist; he is, above all, a practical physician, who, after years of medical experience, is convinced that, in the treatment of Pulmonary Phthisis and kindred diseases, his preparation of Hypophosphites possesses greater therapeutic efficacy than any medicine hitherto used; and the results of treatment with his Syrup appear amply to bear out his views."

J. J. LAWRENCE, A. M., M. D.,
Editor St. Louis "Medical Brief."

CASCARA CORDIAL.

IN HABITUAL CONSTIPATION.

The great desideratum in the treatment of chronic constipation has heretofore been a remedy which possessed not only a temporary specific action on the bowels, but which would be followed by no reaction and no repression of secretion, and which could be administered for a sufficient length of time to permit of restoration of normal function; a remedy which would not only alleviate temporarily the existing mal-condition, but permanently remove the cause upon which it depended for its continuance, and thus effect a radical cure. The extensive trial of Cascara Sagrada by physicians of this country and Europe has shown it to be the drug that most fully meets all these indications. It has been added to the British Pharmacopœia, and its efficacy is attested by all physicians who have given it a trial. Cascara Cordial is prepared to disguise the inherent bitter principle of the drug, and without detracting from its medicinal value, render it acceptable to the most fastidious palate.

AS A VEHICLE FOR NAUSEOUS MEDICINES.

Cascara Cordial has become widely known to the profession. It not only effectually disguises the taste of such inherently bitter medicines as Quinine, but on account of its laxative properties, is a most valuable adjuvant or corrigent to any prescription containing drugs, such as iron, the continued administration of which tends to constipate. It will be seen that Cascara Cordial has a wide range of utility as an agreeable laxative excipient.

TO DISPEL THE ACUTE EFFECTS OF ALCOHOL AND OPIUM ABUSE.

From letters received from physicians, we are led to call the attention of the profession to the use of Cascara Cordial by those addicted to the alcohol and opium habits. The headache and gastric irritation following excessive indulgence in alcohol is avoided by adding a little Cascara Cordial to the alcoholic stimulant taken, or by taking a full dose of the cordial on retiring, after too free indulgence. The severe constipation also often attending indulgence in opium may be relieved by the systematic administration of Cascara Cordial.

We can not assume the responsibility for lack of success physicians may meet with in prescribing the many imitations and spurious varieties of Cascara on the market, and would request those wishing a genuine and reliable preparation to specify P. D. & Co's.

☞ Samples furnished on application, to those physicians who will pay express charges.

DETROIT, MICH.

A NEW EMMENAGOGUE.

The following is an abstract from a letter written by one of the most prominent gynæcologists of the country, to another:

"Thus far no perfect emmenagogue has been discovered, but I regard the manganese as the best I have met with. It should be styled a regulator of menstruation rather than a pure emmenagogue, for it is useful in the absence of the menses, irregularity of their recurrence, and even in excess of flow.

"The preparation which I now employ is McKesson & Robbins' pills of the binoxide of manganese. Of this preparation I give two grains three times a day throughout the month and during the period.

"I also employ manganese in chlorosis and anæmia, and I think that by its use I obtain better results than I have heretofore done by iron." (See *Medical Record* of March 6th, page 274.)

Specify McK. & R.'s Pills Manganese Binoxide.

Important additions to McK. & R.'s list of Gelatine Coated Pills:

McK. & R. *Cascara Sagrada* and *Nux Vomica*: Ext. Cas. Sagr. gr. ii; Ext. Nux Vom. gr. 1-5.

McK. & R. Cascara Sagrada, Nux Vomica and Belladonna: Ext. Cas. Sag. gr. ii; Ext. Nucis Vom. gr. 1-8; Ext. Bellad. gr. 1-16.

McK. & R. Hydrobromide of Hyoscin 1-100 gr.

McK. & R. Binoxide of Manganese 2 grs.

McK. & R. Valerianate of Quinine ½, 1, 2, and 3 grs.

McK. & R. Valerianates Iron, Quinine, and Zinc: Ferri Valer., Quin. Valer., Zinci Valer., ää gr. i.

McK. & R. Oleate of Manganese 20 per cent. May be used to advantage when the pills cannot be administered.

Always specify McK. & R's.

COCAINE.

Although only eighteen months have elapsed since Koller's announcement of his discovery of the anæsthetic properties of this alkaloid, Cocaine already ranks among the most important agents of the practitioner. In general and dental surgery, ophthalmology, laryngology and general therapeutics, its value is everywhere attested.

We began its manufacture immediately after the announcement of Dr. Koller, and samples of our product were submitted to many noted specialists for their experiments, and the results were highly gratifying. The demand for our manufacture of the salt, solutions, and oleates, has continued to increase, and we desire to express our sincere thanks to the medical, pharmaceutical, and dental professions for their kind encouragement as shown in their recognition of the merits of our preparations. Our appreciation of this will be shown in our constant efforts to supply all their requirements in chemicals and pharmaceuticals, of a quality worthy of their entire confidence.

Special quotations on Terebene and Cocaine for specified quantities. Very respectfully,

McKESSON & ROBBINS.

TEREBENE.

McKESSON & ROBBINS

WERE THE FIRST IN THIS COUNTRY TO MANUFACTURE THIS VALUABLE REMEDY FOR

Winter Cough, Bronchial and Chest Affections, Flatulency, Acidity, and other forms of Dyspepsia.

It may be used as an inhalation, or taken internally in doses of five or six drops on sugar every four hours, gradually increasing the dose to twenty minims.

Terebene was brought to the notice of the medical profession as far back as 1873, by M. Riban, who read a series of papers on this and similar substances before the Pharmaceutical Society of Paris. It has lately been brought into prominence by Dr. Wm. Murrell, of London, who has given it in over 114 cases; he has also notes of its value in 81 out of 94 cases. Dr. Murrell says that much of the Terebene now being sold may be described as inferior, and to this fact he ascribes some irritating effects noted in a few of his cases.

We would therefore caution the physician in prescribing and the druggist in ordering to, in all cases,

SESSIONS OF 1887-88.

The REGULAR SESSION begins on Wednesday, September 21, 1887, and ends about the middle of March, 1888. During this Session, in addition to the regular didactic lectures, two or three hours are daily allotted to clinical instruction. Attendance upon at least two regular courses of lectures is required for graduation.

The SPRING SESSION consists of recitations, clinical lectures and exercises, and didactic lectures on special subjects. This Session begins about the middle of March and continues until the middle of June. During this Session, daily recitations in all the departments are held by a corps of Examiners appointed by the Faculty.

The CARNEGIE LABORATORY is open during the collegiate year, for instruction in microscopical examinations of urine, practical demonstrations in medical and surgical pathology, and lessons in normal histology and pathology, including bacteriology.

For the annual Circular and Catalogue, giving requirements for graduation and other information, address Prof. AUSTIN FLINT, Secretary, Bellevue Hospital Medical College, foot of East 26th Street, New York City.

GATE CITY STONE FILTER CO.

Philadelphia.

30,000 PHYSICIANS
NOW PRESCRIBE

HYDROLEINE

(HYDRATED OIL,)

For Consumption and Wasting Diseases. It Produces Immediate Increase in Flesh and Weight.

FORMULA.

Each Dose of Two Teaspoonfuls, equal to 120 Drops, contains:

Pure Cod Liver Oil	80 m. (drops)	Soda	½ Grain.
Distilled Water	35 "	Boric Acid	¾ "
Soluble Pancreatin	5 Grains.	Hyocholic Acid	⅛ "

DOSE:

Two teaspoonfuls alone, or with twice the quantity of water, to be taken thrice daily after meals.

Hydroleine (Hydrated Oil) is not a simple alkaline emulsion of oleum morrhua, but a hydro-pancreated preparation containing acids and a medicum of soda. Pancreatin is the digestive principle of fatty foods, and, in the soluble form here used, completely saponifies the oleaginous material so necessary to the reparative process in all wasting diseases.

Lautenbach's researches on the function of the liver would show the beautiful adjustment of therapeutics in preparation of Hydroleine, furnishing, as it does, the acid and soda necessary to prevent self-poisoning by reabsorption of morbid tubercular detritus and purulent matters into the general circulation.

Each bottle in nutritive value exceeds ten times the same bulk of cod liver oil. It is economical in use and certain in result.

Sold at all Drug Stores at $1.00 per Bottle.

The principles upon which this discovery is based have been described in a treatise on "The Digestion and Assimilation of Fats in the Human Body," by H. C. BARTLETT, Ph. D., F. C. S., and the experiments which were made, together with cases illustrating the effect of Hydrated Oil in practice, are concisely stated in a Treatise on "Consumption and Wasting Diseases," by G. OVEREND DREWRY, M. D.

Copies of these Works sent free on Application.

WM. F. KIDDER & CO., 83 John Street, New York.

Agents for U. S.

Also exclusive Agents for SVAPNIA, or Bigelow's purified Opium, in SCALES and HALF-GRAIN GRANULES.

TAMAR INDIEN GRILLON.

A laxative, refreshing, and medicated Fruit Lozenge, very agreeable to take, and never causing irritation. Its physiological action assures the immediate relief and effectual cure of

CONSTIPATION,

HÆMORRHOIDS, BILE,
CEREBRAL CONGESTION, HEADACHE,
LOSS OF APPETITE,
INTESTINAL OBSTRUCTIONS, ETC.,

by augmenting the peristaltic movement of the intestine without producing undue secretion of the liquids. Unlike pills and the usual purgatives, it does not predispose to intestinal sluggishness, and the same dose always produces the same effect, that is to say, never needs increasing.

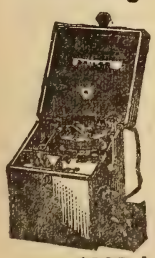
It is recommended by the most eminent physicians of Paris, notably Drs. BELIN and TARDIEU, who prescribe it constantly for the above complaints, and with most marked success.

Paris: E. GRILLON, 27 Rue Rambuteau.

SOLD BY ALL DRUGGISTS.

MEDICAL ELECTRICITY.

Flemming's Electro-Medical Batteries



are considered superior to any in the market at the present time. They received all honors and awards at Exhibitions, and are used and recommended by the highest medical authorities and in many hospitals throughout the country. For illustrated catalogue and price list address

A Forty-page pamphlet and samples will be mailed Free on application.

FREDERICK STEARNS & CO.,
Mnf'g Pharmacists, DETROIT, MICH., U. S. A.

RECTAL ALIMENTATION.

Peptonized Milk the Ideal Substance for Nutritive Enemas.

It would be difficult to conceive of a substance more perfectly adapted for feeding per rectum than thoroughly peptonized milk. It is perfectly absorbable, non-irritant, and may be continuously used for long periods without local disturbance and with entirely adequate nutrition; patients even sometimes increasing in weight.

The artificial digestion of the milk may be carried to the point of complete conversion of the caseine into peptone, or the process may be left to proceed in the alkaline secretion of the rectum. Peptonized Milk *Gruel*—of arrow-root and milk—may be used if preferred, the PEPTONIZING TUBES digesting both starch and milk.

PEPTONIZING TUBES

are sold in boxes at retail for 50 cents, one dozen tubes in a box, each tube peptonizing a pint of milk.

FAIRCHILD BROS. & FOSTER,

82 and 84 FULTON STREET, NEW YORK.

Infantile Atrophy.

"INFANTILE ATROPHY, or the slow wasting which is a familiar symptom in hand-fed babies, is one of the commonest causes of death in early infancy."

"INFANTILE ATROPHY is the consequence of insufficient nourishment. The child wastes because he is starved. But it is not to actual lack of feeding that the starvation is usually to be ascribed. A baby fed from a breast which secretes milk poor in quality and insufficient for the child's support, will, of course, grow slowly thinner; but an infant supplied largely with farinaceous compounds, from which his feeble digestive organs fail to derive even a minimum of nourishment, will waste with startling rapidity."

"Mellin's Food may be used from the first, and is almost always well digested. Farinaceous matters, unless guarded by malt, as in Mellin's Food, should not be given to a child younger than six months."

From "Disease in Children," by Eustace Smith, M. D., F. R. C. P., London, England.

A sample of Mellin's Food, sufficient for trial, will be sent free to any Physician desiring it.

THE WELL-KNOWN APERIENT MINERAL WATER.

IMPORTANT NOTICE.

By reason of an improved method of caption, by which dilution avoided, FRIEDRICHSHALL WATER will be found now to be of **considerably greater strength** *and* **efficacy** *than heretofore.*

The ordinary dose is a large wineglassful (4 ounces). Most efficacious when taken fasting and mixed with an equal quantity of hot water.

"I know nothing at all equal to Friedrichs all. The LONGER it is taken, the SMALLER is the quantity necessary to effect the purpose."

Sir HENRY THOMPSON, F.R.C.S., London.

OF ALL DRUGGISTS AND MINERAL WATER DEALERS.

In corresponding with Advertisers, please mention THE MEDICAL AND SURGICAL REPORTER

BROMIDIA

The Hypnotic.

FORMULA:

Every fluid drachm contains 15 grains EACH of pure Chloral Hydrat. and purified Brom. Pot., and ⅛ grain EACH of Gen. Imp., Ext. Cannabis Ind., and Hyoscyam.

DOSE:

One-half to one fluid drachm, in WATER or SYRUP, every hour, until sleep is produced.

INDICATIONS:

Sleeplessness, Nervousness, Neuralgia, Headache, Convulsions, Colic, Mania, Epilepsy, Irritability, etc. In the restlessness and delirium of Fevers, it is absolutely invaluable.

It does not Lock Up the Secretions.

PAPINE

The Denarcotized Opiate.

Papine is the Anodyne or pain-relieving principle of Opium, the Narcotic and Convulsive elements being eliminated. It has less tendency to cause Nausea, Vomiting, Constipation, etc.

INDICATIONS:

Same as Opium or Morphia.

DOSE:

One fluid drachm represents the Anodyne principle of ⅛ grain of Morphia.

IODIA

The Alterative and Uterine Tonic.

FORMULA:

Iodia is a combination of Active Principles obtained from the Green Roots of STILLINGIA, HELONIAS, SAXIFRAGA, MENISPERMUM, AND AROMATICS. Each fluid drachm also contains five grains Iod. Pot., and three grains Phos. Iron.

DOSE:

One to two fluid drachms (more or less, as indicated,) three times a day, before meals.

INDICATIONS:

Syphilitic, Scrofulous and Cutaneous Diseases, Dysmenorrhœa, Menorrhagia, Leucorrhœa, Amenorrhœa, Impaired Vitality, Habitual Abortion, and General Uterine Debility.

BATTLE & CO.,

Chemists' Corporation, St. Louis, Mo.

BRANCHES: 76 New Bond Street, London, W.

5, Rue De La Paix, Paris. 9 and 10 Dalhousie Square, Calcutta.

CELERINA

NERVE-TONIC, STIMULANT AND ANTISPASMODIC.

FORMULA.—Every Fluid-Drachm represents FIVE grains EACH—Celery, Coca, Kola, Viburnum and Aromatics.

INDICATIONS.—Impotency, Spermatorrhea, Loss of Nerve-Power (so usual with Lawyers, Preachers, Writers and Business Men), Nervous Headache, Neuralgia, Paralysis, Dysmenorrhea, Hysteria, Opium-Habit, Inebriety, Prostatitis, Dyspepsia, and ALL LANGUID or DEBILITATED conditions of the System.—*Indispensable to restore a patient after alcoholic excess.*

DOSE.—One or two teaspoonfuls three or more times a day, as directed by the Physician.

ALETRIS CORDIAL

UTERINE TONIC AND RESTORATIVE.

PREPARED FROM THE ALETRIS FARINOSA OR TRUE UNICORN.

INDICATIONS.—Amenorrhea, Dysmenorrhea, Leucorrhea, Prolapsus Uteri, Sterility, to PREVENT Miscarriage, Etc.

DOSE.—One teaspoonful three or four times a day.

Unrivaled as a Uterine Tonic in Irregular, Painful, Suppressed and Excessive Menstruation.

IT RESTORES NORMAL ACTION TO THE UTERUS, AND IMPARTS VIGOR TO THE ENTIRE UTERINE SYSTEM.

☞Where Women have aborted during previous Pregnancies, or in any case where abortion is feared, the Aletris Cordial is indicated, and should be continuously administered during entire gestation.

ACID MANNATE

A MILD, SAFE AND PLEASANT APERIENT.

Prepared from Manna, Purified Cathartic Acid, and Fruit Juices.

INDICATIONS.—Constipation, Biliousness, Congestions, Etc. INDISPENSABLE AS AN APERIENT FOR WOMEN DURING PREGNANCY. In teaspoonful doses, 3 times a day, it favors the SECRETION and EXCRETION of bile, and gradually removes the congested and torpid states of the liver, and keeps the bowels in a regular and soluble condition.

DOSE.—ONE or MORE teaspoonfuls as directed by the Physician.

S. H. KENNEDY'S
CONCENTRATED EXTRACT OF
PINUS CANADENSIS

DARK — A NON-ALCOHOLIC LIQUID. — WHITE

A MOST VALUABLE NON-IRRITATING MUCOUS ASTRINGENT.

INDICATIONS.—Albuminuria, Diarrhea, Dysentery, Night-Sweats, Hemorrhages, Profuse Expectoration, Catarrh, Sore Throat, Leucorrhea, and other Vaginal Diseases, Piles, Sores, Ulcers, Burns, Scalds, Gonorrhea, Gleet, Etc.

When Used as an Injection, to Avoid Staining of Linen, the WHITE Pinus should be Used.

Recommended by DR. J. MARION SIMS, and other Prominent Physicians.

RIO CHEMICAL CO., ST. LOUIS: LONDON: PARIS.

Samples FREE to any Physician who will pay Express charges, and mention this Journal.

PACKER'S TAR SOAP.

ABSOLUTELY PURE AND NON-IRRITATING.

MADE FROM VEGETABLE OILS, PINE TAR, AND GLYCERINE.

A perfect soap should be made from pure and sweet oils, and clean, well-washed alkalies. Such is **Packer's Tar Soap.** It is combined with distilled **pine-tar,** and hence has had the most gratifying effects in the treatment of Dermatic Diseases, as chafing, eczema, erythema, seborrhea, herpes, etc.

As a Disinfectant, Antiseptic, and Detergent, it is admirably adapted for use in ulcers, foul wounds, fetid discharges, bed sores, and similar conditions. For the bath, toilet, and shampoo, it is unrivaled. 25 cents per cake, from Druggists.

It is supplied to Hospitals, Asylums, and Physicians, in one pound bars, at reasonable prices.

P. O. Box 2985. **THE PACKER MFG. CO., 100 Fulton St., New York.**

"PALLAS" SYRINGE.

VAGINAL AND RECTAL.

A MOST PERFECT and simply constructed Syringe for medicating and irrigating the vaginal cavity. The novel bulb of this Syringe, when doubled upon itself, as shown in the cut, will cause no fluid to be left, as is so apt to happen with the ordinary bulbs, and when filled will contain just enough fluid for the expansion of the vaginal folds. The hard rubber labial shield, with its plug, when firmly pressed against the labia, will both prevent spilling and soiling of linen, and the fluid can therefore be kept in circulation and in contact with the parts by repeating the pumping motion of the bulb. It will also be noticed that the fluid escapes as a spray from the large holes at the point of the stem and returns through the holes at the root of same, which is provided with hard rubber screen-bars, preventing the folds from interfering with the rapid return of the fluid into the bulb. In filling the bulb, a couple of turns will unscrew it. In handsome case, satin lined. Retail price, $3.75. To physicians, $3.00.

NOTABLE POINTS

RELATIVE TO

Lactated Food.

IT IS A COOKED FOOD.

By the use of high steam heat the gluten flour used is partially torrefied. This is done while the flour is dry, and during the process it is in constant motion, which insures perfect cooking to every particle.

Routh says, (Infant Feeding, page 380) that by this process, "the starch granules are rendered more separable, the gluten is reduced to a more porous condition, readily acted on by the gastric juice, and as an aliment, therefore, is more nutritious and digestible."

IT IS A PREDIGESTED FOOD.

"You state that it is self-digestive as regards the conversion of insoluble starch into soluble dextrine and maltose. My experiments with it lead me to hold that this is correct." J. MILNER FOTHERGILL.

IT CONTAINS NO UNCHANGED STARCH.

By the peculiar process of manufacture, every particle of the gluten flour is subjected to the action of the malto-diastase, and by it all the starch contained is transformed into soluble carbo-hydrates.

Professor CARL SEILER says, "Examination has proved that all the starch granules are converted, as shown by their behavior to polarized light."

NO CANE SUGAR USED.

The basis of Lactated Food is the pure sugar of milk made by the improved processes of the American Milk Sugar Co. The great value of this article has been shown conclusively. Cane sugar is not used in the composition or preparation of the Food on account of its liability to cause irritation by reason of the acetic fermentation which it creates in the stomach. Milk sugar never causes this fermentation or irritation.

IT IS NON-IRRITATING.

By reason of the fact that Lactated Food is partially digested in process of Preparation, it is assimilated by the feeblest stomach, and no undigested particles pass into the bowels to irritate, and thus cause troublesome and dangerous bowel disorders.

IT IS HIGHLY NUTRITIOUS.

The nutritive elements of Lactated Food are derived from the three great cereals, Wheat, Barley, and Oats. From the Wheat is taken the pure gluten, the most nourishing substance known for the muscles and tissues; from the Barley, all the soluble albuminoid and extractive matter resulting from the most careful malting; and from the Oat, the strengthening properties for which it is so well known. The result is a food which never disappoints, and under which the feeble child or invalid rapidly rallies.

FOR CHOLERA INFANTUM.

It is the chief reliance of many eminent practitioners, and it is the safest food in summer for all young or delicate children.

Another important consideration is its low price, it being much more economical than other foods. We make four sizes, selling for 25 cents, 50 cents, $1 00, and $2.50. *A dollar can will furnish one hundred and fifty meals for an infant.*

If any physician that has not yet made a trial of the Lactated Food will write us, we will send a package of our regular size, postpaid, without charge, with the understanding that it will be given a careful trial as soon as possible.

We shall use every precaution to maintain the high standard of this Food, and to insure perfect satisfaction to the profession in its use.

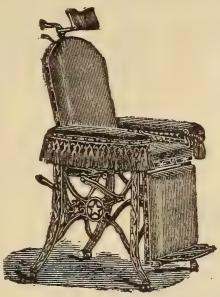
WELLS, RICHARDSON & CO.,

BURLINGTON, VT.

THE CANTON SURGICAL

AND

GYNÆCOLOGICAL CHAIR.



A chair especially constructed for the use of the general practitioner, as well as for the specialist in the treatment of gynæcological cases. For treating diseases of the Eye, Ear, Throat, and Chest, it has no equal. Every chair fully warranted to be first-class.

As a speculum chair it secures ease and comfort to the patient, and at the same time gives the operator such perfect control of all the various changes and positions, that it robs gynæcology of its usual embarrassment and annoyance.

Send for descriptive catalogue.

McINTOSH GALVANIC AND FARADIC BATTERY CO.,

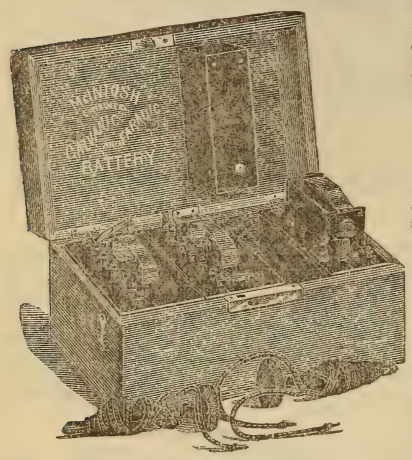
MANUFACTURERS OF THE CELEBRATED

McIntosh Combined Galvanic and Faradic Batteries,

Table, Office, and Family Batteries, Electrodes, Electric Bath Apparatus, Statical Electric Machines, Stereopticons, Solar, Monocular, and Binocular Microscopes.

AND ALL KINDS NF

PHILOSOPHICAL ELECTRICAL APPARATUS.



Schools, Colleges, Physicians, or Hospitals wanting new Apparatus, will do well to favor us with correspondence and obtain estimates. Men of scientific experience have charge of the manufacturing department. We employ the most skillful mechanics, and have the largest facilities in America for manufacturing.

We would call the Special Attention of the Medical Profession to our

Combined Galvanic and Faradic Batteries.

These Batteries are recommended by the Medical Faculty of both America and Europe, and have been adopted by the United States Government for use in Medical Department of the Army and Navy. They are

The First and Only Portable Batteries ever Invented which Give both the Galvanic and Faradic Current,

TWO DISTINCT BATTERIES IN ONE CASE.

No Physician can afford to be without one.

This celebrated Battery is constructed on an improved plan. The zincs and carbons are fastened to hard-rubber plates in sections of six each; this manner of connecting brings the plates nearer together than in any other battery, thus giving less internal resistance. The cells are composed of one piece of hard rubber, and are made in sections of six each with a drip-cup, thus one section can be handled, emptied, and cleaned, as easily and quickly as one cell. The drip-cup is to receive the elements when the battery is not in use. The fluid cannot spill or run between the cells, and there is no danger of breaking, as with glass cells. This is the only battery in which the zinc and carbon plates can be kept clean and always in order by simply rinsing them.

An extra cell (with a zinc and carbon element) is added to the combined batteries, for the purpose of producing the Faradic current. This cell gives as much force as is ever needed, and avoids exhausting the current from the Galvanic cells. All the metal work is finely nickel-plated and highly polished, and every part is put together so that it can be easily replaced by the operator. Our batteries weigh less, occupy less space, give a current of greater intensity and quantity, than any other battery manufactured.

Our illustrated Catalogue, a handsome book giving full description of all our goods, and other valuable information, sent free on application.

McINTOSH GALVANIC AND FARADIC BATTERY CO.
300 & 302 DEARBORN STREET, CHICAGO, ILL.

WHEELER'S TISSUE PHOSPHATES

Bone-Calcium Phosphate $Ca_3 2P.O._4$, Sodium Phosphate $Na_2 H.P.O._4$, Ferrous Phosphate $Fe_3 2P.O._4$, Trihydrogen Phosphate $H_3 P.O._4$.

WHEELER'S COMPOUND ELIXIR OF PHOSPHATES AND CALISAYA. A Nerve Food and Nutritive Tonic, for the treatment of Consumption, Bronchitis, Scrofula, and all forms of Nervous Debility.

The Lactophosphates prepared from the formula of Prof. Dusart, of the University of Paris. Combines with a superior Pemartin Sherry Wine and Aromatics in an agreeable cordial easily assimilable and acceptable to the most irritable stomachs.

Phosphorus, the oxidizing element of the Nerve Centres for the generation of Nerve Force; Lime Phosphate, an agent of Cell Development and Nutrition; Soda Phosphate, an excitant of Functional Activity of Liver and Pancreas, and Corrective of Acid Fermentation in the Alimentary Canal; Iron, the Oxidizing Constituent of the Blood for the Generation of Heat and Motion; Phosphoric Acid, Tonic in Sexual Debility; Alkaloids of Calisaya, Anti-Malarial and Febrifuge; Extract of Wild Cherry, uniting with tonic power the property of Calming Irritation and Diminishing Nervous Excitement.

THE SUPERIORITY OF THE ELIXIR consists in uniting with the Phosphates the special properties of the Cinchona and Prunus, of Subduing Fever and Allaying Irritation of the Mucous Membrane of the Alimentary Canal, which adapts it to the successful treatment of Stomach Derangements and all diseases of Faulty Nutrition, the outcome of Indigestion, Malassimilation of Food, and *failure of supply* of these essential elements of Nerve Force and Tissue Repair.

The special indication of this combination of Phosphates in Spinal Affections, Caries, Necrosis, Ununited Fractures, Marasmus, Poorly Developed Children, Retarded Dentition, Alcohol, Opium, Tobacco Habits, Gestation and Lactation, to promote Development, etc., and as a *physiological restorative* in Sexual Debility, and all used up conditions of the Nervous System, should receive the careful attention of good therapeutists.

There is no strychnia in this preparation, but when indicated, the Liquor Strychniæ of the U. S. Dispensatory may be added, each fluid drachm of the solution to a pound bottle of the Elixir making the 64th of a grain to a half fluid ounce, an ordinary dose, a combination of a wide range of usefulness.

DOSE—For an adult, one tablespoonful three times a day, after eating; from seven to twelve years of age, one dessertspoonful; from two to seven, one teaspoonful. For infants, from five to twenty drops, according to age.

Prepared at the Chemical Laboratory of T. B. WHEELER, M. D., Montreal, D. C.

Put up in pound bottles and sold by all Druggists at One Dollar.

MATHEY-CAYLUS' GLUTEN

CAPSULES

OF

PURE COPAIBA AND OTHER MEDICINES.

Adapted and recommended for the cure recent or chronic Gleets, Fluor Albus, etc., etc.

The MATHEY-CAYLUS' CAPSULES, *coated with gluten*, present the most perfect mode for administering Copaiba, Cubebs, Norway Tar, Turpentine, and other remedies, the disagreeable odor and taste of which are often a hindrance to their use. This mode of preparing capsules, which has been approved by the Academy of Medicine, has been recommended in their clinical lectures by eminent Professors in the hospitals of Paris, as well as in those of New York and London.

By the first physicians of the hospitals of Paris, London, and New York.

SPECIAL ADVANTAGES OF MATHEY-CAYLUS' GLUTEN CAPSULES.—Being formed of thin, transparent, and readily assimilated coating, they so cover and disguise the medicine to be given, that it can be taken without disgust, but with ease. In this respect, they differ widely from the gelatine capsules, which have a hard, thick coating, which swells beyond measure, in the stomach, are hard to be swallowed, and what is of great importance, they create disturbance in the digestive functions.

The special advantage of the coating of gluten consists in the fact that, notwithstanding its extra thinness, and although it softens under the action of the gastric juice, it can pass the stomach without breaking, and only in the intestines is the medicinal matter liberated; this accounts for the fact that Mathey-Caylus' Capsules never cause the nausea, eructations, and dyspeptic symptoms, which are complained of by many persons using other preparations.

Finally, their regular ovoid form, which is so favorable to swallowing, their pleasant appearance, which dispels all disgust, and the advantage of being entirely free from taste and smell, recommend the use of these capsules even to the most delicate persons.

Thankful to the Medical Profession for the liberal patronage heretofore bestowed upon us, we hope that they will continue their favors, and we are convinced that they will never have any reason to regret the generous welcome they have given to our preparations.

MATHEY-CAYLUS' CAPSULES are never sold, except in bottles having the following inscription printed in the glass: MATHEY-CAYLUS A PARIS. And each bottle contains 64 capsules, making them the cheapest capsules in the market.

The following different kinds of Mathey-Caylus' Gluten Capsules are now offered:

COPAIBA AND TANNIC ACID,
COPAIBA AND S. N. OF BISMUTH,
COPAIBA AND CATECHU,
COPAIBA AND MAGNESIA,
COPAIBA, CUBEBS AND ALUM,
COPAIBA, CUBEBS AND RHATANY,

TANRET'S PELLETIERINE

For the Treatment of Tape-Worm (Tænia Solium.)

This New Tænifuge, the Active Alkaloid of Pomegranate Bark, has of late come into extensive use in France for the treatment of Tape-Worm (Tænia Solium). The results of numerous experiments with it at the Marine Hospitals of Toulon, St. Mandrier, etc., and in the Hospitals of Paris, St. Antoine, La Charite, Necker, Beaujon, etc., have all been most satisfactory. Doctor Dujardin Beaumetz, Member of the Academy of Medicine, and Prof. Laboulbene, in their report to the Society of Therapeutics, have given it their unqualified approval after the most searching experiments. This preparation is pleasant to administer, and if certain preliminaries are observed success will be insured.

Sold only in Bottles containing one dose.

TANRET'S ERGOTININE.

ALKALOID AND ACTIVE PRINCIPLE OF SPURRED RYE.

This is a well defined Alkaloid that must not be confounded with Ergotine or other extracts; it is given in doses of from ¼ to ½ Milligramme (1-240th to 1-120th of a grain), in all cases where Ergot is indicated, viz.: Flooding, Post-partum Hemorrhages, Metrorrhagia, etc., etc.

It is put up in the following forms:

Syrup Containing ¼ Milligramme to each teaspoonful; DOSE from 1 to 6 teaspoonsfuls per day.

Solution for hypodermic purposes, Containing 1 Milligramme to each cubic Centimeter; DOSE, from 3 to 10 drops.

The Institute of France has awarded one of its Prizes to Mr. Chas. Tanret for the discovery of these Alkaloids.

Tanret's Pelletierine and Ergotinine are only prepared by Mr. Chas. Tanret, Laureate of the Institute of France, 60 Rue du Rempart, Paris.

Sole Agents for the United States, E. FOUGERA & CO., 30 North William St., N. Y.

PAMPHLET ON PELLETIERINE AND ERGOTININE SENT ON APPLICATION.

BOUDAULT'S PEPSINE

The Only Pepsine Used in the Hospitals of Paris for the Last 30 Years.

Unlike the various substitutes which, in most cases, are but unscientific or incompatible compounds, forced upon the Medical Profession as aids to digestion by extensive advertising, but which, when submitted to the proper tests, are found to be useless as digestive agents, Pepsine is constantly gaining in the esteem of the careful practitioner.

Since the introduction of Pepsine by Boudault and Corvisart, in 1854, the original BOUDAULT'S PEPSINE HAS BEEN AT ALL TIMES CONSIDERED THE BEST, as is attested by the awards it has received at the Expositions of 1867, 1868, 1872, 1873, in 1876 at the Centennial Exposition of Philadelphia, and in 1878 at the Paris Exposition.

The most reliable tests, carefully applied, will satisfy every one that BOUDAULT'S PEPSINE HAS A MUCH HIGHER DIGESTIVE POWER than the best Pepsines now before the Profession, and is therefore especially worthy of their attention.

BOUDAULT'S PEPSINE is prepared in the form of Pepsine Acid and Pepsine Neutral. It is sold in bottles of an ounce, with a measure containing exactly five grains; also in bottles of 4, 8, and 16 ounces for dispensing.

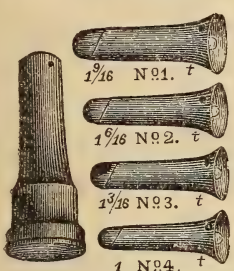
BOUDAULT'S WINE OF PEPSINE.

Formula of Dr. Corvisart.

The taste of Pepsine being perfectly disguised in this Wine, it may be recommended to persons who have difficulty in taking Pepsine in the form of powder. This Wine is tested so that a tablespoonful of it is equal in digestive power to ten grains of Boudault's Pepsine in powder. Sold only in 8 oz. Bottles.

Agents for the United States, E. FOUGERA & CO., New York.

STAUFER'S
HARD RUBBER SPECULUMS GUARANTEED.



Prices, Single, $2.50
Series encased, 12.00

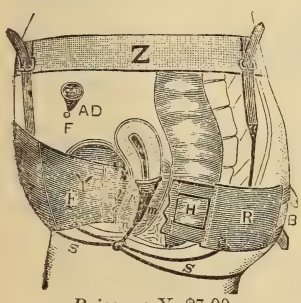
The engraving shows the shape, conductor and case so complete, that scarcely any description is necessary. For compactness there is but one conductor stem, on which each size of bulb screws. Speculums and case are all of the best quality hard rubber, and do not break from ordinary falling. Dental red enamelled inside. The mouth is polished very smooth, and shaped so that the cervix can be brought in entirely by rotation. And when brought in can be rotated to bring into view all the parts. The vaginal portion of the uterus can be seen as clearly as if located externally. When obtained, single, No. 2, is the most useful, since it reveals fully the point of the cervix in almost all multipara, and freely enters, when the position is correct, in many nullipara.

Guarantee.—One or two speculums are guaranteed; thus when returned sound and in the original wooden boxes, within six months of purchase, the money will be refunded without any deduction.

Plates.—The *First* contains 16 engravings and groups of engravings, illustrating the uterine examining instruments. *Second* contains 17 engravings and groups of engravings, illustrating the uterine replacing and supporting instruments.

Catalogue.—The catalogue comprises over 150 sizes and styles of uterine examining and supporting instruments, of which the hard rubber parts are exchanged and interchanged at cost, without limit of time. It also contains full directions and explanations for the use of this series of hard rubber gynecological instruments; together with common information collected through many years to simplify this line of treatment.

STAUFER'S
SPRING STEM UTERINE SUPPORTERS.
GUARANTEED.



Price, on Y, $7.00
" " Z, 6.00

The engraving shows the Spring Stem Cup, which consists of over a dozen sizes. The series contains Spring Stem Balls, Spring Stem Levers, for Anteversions and Retroversions. also Spring Stem Cup with posterior projections, all of assorted sizes.

Explanation.—The stem is screwed on cup A, and when unscrewed, the spring is put in tube *m*, or taken out when it needs cleaning. Thus the coil spring lays between the cup and base *n*. When there is pressure from above, or below, or both, the spring is compressed and again stretches out at the first opportunity. The movement of the base stem *n*, is governed by a slot and pin through tube *m*.

A D.—Represents the cup transformed into a self-sustaining cup, virtually an instrument of double capacity. In most cases after the uterus is held in "health line" for a time by external support, contraction of the walls of the vagina takes place, and it is sufficient at night or until forced down next day by bodily exertion, against which the stem and bandage guards if applied in time.

Belt Y.—The manner in which belt Y, sets on the abdomen is shown in above engraving. The widest or lifting part is in front. Over each hip as seen at H, are two elastics, and on large belts three. It closes on the back by buckling at B. It is of fine sateen outside, fine lining inside, and a slight stiffening between, and stayed with soft whalebones. Accurate hip measure is to be taken over a thin undergarment; since it needs to fit with a space of one or two inches apart on the back, for the buckle straps to draw. The perineal attachments are short and buckle at F and R.

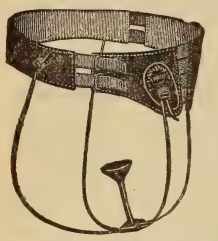
Belt Z.—This is an elastic waist strap and carries any supporter of this series. Yet the common difficulty presents itself, where long and slender attachments are used, that they do not govern the internal part so efficiently as on the low grasping abdominal supporter Y.

The Series.—This series of imstruments has been invented as cases presented themselves, requiring different styles and sizes of instruments, without change of proprietor, until it has reached its present efficiency.

Guarantee.—The money lost by purchasing uterine supporters, unscientifically constructed, of irritating material, or limited in deficiency of sizes, and in consequence loss of families in practice, has set a large portion of the medical profession against the mechanical support of the uterus. By these conditions the risk of the first purchase by a physician of a stem and bandage supporter of this series is obviated. After the first purchase the instruments are supposed to be known, yet the guarantee is extended by special contract in doubtful cases.

Refunding.—On return of the hard rubber part or parts within six months of purchase, Five Dollars of the purchase money will be refunded. The belt remains with the patient as an abdominal supporter and only risk.

The above Guarantee and Refunding is secured when the Instrnments are obtained through this Office. Any other Instrument of STAUFER'S SERIES is also obtained through this Office at Catalogue Prices, and Catalogue free, on application.



PHYSICIANS!

YOUR ATTENTION IS INVITED

—TO THE—

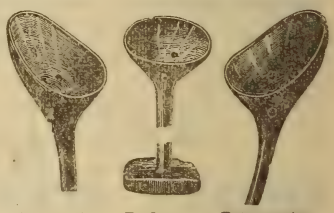
DR. McINTOSH NATURAL UTERINE SUPPORTER.

THIS INSTRUMENT MEETS THE WANTS OF THE PROFESSION MORE PERFECTLY than any other Uterine Supporter ever made. This is proven by the fact that during the past fifteen years more have been sold than of all other Supporters combined. *It never fails to give perfect satisfaction, even in the most difficult cases,* where any instrument can be used.

The **ABDOMINAL PORTION** is a broad morocco leather belt with elastic straps to buckle around the hips, with concave front, so shaped as to hold up the abdomen.

The **UTERINE PORTION** is a cup and stem made of highly-polished hard rubber, very light and durable, shaped to fit the neck of the womb, with openings for the secretions to pass out, as shown by the cuts. Cups are made with extended lips to correct flexions and versions of the womb.

The cup and stem is suspended from the belt by two soft elastic rubber tubes, which are fastened to the front of the belt by simple loops, pass down and through the stem of the cup and up to the back of the belt. These soft rubber tubes being elastic adapt themselves to all the varying positions of the body and perform the service of the ligaments of the womb.



Anteversion. Prolapsus. Retroversion

The instrument is very comfortable to the patient, can be removed or replaced by her at will, can be worn at all times, will not interfere with nature's necessities, will not corrode, and is lighter than metal. It will answer for all cases of Anteversion, Retroversion, or Prolapsus of the Womb. It is used by our leading physicians with never-failing success.

OUR REDUCED PRICE TO PHYSICIANS IS $5.00 EACH.

Instruments sent by mail at our risk on receipt of price; or we can send by express, C. O. D., with express charge for returning money added.

CAUTION.

Owing to the great success of our Supporter, several worthless imitations have been made which are often substituted for our instruments, to the detriment of the patient and the disappointment of the physician. To protect our patrons from imposture, we stamp each pad of the Abdominal belt in gilt letters, "Dr. McIntosh N. U. Supporter, Chicago, Ill."; the base of each cup is stamped "Dr. McIntosh N. U. S. Co., Chicago, Ill., U. S. A."

The box in which the instrument is put up contains directions for the application of the instrument pasted inside the cover, having the fac simile signature of Dr. L. D. McIntosh.

For further information in regard to the instrument, address

DR. McINTOSH NATURAL UTERINE SUPPORTER CO.,

300 AND 302 DEARBORN STREET, CHICAGO, ILL.

Our valuable Pamphlet on "Displacement of the Womb," giving a more complete description of the Instrument, will be sent you free on application.

LEVIS'S METALLIC SPLINTS.

CHERRY MALT PHOSPHITES.

W. C. JACOBS,
Manager.

This preparation is believed to be the only Malt Extract continuously acceptable to the stomach. The attention of those who have ceased prescribing other extracts of malt because of excessive sweetness is specially called to this.

CHERRY MALT PHOSPHITES is a combination of Wild Cherry, the condensed extract of the important Cereals and the Elixir of the Hypophosphites. Its flavor is delicious, and it is medicinally invaluable in all cases of General and Nervous Debility, Dyspepsia, Imperfect Nutrition, Impure Blood, Wasting Diseases of Children and Adults. It is extensively prescribed in European countries, and has received the cordial endorsement of the leading practitioners of this country.

PRICE $1.00 PER BOTTLE.

To Physicians not familiar with its merits, who will pay express charges, we will send a full-sized bottle *free.*

Since the introduction—1870—of the substance known as **COSMOLINE** (Unguentum Petrolei) to the College of Pharmacy in Philadelphia, by the late Professor Parrish, who was one of the very first to recognize its merits, it has become very widely known and variously used by the Physicians, Surgeons, and Pharmacists of all schools throughout this country and abroad. Pure Petroleum will not oxidize, but the processes resorted to by many, in order to obtain special products from petroleum, introduce properties that will oxidize in ordinary temperatures, and develop other objections with age. Such products may be used in the arts, but they were decided years ago to be exceedingly irritating and otherwise interfering as surgical dressings or bases for ointments. The Manufacturers of **COSMOLINE** (Unguentum Petrolei) took advantage of the possibility of producing an article which would not only not become rancid, but also one which would be absolutely free from those properties which affected the ordinary residuums and products of the petroleum still. Notwithstanding numerous other petroleum preparations of variable merit and ostensibly for the same purpose, have since been offered, **COSMOLINE** (Unguentum Petrolei) has continued to increase steadily in professional favor. **COSMOLINE** (Unguentum Petrolei) was not recommended to the profession at large until the leading Physicians and Pharmacists of Philadelphia were thoroughly satisfied of its fitness and absolute purity, and since then it has not been changed to meet every speculative fancy, or to compete in price with those preparations of petroleum having some outward resemblance to Cosmoline, but found either deficient in action or positively irritating, owing to chemical agencies used to cheapen the cost of manufacture. It was apparent from its first introduction, that **COSMOLINE** (Unguentum Petrolei) was adapted to a very wide range of uses in Surgery and Pharmacy; and when it was found that its uniformity could invariably be depended upon, it is not surprising that it obtained supremacy over those products which have been varying as commercial experiments, and lacking in all the essential and absolutely pure characteristics needed for a general surgical dressing and base for ointments.

Yours very respectfully,

E. F. HOUGHTON & CO.,

No. 211 South Front St.,

PHILADELPHIA.

[A Fresh Supply.] January 22, 1887.

STROPHANTHUS,

THE NEW HEART TONIC.

We have at an extravagant cost procured from Central Africa another limited quantity of Strophanthus. This is the only lot in the market.

This new substitute for digitalis was introduced by Prof. Fraser, at the late meeting of the British Medical Association, after experimenting with the drug for fifteen years.

Strophanthus is not only more powerful on the heart than digitalis, but is free from all other attendant actions and secondary effects of the latter. It seems to be a pure heart tonic. No cumulative action has been observed even after it has been administered for weeks continuously, and sickness and gastro-intestinal disturbance are not produced so frequently by Strophanthus as by digitalis. Scarcely any action is produced by this substance upon blood-vessels directly. Prof. Fraser said: "As a result of the action on muscle, the heart is easily and powerfully affected. * * By regulating the dose, a very distinct pharmacological influence may be produced upon the heart, while the muscles remain apparently quiet unaffected." "The systole of the heart is increased, and its contractions are slowed by small doses." "The action of the heart is accompanied by a rise in blood pressure, which appears to be directly produced by it." Thus, "in disturbance of the circulation, when the blood tension was unduly low, Strophanthus was capable of producing a diuretic effect."

"Strophanthus," writes Prof. Fraser, "exerts a much more powerful action upon the heart, and a less powerful action upon the blood-vessels, than digitalis. * * In difficulties and embarrassments of the circulation depending upon a central cause, it seems preferable to act on the heart alone, rather than also to increase its difficulties by closing the blood-vessels, into which it must empty itself." Strophanthus may "be used with advantage in all weak states of this organ, whatever the cause of weakness," but in case of degeneration, or sufficient compensatory change, it will probably do little good." Prof. Fraser further stated that under its use he has occasionally seen pyrexia disappear, and that very frequently the charts of his apyretic cases exhibited a subnormal temperature.

A pamphlet containing Prof. Fraser's treatise on Strophanthus forwarded upon request.

Put up in form of Tincture, Dose 2 to 6 Drops, in one half and one ounce Bottles, at 40 cents and 75 cents each.

SUCCUS ALTERANS.

(McDADE).

SUCCUS ALTERANS is a purely vegetable compound of the preserved juices of Stillingia Sylvatica, Lappa Minor, Phytolacca Decandra Smilax Sarsaparilla, and Xanthoxylum Fraxineum, as collected by DR. GEO. W. MCDADE exclusively for ELI LILLY & CO., and endorsed by DR. J. MARION SIMS.

SUCCUS ALTERANS continues to gain favor from its remarkable Alterative and Tonic properties, *eliminating specific poison from the blood*, and *increasing the proportion of red corpuscles in anæmic patients* to a wonderful degree.

SUCCUS ALTERANS in venereal and cutaneous diseases is fast supplanting Mercury, the Iodides and Arsenic; and is a certain remedy for Mercurialization, Iodism, and the dreadful effects often following the use of Arsenic in skin diseases.

SUCCUS ALTERANS is also strongly recommended for its Tonic and Alterative effects in the myriad forms of scrofulous disease, and in all cases where anæmia is a factor. Such patients rapidly develop a good appetite, sleep soundly, and gain flesh rapidly. Many cases are on record where patients increased ten to twenty-five pounds in weight in a few weeks.

SUCCUS ALTERANS may be given for any length of time without injury to the patient.

SUCCUS ALTERANS is now endorsed by leading members of the medical profession, and in use by many hospitals of note.

SUCCUS ALTERANS is put up only in round amber bottles holding sixteen fluid ounces, which is sufficient for from two to six weeks' treatment.

ANY PHYSICIAN who has not received DR. MCDADE'S latest publication, the MONOGRAPHIA SYPHILITICA for JANUARY, 1887, should send their address, mentioning this journal, and we will mail a copy. It contains a paper, illustrated with colored plates, by DR. D. H. GOODWILLIE, of New York, on the "Sequelæ of Syphilis," reports of cases in practice, and many other valuable papers.

SUCCUS ALTERANS is supplied by reputable wholesale and retail druggists everywhere. Agency for Great Britain, etc., JOHN M. RICHARDS, 46 HOLBORN VIADUCT, LONDON, E. C.

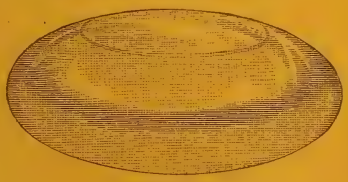
COMPRESSIBLE,

5 Grammes.

EASILY

10 Grammes.

SWALLOWED.



15 Grammes.

Pharmacy has given to medicine no more elegant method of administering drugs, especially those of a bitter and nauseous character, than the Soluble Elastic Filled Capsule properly made.

We say properly made advisedly, for owing to the great demand for them, so many inferior capsules have been put upon the market by those having imperfect facilities for their manufacture, the resultant product being inelastic, insoluble and inelegant in appearance, that many physicians do not properly appreciate the advantages offered by a highly elastic, perfectly soluble capsule, with medicinal contents of the very purest quality obtainable.

At great expense we have perfected our facilities and processes for making capsules, and can confidently recommend our very complete line of this class of products to physicians.

We shall be pleased to send on application a formulæ book giving a complete list of our soluble elastic capsules, and other gelatin products.

PARKE, DAVIS & CO.,

MANUFACTURING CHEMISTS,

NEW YORK: 60 Maiden Lane and 21 Liberty Street. DETROIT, MICH.

30,000 PHYSICIANS
NOW PRESCRIBE

HYDROLEINE

(HYDRATED OIL,)

For Consumption and Wasting Diseases. It Produces Immediate Increase in Flesh and Weight.

FORMULA.

Each Dose of Two Teaspoonfuls, equal to 120 Drops, contains:

Pure Cod Liver Oil	80 m. (drops)	Soda	½ Grain.
Distilled Water	35 "	Boric Acid	½ "
Soluble Pancreatin	5 Grains.	Hyocholic Acid	⅛ "

DOSE:

Two teaspoonfuls alone, or with twice the quantity of water, to be taken thrice daily after meals.

Hydroleine (Hydrated Oil) is not a simple alkaline emulsion of oleum morrhua, but a hydro-pancreated preparation containing acids and a medicum of soda. Pancreatin is the digestive principle of fatty foods, and, in the soluble form here used, completely saponifies the oleaginous material so necessary to the reparative process in all wasting diseases.

Lautenbach's researches on the function of the liver would show the beautiful adjustment of therapeutics in preparation of Hydroleine, furnishing, as it does, the acid and soda necessary to prevent self-poisoning by reabsorption of morbid tubercular detritus and purulent matters into the general circulation.

Each bottle in nutritive value exceeds ten times the same bulk of cod liver oil. It is economical in use and certain in result.

Sold at all Drug Stores at $1.00 per Bottle.

The principles upon which this discovery is based have been described in a treatise on "The Digestion and Assimilation of Fats in the Human Body," by H. C. BARTLETT, Ph. D., F. C. S., and the experiments which were made, together with cases illustrating the effect of Hydrated Oil in practice, are concisely stated in a Treatise on "Consumption and Wasting Diseases," by G. OVEREND DREWRY, M. D.

Copies of these Works sent free on Application.

WM. F. KIDDER & CO., 83 John Street, New York.

Agents for U. S.

Also exclusive Agents for SVAPNIA, or Bigelow's purified Opium, in SCALES and HALF-GRAIN GRANULES.

THE BEST ANTISEPTIC.

FOR BOTH INTERNAL AND EXTERNAL USE.

LISTERINE.

FORMULA.—Listerine is the essential antiseptic constituent of Thyme, Eucalyptus, Baptisia, Gaultheria, and Mentha Arvensis, in combination. Each fluid drachm also contains two grains of refined and purified Benzo-boracic Acid.

DOSE.—Internally: One teaspoonful three or more times a day (as indicated), either full strength, or diluted, as necessary for varied conditions.

LISTERINE is a well-proven antiseptic agent—an anti-zymotic—especially adapted to internal use, and to make and maintain surgical cleanliness—asepsis—in the treatment of all parts of the human body, whether by spray, irrigation, atomization, or simple local application, and therefore characterized by its particular adaptability to the field of

PREVENTIVE MEDICINE—INDIVIDUAL PROPHYLAXIS.

Physicians interested in LISTERINE will please send us their address, and receive by return mail our new and complete pamphlet of 36 quarto pages, embodying:

A TABULATED EXHIBIT of the action of LISTERINE upon inert Laboratory Compounds.

FULL AND EXHAUSTIVE REPORTS and Clinical Observations from all sources, confirming the utility of LISTERINE as a General Antiseptic for both internal and external use; and particularly

MICROSCOPIC OBSERVATIONS, showing the comparative value and availability of various antiseptics in the treatment of Diseases of the Oral Cavity, by W. D. MILLER, A. B., Ph. D., D. D. S., Prof. of Operative and Clinical Dentistry, University of Berlin, from whose deductions LISTERINE appears to be the most acceptable prophylactic for the care and preservation of the teeth.

LAMBERT PHARMACAL COMPANY,

116 OLIVE STREET, ST. LOUIS.

SCOTT'S EMULSION

OF PURE COD LIVER OIL WITH HYPOPHOSPHITES OF LIME AND SODA.

THE STANDARD EMULSION OF COD LIVER OIL.

The ONLY Preparation of its class that will not SEPARATE nor SPOIL in any climate.

IT IS MADE FROM THE PUREST NORWEGIAN COD LIVER OIL, COMBINED WITH CHEMICALLY PURE HYPOPHOSPHITES AND GLYCERINE.

Acknowledged by leading Physicians in the U. S. and many other Countries to be the most ELEGANT most PALATABLE and EASILY DIGESTED preparation in the World, and can be tolerated longer by children and persons with delicate stomachs than any other.

WE ASK A CAREFUL COMPARATIVE TEST WITH ANY OR ALL SIMILAR PREPARATIONS.

FORMULA: 50 per cent. of Pure Cod Liver Oil, 6 grs. of the Hypophosphites of Lime, and 3 grs. of the Hypophosphite of Soda to a fluid ounce. Emulsified with mucilage and Glycerine.

S. & B's BUCKTHORN CORDIAL, RHAMNUS FRANGULA.

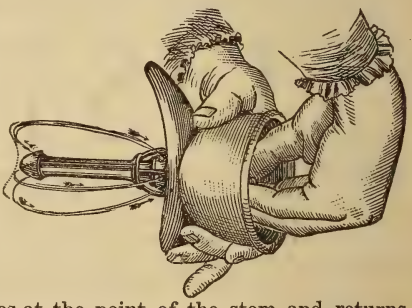
Is giving universal satisfaction to the profession, for its mild but certain and efficient cathartic action. It seems to be *almost* a *specific* for *habitual constipation*, and we are constantly in receipt of the most flattering reports regarding it. The care we use in its preparation—having the bark always the proper age, and properly exhausted—makes it always reliable in its action. Be sure and specify S. & B. Buckthorn Cordial.

To those who have for any reason never yet tried these preparations, we will be pleased to send samples free by express.

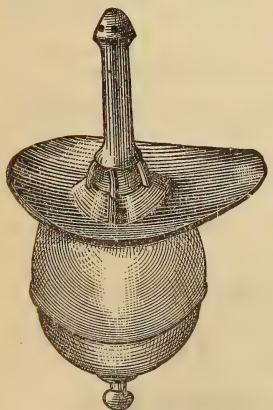
SCOTT & BOWNE, Mfg. Chemists, 132 & 134 S. 5th Ave., N. Y.

"PALLAS" SYRINGE.

VAGINAL AND RECTAL.



A MOST PERFECT and simply constructed Syringe for medicating and irrigating the vaginal cavity. The novel bulb of this Syringe, when doubled upon itself, as shown in the cut, will cause no fluid to be left, as is so apt to happen with the ordinary bulbs, and when filled will contain just enough fluid for the expansion of the vaginal folds. The hard rubber labial shield, with its plug, when firmly pressed against the labia, will both prevent spilling and soiling of linen, and the fluid can therefore be kept in circulation and in contact with the parts by repeating the pumping motion of the bulb. It will also be noticed that the fluid escapes as a spray from the large holes at the point of the stem and returns through the holes at the root of same, which is provided with hard rubber screen-bars, preventing the folds from interfering with the rapid return of the fluid into the bulb. In filling the bulb, a couple of turns will unscrew it. In handsome case, satin lined. Retail price, $3.75. To physicians, $3.00.



CHRISTIAN JENSEN & CO.,

2207 Fairmount Avenue,

PHILADELPHIA, PA.

COLDEN'S Liquid Beef Tonic.

Established 15 Years.
OBSERVE the NAME.
Beware of Imitations.

ORIGINAL LABEL:
"Colden's Liebig's Liquid Extract of Beef and Tonic Invigorator."

An Invaluable Aid in Medical Practice.

Differs Essentially from all other Beef Tonics.

COLDEN'S Liquid Beef Tonic is endorsed by scores of physicians, who are growing to realize more and more its importance in repairing, in accordance with the principles of dietetics, the **waste which disease entails.** It consists of the extract of Beef (by Baron Liebig's process) spirit rendered non-injurious to the most delicate stomach by extraction of the Fusel Oil, soluble Citrate of Iron, Cinchona, Gentian and other bitter tonics. An official analysis of this preparation by the eminent Chemist, ARTHUR HILL HASSALL, M. D., F. R. S., and an endorsement by the late SIR ERASMUS WILSON, F. R. S., is printed on the label of each bottle.

As a **blood food,** and a **reliable tonic** in all cases of debility and weakness, Malarial Fever, Anæmia, Chlorosis, Incipient Consumption, etc., it is the best preparation ever used. It acts directly on the sentient Gastric Nerves, stimulating the follicles to secretion, and gives to weakened individuals that first prerequisite to improvement—an appetite. It strengthens the nervous system when unstrung by disease, and has been employed with remarkable success as a remedy for Drunkenness and the Opium Habit.

Its Range of Action Embraces all Cases of Debility.

In order that physicians may form some idea of the nature of its ingredients, I will upon application in person, or by letter (enclosing a card), send a sample bottle of COLDEN'S LIQUID BEEF TONIC to any physician in regular standing, in the United States. Please ask your Dispensing Druggist (if he has not already a supply) to order it. In prescribing this preparation, physicians should be particular to mention "COLDEN'S"—*viz.:* "***Ext. carnis, fl. comp. (Colden's.)***" It is put up in pint bottles, and can be had of Wholesale and Retail Druggists generally throughout the United States.

C. N. CRITTENTON, Sole Agent, 115 Fulton St. New-York.

GLENN'S Sulphur Soap.

ALL physicians know that ***skin diseases*** are more or less constitutional, or dependent upon some specific poison in the blood, which if eradicated by internal treatment needs something to remove its appearance from the surface. Experience has proved that the best possible aid in the accomplishment of this end is obtained by the use of ***Sulphur in soap.*** GLENN'S SULPHUR SOAP is the best combination of its kind, and the one now generally used. It is for sale by all Druggists, at **25** cents a cake, or 3 cakes for **60** cents.

CONSTANTINE'S PINE TAR SOAP

Has been on trial among physicians for very many years as a toilet Soap and Healing Agent, and its superior virtues have been unanimously conceded **in all cases where the use of tar is indicated.** Unsolicited expressions of its excellence have been received from the Medical Faculty generally. IT IS THE BEST TAR SOAP MADE. None genuine unless stamped "A. Constantine's Persian Healing Pine-Tar Soap." For sale by all Druggists.

Samples of either of the above-named Soaps will be sent free upon application in person or by letter (enclosing card) to any physician in regular standing in the United States. C. N. Crittenton, 115 Fulton Street, New York. Please mention "THE MEDICAL AND SURGICAL REPORTER."

Carl L. Jensen

Sole Originator of

Pepsin in Scales

OR

"Crystal" Pepsin

2039 Green St.
Philadelphia

Physicians desirous of obtaining the genuine article, when prescribing Scale Pepsin or "Cryst." Pepsin, will not alone lend their aid and encouragement to the inventor, but will benefit themselves and patients as well, by simply prescribing this Pepsin thus: "Jensen's Pepsin," drawing a heavy line under the name "Jensen."

The profession generally takes it for granted that druggists are well aware that the physicians never intend to prescribe the imitations of preparations of established merits, which are brought to light solely through the knowledge and technicalities of the inventor or originator, acquired by protracted study and experiments. Imitations have never yet been known to supersede the article imitated, but furnish most convincing testimony to the worth of the article counterfeited. I am continually improving this valuable preparation. Besides its enormous digestive strength, it possesses a keeping quality not before found in any Pepsin preparation, owing to its being of a brittle, scaly texture, reduced to the shape of small granular fragments, it is perfectly soluble and pulverizes easily. It contains no foreign matter like preparations of other make, as Pepsin Manufacturers, heretofore, could not accomplish this without adding large quantities of either starch or sugar of milk.

Physicians who have not yet tried this preparation, or who have been imposed upon, will meet with gratifying results by simply prescribing this Pepsin, thus: "Jensen's Pepsin," as it will prevent substitutions.

Samples promptly forwarded, post-paid.

Faithfully **CARL L. JENSEN.**

Apollinaris

"THE QUEEN OF TABLE WATERS,"

HAS RECEIVED THE

HIGHEST AWARD

LONDON, 1884,

AND IS SUPPLIED UNDER

ROYAL WARRANT

TO

H. R. H. THE PRINCE OF WALES.

ANNUAL SALE, 10 MILLIONS.

Of all Grocers, Druggists & Min. Wat. Dealers.

BEWARE OF IMITATIONS.

Friedrichshall.

THE WELL-KNOWN APERIENT MINERAL WATER.

IMPORTANT NOTICE.

By reason of an improved method of caption, by which dilution avoided, FRIEDRICHSHALL WATER will be found now to be of **considerably greater strength** *and* **efficacy** *than heretofore.*

The ordinary dose is a large wineglassful (4 ounces). Most efficacious when taken fasting and mixed with an equal quantity of hot water.

"I know nothing at all equal to Friedrichs all. The LONGER it is taken, the SMALLER is the quantity necessary to effect the purpose."

Sir HENRY THOMPSON, F.R.C.S., London.

OF ALL DRUGGISTS AND MINERAL WATER DEALERS.

In corresponding with Advertisers, please mention THE MEDICAL AND SURGICAL REPORTER

SAVORY & MOORE beg to call the attention of the Profession to some of their Special Preparations, the purity and uniform strength of which are guaranteed.

Pancreatic Emulsion. In Consumption, Wasting, LOSS OF THE POWER OF DIGESTION AND ASSIMILATION, this pure drug is the MOST POTENT REMEDY. This is now attested by the published records of numerous medical men, extracts of which accompany each bottle.

Peptodyn, the New Digestive, is a combination of the whole of the digestive secretions, forming an invaluable remedy in the treatment of all forms of Dyspepsia, and all diseases arising from imperfect nutrition. Peptodyn is intended as a general promoter of digestion for persons not necessarily considered in bad health; thus, when taken about a quarter of an hour after a meal, it will be found to assist digestion in a remarkable manner, and prevent the discomfort which often follows the partaking of a full meal by persons in good health.

Pancreatine Powder, for Indigestion and Loss of APPETITE. This palatable and popular remedy effects the digestion and assimilation of all food, especially of FATTY SUBSTANCES, and is therefore invaluable to patients who are unable to digest Cod Liver Oil, and who are thus deprived of its nourishing and invigorating properties.

Gelatine Discs for Hypodermic Use—Of Morphia, CODEIA, ERGOTINE, ATROPIA, STRYCHNIA, APOMORPHIA, etc. The chief features of these discs are their instant solubility, by which hypodermic solutions can be instantly obtained of uniform and reliable strengths; they keep good for an unlimited period in their dry state, and are extremely portable. (Prepared in accordance with Dr. Sansom's recommendation.)
In tubes, each containing 25 discs.

Etherodine (Substitute for Chlorodyne). A clear, bright fluid, pleasant to the taste, readily miscible with water or any suitable menstruum. The therapeutical properties of ETHERODINE are identical with those of CHLORODYNE, but the former is an elegant preparation, and more convenient for use.

Gelatine Discs for Ophthalmic Purposes.
"Much smaller doses of medicaments such as Atropine, Calabar Bean Extract, Sulphate of Zinc, Morphia, etc., etc., suffice to produce a marked effect by this form of application, than when drops are introduced."—*The Lancet.*
In tubes, each containing 100 discs.

Gelatine Lamels for Internal Administration, consist of thin, pliable, and, in most cases, transparent sheets of uniform thickness, accurately divided into squares by raised lines, each square containing an exact dose of the medicine with which the sheet is impregnated.
In sheets, each consisting of 24 squares.

Datura Tatula, for Asthma, Hay Fever, and Chronic BRONCHITIS. Recommended by the Profession as a remedy of great power and usefulness in cases of short and difficult breathing, spasmodic coughing, etc. The most convenient forms for use are—
Datura Tatula Cigars. Datura Tatula—prepared for use by means of a pipe.
Datura Tatula Cigarettes. Datura Tatula Pastilles—for Inhalation.

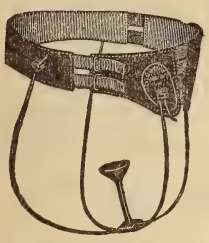
Agents for America, E. FOUGERA & CO., New York.



PHYSICIANS!

YOUR ATTENTION IS INVITED

—TO THE—

DR. McINTOSH NATURAL UTERINE SUPPORTER.

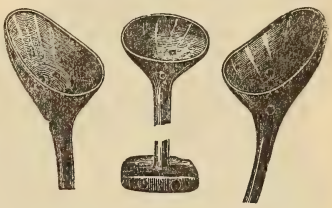
THIS INSTRUMENT MEETS THE WANTS OF THE PROFESSION MORE PERFECTLY than any other Uterine Supporter ever made. This is proven by the fact that during the past fifteen years more have been sold than of all other Supporters combined. *It never fails to give perfect satisfaction, even in the most difficult cases,* where any instrument can be used.

The **ABDOMINAL PORTION** is a broad morocco leather belt with elastic straps to buckle around the hips, with concave front, so shaped as to hold up the abdomen.

The **UTERINE PORTION** is a cup and stem made of highly-polished hard rubber, very light and durable, shaped to fit the neck of the womb, with openings for the secretions to pass out, as shown by the cuts. Cups are made with extended lips to correct flexions and versions of the womb.

The cup and stem is suspended from the belt by two soft elastic rubber tubes, which are fastened to the front of the belt by simple loops, pass down and through the stem of the cup and up to the back of the belt. These soft rubber tubes being elastic adapt themselves to all the varying positions of the body and perform the service of the ligaments of the womb.

The instrument is very comfortable to the patient, can be removed or replaced by her at will, can be worn at all times, will not interfere with nature's necessities, will not corrode, and is lighter than metal. It will answer for all cases of Anteversion, Retroversion, or Prolapsus of the Womb. It is used by our leading physicians with never-failing success.



Anteversion. Prolapsus. Retroversion

OUR REDUCED PRICE TO PHYSICIANS IS $5.00 EACH.

Instruments sent by mail at our risk on receipt of price; or we can send by express, C. O. D., with express charge for returning money added.

CAUTION.

Owing to the great success of our Supporter, several worthless imitations have been made which are often substituted for our instruments, to the detriment of the patient and the disappointment of the physician. To protect our patrons from imposture, we stamp each pad of the Abdominal belt in gilt letters, "Dr. McIntosh N. U. Supporter, Chicago, Ill."; the base of each cup is stamped "Dr. McIntosh N. U. S. Co., Chicago, Ill., U. S. A."

The box in which the instrument is put up contains directions for the application of the instrument pasted inside the cover, having the fac simile signature of Dr. L. D. McIntosh.

For further information in regard to the instrument, address

DR. McINTOSH NATURAL UTERINE SUPPORTER CO.,

300 AND 302 DEARBORN STREET, CHICAGO, ILL.

Our valuable Pamphlet on "Displacement of the Womb," giving a more complete description of the Instrument, will be sent you free on application.

LEVIS'S METALLIC SPLINTS.

FLEXIBLE, PERFORATED, NICKEL-PLATED, Conformable to every size and condition of Limbs. **VERY LIGHT, INDESTRUCTIBLE,** and **INEXPENSIVE.** The complete set consists of **21 pieces** in a neat, compact case. Full descriptive circulars sent on application. ☞ **PRICE, $15.00 Per Set.** ☜

McINTOSH GALVANIC AND FARADIC BATTERY CO.,

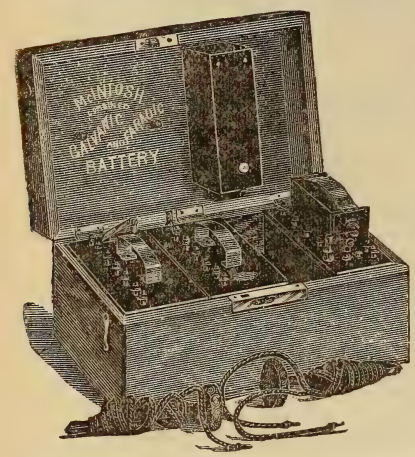
MANUFACTURERS OF THE CELEBRATED

McIntosh Combined Galvanic and Faradic Batteries,

Table, Office, and Family Batteries, Electrodes, Electric Bath Apparatus, Statical Electric Machines, Stereopticons, Solar, Monocular, and Binocular Microscopes.

AND ALL KINDS OF

PHILOSOPHICAL ELECTRICAL APPARATUS.



Schools, Colleges, Physicians, or Hospitals wanting new Apparatus, will do well to favor us with correspondence and obtain estimates. Men of scientific experience have charge of the manufacturing department. We employ the most skillful mechanics, and have the largest facilities in America for manufacturing.

We would call the Special Attention of the Medical Profession to our

Combined Galvanic and Faradic Batteries.

These Batteries are recommended by the Medical Faculty of both America and Europe, and have been adopted by the United States Government for use in Medical Department of the Army and Navy. They are

The First and Only Portable Batteries ever Invented which Give both the Galvanic and Faradic Current,

TWO DISTINCT BATTERIES IN ONE CASE.

No Physician can afford to be without one.

This celebrated Battery is constructed on an improved plan. The zincs and carbons are fastened to hard-rubber plates in sections of six each; this manner of connecting brings the plates nearer together than in any other battery, thus giving less internal resistance. The cells are composed of one piece of hard rubber, and are made in sections of six each with a drip-cup, thus one section can be handled, emptied, and cleaned, as easily and quickly as one cell. The drip-cup is to receive the elements when the battery is not in use. The fluid cannot spill or run between the cells, and there is no danger of breaking, as with glass cells. This is the only battery in which the zinc and carbon plates can be kept clean and always in order by simply rinsing them.

An extra cell (with a zinc and carbon element) is added to the combined batteries, for the purpose of producing the Faradic current. This cell gives as much force as is ever needed, and avoids exhausting the current from the Galvanic cells. All the metal work is finely nickel-plated and highly polished, and every part is put together so that it can be easily replaced by the operator. Our batteries weigh less, occupy less space, give a current of greater intensity and quantity, than any other battery manufactured.

Our illustrated Catalogue, a handsome book giving full description of all our goods, and other valuable information, sent free on application.

McINTOSH GALVANIC AND FARADIC BATTERY CO.
300 & 302 DEARBORN STREET, CHICAGO, ILL.

WHEELER'S TISSUE PHOSPHATES

Bone-Calcium Phosphate $Ca_3 2P.O._4$, Sodium Phosphate $Na_2 H.P.O._4$, Ferrous Phosphate $Fe_3 2P.O._4$, Trihydrogen Phosphate $H_3 P.O._4$.

WHEELER'S COMPOUND ELIXIR OF PHOSPHATES AND CALISAYA. A Nerve Food and Nutritive Tonic, for the treatment of Consumption, Bronchitis, Scrofula, and all forms of Nervous Debility.

The Lactophosphates prepared from the formula of Prof. Dusart, of the University of Paris. Combines with a superior Pemartin Sherry Wine and Aromatics in an agreeable cordial easily assimilable and acceptable to the most irritable stomachs.

Phosphorus, the oxidizing element of the Nerve Centres for the generation of Nerve Force; Lime Phosphate, an agent of Cell Development and Nutrition; Soda Phosphate, an excitant of Functional Activity of Liver and Pancreas, and Corrective of Acid Fermentation in the Alimentary Canal; Iron, the Oxidizing Constituent of the Blood for the Generation of Heat and Motion; Phosphoric Acid, Tonic in Sexual Debility; Alkaloids of Calisaya, Anti-Malarial and Febrifuge; Extract of Wild Cherry, uniting with tonic power the property of Calming Irritation and Diminishing Nervous Excitement.

THE SUPERIORITY OF THE ELIXIR consists in uniting with the Phosphates the special properties of the Cinchona and Prunus, of Subduing Fever and Allaying Irritation of the Mucous Membrane of the Alimentary Canal, which adapts it to the successful treatment of Stomach Derangements and all diseases of Faulty Nutrition, the outcome of Indigestion. Malassimilation of Food, and *failure of supply* of these essential elements of Nerve Force and Tissue Repair.

The special indication of this combination of Phosphates in Spinal Affections, Caries, Necrosis, Ununited Fractures Marasmus, Poorly Developed Children, Retarded Dentition, Alcohol, Opium, Tobacco Habits, Gestation and Lactation, to promote Development, etc., and as a *physiological restorative* in Sexual Debility, and all used up conditions of the Nervous System, should receive the careful attention of good therapeutists.

There is no strychnia in this preparation, but when indicated, the Liquor Strychniæ of the U. S. Dispensatory may be added, each fluid drachm of the solution to a pound bottle of the Elixir making the 64th of a grain to a half fluid ounce, an ordinary dose, a combination of a wide range of usefulness.

DOSE—For an adult, one tablespoonful three times a day, after eating; from seven to twelve years of age, one dessertspoonful; from two to seven, one teaspoonful. For infants, from five to twenty drops, according to age.

Prepared at the Chemical Laboratory of T. B. WHEELER, M. D., Montreal, D. C.

Put up in pound bottles and sold by all Druggists at One Dollar.

THREE MORE MEDALS IN 1886.

The recent International Expositions at Edinburgh and Liverpool, and the American Institute, New York, each awarded us the Highest Silver Medal, which swells our list to about

THIRTY-FIVE GOLD, SILVER AND BRONZE MEDALS

FROM ALL PARTS OF THE WORLD.

THE REASON FOR IT IS PLAIN.

We make but one quality, and that the best. WE SCRUPULOUSLY CONFORM TO THE PHARMACOPŒIAL, or other recognized standards, in the incorporation of medicinal ingredients. We command perfect skill in manipulation, we use pure and superior fabrics, our packages are neat, elegant, and convenient, and our prices are not only uniform, but the most reasonable that can be placed on honest goods of the first quality.

THE STATUS OF THE WHOLE PLASTER BUSINESS

is well shown by the analyses of Belladonna Plasters, the leading article on the list of spread goods, made in March, 1886 by Dr. Albert B. Prescott, Prof. of Chemistry at the University of Michigan, and President of the American Chemical Society, from goods purchased by him in open market. The analyses were made by the same process, in parallel operations, for the quantity of total Belladonna alkaloids, estimated as atropine, and show our Belladonna plaster to contain 0.543 of a grain of alkaloid, which represents the strength of a plaster made after the standard prescribed by the U. S. P. from the highest grade of belladonna root. The same analyses showed the next highest belladonna plaster to contain but 0.264 grains of alkaloid, or less than half U. S. P. strength; while the several other brands examined contained from 0.230 grains to 0.045 grains, proving the S. & J. plaster to contain more than twice as much belladonna as the one approaching nearest to it, the rest falling below the line of any valid comparison, a number having scarcely a trace of belladonna alkaloid.

IN FURTHER PROOF OF OUR DESIRE AND PURPOSE

to maintain, and, if possible, to enhance, the high standard and reputation of our goods, we cite the fact that we have recently erected one of the most complete and best equipped laboratories in the United States, and we shall hereafter manufacture every medicinal extract incorporated in our specialties, and can guarantee, through our own analyses, the strength and quality of all drugs we employ; thus, also, ensuring the perfect uniformity of all our products. For many years, physicians have preferred our goods because they always found them therapeutically reliable, as others were not; and our new departure will set up a stronger safeguard than ever against cheap and worthless plasters and dressings.

WE HAVE ESTABLISHED THE STANDARD.

Failing to make goods equal to ours, and which would sell on their merits, our competitors have heretofore striven to introduce their goods to the notice of the trade and the medical profession by imitating our trade-marks, packages, circulars, and price lists. Now, certain plaster makers have evidently found it necessary to adopt more desperate tactics, since we learn from retailers in Pennsylvania and New Jersey that jobbing-house salesmen have solicited them to buy other goods when ours were indicated on their order. In one case the salesmen said the house he represented no longer stocked our goods; in another, that we no longer made some of the articles desired. On inquiry, we learn that the representatives of these desperate plaster manufacturers offered these men a personal consideration to perform this dishonorable service. In one or two cases a direct money bribe was tendered and refused. The whole scheme shows to what straits our competitors are reduced, and indicates clearly the necessity for physicians specifying "S. & J." goods when prescribing, if they would be assured of obtaining the therapeutic results expected from medicinal plasters, or the strict reliability of goods for surgical use.

NOTABLE POINTS

RELATIVE TO

Lactated Food.

IT IS A COOKED FOOD.

By the use of high steam heat the gluten flour used is partially torrefied. This is done while the flour is dry, and during the process it is in constant motion, which insures perfect cooking to every particle.

Routh says, (Infant Feeding, page 380) that by this process, "the starch granules are rendered more separable, the gluten is reduced to a more porous condition, readily acted on by the gastric juice, and as an aliment, therefore, is more nutritious and digestible."

IT IS A PREDIGESTED FOOD.

"You state that it is self-digestive as regards the conversion of insoluble starch into soluble dextrine and maltose. My experiments with it lead me to hold that this is correct." J. MILNER FOTHERGILL.

IT CONTAINS NO UNCHANGED STARCH.

By the peculiar process of manufacture, every particle of the gluten flour is subjected to the action of the malto-diastase, and by it all the starch contained is transformed into soluble carbo-hydrates.

Professor CARL SEILER says, "Examination has proved that all the starch granules are converted, as shown by their behavior to polarized light."

NO CANE SUGAR USED.

The basis of Lactated Food is the pure sugar of milk made by the improved processes of the American Milk Sugar Co. The great value of this article has been shown conclusively. Cane sugar is not used in the composition or preparation of the Food on account of its liability to cause irritation by reason of the acetic fermentation which it creates in the stomach. Milk sugar never causes this fermentation or irritation.

IT IS NON-IRRITATING.

By reason of the fact that Lactated Food is partially digested in process of Preparation, it is assimilated by the feeblest stomach, and no undigested particles pass into the bowels to irritate, and thus cause troublesome and dangerous bowel disorders.

IT IS HIGHLY NUTRITIOUS.

The nutritive elements of Lactated Food are derived from the three great cereals, Wheat, Barley, and Oats. From the Wheat is taken the pure gluten, the most nourishing substance known for the muscles and tissues; from the Barley, all the soluble albuminoid and extractive matter resulting from the most careful malting; and from the Oat, the strengthening properties for which it is so well known. The result is a food which never disappoints, and under which the feeble child or invalid rapidly rallies.

FOR CHOLERA INFANTUM.

It is the chief reliance of many eminent practitioners, and it is the safest food in summer for all young or delicate children.

Another important consideration is its low price, it being much more economical than other foods. We make four sizes, selling for 25 cents, 50 cents, $1 00, and $2.50. *A dollar can will furnish one hundred and fifty meals for an infant.*

If any physician that has not yet made a trial of the Lactated Food will write us, we will send a package of our regular size, postpaid, without charge, with the understanding that it will be given a careful trial as soon as possible.

We shall use every precaution to maintain the high standard of this Food, and to insure perfect satisfaction to the profession in its use.

WELLS, RICHARDSON & CO.,

BURLINGTON, VT.

THE CANTON SURGICAL

AND

GYNÆCOLOGICAL CHAIR.

A chair especially constructed for the use of the general practitioner, as well as for the specialist in the treatment of gynæcological cases. For treating diseases of the Eye, Ear, Throat, and Chest, it has no equal. Every chair fully warranted to be first-class.

As a speculum chair it secures ease and comfort to the patient, and at the same time gives the operator such perfect control of all the various changes and positions, that it robs gynæcology of its usual embarrassment and annoyance.

Send for descriptive catalogue.

DR. RABUTEAU'S

[Laureate of the Institute of France]

DRAGEES, ELIXIR, AND SYRUP OF IRON.

"The experiments made in the hospitals of Paris have demonstrated that *Dr. Rabuteau's Dragees, Elixir, and Syrup* regenerate the red globules of the blood with a rapidity never observed with the use of the other ferruginous preparations. These results have been proved by the various *Compt-Globules.*

"The ferruginous preparations of *Dr. Rabuteau* do not cause any constipation, and are perfectly tolerated by the weakest persons."—*Gazette des Hopitaux.*

Dr. Rabuteau's Elixir is prescribed when some difficulty is experienced in swallowing the Dragees; it is especially adapted to weak persons, whose digestive functions need strengthening or stimulating.

Dr. Rabuteau's Syrup is especially prepared for children, who take it readily because of its agreeable taste.

A sample of Rabuteau's Dragees will be sent free to any Physician mentioning *The St. Louis Medical and Surgical Journal.*

Prepared by CLINN & Co., Pharmacists, Paris.

E. FOUGERA & Co., Agents for the United States.

Ducro's Alimentary Elixir,

A COMBINATION UNITING THE PROPERTIES OF

ALCOHOLIC STIMULANTS AND RAW MEAT

This preparation, which has been used with great success in the hospitals of Paris, since 1868, is adapted to the treatment of all diseases requiring the administration, in a small volume, of a tonic able to stimulate and support the vital forces, as *Pulmonary Phthisis, Depression and Nervous Debility, Adynamia, Malarious Cachexia,* etc.

Prepared by EMILE DURIEZ & Co., Successors to DUCRO & CIE, Paris.

KIRKWOOD'S INHALER,

This is the only complete, reliable, and effective inhaler in use, arranged for the direct application of Muriate of Ammonia and other remedial agents in the state of vapor to the diseased parts of the air passages in the treatment of catarrh and diseases of the throat and lungs. No heat or warm liquids required in its use.

It is entirely different from the various frail, cheap instruments that have been introduced.

KIRKWOOD'S INHALER is accompanied by testimonials of the highest professional character, together with carefully-prepared formulas for use.

Retail Price, complete, $2.50.

☞A liberal discount allowed to the trade and profession.

☞For descriptive pamphlets or other information, address

E. FOUGERA & CO., 30 North William Street, New York.

Rigollot's Mustard Paper

Is one of the most important and useful discoveries of the age. It is the only preparation which has been adopted by the civil and military hospitals, and the armies and navies of France and England, and which has obtained a medal at the Centennial Exposition at Philadelphia. All other mustard plasters or leaves, of whatever name, are but imitations of the original.

Physicians will find it the most reliable sinapism, prompt and certain in its action, and will therefore always prescribe it. Every sheet, in order to be genuine, must bear the annexed signature of the inventor.

Sold in tin boxes containing 10 sheets, also 25 and 100 sheets, by all respectable chemists throughout the world.

J. Rigollot

E. FOUGERA & CO., New York Depositaries.

TAMAR INDIEN GRILLON.

A laxative, refreshing, and medicated Fruit Lozenge, very agreeable to take, and never causing irritation. Its physiological action assures the immediate relief and effectual cure of

CONSTIPATION,

HÆMORRHOIDS, BILE, CEREBRAL CONGESTION, HEADACHE, LOSS OF APPETITE, INTESTINAL OBSTRUCTIONS, ETC.,

by augmenting the peristaltic movement of the intestine without producing undue secretion of the liquids. Unlike pills and the usual purgatives, it does not predispose to intestinal sluggishness, and the same dose always produces the same effect, that is to say, never needs increasing.

It is recommended by the most eminent physicians of Paris, notably Drs. BELIN and TARDIEU, who prescribe it constantly for the above complaints, and with most marked success.

Paris: E. GRILLON, 27 Rue Rambuteau.

SOLD BY ALL DRUGGISTS.

THE VALUE OF MURDOCK'S LIQUID FOOD IS RECOGNIZED IN ALL COUNTRIES, AND IS ENDORSED BY ALL NATIONAL MEDICAL SOCIETIES THAT HAVE INVESTIGATED ITS VALUE.

There never was an essay read before any Medical Society on Raw Food Extracts, except on Murdock's Liquid Food, and counterfeit manufacturers of Extracts have published many of our essays to show the value of their counterfeits.

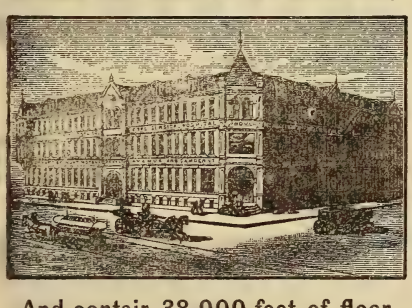
Send for Essay and DISCUSSION before the British Medical Association at Brighton, England, 1886 (Essay), by the Vice-President of the American Medical Association, and others, on the value of MURDOCK'S LIQUID FOOD over all Foods and Extracts known, it being the ONLY Raw Condensed Food free from insoluble matter.

Also essay read before the American Medical Association at Richmond, Va., and Washington, D. C.

Its value was recognized by the profession from results obtained in the Free Hospitals that have been established and supported by our Mr. A. L. Murdock during the last four years.

They now equal

140 FREE BEDS,



And contain 38,000 feet of floor.

Our Liquid Food can be retained by the weakest stomach. Four tablespoonfuls daily will make eight per cent. new blood weekly. When used for infants, never change their food, but add five or more drops of Liquid Food at each feeding, and their lost or needed vitality will be restored in less than thirty days.

Send for the Report of the Chairman of the Section of Obstetrics of the American Institute of Homœopathy, read at Saratoga at the annual meeting of 1886.

Circulars were sent by him to all the Physicians in the United States, asking what their experience was with Murdock's Liquid Food in its use for infants under, as well as over, one year old.

Then what results, with all the different Milk preparations, Grain Foods, Peptonoid Foods, and Beef Extracts, compared with MURDOCK'S LIQUID FOOD.

The returns show that it is the Standard Food and Extract, as the percentage of lives restored was the largest when used.

We extract from the report. After calling attention to the fact that one-quarter of the homœopathic profession are accustomed frequently to prescribe this food for children less than a year old, as well as over, he remarks:

"It is singularly adapted to scrofulous, syphilitic, and tubercular constitutions, its life-restoring power manifesting itself in each with a relative clearness and power corresponding to the order of enumeration. For fair-haired children who are inclined to grow fleshy it is more symptomatically recommended, while Duncan's *acid* babies find it particularly useful. Accordingly, it is chiefly employed for marasmus and anæmic conditions resulting either from non-assimilation of food, or from smple summer complaints. Should a child vomit all milk food and suffer synchronously with diarrhœa or dysentery, the demand for this food is emphatic and unmistakable; also in general irritability of the stomach, particularly if there be sour-smelling diarrhœa, the food passing through undigested. For the prematurely born it stands pre-eminent. For those 'weak and debilitated from any cause, Murdock's Food is probably the best in the world.' Should any indication of cerebral hyperæmia appear, the quantity of food must be diminished; so, too, if after its protracted use vomiting and diarrhœa ensue, the child has been overfed. Should the taste or odor of any given bottle chance to be disagreeable, add water until they disappear, and let the purchaser congratulate himself upon getting more nutriment than he paid for. When given in combination with milk in cases of indigestion, the quantity of milk should be diminished until all curds disappear from the stool, the quantity of Food, of course, being proportionately increased."

The Surgical Staff at MURDOCK'S FREE HOSPITAL FOR WOMEN are in daily attendance, except Saturdays, to examine patients and assign beds.

EVERY BED FREE.

Our Free Surgical Hospital for Women, located on Huntington avenue, above West Chester park, contains fifty (50) beds, in charge of a staff of five surgeons, members of the Massachusetts Medical Society.

Our Free Surgical Hospital for Women, located on Gainsborough street, corner of Huntington avenue, contains 50 beds, in charge of a staff of five surgeons. members of the Massachusetts Homœopathic Medical Society.

Our Free Home for Homeless Boys contains 40 beds, and is located at 11 to 21 Causeway street. Many of these boys suffer from Scrofula, Eczema, and other skin diseases, which yield quickly by the use of our Liquid Food.

From the fact that no two beeves or sheep are alike, is the reason of our different brands being different in flavor.

All brands are made by the same formula. The letter represents the day of make, and the figure the tank.

If richer, it is stronger in smell and flavor, and will bear a greater reduction. It cannot be reduced so low but it wil be superior to all other preparations in treating chronic cases.

If you cannot obtain Murdock's Liquid Food from your druggist, we deliver, free of express, 12 oz. for $1. Any physician that has not used our Liquid Food, we will deliver free to the Boston express 12 oz.

MURDOCK'S LIQUID FOOD CO.,

BOSTON

CELERINA

NERVE-TONIC, STIMULANT AND ANTISPASMODIC.

FORMULA.—Every Fluid-Drachm represents FIVE grains EACH—Celery, Coca, Kola, Viburnum and Aromatics.

INDICATIONS.—Impotency, Spermatorrhea, Loss of Nerve-Power (so usual with Lawyers, Preachers, Writers and Business Men), Nervous Headache, Neuralgia, Paralysis, Dysmenorrhea, Hysteria, Opium-Habit, Inebriety, Prostatitis, Dyspepsia, and ALL LANGUID or DEBILITATED conditions of the System.—*Indispensable to restore a patient after alcoholic excess.*

DOSE.—One or two teaspoonfuls three or more times a day, as directed by the Physician.

ALETRIS CORDIAL

UTERINE TONIC AND RESTORATIVE.

PREPARED FROM THE ALETRIS FARINOSA OR TRUE UNICORN.

INDICATIONS.—Amenorrhea, Dysmenorrhea, Leucorrhea, Prolapsus Uteri, Sterility, to PREVENT Miscarriage, Etc.

DOSE.—One teaspoonful three or four times a day.

Unrivaled as a Uterine Tonic in Irregular, Painful, Suppressed and Excessive Menstruation,

IT RESTORES NORMAL ACTION TO THE UTERUS, AND IMPARTS VIGOR TO THE ENTIRE UTERINE SYSTEM.

☞Where Women have aborted during previous Pregnancies, or in any case where abortion is feared, the Aletris Cordial is indicated, and should be continuously administered during entire gestation.

ACID MANNATE

A MILD, SAFE AND PLEASANT APERIENT.

Prepared from Manna, Purified Cathartic Acid, and Fruit Juices.

INDICATIONS.—Constipation, Biliousness, Congestions, Etc. **INDISPENSABLE** AS AN APERIENT FOR WOMEN DURING PREGNANCY. In teaspoonful doses, 3 times a day, it favors the SECRETION and EXCRETION of bile, and gradually removes the congested and torpid states of the liver, and keeps the bowels in a regular and soluble condition.

DOSE.—ONE or MORE teaspoonfuls as directed by the Physician.

S. H. KENNEDY'S
CONCENTRATED EXTRACT OF
PINUS CANADENSIS

DARK — A NON-ALCOHOLIC LIQUID. — WHITE

A MOST VALUABLE NON-IRRITATING MUCOUS ASTRINGENT.

INDICATIONS.—Albuminuria, Diarrhea, Dysentery, Night-Sweats, Hemorrhages, Profuse Expectoration, Catarrh, Sore Throat, Leucorrhea, and other Vaginal Diseases, Piles, Sores, Ulcers, Burns, Scalds, Gonorrhea, Gleet, Etc.

When Used as an Injection, to Avoid Staining of Linen, the WHITE Pinus should be Used.

Recommended by DR. J. MARION SIMS, and other Prominent Physicians.

RIO CHEMICAL CO., ST. LOUIS: LONDON: PARIS.

Samples FREE to any Physician who will pay Express charges, and mention this Journal.

A NEW FEATURE IN BARRY'S CLINICAL THERMOMETER.
AN INDELIBLE BLACK THAT WON'T RUB OUT.

PRICE, IN POCKET CASE, $1.50.

They are well seasoned before finished, and are positively correct instruments. They will rest on their flat back, and breakage from rolling is lessened. They are sufficiently magnifying to be easily seen by any practitioner. They are endorsed by the medical profession and press everywhere. **Beware of imitations. Please see that his name and date of patent be on each thermometer. JOHN BARRY, Patentee and Maker, 62 Fulton street, New York.** For sale by all responsible houses, or by the maker. Please mention the M. & S. REPORTER.

TRUSSES

The World's Recognition of Merit.

London—1881—Announcement.

At the late INTERNATIONAL MEDICAL AND SANITARY EXHIBITION, the World's most competent Judges recognized their *unequalled excellence* by granting the

ONLY "AWARD OF MERIT" FOR TRUSSES

"TO I. B. SEELEY, PHILADELPHIA, U. S. A."

(Over Sixty-Eight Competitors.)—confirming their high favor with America's most distinguished Surgeons.

EXHIBITION JUDGES FROM THE ROYAL COLLEGE OF SURGEONS:—
Thomas Bryant, F. R. C. S., Christopher Heath, F. R. C. S., Thomas Smith, F. R. C. S., John Wood, F. R. S., F. R. C. S.

SEELEY'S HARD-RUBBER TRUSSES.

Fig. 1.

Fig 5.

Fine Steel Springs, neatly covered with highly-polished Hard Rubber. Made in every desirable pattern, with Pads anatomically constructed. Light, cool, cleanly, durable; unequalled in quality, finish, and practical construction. Unaffected by time, use or climate; used in bathing. **Always Reliable. Prices reduced** to meet the popular demands. Sold by all leading Druggists and Dealers at the usual price of common Trusses.

For information regarding Difficult or Complicated Cases, address I. B. SEELEY & CO., Philada., Pa.

COSMOLINE

Unguentum Petrolei

Prepared by E.F.Houghton & Co. Philadelphia, U.S.A.

Put up in 1, 5, 10, 25, 50, and 100-lb. cans. Samples furnished on application. The post-office laws forbid anything of an oleaginous nature being sent through the mail.

In chemical composition, Cosmoline (Unguentum Petrolei) is an oleaginous hydrocarbon, corresponding to the heavy petroleum oils, and containing a large amount of the paraffines and olefines of the formulæ $C_{16}H_{34}$ and $C_{16}H_{32}$. It contains but a small percentage of the paraffines and olefines corresponding to the formulæ C_7H_{16} and C_7H_{14}, respectively, and the offensive and irritating properties of the crude oil have been carefully removed. In the process of purification, no acids, alkalies, or other chemicals are employed, and no injurious additions of any kind are made to the natural product. The result is a semi-solid, translucent substance, with a faint odor and unctuous feel.

Cosmoline (Unguentum Petrolei) melts at about 100° Fah. (38° Cent.); and boils at about 625° Fah. (329° Cent.); its specific gravity is about 0.875 at 60° Fah.

As it contains no oxydizable or organic matter capable of change by putrefaction or fermentation, and is absolutely without affinity for moisture, it offers to the profession an admirable unguent, which can never decompose, ferment, or become rancid in any climate or temperature.

PHILADELPHIA, July 10, 1880.

MESSRS. E. F. HOUGHTON & CO.: I have for a number of years made extensive use of Cosmoline (Unguentum Petrolei), and consider it a most valuable article for surgical purposes. Either as a dressing by itself, or as a vehicle for the application of medicaments, it is greatly superior to lard or other fatty matters, especially by reason of its non-liability to change by time or temperature.

Yours truly, JOHN H. PACKARD, M. D.

1031 WALNUT STREET, PHILADELPHIA.

MESSRS. E. F. HOUGHTON & CO.: I have used extensively Cosmoline (Unguentum Petrolei) both in Dispensary and private practice, with very great satisfaction. As a vehicle in making ointments it is invaluable, and far superior to lard, for the reason that it will not become rancid or undergo chemical change like the latter, when exposed to the atmosphere. I cannot too highly commend it as an application in various skin diseases. Yours truly, JOHN V. SHOEMAKER, A. M., M. D.,

Physician to the Pennsylvania Free Dispensary for Skin Disease.

208 WEST 34TH STREET, NEW YORK.

MESSRS. E. F. HOUGHTON & CO.—*Gents:* I fully appreciate the value of your Cosmoline, or Unguentum Petrolei, and prescribe it frequently in ointments. Fluid Cosmoline I have used constantly for several years, as a lubricant of urethral sounds. It is the cleanest oil I know of for this purpose.

Yours truly, GEO. HENRY FOX.

New Medicaments for Bronchitis and other Respiratory Affections.

CHEKEN.
(Myrtus Chekan.)

THIS PLANT, indigenous to Chili, was introduced to the profession by Dr. Murrell, the famous English therapeutist and collaborator of Ringer. Dr. Murrell found Cheken to be of great value in chronic cough, especially in the "winter cough" of elderly people.

An extensive trial of this remedy has not only confirmed Dr. Murrell's observations, but has widened the range of the therapeutic application of Cheken so that at the present time it is looked upon, on account of its alterative and demulcent properties, as an indispensable addition to "cough mixtures," particularly in those intractable cases of long standing which have assumed a subacute or chronic course. The dose of the fluid extract which we manufacture is from 1 to 2 fluidrachms.

TEREBENE.

TO DR. MURRELL the profession is indebted for the introduction of another remedy which seems to be almost a specific in winter cough or chronic bronchitis, than which there are few more annoying maladies. Terebene facilitates expectoration, relieves the cough and shortness of breath, and also the acidity and flatulency which so often accompany bronchitis. Dr. Murrell, in *British Med. Journal*, Dec. 12th, 1885, states that he has employed Terebene in 114 cases of winter cough, with the most gratifying results.

We furnish *Terebene Pure; Terebene Inhalant* after Murrell's formuia, and *Soluble Elastic Capsules Terebene*, each containing 10 minims.

YERBA SANTA.
(Eriodictyon Californicum.)

YERBA SANTA is a demulcent expectorant in harassing cough. Both in hospital and private practice this remedy has been subjected to a thorough trial, and the reports of its use are unanimous in according it a high place among remedial agents in the treatment of the distressing cough accompanying inflammatory affections of the respiratory mucous membrane. Its action has been likened to the combined action of ipecac and balsam of Peru, but it possesses, in addition, through its resinous principles, an action which is wanting in these valuable drugs in irritative bronchitis.

LIPPIA MEXICANA.

IN ITS native habitat this remedy was long known to possess medicinal virtue in the treatment of coughs. Its popular use led to a scientific investigation of its claims which has resulted in its general introduction to the medical profession, and a clinical test of its merits by physicians has confirmed the popular opinion of its value. Alone or in combination with other remedies, such as Yerba Santa, Cheken, etc., it has been found most serviceable in controlling cough.

Working Bulletins and Circulars fully descriptive of above remedies, together with reprints of Dr. Murrell's articles on winter cough, will be mailed on application.

PARKE, DAVIS & CO.,

Manufacturing Chemists,

New York: 60 Maiden Lane, 21 Liberty Street.

DETROIT, MICH.

BROMIDIA

The Hypnotic.

FORMULA:

Every fluid drachm contains 15 grains EACH of pure Chloral Hydrat. and purified Brom. Pot., and ⅛ grain EACH of Gen. Imp., Ext. Cannabis Ind., and Hyoscyam.

DOSE:

One-half to one fluid drachm, in WATER or SYRUP, every hour, until sleep is produced.

INDICATIONS:

Sleeplessness, Nervousness, Neuralgia, Headache, Convulsions, Colic, Mania, Epilepsy, Irritability, etc. In the restlessness and delirium of Fevers, it is absolutely invaluable.

It does not Lock Up the Secretions.

PAPINE

The Denarcotized Opiate.

Papine is the Anodyne or pain-relieving principle of Opium, the Narcotic and Convulsive elements being eliminated. It has less tendency to cause Nausea, Vomiting, Constipation, etc.

INDICATIONS:

Same as Opium or Morphia.

DOSE:

One fluid drachm represents the Anodyne principle of ⅛ grain of Morphia.

IODIA

The Alterative and Uterine Tonic.

FORMULA:

Iodia is a combination of Active Principles obtained from the Green Roots of STILLINGIA, HELONIAS, SAXIFRAGA, MENISPERMUM, AND AROMATICS. Each fluid drachm also contains five grains Iod. Pot., and three grains Phos. Iron.

DOSE:

One to two fluid drachms (more or less, as indicated,) three times a day, before meals.

INDICATIONS:

Syphilitic, Scrofulous and Cutaneous Diseases, Dysmenorrhœa, Menorrhagia, Leucorrhœa, Amenorrhœa, Impaired Vitality, Habitual Abortion, and General Uterine Debility.

SESSIONS OF 1887-88.

The REGULAR SESSION begins on Wednesday, September 21, 1887, and ends about the middle of March, 1888. During this Session, in addition to the regular didactic lectures, two or three hours are daily allotted to clinical instruction. Attendance upon at least two regular courses of lectures is required for graduation.

The SPRING SESSION consists of recitations, clinical lectures and exercises, and didactic lectures on special subjects. This Session begins about the middle of March and continues until the middle of June. During this Session, daily recitations in all the departments are held by a corps of Examiners appointed by the Faculty.

The CARNEGIE LABORATORY is open during the collegiate year, for instruction in microscopical examinations of urine, practical demonstrations in medical and surgical pathology, and lessons in normal histology and pathology, including bacteriology.

For the annual Circular and Catalogue, giving requirements for graduation and other information, address Prof. AUSTIN FLINT, Secretary, Bellevue Hospital Medical College, foot of East 26th Street, New York City.

30,000 PHYSICIANS
NOW PRESCRIBE

HYDROLEINE

(HYDRATED OIL,)

For Consumption and Wasting Diseases. It Produces Immediate Increase in Flesh and Weight.

FORMULA.

Each Dose of Two Teaspoonfuls, equal to 120 Drops, contains:

Pure Cod Liver Oil	80 m. (drops)	Soda	½ Grain.
Distilled Water	35 "	Boric Acid	½ "
Soluble Pancreatin	5 Grains.	Hyocholic Acid	⅛ "

DOSE:

Two teaspoonfuls alone, or with twice the quantity of water, to be taken thrice daily after meals.

Hydroleine (Hydrated Oil) is not a simple alkaline emulsion of oleum morrhua, but a hydro-pancreated preparation containing acids and a modicum of soda. Pancreatin is the digestive principle of fatty foods, and, in the soluble form here used, completely saponifies the oleaginous material so necessary to the reparative process in all wasting diseases.

Lautenbach's researches on the function of the liver would show the beautiful adjustment of therapeutics in preparation of Hydroleine, furnishing, as it does, the acid and soda necessary to prevent self-poisoning by reabsorption of morbid tubercular detritus and purulent matters into the general circulation.

Each bottle in nutritive value exceeds ten times the same bulk of cod liver oil. It is economical in use and certain in result.

Sold at all Drug Stores at $1.00 per Bottle.

The principles upon which this discovery is based have been described in a treatise on "The Digestion and Assimilation of Fats in the Human Body," by H. C. BARTLETT, Ph. D., F. C. S., and the experiments which were made, together with cases illustrating the effect of Hydrated Oil in practice, are concisely stated in a Treatise on "Consumption and Wasting Diseases," by G. OVEREND DREWRY, M. D.

Copies of these Works sent free on Application.

WM. F. KIDDER & CO., 83 John Street, New York.

Also exclusive Agents for SVAPNIA, or Bigelow's purified Opium, in SCALES and HALF-GRAIN GRANULES.

TAMAR INDIEN GRILLON.

A laxative, refreshing, and medicated Fruit Lozenge, very agreeable to take, and never causing irritation. Its physiological action assures the immediate relief and effectual cure of

CONSTIPATION,

HÆMORRHOIDS, BILE,
CEREBRAL CONGESTION, HEADACHE,
LOSS OF APPETITE,
INTESTINAL OBSTRUCTIONS, ETC.,

by augmenting the peristaltic movement of the intestine without producing undue secretion of the liquids. Unlike pills and the usual purgatives, it does not predispose to intestinal sluggishness, and the same dose always produces the same effect, that is to say, never needs increasing.

It is recommended by the most eminent physicians of Paris, notably Drs. BELIN and TARDIEU, who prescribe it constantly for the above complaints, and with most marked success.

Paris: E. GRILLON, 27 Rue Rambuteau.

SOLD BY ALL DRUGGISTS.

MEDICAL ELECTRICITY.

HORSFORD'S ACID PHOSPHATE,

(Liquid.)

Prepared according to the directions of Prof. E. N. HORSFORD, of Cambridge, Mass.

FORMULA: Its analysis shows that each fluid drachm contains 5 1-2 grains free Phosphoric Acid (P_2O_5), **and nearly 4 grains Phosphate of Lime, Magnesia, Iron, and Potash.**

Among the numerous forms of Phosphorus in combination, Horsford's Acid Phosphate seems best adapted as a medicinal remedy, and it has been in use by the medical fraternity of the United States and elsewhere for several years, with the most satisfactory results, in

Dyspepsia, Indigestion,

Mental and Physical Exhaustion,

Insomnia, Nervousness,

Diminished Vitality, etc.

Especially serviceable as a menstruum for the administration of such alkaloids as strychnia, morphia, quinia, and other organic bases which are usually exhibited in acid combination.

It Makes a Refreshing and Nutritious Drink in Fevers,

and with water and sugar a delicious beverage.

We have received a very large number of letters from physicians of the highest standing, in all parts of the country, relating their experience with the Acid Phosphate, and speaking of it in high terms of commendation.

Physicians who have not used Horsford's Acid Phosphate, and who wish to test it, will be furnished a sample on application, without expense except express charges.

PHYSICIANS!

YOUR ATTENTION IS INVITED

—TO THE—

DR. McINTOSH NATURAL UTERINE SUPPORTER.

THIS INSTRUMENT MEETS THE WANTS OF THE PROFESSION MORE PERFECTLY than any other Uterine Supporter ever made. This is proven by the fact that during the past fifteen years more have been sold than of all other Supporters combined. *It never fails to give perfect satisfaction, even in the most difficult cases,* where any instrument can be used.

The **ABDOMINAL PORTION** is a broad morocco leather belt with elastic straps to buckle around the hips, with concave front, so shaped as to hold up the abdomen.

The **UTERINE PORTION** is a cup and stem made of highly-polished hard rubber, very light and durable, shaped to fit the neck of the womb, with openings for the secretions to pass out, as shown by the cuts. Cups are made with extended lips to correct flexions and versions of the womb.

The cup and stem is suspended from the belt by two soft elastic rubber tubes, which are fastened to the front of the belt by simple loops, pass down and through the stem of the cup and up to the back of the belt. These soft rubber tubes being elastic adapt themselves to all the varying positions of the body and perform the service of the ligaments of the womb.

Anteversion. Prolapsus. Retroversion

The instrument is very comfortable to the patient, can be removed or replaced by her at will, can be worn at all times, will not interfere with nature's necessities, will not corrode, and is lighter than metal. It will answer for all cases of Anteversion, Retroversion, or Prolapsus of the Womb. It is used by our leading physicians with never-failing success.

OUR REDUCED PRICE TO PHYSICIANS IS $5.00 EACH.

Instruments sent by mail at our risk on receipt of price; or we can send by express, C. O. D., with express charge for returning money added.

CAUTION.

Owing to the great success of our Supporter, several worthless imitations have been made which are often substituted for our instruments, to the detriment of the patient and the disappointment of the physician. To protect our patrons from imposture, we stamp each pad of the Abdominal belt in gilt letters, "Dr. McIntosh N. U. Supporter, Chicago, Ill."; the base of each cup is stamped "Dr. McIntosh N. U. S. Co., Chicago, Ill., U. S. A."

The box in which the instrument is put up contains directions for the application of the instrument pasted inside the cover, having the fac simile signature of Dr. L. D. McIntosh.

For further information in regard to the instrument, address

DR. McINTOSH NATURAL UTERINE SUPPORTER CO.,

300 AND 302 DEARBORN STREET, CHICAGO, ILL.

Our valuable Pamphlet on "Displacement of the Womb," giving a more complete description of the Instrument, will be sent you free on application.

CELERINA

NERVE-TONIC, STIMULANT AND ANTISPASMODIC.

FORMULA.—Every Fluid-Drachm represents FIVE grains EACH—Celery, Coca, Kola, Viburnum and Aromatics.

INDICATIONS.—Impotency, Spermatorrhea, Loss of Nerve-Power (so usual with Lawyers, Preachers, Writers and Business Men), Nervous Headache, Neuralgia, Paralysis, Dysmenorrhea, Hysteria, Opium-Habit, Inebriety, Prostatitis, Dyspepsia, and ALL LANGUID or DEBILITATED conditions of the System.—*Indispensable to restore a patient after alcoholic excess.*

DOSE.—One or two teaspoonfuls three or more times a day, as directed by the Physician.

ALETRIS CORDIAL

UTERINE TONIC AND RESTORATIVE.

PREPARED FROM THE ALETRIS FARINOSA OR TRUE UNICORN.

INDICATIONS.—Amenorrhea, Dysmenorrhea, Leucorrhea, Prolapsus Uteri, Sterility, to PREVENT Miscarriage, Etc.

DOSE.—One teaspoonful three or four times a day.

Unrivaled as a Uterine Tonic in Irregular, Painful, Suppressed and Excessive Menstruation,

IT RESTORES NORMAL ACTION TO THE UTERUS, AND IMPARTS VIGOR TO THE ENTIRE UTERINE SYSTEM.

☞Where Women have aborted during previous Pregnancies, or in any case where abortion is feared, the Aletris Cordial is indicated, and should be continuously administered during entire gestation.

ACID MANNATE

A MILD, SAFE AND PLEASANT APERIENT.

Prepared from Manna, Purified Cathartic Acid, and Fruit Juices.

INDICATIONS.—Constipation, Biliousness, Congestions, Etc. **INDISPENSABLE AS AN APERIENT FOR WOMEN DURING PREGNANCY.** In teaspoonful doses, 3 times a day, it favors the SECRETION and EXCRETION of bile, and gradually removes the congested and torpid states of the liver, and keeps the bowels in a regular and soluble condition.

DOSE.—ONE or MORE teaspoonfuls as directed by the Physician.

S. H. KENNEDY'S
CONCENTRATED EXTRACT OF
PINUS CANADENSIS
DARK A NON-ALCOHOLIC LIQUID. **WHITE**

A MOST VALUABLE NON-IRRITATING MUCOUS ASTRINGENT.

INDICATIONS.—Albuminuria, Diarrhea, Dysentery, Night-Sweats, Hemorrhages, Profuse Expectoration, Catarrh, Sore Throat, Leucorrhea, and other Vaginal Diseases, Piles, Sores, Ulcers, Burns, Scalds, Gonorrhea, Gleet, Etc.

When Used as an Injection, to Avoid Staining of Linen, the WHITE Pinus should be Used.

Recommended by DR. J. MARION SIMS, and other Prominent Physicians.

RIO CHEMICAL CO., ST. LOUIS: LONDON: PARIS.

Samples FREE to any Physician who will pay Express charges, and mention this Journal.

PACKER'S TAR SOAP.

ABSOLUTELY PURE AND NON-IRRITATING.

MADE FROM VEGETABLE OILS, PINE TAR, AND GLYCERINE.

A perfect soap should be made from pure and sweet oils, and clean, well-washed alkalies. Such is **Packer's Tar Soap.** It is combined with distilled **pine-tar,** and hence has had the most gratifying effects in the treatment of Dermatic Diseases, as chafing, eczema, erythema, seborrhea, herpes, etc.

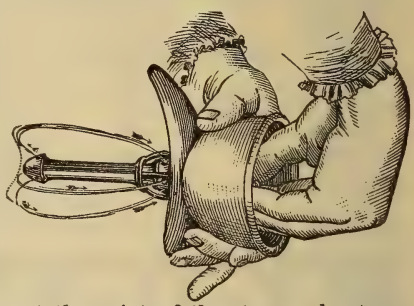
As a Disinfectant, Antiseptic, and Detergent, it is admirably adapted for use in ulcers, foul wounds, fetid discharges, bed sores, and similar conditions. For the bath, toilet, and shampoo, it is unrivaled. 25 cents per cake, from Druggists.

It is supplied to Hospitals, Asylums, and Physicians, in one pound bars, at reasonable prices.

P. O. Box 2985. **THE PACKER MFG. CO., 100 Fulton St., New York.**

"PALLAS" SYRINGE.

VAGINAL AND RECTAL.



A MOST PERFECT and simply constructed Syringe for medicating and irrigating the vaginal cavity. The novel bulb of this Syringe, when doubled upon itself, as shown in the cut, will cause no fluid to be left, as is so apt to happen with the ordinary bulbs, and when filled will contain just enough fluid for the expansion of the vaginal folds. The hard rubber labial shield, with its plug, when firmly pressed against the labia, will both prevent spilling and soiling of linen, and the fluid can therefore be kept in circulation and in contact with the parts by repeating the pumping motion of the bulb. It will also be noticed that the fluid escapes as a spray from the large holes at the point of the stem and returns through the holes at the root of same, which is provided with hard rubber screen-bars, preventing the folds from interfering with the rapid return of the fluid into the bulb. In filling the bulb, a couple of turns will unscrew it. In handsome case, satin lined. Retail price, $3.75. To physicians, $3.00.

NOTABLE POINTS

RELATIVE TO

Lactated Food.

IT IS A COOKED FOOD.

By the use of high steam heat the gluten flour used is partially torrefied. This is done while the flour is dry, and during the process it is in constant motion, which insures perfect cooking to every particle.

Routh says, (Infant Feeding, page 380) that by this process, "the starch granules are rendered more separable, the gluten is reduced to a more porous condition, readily acted on by the gastric juice, and as an aliment, therefore, is more nutritious and digestible."

IT IS A PREDIGESTED FOOD.

"You state that it is self-digestive as regards the conversion of insoluble starch into soluble dextrine and maltose. My experiments with it lead me to hold that this is correct." J. MILNER FOTHERGILL.

IT CONTAINS NO UNCHANGED STARCH.

By the peculiar process of manufacture, every particle of the gluten flour is subjected to the action of the malto-diastase, and by it all the starch contained is transformed into soluble carbo-hydrates.

Professor CARL SEILER says, "Examination has proved that all the starch granules are converted, as shown by their behavior to polarized light."

NO CANE SUGAR USED.

The basis of Lactated Food is the pure sugar of milk made by the improved processes of the American Milk Sugar Co. The great value of this article has been shown conclusively. Cane sugar is not used in the composition or preparation of the Food on account of its liability to cause irritation by reason of the acetic fermentation which it creates in the stomach. Milk sugar never causes this fermentation or irritation.

IT IS NON-IRRITATING.

By reason of the fact that Lactated Food is partially digested in process of Preparation, it is assimilated by the feeblest stomach, and no undigested particles pass into the bowels to irritate, and thus cause troublesome and dangerous bowel disorders.

IT IS HIGHLY NUTRITIOUS.

The nutritive elements of Lactated Food are derived from the three great cereals, Wheat, Barley, and Oats. From the Wheat is taken the pure gluten, the most nourishing substance known for the muscles and tissues; from the Barley, all the soluble albuminoid and extractive matter resulting from the most careful malting; and from the Oat, the strengthening properties for which it is so well known. The result is a food which never disappoints, and under which the feeble child or invalid rapidly rallies.

FOR CHOLERA INFANTUM.

It is the chief reliance of many eminent practitioners, and it is the safest food in summer for all young or delicate children.

Another important consideration is its low price, it being much more economical than other foods. We make four sizes, selling for 25 cents, 50 cents, $1 00, and $2.50. *A dollar can will furnish one hundred and fifty meals for an infant.*

If any physician that has not yet made a trial of the Lactated Food will write us, we will send a package of our regular size, postpaid, without charge, with the understanding that it will be given a careful trial as soon as possible.

We shall use every precaution to maintain the high standard of this Food, and to insure perfect satisfaction to the profession in its use.

McINTOSH GALVANIC AND FARADIC BATTERY CO.,

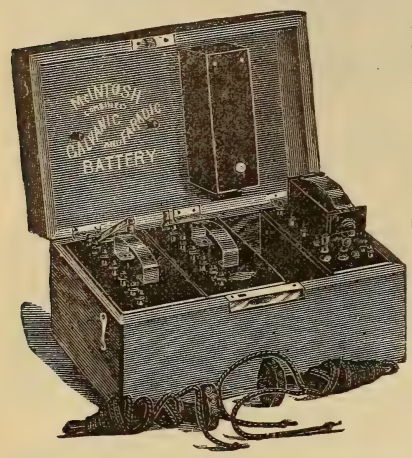
MANUFACTURERS OF THE CELEBRATED

McIntosh Combined Galvanic and Faradic Batteries,

Table, Office, and Family Batteries, Electrodes, Electric Bath Apparatus, Statical Electric Machines, Stereopticons, Solar, Monocular, and Binocular Microscopes.

AND ALL KINDS OF

PHILOSOPHICAL ELECTRICAL APPARATUS.



Schools, Colleges, Physicians, or Hospitals wanting new Apparatus, will do well to favor us with correspondence and obtain estimates. Men of scientific experience have charge of the manufacturing department. We employ the most skillful mechanics, and have the largest facilities in America for manufacturing.

We would call the Special Attention of the Medical Profession to our

Combined Galvanic and Faradic Batteries.

These Batteries are recommended by the Medical Faculty of both America and Europe, and have been adopted by the United States Government for use in Medical Department of the Army and Navy. They are

The First and Only Portable Batteries ever Invented which Give both the Galvanic and Faradic Current,

TWO DISTINCT BATTERIES IN ONE CASE.

No Physician can afford to be without one.

This celebrated Battery is constructed on an improved plan. The zincs and carbons are fastened to hard-rubber plates in sections of six each; this manner of connecting brings the plates nearer together than in any other battery, thus giving less internal resistance. The cells are composed of one piece of hard rubber, and are made in sections of six each with a drip-cup, thus one section can be handled, emptied, and cleaned, as easily and quickly as one cell. The drip-cup is to receive the elements when the battery is not in use. The fluid cannot spill or run between the cells, and there is no danger of breaking, as with glass cells. This is the only battery in which the zinc and carbon plates can be kept clean and always in order by simply rinsing them.

An extra cell (with a zinc and carbon element) is added to the combined batteries, for the purpose of producing the Faradic current. This cell gives as much force as is ever needed, and avoids exhausting the current from the Galvanic cells. All the metal work is finely nickel-plated and highly polished, and every part is put together so that it can be easily replaced by the operator. Our batteries weigh less, occupy less space, give a current of greater intensity and quantity, than any other battery manufactured.

Our illustrated Catalogue, a handsome book giving full description of all our goods, and other valuable information, sent free on application.

McINTOSH GALVANIC AND FARADIC BATTERY CO.
300 & 302 DEARBORN STREET, CHICAGO, ILL.

WHEELER'S TISSUE PHOSPHATES

Bone-Calcium Phosphate $Ca_3 2P.O._4$, Sodium Phosphate $Na_2 H.P.O._4$, Ferrous Phosphate $Fe_3 2P.O._4$, Trihydrogen Phosphate $H_3 P.O._4$.

WHEELER'S COMPOUND ELIXIR OF PHOSPHATES AND CALISAYA. A Nerve Food and Nutritive Tonic, for the treatment of Consumption, Bronchitis, Scrofula, and all forms of Nervous Debility.

The Lactophosphates prepared from the formula of Prof. Dusart, of the University of Paris. Combines with a superior Pemartin Sherry Wine and Aromatics in an agreeable cordial easily assimilable and acceptable to the most irritable stomachs.

Phosphorus, the oxidizing element of the Nerve Centres for the generation of Nerve Force; Lime Phosphate, an agent of Cell Development and Nutrition; Soda Phosphate, an excitant of Functional Activity of Liver and Pancreas, and Corrective of Acid Fermentation in the Alimentary Canal; Iron, the Oxidizing Constituent of the Blood for the Generation of Heat and Motion; Phosphoric Acid, Tonic in Sexual Debility; Alkaloids of Calisaya, Anti-Malarial and Febrifuge; Extract of Wild Cherry, uniting with tonic power the property of Calming Irritation and Diminishing Nervous Excitement.

THE SUPERIORITY OF THE ELIXIR consists in uniting with the Phosphates the special properties of the Cinchona and Prunus, of Subduing Fever and Allaying Irritation of the Mucous Membrane of the Alimentary Canal, which adapts it to the successful treatment of Stomach Derangements and all diseases of Faulty Nutrition, the outcome of Indigestion. Malassimilation of Food, and *failure of supply* of these essential elements of Nerve Force and Tissue Repair.

The special indication of this combination of Phosphates in Spinal Affections, Caries, Necrosis, Ununited Fractures Marasmus, Poorly Developed Children, Retarded Dentition, Alcohol, Opium, Tobacco Habits, Gestation and Lactation, to promote Development, etc., and as a *physiological restorative* in Sexual Debility, and all used up conditions of the Nervous System, should receive the careful attention of good therapeutists.

There is no strychnia in this preparation, but when indicated, the Liquor Strychniæ of the U. S. Dispensatory may be added, each fluid drachm of the solution to a pound bottle of the Elixir making the 64th of a grain to a half fluid ounce, an ordinary dose, a combination of a wide range of usefulness.

DOSE—For an adult, one tablespoonful three times a day, after eating; from seven to twelve years of age, one dessert-spoonful; from two to seven, one teaspoonful. For infants, from five to twenty drops, according to age.

Prepared at the Chemical Laboratory of T. B. WHEELER, M. D., Montreal, D. C.

Put up in pound bottles and sold by all Druggists at One Dollar.

MATHEY-CAYLUS' GLUTEN

CAPSULES

OF

PURE COPAIBA AND OTHER MEDICINES.

Adapted and recommended for the cure recent or chronic Gleets, Fluor Albus, etc., etc.

The MATHEY-CAYLUS' CAPSULES, *coated with gluten*, present the most perfect mode for administering Copaiba, Cubebs, Norway Tar, Turpentine, and other remedies, the disagreeable odor and taste of which are often a hindrance to their use. This mode of preparing capsules, which has been approved by the Academy of Medicine, has been recommended in their clinical lectures by eminent Professors in the hospitals of Paris, as well as in those of New York and London.

By the first physicians of the hospitals of Paris, London, and New York.

SPECIAL ADVANTAGES OF MATHEY-CAYLUS' GLUTEN CAPSULES.—Being formed of thin, transparent, and readily assimilated coating, they so cover and disguise the medicine to be given, that it can be taken without disgust, but with ease. In this respect, they differ widely from the gelatine capsules which have a hard, thick coating, which swells beyond measure, in the stomach, are hard to be swallowed. and which is of great importance, they create disturbance in the digestive functions.

The special advantage of the coating of gluten consists in the fact that, notwithstanding its extra thinness, and although it softens under the action of the gastric juice, it can pass the stomach without breaking, and only in the intestines is the medicinal matter liberated; this accounts for the fact that Mathey-Caylus' Capsules never cause the nausea, eructations, and dyspeptic symptoms, which are complained of by many persons using other preparations.

Finally, their regular ovoid form, which is so favorable to swallowing, their pleasant appearance, which dispels all disgust, and the advantage of being entirely free from taste and smell, recommend the use of these capsules even to the most delicate persons.

Thankful to the Medical Profession for the liberal patronage heretofore bestowed upon us, we hope that they will continue their favors, and we are convinced that they will never have any reason to regret the generous welcome they have given to our preparations.

MATHEY-CAYLUS' CAPSULES are never sold, except in bottles having the following inscription printed in the glass: MATHEY-CAYLUS A PARIS. And each bottle contains 64 capsules, making them the cheapest capsules in the market.

The following different kinds of Mathey-Caylus' Gluten Capsules are now offered:

COPAIBA AND TANNIC ACID,
COPAIBA AND S. N. OF BISMUTH,
COPAIBA AND CATECHU,
COPAIBA AND MAGNESIA,
COPAIBA, CUBEBS AND ALUM,
COPAIBA, CUBEBS AND RHATANY,

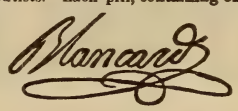
BLANCARD'S PILLS

OF UNCHANGEABLE IODIDE OF IRON.

Blancard's Pills of Iodide of Iron are so scrupulously prepared, and so well made, that none other have acquired a so well deserved favor among physicians and pharmaceutists. Each pill, containing one grain of proto-iodide of iron, is covered with finely pulverized iron, and covered with balsam of tolu. Dose, two to six pills a day. The genuine have a *reactive silver seal* attached to the lower part of the cork, and a green label on the wrapper, bearing the fac-simile of the signature of



Pharmacien, No. 40 Rue Bonaparte, Paris.

Without which none are genuine.

BEWARE OF IMITATIONS.

E. FOUGERA & CO., AGENTS, NEW YORK.

TANRET'S PELLETIERINE

For the Treatment of Tape-Worm (Tænia Solium.)

This New Tænifuge, the Active Alkaloid of Pomegranate Bark, has of late come into extensive use in France for the treatment of Tape-Worm (Tænia Solium). The results of numerous experiments with it at the Marine Hospitals of Toulon, St. Mandrier, etc., and in the Hospitals of Paris, St. Antoine, La Charite, Necker, Beaujon, etc., have all been most satisfactory. Doctor Dujardin Beaumetz, Member of the Academy of Medicine, and Prof. Laboulbene, in their report to the Society of Therapeutics, have given it their unqualified approval after the most searching experiments. This preparation is pleasant to administer, and if certain preliminaries are observed success will be insured.

Sold only in Bottles containing one dose.

TANRET'S ERGOTININE.

ALKALOID AND ACTIVE PRINCIPLE OF SPURRED RYE.

This is a well defined Alkaloid that must not be confounded with Ergotine or other extracts; it is given in doses of from ¼ to ½ Milligramme (1-240th to 1-120th of a grain), in all cases where Ergot is indicated, viz.: Flooding, Post-partum Hemorrhages, Metrorrhagia, etc., etc.

It is put up in the following forms:

Syrup Containing ¼ Milligramme to each teaspoonful; DOSE from 1 to 6 teaspoonsfuls per day.

Solution for hypodermic purposes, Containing 1 Milligramme to each cubic Centimeter; DOSE, from 3 to 10 drops.

The Institute of France has awarded one of its Prizes to Mr. Chas. Tanret for the discovery of these Alkaloids.

Tanret's Pelletierine and Ergotinine are only prepared by Mr. Chas. Tanret, Laureate of the Institute of France, 64 Rue du Rempart, Paris.

Sole Agents for the United States, E. FOUGERA & CO., 30 North William St., N. Y.

PAMPHLET ON PELLETIERINE AND ERGOTININE SENT ON APPLICATION.

BOUDAULT'S PEPSINE

The Only Pepsine Used in the Hospitals of Paris for the Last 30 Years.

Unlike the various substitutes which, in most cases, are but unscientific or incompatible compounds, forced upon the Medical Profession as aids to digestion by extensive advertising, but which, when submitted to the proper tests, are found to be useless as digestive agents, Pepsine is constantly gaining in the esteem of the careful practitioner.

Since the introduction of Pepsine by Boudault and Corvisart, in 1854, the original BOUDAULT'S PEPSINE HAS BEEN AT ALL TIMES CONSIDERED THE BEST, as is attested by the awards it has received at the Expositions of 1867, 1868, 1872, 1873, in 1876 at the Centennial Exposition of Philadelphia, and in 1878 at the Paris Exposition.

The most reliable tests, carefully applied, will satisfy every one that BOUDAULT'S PEPSINE HAS A MUCH HIGHER DIGESTIVE POWER than the best Pepsines now before the Profession, and is therefore especially worthy of their attention.

BOUDAULT'S PEPSINE is prepared in the form of Pepsine Acid and Pepsine Neutral. It is sold in bottles of an ounce, with a measure containing exactly five grains; also in bottles of 4, 8, and 16 ounces for dispensing.

BOUDAULT'S WINE OF PEPSINE.

Formula of Dr. Corvisart.

The taste of Pepsine being perfectly disguised in this Wine, it may be recommended to persons who have difficulty in taking Pepsine in the form of powder. This Wine is tested so that a tablespoonful of it is equal in digestive power to ten grains of Boudault's Pepsine in powder. Sold only in 8 oz. Bottles.

MAINTAINED SUPERIORITY!!

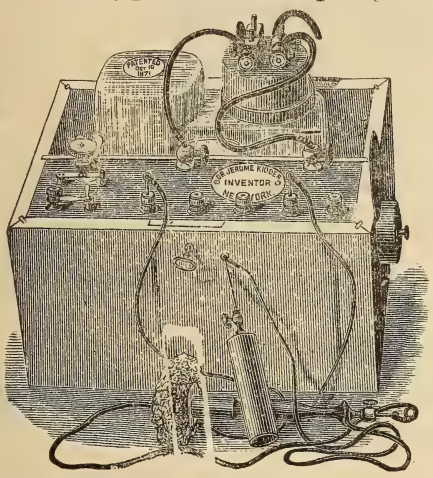
Awarded Medal of Superiority at American Institute for Fourteen Consecutive Years.

DR. JEROME KIDDER'S

ELECTRO-MEDICAL APPARATUSES

ARE THE BEST TO CURE DISEASES, owing to the physiological qualities of Electricity they produce, the simplicity of operation and durable construction.

HIGHEST AWARD WHEREVER EXHIBITED IN COMPETITION.



Shown without cover.

GOLD MEDAL
From American Institute in 1875.

BRONZE MEDALS
From the American Institute; the Highest Awards, from 1872 to 1886 inclusive, for the Best Apparatus either here or Abroad.

BRONZE MEDAL
And First Premium at Centennial Exhibition, 1876.

Highest Award
SILVER MEDAL
From Charleston, S. C., Exhibition, Fall of 1882.

FIVE SILVER MEDALS
From Cincinnati Industrial Exposition, Fall of 1881, 1882, and 1883.

BRONZE MEDAL
From Southern Exposition at Louisville, Kentucky, Fall of 1883.

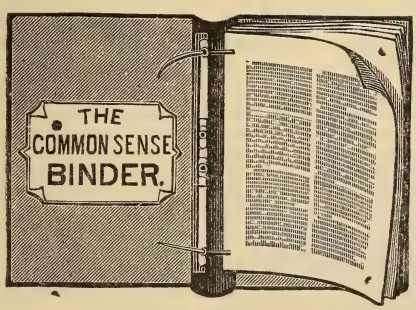
RUSSELL'S COMMON SENSE BINDER.

We give below a cut showing the form of this binder, which we have found the best we have used. A number have been prepared, of a size to fit the REPORTER, and are lettered in gilt, with its name. They will be sent by mail, to suit subscribers, on receipt of seventy-five cents.



At the close of a volume, the numbers can be removed from the binder and regularly bound, or they can with equal convenience be left in it, and another binder be used for the next volume.

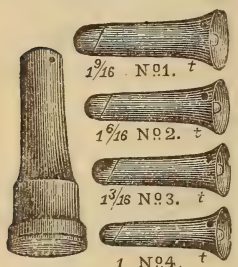
STAUFER'S
HARD RUBBER SPECULUMS GUARANTEED.



Prices, Single, $2.50
Series encased, 12.00

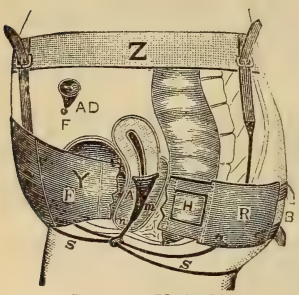
The engraving shows the shape, conductor and case so complete, that scarcely any description is necessary. For compactness there is but one conductor stem, on which each size of bulb screws. Speculums and case are all of the best quality hard rubber, and do not break from ordinary falling. Dental red enamelled inside. The mouth is polished very smooth, and shaped so that the cervix can be brought in entirely by rotation. And when brought in can be rotated to bring into view all the parts. The vaginal portion of the uterus can be seen as clearly as if located externally. When obtained, single, No. 2, is the most useful, since it reveals fully the point of the cervix in almost all multipara, and freely enters, when the position is correct, in many nullipara.

Guarantee.—One or two speculums are guaranteed; thus when returned sound and in the original wooden boxes, within six months of purchase, the money will be refunded without any deduction.

Plates.—The *First* contains 16 engravings and groups of engravings, illustrating the uterine examining instruments. *Second* contains 17 engravings and groups of engravings, illustrating the uterine replacing and supporting instruments.

Catalogue.—The catalogue comprises over 150 sizes and styles of uterine examining and supporting instruments, of which the hard rubber parts are exchanged and interchanged at cost, without limit of time. It also contains full directions and explanations for the use of this series of hard rubber gynecological instruments; together with common information collected through many years to simplify this line of treatment.

STAUFER'S
SPRING STEM UTERINE SUPPORTERS.
GUARANTEED.



Price, on Y, $7.00
" " Z, 6.00

The engraving shows the Spring Stem Cup, which consists of over a dozen sizes. The series contains Spring Stem Balls, Spring Stem Levers, for Anteversions and Retroversions. also Spring Stem Cup with posterior projections, all of assorted sizes.

Explanation.—The stem is screwed on cup A, and when unscrewed, the spring is put in tube *m*, or taken out when it needs cleaning. Thus the coil spring lays between the cup and base *n*. When there is pressure from above, or below, or both, the spring is compressed and again stretches out at the first opportunity. The movement of the base stem *n*, is governed by a slot and pin through tube *m*.

A D.—Represents the cup transformed into a self-sustaining cup, virtually an instrument of double capacity. In most cases after the uterus is held in "health line" for a time by external support, contraction of the walls of the vagina takes place, and it is sufficient at night or until forced down next day by bodily exertion, against which the stem and bandage guards if applied in time.

Belt Y.—The manner in which belt Y, sets on the abdomen is shown in above engraving. The widest or lifting part is in front. Over each hip as seen at H, are two elastics, and on large belts three. It closes on the back by buckling at B. It is of fine sateen outside, fine lining inside, and a slight stiffening between, and stayed with soft whalebones. Accurate hip measure is to be taken over a thin undergarment; since it needs to fit with a space of one or two inches apart on the back, for the buckle straps to draw. The perineal attachments are short and buckle at F and R.

Belt Z. - This is an elastic waist strap and carries any supporter of this series. Yet the common difficulty presents itself, where long and slender attachments are used, that they do not govern the internal part so efficiently as on the low grasping abdominal supporter Y.

The Series.—This series of imstruments has been invented as cases presented themselves, requiring different styles and sizes of instruments, without change of proprietor, until it has reached its present efficiency.

Guarantee.—The money lost by purchasing uterine supporters, unscientifically constructed, of irritating material, or limited in deficiency of sizes, and in consequence loss of families in practice, has set a large portion of the medical profession against the mechanical support of the uterus. By these conditions the risk of the first purchase by a physician of a stem and bandage supporter of this series is obviated. After the first purchase the instruments are supposed to be known, yet the guarantee is extended by special contract in doubtful cases.

Refunding.—On return of the hard rubber part or parts within six months of purchase, Five Dollars of the purchase money will be refunded. The belt remains with the patient as an abdominal supporter and only risk.

The above Guarantee and Refunding is secured when the Instruments are obtained through this Office. Any other Instrument of STAUFER'S SERIES is also obtained through this Office at Catalogue Prices, and Catalogue free, on application.

FLUID

Fluid Cosmoline [*Petroleol*] is a fixed oil of Petroleum, a pure hydro-carbon prepared expressly for medical use. From it all the volatile and otherwise offensive properties of the crude Petroleum have been separated, without the aid of chemicals. Perfectly indifferent to atmospheric action, it remains inalterable in any climate. It is neutral in reaction, bland, soothing, cooling, and may therefore be applied to the most sensitive conditions without irritation. Flowing at 32° Fahr., it may be used may be warmed to any temperature the body can endure. It will be found excellent to relax the skin, to protect irritated surfaces from the air, and to use as a constituent in liniments, ointments and plasters, where an emollient is needed. For these and many other purposes, obvious to the medical profession, it will be found superior to olive oil, or to any vegetable or animal oils, which undergo decomposition and turn rancid. It contains no foreign ingredient.

SAMPLES FURNISHED UPON APPLICATION.

PETROLEOL

Is put up in 1-lb., 5-lb., 10-lb., 25-lb., 50-lb. and 100-lb. Cans.

FELLOWS'

HYPO-PHOS-PHITES

(SYR: HYPOPHOS: COMP: FELLOWS)

Contains **The Essential Elements** to the Animal Organization—Potash and Lime;
The **Oxydizing Agents**—Iron and Manganese;
The **Tonics**—Quinine and Strychnine;
And the **Vitalizing Constituent**—Phosphorus,
Combined in the form of a Syrup, with *slight alkaline reaction.*

It Differs in Effect from all others, being pleasant to taste, acceptable to the stomach, and harmless under prolonged use.

It has Sustained a High Reputation in America and England for efficiency in the treatment of Pulmonary Tuberculosis, Chronic Bronchitis, and other affections of the respiratory organs, and is employed also in various nervous and debilitating diseases with success.

Its Curative Properties are largely attributable to Stimulant, Tonic, and Nutritive qualities, whereby the various organic functions are recruited.

In Cases where innervating constitutional treatment is applied, and tonic treatment is desirable, this preparation will be found to act with safety and satisfaction.

Its Action is Prompt; stimulating the appetite and the digestion, it promotes assimilation, and enters directly into the circulation with the food products.

The Prescribed Dose produces a feeling of buoyancy, removing depression or melancholy, and hence is of great value in the treatment of MENTAL AND NERVOUS AFFECTIONS.

From its exerting a double tonic effect and influencing a healthy flow of the secretions, its use is indicated in a wide range of diseases.

Prepared by JAMES I. FELLOWS, Chemist,

48 VESEY STREET, NEW YORK.

SYR: HYPOPHOS: COMP: C. P.

(McARTHUR.)

For the treatment of Consumption and Tubercular Diseases.

"Dr. McArthur is a sanguine advocate of the Churchill Method. His Syrup of the Hypophosphites is an excellent and PURE preparation; and though we do not concede all the virtues claimed for it as a remedy for Consumption, yet we can testify to its great value from actual trial."

HENRY GIBBONS, M. D.,
Professor of the Principles and Practice of Medicine, University College, San Francisco, editor "Pacific Medical and Surgical Journal."

"I do not hesitate to commend it to the profession as worthy of confidence."

PROFESSOR HARVEY L. BIRD, Baltimore.

"I now prescribe it habitually in my private practice, and ALWAYS WITH BENEFIT when the cases are properly selected."

PROFESSOR JOHN H. LYNCH, M. D., Baltimore, Md.

"Dr. McArthur's chemically pure Syrup of Hypophosphites is becoming thoroughly recognized as an efficient remedy in the treatment of consumption and wasting diseases."

"Dr. McArthur is not only a good chemist and physiologist; he is, above all, a practical physician, who, after years of medical experience, is convinced that, in the treatment of Pulmonary Phthisis and kindred diseases, his preparation of Hypophosphites possesses greater therapeutic efficacy than any medicine hitherto used; and the results of treatment with his Syrup appear amply to bear out his views."

J. J. LAWRENCE, A. M., M. D.,
Editor St. Louis "Medical Brief."

PHYSICIANS WHEN PRESCRIBING WILL PLEASE WRITE THUS:

℞ SYR: HYPOPHOS: COMP: McARTHUR, ONE BOTTLE.

SUCCUS ALTERANS.

(McDADE).

SUCCUS ALTERANS is a purely vegetable compound of the preserved juices of Stillingia Sylvatica, Lappa Minor, Phytolacca Decandra Smilax Sarsaparilla, and Xanthoxylum Fraxineum, as collected by DR. GEO. W. MCDADE exclusively for ELI LILLY & CO., and endorsed by DR. J. MARION SIMS.

SUCCUS ALTERANS continues to gain favor from its remarkable Alterative and Tonic properties, *eliminating specific poison from the blood*, and *increasing the proportion of red corpuscles in anæmic patients* to a wonderful degree.

SUCCUS ALTERANS in venereal and cutaneous diseases is fast supplanting Mercury, the Iodides and Arsenic; and is a certain remedy for Mercurialization, Iodism, and the dreadful effects often following the use of Arsenic in skin diseases.

SUCCUS ALTERANS is also strongly recommended for its Tonic and Alterative effects in the myriad forms of scrofulous disease, and in all cases where anæmia is a factor. Such patients rapidly develop a good appetite, sleep soundly, and gain flesh rapidly. Many cases are on record where patients increased ten to twenty-five pounds in weight in a few weeks.

SUCCUS ALTERANS may be given for any length of time without injury to the patient.

SUCCUS ALTERANS is now endorsed by leading members of the medical profession, and in use by many hospitals of note.

SUCCUS ALTERANS is put up only in round amber bottles holding sixteen fluid ounces, which is sufficient for from two to six weeks' treatment.

ANY PHYSICIAN who has not received DR. MCDADE'S latest publication, the MONOGRAPHIA SYPHILITICA for JANUARY, 1887, should send their address, mentioning this journal, and we will mail a copy. It contains a paper, illustrated with colored plates, by Dr. D. H. GOODWILLIE, of New York, on the "Sequelæ of Syphilis," reports of cases in practice, and many other valuable papers.

SUCCUS ALTERANS is supplied by reputable wholesale and retail druggists everywhere. Agency for Great Britain, etc., JOHN M. RICHARDS, 46 HOLBORN VIADUCT, LONDON, E. C.

ELI LILLY & CO., PHARMACEUTICAL CHEMISTS, INDIANAPOLIS, IND., U. S. A.

Smithsonian Institute

Concentrated Palatable Nutrients.

PEPTONIZED EXTRACT OF BEEF.

Contains all the nutritive constituents of beef.

The superiority of this preparation over other extracts of beef depends upon:

1. The large proportion of albuminoids which it contains.
2. The fact that its albuminoid constituents are chiefly in the form of peptones, insuring rapid absorption and ready assimilation.
3. Its appetizing flavor.
4. Its perfect and ready solubility in water.

The uses of such a preparation are obvious. It is a concentrated, and at the same time an easily assimilated food, useful in all cases of acute disease where sustaining treatment is indicated, and especially valuable in convalescence, and in chronic conditions of inanition or malnutrition, particularly where the functions of the stomach are not well performed.

One part of the Peptonized Extract of Beef may be said to be the equivalent of eight parts of fresh beef. One teaspoonful (about one-half ounce) will make a pint of excellent beef tea.

A like quantity added to a pint of vegetable soup communicates to it a rich flavor, and converts it into a highly nutritious food.

It may be employed in a still more concentrated form, if desired, but from half an ounce to one ounce of the extract is as much as it is generally advisable to give at one time.

POWDER OF BEEF.

A concentrated food of the highest nutritive value.

It represents in an exceedingly concentrated form the total nutritive value of the beef.

It is tasteless, and can be taken for a longer time than the various extracts of beef, beef juices, etc., without exciting nausea.

It is not only more readily digested and assimilated, but also incomparably easier of administration than other concentrated aliments, and may be added to water, milk, or wine, or beaten up with the yolk of an egg.

Drs. Debove and Dujardin-Beaumetz, of Paris, France, Dr. Lauder Brunton, of London, England, Dr. Henry B. Millard, of New York City, and many others, have given Powder of Beef a most thorough trial, and report that it is a most valuable adjuvant in the treatment of dyspepsia, indigestion, gastritis, ulcer of the stomach, tuberculosis, and in all chronic wasting diseases accompanied by enfeeblement of the digestive and assimilative functions.

PURE POWDERED BONE.

For the treatment of such affections as nervous exhaustion, rickets, and all diseases depending upon a lack of the proper supply of the inorganic elements of the tissues, it is believed that Pure Powdered Bone will be found invaluable.

It has the exact chemical composition required for a true nerve and bone food.

Its mechanical construction is such as to aid digestion to the greatest possible degree.

It is tasteless and odorless.

It is miscible with all ordinary foods in the proportions required, without detection.

It is inexpensive, and therefor adapted for general use.

☞ Send for descriptive circulars, which will be mailed free on application.

PARKE, DAVIS & CO.,

Manufacturing Chemists,

New York: { 60 Maiden Lane, 21 Liberty Street.

DETROIT, MICH.

30,000 PHYSICIANS
NOW PRESCRIBE

HYDROLEINE

(HYDRATED OIL,)

For Consumption and Wasting Diseases. It Produces Immediate Increase in Flesh and Weight.

FORMULA.

[Each Dose of Two Teaspoonfuls, equal to 120 Drops, contains:

Pure Cod Liver Oil	80 m. (drops)	Soda	½ Grain.
Distilled Water	35 "	Boric Acid	½ "
Soluble Pancreatin	5 Grains.	Hyocholic Acid	⅛ "

DOSE:

Two teaspoonfuls alone, or with twice the quantity of water, to be taken thrice daily after meals.

Hydroleine (Hydrated Oil) is not a simple alkaline emulsion of oleum morrhua, but a hydro-pancreated preparation containing acids and a medicum of soda. Pancreatin is the digestive principle of fatty foods, and, in the soluble form here used, completely saponifies the oleaginous material so necessary to the reparative process in all wasting diseases.

Lautenbach's researches on the function of the liver would show the beautiful adjustment of therapeutics in preparation of Hydroleine, furnishing, as it does, the acid and soda necessary to prevent self-poisoning by reabsorption of morbid tubercular detritus and purulent matters into the general circulation.

Each bottle in nutritive value exceeds ten times the same bulk of cod liver oil. It is economical in use and certain in result.

Sold at all Drug Stores at $1.00 per Bottle.

The principles upon which this discovery is based have been described in a treatise on "The Digestion and Assimilation of Fats in the Human Body," by H. C. BARTLETT, Ph. D., F. C. S., and the experiments which were made, together with cases illustrating the effect of Hydrated Oil in practice, are concisely stated in a Treatise on "Consumption and Wasting Diseases," by G. OVEREND DREWRY, M. D.

Copies of these Works sent free on Application.

WM. F. KIDDER & CO., 83 John Street, New York.

Agents for U. S.

Also exclusive Agents for SVAPNIA, or Bigelow's purified Opium, in SCALES and HALF-GRAIN GRANULES.

DISEASES OF THE URIC ACID DIATHESIS.

LAMBERT'S

LITHIATED HYDRANGEA.

KIDNEY ALTERATIVE—ANTI-LITHIC.

Formula.—Each fluid drachm of "Lithiated Hydrangea" represents thirty grains of FRESH HYDRANGEA and three grains of CHEMICALLY PURE Benzo-Salicylate of Lithia. Prepared by our improved process of osmosis, it is INVARIABLY of DEFINITE and UNIFORM therapeutic strength, and hence can be depended upon in clinical practice.

Dose.—One or two teaspoonfuls four times a day (preferably between meals).

Urinary Calculus, Gout, Rheumatism, Bright's Disease, Diabetes, Cystitis, Hæmaturia Albuminuria, and Vesical Irritations generally.

WE have had prepared for the convenience of Physicians **Dietetic Notes,** *suggesting the articles of food to be allowed or prohibited in several of these diseases.*

These Dietetic Notes have been bound in the form of small perforated slips for Physicians to distribute to their patients. Mailed gratis upon request, together with our latest compilation of case reports and clinical observations, bearing upon the treatment of this class of Diseases.

LAMBERT PHARMACAL COMPANY,

116 OLIVE STREET, ST. LOUIS.

RHEUMATISM.

DIETETIC NOTE.—A fruit and vegetable diet is most favorable for patients with chromic rheumatic troubles.

Allowed.—Beef and mutton in moderation, with horse-radish as a relish; fish and eggs, green vegetables and fruit, especially lemons. The skimmed milk diet has been advocated by some authors.

Avoid.—Starchy and saccharine food; all malt liquors, wines, and coffee.

SCOTT'S EMULSION

OF PURE COD LIVER OIL WITH HYPOPHOSPHITES OF LIME AND SODA.

THE STANDARD EMULSION OF COD LIVER OIL.

The ONLY Preparation of its class that will not SEPARATE nor SPOIL in any climate.

IT IS MADE FROM THE PUREST NORWEGIAN COD LIVER OIL, COMBINED WITH CHEMICALLY PURE HYPOPHOSPHITES AND GLYCERINE.

Acknowledged by leading Physicians in the U. S. and many other Countries to be the most ELEGANT most PALATABLE and EASILY DIGESTED preparation in the World, and can be tolerated longer by children and persons with delicate stomachs than any other.

WE ASK A CAREFUL COMPARATIVE TEST WITH ANY OR ALL SIMILAR PREPARATIONS.

FORMULA: 50 per cent. of Pure Cod Liver Oil, 6 grs. of the Hypophosphites of Lime. and 3 grs. of the Hypophosphite of Soda to a fluid ounce. Emulsified with mucilage and Glycerine.

S. & B's BUCKTHORN CORDIAL, RHAMNUS FRANGULA.

Is giving universal satisfaction to the profession, for its mild but certain and efficient cathartic action. It seems to be *almost* a *specific* for *habitual constipation*, and we are constantly in receipt of the most flattering reports regarding it. The care we use in its preparation—having the bark always the proper age, and properly exhausted—makes it always reliable in its action. Be sure and specify S. & B. Buckthorn Cordial.

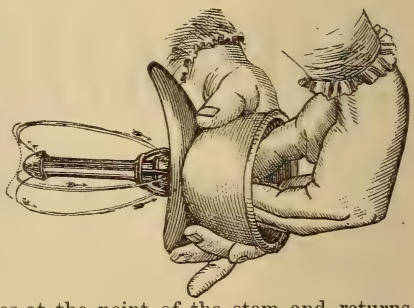
To those who have for any reason never yet tried these preparations, we will be pleased to send samples free by express

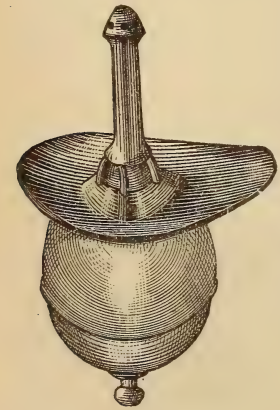
SCOTT & BOWNE, Mfg. Chemists, 132 & 134 S. 5th Ave., N. Y

"PALLAS" SYRINGE.

VAGINAL AND RECTAL.

A MOST PERFECT and simply constructed Syringe for medicating and irrigating the vaginal cavity. The novel bulb of this Syringe, when doubled upon itself, as shown in the cut, will cause no fluid to be left, as is so apt to happen with the ordinary bulbs, and when filled will contain just enough fluid for the expansion of the vaginal folds. The hard rubber labial shield, with its plug, when firmly pressed against the labia, will both prevent spilling and soiling of linen, and the fluid can therefore be kept in circulation and in contact with the parts by repeating the pumping motion of the bulb. It will also be noticed that the fluid escapes as a spray from the large holes at the point of the stem and returns through the holes at the root of same, which is provided with hard rubber screen-bars, preventing the folds from interfering with the rapid return of the fluid into the bulb. In filling the bulb, a couple of turns will unscrew it. In handsome case, satin lined. Retail price, $3.75. To physicians, $3.00.





CHRISTIAN JENSEN & CO.,

2207 Fairmount Avenue,

PHILADELPHIA, PA.

COLDEN'S Liquid Beef Tonic.

Established 15 Years.
OBSERVE the NAME.
Beware of Imitations.

ORIGINAL LABEL:
"Colden's Liebig's Liquid Extract of Beef and Tonic Invigorator."

An Invaluable Aid in Medical Practice.

Differs Essentially from all other Beef Tonics.

COLDEN'S Liquid Beef Tonic is endorsed by scores of physicians, who are growing to realize more and more its importance in repairing, in accordance with the principles of dietetics, the **waste which disease entails.** It consists of the extract of Beef (by Baron Liebig's process) spirit rendered non-injurious to the most delicate stomach by extraction of the Fusel Oil, soluble Citrate of Iron, Cinchona, Gentian and other bitter tonics. An official analysis of this preparation by the eminent Chemist, ARTHUR HILL HASSALL, M. D., F. R. S., and an endorsement by the late SIR ERASMUS WILSON, F. R. S., is printed on the label of each bottle.

As a **blood food,** and a **reliable tonic** in all cases of debility and weakness, Malarial Fever, Anæmia, Chlorosis, Incipient Consumption, etc., it is the best preparation ever used. It acts directly on the sentient Gastric Nerves, stimulating the follicles to secretion, and gives to weakened individuals that first prerequisite to improvement—an appetite. It strengthens the nervous system when unstrung by disease, and has been employed with remarkable success as a remedy for Drunkenness and the Opium Habit.

Its Range of Action Embraces all Cases of Debility.

In order that physicians may form some idea of the nature of its ingredients, I will upon application in person, or by letter (enclosing a card), send a sample bottle of COLDEN'S LIQUID BEEF TONIC to any physician in regular standing, in the United States. Please ask your Dispensing Druggist (if he has not already a supply) to order it. In prescribing this preparation, physicians should be particular to mention "COLDEN'S"—*viz.:* ***"Ext. carnis, fl. comp. (Colden's.)"*** It is put up in pint bottles, and can be had of Wholesale and Retail Druggists generally throughout the United States.

C. N. CRITTENTON, Sole Agent, 115 Fulton St. New-York.

GLENN'S Sulphur Soap.

ALL physicians know that ***skin diseases*** are more or less constitutional, or dependent upon some specific poison in the blood, which if eradicated by internal treatment needs something to remove its appearance from the surface. Experience has proved that the best possible aid in the accomplishment of this end is obtained by the use of ***Sulphur in soap.*** GLENN'S SULPHUR SOAP is the best combination of its kind, and the one now generally used. It is for sale by all Druggists, at **25** cents a cake, or 3 cakes for **60** cents.

CONSTANTINE'S PINE TAR SOAP

Has been on trial among physicians for very many years as a toilet Soap and Healing Agent, and its superior virtues have been unanimously conceded **in all cases where the use of tar is indicated.** Unsolicited expressions of its excellence have been received from the Medical Faculty generally. IT IS THE BEST TAR SOAP MADE. None genuine unless stamped "A. Constantine's Persian Healing Pine-Tar Soap." For sale by all Druggists.

Samples of either of the above-named Soaps will be sent free upon application in person or by letter (enclosing card) to any physician in regular standing in the United States. C. N. Crittenton, 115 Fulton Street, New York. Please mention "THE MEDICAL AND SURGICAL REPORTER."

ESTABLISHED 1852.

HYDRASTIS

AND ITS PREPARATIONS.

The WM. S. MERRELL CHEMICAL CO. of Cincinnati—"The largest consumers of Golden Seal Root in the world" (see "Drugs and Medicines of North America")—offer to the medical profession, through the drug trade, the following well-known and highly approved preparations of this leading American drug.

FLUID HYDRASTIS.

A neutral solution of all the active medicinal constituents, forming a perfectly clear solution with alcohol, glycerin, syrup, or water. May be properly and profitably substituted for the Fluid Extract of the U. S. P. in the manufacture of syrup, wine or tincture.

COLORLESS HYDRASTIS.

A neutral solution of the White Alkaloid alone—without color or stain.

SULPHATE HYDRASTIA—CRYSTALLIZED.

[SULPHATE BERBERINA.]

This is the Sulphate of Yellow Alkaloid, which we present in crystals to guard against the substitution of impure and unskillful preparations in a powdered form.

Subsequent to its introduction by us under its present commercial title, this salt was identified as Berberina by Mahla, Durand and others. To avoid confusion with the Alkaloid Bebeerine and its salts, and to fully establish its identity, we continue the name by which it was originally introduced.

SOLUTION BISMUTH AND HYDRASTIA

A neutral solution of the double Citrate of Bismuth and Hydrastia (White Alkaloid); each fluid drachm containing 2½ grains of the double salt.

Represented in New York City by

LEHN & FINK, 128 William Street.

Prices Current and Descriptive Circulars cheerfully supplied. Correspondence invited.

Apollinaris

"THE QUEEN OF TABLE WATERS,"

HAS RECEIVED THE

HIGHEST AWARD

LONDON, 1884,

AND IS SUPPLIED UNDER

ROYAL WARRANT

TO

H. R. H. THE PRINCE OF WALES.

ANNUAL SALE, 10 MILLIONS.

Of all Grocers, Druggists & Min. Wat. Dealers.

BEWARE OF IMITATIONS.

Friedrichshall.

THE WELL-KNOWN APERIENT MINERAL WATER.

IMPORTANT NOTICE.

By reason of an improved method of caption, by which dilution avoided, FRIEDRICHSHALL WATER will be found now to be of **considerably greater strength** *and* **efficacy** *than heretofore.*

The ordinary dose is a large wineglassful (4 ounces). Most efficacious when taken fasting and mixed with an equal quantity of hot water.

"I know nothing at all equal to Friedrichs all. The LONGER it is taken, the SMALLER is the quantity necessary to effect the purpose."

Sir HENRY THOMPSON, F.R.C.S., London.

OF ALL DRUGGISTS AND MINERAL WATER DEALERS.

SAVORY & MOORE beg to call the attention of the Profession to some of their Special Preparations, the purity and uniform strength of which are guaranteed.

Pancreatic Emulsion. In Consumption, Wasting, LOSS OF THE POWER OF DIGESTION AND ASSIMILATION, this pure drug is the MOST POTENT REMEDY. This is now attested by the published records of numerous medical men, extracts of which accompany each bottle.

Peptodyn, the New Digestive, is a combination of the whole of the digestive secretions, forming an invaluable remedy in the treatment of all forms of Dyspepsia, and all diseases arising from imperfect nutrition. Peptodyn is intended as a general promoter of digestion for persons not necessarily considered in bad health; thus, when taken about a quarter of an hour after a meal, it will be found to assist digestion in a remarkable manner, and prevent the discomfort which often follows the partaking of a full meal by persons in good health.

Pancreatine Powder, for Indigestion and Loss of APPETITE. This palatable and popular remedy effects the digestion and assimilation of all food, especially of FATTY SUBSTANCES, and is therefore invaluable to patients who are unable to digest Cod Liver Oil, and who are thus deprived of its nourishing and invigorating properties.

Gelatine Discs for Hypodermic Use—Of Morphia, CODEIA, ERGOTINE, ATROPIA, STRYCHNIA, APOMORPHIA, etc. The chief features of these discs are their instant solubility, by which hypodermic solutions can be instantly obtained of uniform and reliable strengths; they keep good for an unlimited period in their dry state, and are extremely portable. (Prepared in accordance with Dr. Sansom's recommendation.)
In tubes, each containing 25 discs.

Etherodine (Substitute for Chlorodyne). A clear, bright fluid, pleasant to the taste, readily miscible with water or any suitable menstruum. The therapeutical properties of ETHERODINE are identical with those of CHLORODYNE, but the former is an elegant preparation, and more convenient for use.

Gelatine Discs for Ophthalmic Purposes.
"Much smaller doses of medicaments such as Atropine, Calabar Bean Extract, Sulphate of Zinc, Morphia, etc., etc., suffice to produce a marked effect by this form of application, than when drops are introduced."—*The Lancet.*
In tubes, each containing 100 discs.

Gelatine Lamels for Internal Administration, consist of thin, pliable, and, in most cases, transparent sheets of uniform thickness, accurately divided into squares by raised lines, each square containing an exact dose of the medicine with which the sheet is impregnated.
In sheets, each consisting of 24 squares.

Datura Tatula, for Asthma, Hay Fever, and Chronic BRONCHITIS. Recommended by the Profession as a remedy of great power and usefulness in cases of short and difficult breathing, spasmodic coughing, etc. The most convenient forms for use are—
Datura Tatula Cigars. Datura Tatula—prepared for use by means of a pipe.
Datura Tatula Cigarettes. Datura Tatula Pastilles—for Inhalation.

PHYSICIANS!

YOUR ATTENTION IS INVITED

—TO THE—

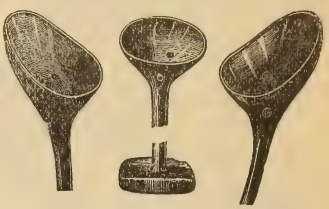
DR. McINTOSH NATURAL UTERINE SUPPORTER.

THIS INSTRUMENT MEETS THE WANTS OF THE PROFESSION MORE PERFECTLY than any other Uterine Supporter ever made. This is proven by the fact that during the past fifteen years more have been sold than of all other Supporters combined. *It never fails to give perfect satisfaction, even in the most difficult cases,* where any instrument can be used.

The **ABDOMINAL PORTION** is a broad morocco leather belt with elastic straps to buckle around the hips, with concave front, so shaped as to hold up the abdomen.

The **UTERINE PORTION** is a cup and stem made of highly-polished hard rubber, very light and durable, shaped to fit the neck of the womb, with openings for the secretions to pass out, as shown by the cuts. Cups are made with extended lips to correct flexions and versions of the womb.

The cup and stem is suspended from the belt by two soft elastic rubber tubes, which are fastened to the front of the belt by simple loops, pass down and through the stem of the cup and up to the back of the belt. These soft rubber tubes being elastic adapt themselves to all the varying positions of the body and perform the service of the ligaments of the womb.



Anteversion. Prolapsus. Retroversion

The instrument is very comfortable to the patient, can be removed or replaced by her at will, can be worn at all times, will not interfere with nature's necessities, will not corrode, and is lighter than metal. It will answer for all cases of Anteversion, Retroversion, or Prolapsus of the Womb. It is used by our leading physicians with never-failing success.

OUR REDUCED PRICE TO PHYSICIANS IS $5.00 EACH.

Instruments sent by mail at our risk on receipt of price; or we can send by express, C. O. D., with express charge for returning money added.

CAUTION.

Owing to the great success of our Supporter, several worthless imitations have been made which are often substituted for our instruments, to the detriment of the patient and the disappointment of the physician. To protect our patrons from imposture, we stamp each pad of the Abdominal belt in gilt letters, "Dr. McIntosh N. U. Supporter, Chicago, Ill."; the base of each cup is stamped "Dr. McIntosh N. U. S. Co., Chicago, Ill., U. S. A."

The box in which the instrument is put up contains directions for the application of the instrument pasted inside the cover, having the fac simile signature of Dr. L. D. McIntosh.

For further information in regard to the instrument, address

DR. McINTOSH NATURAL UTERINE SUPPORTER CO.,
300 AND 302 DEARBORN STREET, CHICAGO, ILL.

Our valuable Pamphlet on "Displacement of the Womb," giving a more complete description of the Instrument, will be sent you free on application.

LEVIS'S METALLIC SPLINTS.

FLEXIBLE, PERFORATED, NICKEL-PLATED, Conformable to every size and condition of Limbs. VERY LIGHT, INDESTRUCTIBLE, and INEXPENSIVE. The complete set consists of **21 pieces** in a neat, compact case. Full descriptive circulars sent on application. ☞ **PRICE, $15.00 Per Set.** ☜

McINTOSH GALVANIC AND FARADIC BATTERY CO.,

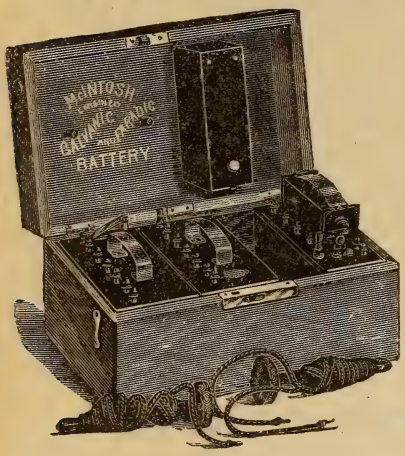
MANUFACTURERS OF THE CELEBRATED

McIntosh Combined Galvanic and Faradic Batteries,

Table, Office, and Family Batteries, Electrodes, Electric Bath Apparatus, Statical Electric Machines, Stereopticons, Solar, Monocular, and Binocular Microscopes.

AND ALL KINDS OF

PHILOSOPHICAL ELECTRICAL APPARATUS.



Schools, Colleges, Physicians, or Hospitals wanting new Apparatus, will do well to favor us with correspondence and obtain estimates. Men of scientific experience have charge of the manufacturing department. We employ the most skillful mechanics, and have the largest facilities in America for manufacturing.

We would call the Special Attention of the Medical Profession to our

Combined Galvanic and Faradic Batteries.

These Batteries are recommended by the Medical Faculty of both America and Europe, and have been adopted by the United States Government for use in Medical Department of the Army and Navy. They are

The First and Only Portable Batteries ever Invented which Give both the Galvanic and Faradic Current,

TWO DISTINCT BATTERIES IN ONE CASE.

No Physician can afford to be without one.

This celebrated Battery is constructed on an improved plan. The zincs and carbons are fastened to hard-rubber plates in sections of six each; this manner of connecting brings the plates nearer together than in any other battery, thus giving less internal resistance. The cells are composed of one piece of hard rubber, and are made in sections of six each with a drip-cup, thus one section can be handled, emptied, and cleaned, as easily and quickly as one cell. The drip-cup is to receive the elements when the battery is not in use. The fluid cannot spill or run between the cells, and there is no danger of breaking, as with glass cells. This is the only battery in which the zinc and carbon plates can be kept clean and always in order by simply rinsing them.

An extra cell (with a zinc and carbon element) is added to the combined batteries, for the purpose of producing the Faradic current. This cell gives as much force as is ever needed, and avoids exhausting the current from the Galvanic cells. All the metal work is finely nickel-plated and highly polished, and every part is put together so that it can be easily replaced by the operator. Our batteries weigh less, occupy less space, give a current of greater intensity and quantity, than any other battery manufactured.

Our illustrated Catalogue, a handsome book giving full description of all our goods, and other valuable information, sent free on application.

McINTOSH GALVANIC AND FARADIC BATTERY CO.
300 & 302 DEARBORN STREET, CHICAGO, ILL.

WHEELER'S TISSUE PHOSPHATES

Bone-Calcium Phosphate $Ca_3 2P.O._4$, Sodium Phosphate $Na_2 H.P.O._4$, Ferrous Phosphate $Fe_3 2P.O._4$, Trihydrogen Phosphate $H_3 P.O._4$.

WHEELER'S COMPOUND ELIXIR OF PHOSPHATES AND CALISAYA. A Nerve Food and Nutritive Tonic, for the treatment of Consumption, Bronchitis, Scrofula, and all forms of Nervous Debility.

The Lactophosphates prepared from the formula of Prof. Dusart, of the University of Paris. Combines with a superior Pemartin Sherry Wine and Aromatics in an agreeable cordial easily assimilable and acceptable to the most irritable stomachs.

Phosphorus, the oxidizing element of the Nerve Centres for the generation of Nerve Force; Lime Phosphate, an agent of Cell Development and Nutrition; Soda Phosphate, an excitant of Functional Activity of Liver and Pancreas, and Corrective of Acid Fermentation in the Alimentary Canal; Iron, the Oxidizing Constituent of the Blood for the Generation of Heat and Motion; Phosphoric Acid, Tonic in Sexual Debility; Alkaloids of Calisaya, Anti-Malarial and Febrifuge; Extract of Wild Cherry, uniting with tonic power the property of Calming Irritation and Diminishing Nervous Excitement.

THE SUPERIORITY OF THE ELIXIR consists in uniting with the Phosphates the special properties of the Cinchona and Prunus, of Subduing Fever and Allaying Irritation of the Mucous Membrane of the Alimentary Canal, which adapts it to the successful treatment of Stomach Derangements and all diseases of Faulty Nutrition, the outcome of Indigestion. Malassimilation of Food, and *failure of supply* of these essential elements of Nerve Force and Tissue Repair.

The special indication of this combination of Phosphates in Spinal Affections, Caries, Necrosis, Ununited Fractures Marasmus, Poorly Developed Children, Retarded Dentition, Alcohol, Opium, Tobacco Habits, Gestation and Lactation, to promote Development, etc., and as a *physiological restorative* in Sexual Debility, and all used up conditions of the Nervous System, should receive the careful attention of good therapeutists.

There is no strychnia in this preparation, but when indicated, the Liquor Strychniæ of the U. S. Dispensatory may be added, each fluid drachm of the solution to a pound bottle of the Elixir making the 64th of a grain to a half fluid ounce, an ordinary dose, a combination of a wide range of usefulness.

DOSE—For an adult, one tablespoonful three times a day, after eating; from seven to twelve years of age, one dessertspoonful; from two to seven, one teaspoonful. For infants, from five to twenty drops, according to age.

Prepared at the Chemical Laboratory of T. B. WHEELER, M. D., Montreal, D. C.

Put up in pound bottles and sold by all Druggists at One Dollar.

THREE MORE MEDALS IN 1886,

The recent International Expositions at Edinburgh and Liverpool, and the American Institute, New York, each awarded us the Highest Silver Medal, which swells our list to about

THIRTY-FIVE GOLD, SILVER AND BRONZE MEDALS

FROM ALL PARTS OF THE WORLD.

THE REASON FOR IT IS PLAIN.

We make but one quality, and that the best. WE SCRUPULOUSLY CONFORM TO THE PHARMACOPŒIAL, or other recognized standards, in the incorporation of medicinal ingredients. We command perfect skill in manipulation, we use pure and superior fabrics, our packages are neat, elegant, and convenient, and our prices are not only uniform, but the most reasonable that can be placed on honest goods of the first quality.

THE STATUS OF THE WHOLE PLASTER BUSINESS

is well shown by the analyses of Belladonna Plasters, the leading article on the list of spread goods, made in March, 1886 by Dr. Albert B. Prescott, Prof. of Chemistry at the University of Michigan, and President of the American Chemical Society, from goods purchased by him in open market. The analyses were made by the same process, in parallel operations, for the quantity of total Belladonna alkaloids, estimated as atropine, and show our Belladonna plaster to contain 0.543 of a grain of alkaloid, which represents the strength of a plaster made after the standard prescribed by the U. S. P. from the highest grade of belladonna root. The same analyses showed the next highest belladonna plaster to contain but 0.264 grains of alkaloid, or less than half U. S. P. strength; while the several other brands examined contained from 0.230 grains to 0.045 grains, proving the S. & J. plaster to contain more than twice as much belladonna as the one approaching nearest to it, the rest falling below the line of any valid comparison, a number having scarcely a trace of belladonna alkaloid.

IN FURTHER PROOF OF OUR DESIRE AND PURPOSE

to maintain, and, if possible, to enhance, the high standard and reputation of our goods, we cite the fact that we have recently erected one of the most complete and best equipped laboratories in the United States, and we shall hereafter manufacture every medicinal extract incorporated in our specialties, and can guarantee, through our own analyses, the strength and quality of all drugs we employ; thus, also, ensuring the perfect uniformity of all our products. For many years, physicians have preferred our goods because they always found them therapeutically reliable, as others were not; and our new departure will set up a stronger safeguard than ever against cheap and worthless plasters and dressings.

WE HAVE ESTABLISHED THE STANDARD.

Failing to make goods equal to ours, and which would sell on their merits, our competitors have heretofore striven to introduce their goods to the notice of the trade and the medical profession by imitating our trade-marks, packages, circulars, and price lists. Now, certain plaster makers have evidently found it necessary to adopt more desperate tactics, since we learn from retailers in Pennsylvania and New Jersey that jobbing-house salesmen have solicited them to buy other goods when ours were indicated on their order. In one case the salesmen said the house he represented no longer stocked our goods; in another, that we no longer made some of the articles desired. On inquiry, we learn that the representatives of these desperate plaster manufacturers offered these men a personal consideration to perform this dishonorable service. In one or two cases a direct money bribe was tendered and refused. The whole scheme shows to what straits our competitors are reduced, and indicates clearly the necessity for physicians specifying "S. & J." goods when prescribing, if they would be assured of obtaining the therapeutic results expected from medicinal plasters, or the strict reliability of goods for surgical use.

NOTABLE POINTS

RELATIVE TO

Lactated Food.

IT IS A COOKED FOOD.

By the use of high steam heat the gluten flour used is partially torrefied. This is done while the flour is dry, and during the process it is in constant motion, which insures perfect cooking to every particle.

Routh says, (Infant Feeding, page 380) that by this process, "the starch granules are rendered more separable, the gluten is reduced to a more porous condition, readily acted on by the gastric juice, and as an aliment, therefore, is more nutritious and digestible."

IT IS A PREDIGESTED FOOD.

"You state that it is self-digestive as regards the conversion of insoluble starch into soluble dextrine and maltose. My experiments with it lead me to hold that this is correct." J. MILNER FOTHERGILL.

IT CONTAINS NO UNCHANGED STARCH.

By the peculiar process of manufacture, every particle of the gluten flour is subjected to the action of the malto-diastase, and by it all the starch contained is transformed into soluble carbo-hydrates.

Professor CARL SEILER says, "Examination has proved that all the starch granules are converted, as shown by their behavior to polarized light."

NO CANE SUGAR USED.

The basis of Lactated Food is the pure sugar of milk made by the improved processes of the American Milk Sugar Co. The great value of this article has been shown conclusively. Cane sugar is not used in the composition or preparation of the Food on account of its liability to cause irritation by reason of the acetic fermentation which it creates in the stomach. Milk sugar never causes this fermentation or irritation.

IT IS NON-IRRITATING.

By reason of the fact that Lactated Food is partially digested in process of Preparation, it is assimilated by the feeblest stomach, and no undigested particles pass into the bowels to irritate, and thus cause troublesome and dangerous bowel disorders.

IT IS HIGHLY NUTRITIOUS.

The nutritive elements of Lactated Food are derived from the three great cereals, Wheat, Barley, and Oats. From the Wheat is taken the pure gluten, the most nourishing substance known for the muscles and tissues; from the Barley, all the soluble albuminoid and extractive matter resulting from the most careful malting; and from the Oat, the strengthening properties for which it is so well known. The result is a food which never disappoints, and under which the feeble child or invalid rapidly rallies.

FOR CHOLERA INFANTUM.

It is the chief reliance of many eminent practitioners, and it is the safest food in summer for all young or delicate children.

Another important consideration is its low price, it being much more economical than other foods. We make four sizes, selling for 25 cents, 50 cents, $1 00, and $2.50. *A dollar can will furnish one hundred and fifty meals for an infant.*

If any physician that has not yet made a trial of the Lactated Food will write us, we will send a package of our regular size, postpaid, without charge, with the understanding that it will be given a careful trial as soon as possible.

We shall use every precaution to maintain the high standard of this Food, and to insure perfect satisfaction to the profession in its use.

WELLS, RICHARDSON & CO.,

BURLINGTON, VT.

THE CANTON SURGICAL

AND

GYNÆCOLOGICAL CHAIR.

A chair especially constructed for the use of the general practitioner, as well as for the specialist in the treatment of gynæcological cases. For treating diseases of the Eye, Ear, Throat, and Chest, it has no equal. Every chair fully warranted to be first-class.

As a speculum chair it secures ease and comfort to the patient, and at the same time gives the operator such perfect control of all the various changes and positions, that it robs gynæcology of its usual embarrassment and annoyance.

DR. RABUTEAU'S

[Laureate of the Institute of France]

DRAGEES, ELIXIR, AND SYRUP OF IRON.

"The experiments made in the hospitals of Paris have demonstrated that *Dr. Rabuteau's Dragees, Elixir, and Syrup* regenerate the red globules of the blood with a rapidity never observed with the use of the other ferruginous preparations. These results have been proved by the various *Compi-Globules.*

"The ferruginous preparations of *Dr. Rabuteau* do not cause any constipation, and are perfectly tolerated by the weakest persons."—*Gazette des Hopitaux.*

Dr. Rabuteau's Elixir is prescribed when some difficulty is experienced in swallowing the Dragees; it is especially adapted to weak persons, whose digestive functions need strengthening or stimulating.

Dr. Rabuteau's Syrup is especially prepared for children, who take it readily because of its agreeable taste.

A sample of Rabuteau's Dragees will be sent free to any Physician mentioning *The St. Louis Medical and Surgical Journal.*

Prepared by CLINN & Co., Pharmacists, Paris.

Ducro's Alimentary Elixir,

A COMBINATION UNITING THE PROPERTIES OF

ALCOHOLIC STIMULANTS AND RAW MEAT

This preparation, which has been used with great success in the hospitals of Paris, since 1868, is adapted to the treatment of all diseases requiring the administration, in a small volume, of a tonic able to stimulate and support the vital forces, as *Pulmonary Phthisis, Depression and Nervous Debility, Adynamia, Malarious Cachexia,* etc.

Prepared by EMILE DURIEZ & Co., Successors to DUCRO & CIE, Paris.

KIRKWOOD'S INHALER,

This is the only complete, reliable, and effective inhaler in use, arranged for the direct application of Muriate of Ammonia and other remedial agents in the state of vapor to the diseased parts of the air passages in the treatment of catarrb and diseases of the throat and lungs. No heat or warm liquids required in its use.

It is entirely different from the various frail, cheap instruments that have been introduced.

KIRKWOOD'S INHALER is accompanied by testimonials of the highest professional character, together with carefully-prepared formulas for use.

Retail Price, complete, $2.50.

☞A liberal discount allowed to the trade and profession.

☞For descriptive pamphlets or other information, address

E. FOUGERA & CO., 30 North William Street, New York.

Rigollot's Mustard Paper

Is one of the most important and useful discoveries of the age. It is the only preparation which has been adopted by the civil and military hospitals, and the armies and navies of France and England, and which has obtained a medal at the Centennial Exposition at Philadelphia. All other mustard plasters or leaves, of whatever name, are but imitations of the original.

Physicians will find it the most reliable sinapism, prompt and certain in its action, and will therefore always prescribe it. Every sheet, in order to be genuine, must bear the annexed signature of the inventor.

Sold in tin boxes containing 10 sheets, also 25 and 100 sheets, by all respectable chemists throughout the world.

S. Rigollot

TAMAR INDIEN GRILLON.

A laxative, refreshing, and medicated Fruit Lozenge, very agreeable to take, and never causing irritation. Its physiological action assures the immediate relief and effectual cure of

CONSTIPATION,

HÆMORRHOIDS, BILE, CEREBRAL CONGESTION, HEADACHE, LOSS OF APPETITE, INTESTINAL OBSTRUCTIONS, ETC.,

by augmenting the peristaltic movement of the intestine without producing undue secretion of the liquids. Unlike pills and the usual purgatives, it does not predispose to intestinal sluggishness, and the same dose always produces the same effect, that is to say, never needs increasing.

It is recommended by the most eminent physicians of Paris, notably Drs. BELIN and TARDIEU, who prescribe it constantly for the above complaints, and with most marked success.

Paris: E. GRILLON, 27 Rue Rambuteau.

SOLD BY ALL DRUGGISTS.

PRIVATE SCHOOL FOR THE DEAF.

THE VALUE OF MURDOCK'S LIQUID FOOD IS RECOGNIZED IN ALL COUNTRIES, AND IS ENDORSED BY ALL NATIONAL MEDICAL SOCIETIES THAT HAVE INVESTIGATED ITS VALUE.

There never was an essay read before any Medical Society on Raw Food Extracts, except on Murdock's Liquid Food, and counterfeit manufacturers of Extracts have published many of our essays to show the value of their counterfeits.

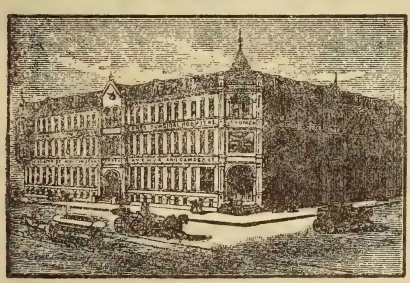
Send for Essay and DISCUSSION before the British Medical Association at Brighton, England, 1886 (Essay), by the Vice-President of the American Medical Association, and others, on the value of MURDOCK'S LIQUID FOOD over all Foods and Extracts known, it being the ONLY Raw Condensed Food free from insoluble matter.

Also essay read before the American Medical Association at Richmond, Va., and Washington, D. C.

Its value was recognized by the profession from results obtained in the Free Hospitals that have been established and supported by our Mr. A. L. Murdock during the last four years.

They now equal

140 FREE BEDS,



And contain 38,000 feet of floor.

Our Liquid Food can be retained by the weakest stomach. Four tablespoonfuls daily will make eight per cent. new blood weekly. When used for infants, never change their food, but add five or more drops of Liquid Food at each feeding, and their lost or needed vitality will be restored in less than thirty days.

Send for the Report of the Chairman of the Section of Obstetrics of the American Institute of Homœopathy, read at Saratoga at the annual meeting of 1886.

Circulars were sent by him to all the Physicians in the United States, asking what their experience was with Murdock's Liquid Food in its use for infants under, as well as over, one year old.

Then what results, with all the different Milk preparations, Grain Foods, Peptonoid Foods, and Beef Extracts, compared with MURDOCK'S LIQUID FOOD.

The returns show that it is the Standard Food and Extract, as the percentage of lives restored was the largest when used.

We extract from the report. After calling attention to the fact that one-quarter of the homœopathic profession are accustomed frequently to prescribe this food for children less than a year old, as well as over, he remarks:

"It is singularly adapted to scrofulous, syphilitic, and tubercular constitutions, its life-restoring power manifesting itself in each with a relative clearness and power corresponding to the order of enumeration. For fair-haired children who are inclined to grow fleshy it is more symptomatically recommended, while Duncan's *acid* babies find it particularly useful. Accordingly, it is chiefly employed for marasmus and anæmic conditions resulting either from non-assimilation of food, or from smple summer complaints. Should a child vomit all milk food and suffer synchronously with diarrhœa or dysentery, the demand for this food is emphatic and unmistakable; also in general irritability of the stomach, particularly if there be sour-smelling diarrhœa, the food passing through undigested. For the prematurely born it stands pre-eminent. For those 'weak and debilitated from any cause, Murdock's Food is probably the best in the world.' Should any indication of cerebral hyperæmia appear, the quantity of food must be diminished; so, too, if after its protracted use vomiting and diarrhœa ensue, the child has been overfed. Should the taste or odor of any given bottle chance to be disagreeable, add water until they disappear, and let the purchaser congratulate himself upon getting more nutriment than he paid for. When given in combination with milk in cases of indigestion, the quantity of milk should be diminished until all curds disappear from the stool, the quantity of Food, of course, being proportionately increased."

The Surgical Staff at MURDOCK'S FREE HOSPITAL FOR WOMEN are in daily attendance, except Saturdays, to examine patients and assign beds.

EVERY BED FREE.

Our Free Surgical Hospital for Women, located on Huntington avenue, above West Chester park, contains fifty (50) beds, in charge of a staff of five surgeons, members of the Massachusetts Medical Society.

Our Free Surgical Hospital for Women, located on Gainsborough street, corner of Huntington avenue, contains 50 beds, in charge of a staff of five surgeons, members of the Massachusetts Homœopathic Medical Society.

Our Free Home for Homeless Boys contains 40 beds, and is located at 11 to 21 Causeway street. Many of these boys suffer from Scrofula, Eczema, and other skin diseases, which yield quickly by the use of our Liquid Food.

From the fact that no two beeves or sheep are alike, is the reason of our different brands being different in flavor.

All brands are made by the same formula. The letter represents the day of make, and the figure the tank.

If richer, it is stronger in smell and flavor, and will bear a greater reduction. It cannot be reduced so low but it will be superior to all other preparations in treating chronic cases.

If you cannot obtain Murdock's Liquid Food from your druggist, we deliver, free of express, 12 oz. for $1. Any physician that has not used our Liquid Food, we will deliver free to the Boston express 12 oz.

MURDOCK'S LIQUID FOOD CO.,

BOSTON

CELERINA

NERVE-TONIC, STIMULANT AND ANTISPASMODIC.

FORMULA.—Every Fluid-Drachm represents FIVE grains EACH—Celery, Coca, Kola, Viburnum and Aromatics.

INDICATIONS.—Impotency, Spermatorrhea, Loss of Nerve-Power (so usual with Lawyers, Preachers, Writers and Business Men), Nervous Headache, Neuralgia, Paralysis, Dysmenorrhea, Hysteria, Opium-Habit, Inebriety, Prostatitis, Dyspepsia, and ALL LANGUID or DEBILITATED conditions of the System.—*Indispensable to restore a patient after alcoholic excess.*

DOSE.—One or two teaspoonfuls three or more times a day, as directed by the Physician.

ALETRIS CORDIAL

UTERINE TONIC AND RESTORATIVE.

PREPARED FROM THE ALETRIS FARINOSA OR TRUE UNICORN.

INDICATIONS.—Amenorrhea, Dysmenorrhea, Leucorrhea, Prolapsus Uteri, Sterility, to PREVENT Miscarriage, Etc.

DOSE.—One teaspoonful three or four times a day.

Unrivaled as a Uterine Tonic in Irregular, Painful, Suppressed and Excessive Menstruation.

IT RESTORES NORMAL ACTION TO THE UTERUS, AND IMPARTS VIGOR TO THE ENTIRE UTERINE SYSTEM.

☞Where Women have aborted during previous Pregnancies, or in any case where abortion is feared, the Aletris Cordial is indicated, and should be continuously administered during entire gestation.

ACID MANNATE

A MILD, SAFE AND PLEASANT APERIENT.

Prepared from Manna, Purified Cathartic Acid, and Fruit Juices.

INDICATIONS.—Constipation, Biliousness, Congestions, Etc. **INDISPENSABLE** AS AN APERIENT FOR WOMEN DURING PREGNANCY. In teaspoonful doses, 3 times a day, it favors the SECRETION and EXCRETION of bile, and gradually removes the congested and torpid states of the liver, and keeps the bowels in a regular and soluble condition.

DOSE.—ONE or MORE teaspoonfuls as directed by the Physician.

S. H. KENNEDY'S
CONCENTRATED EXTRACT OF
PINUS CANADENSIS

DARK A NON-ALCOHOLIC LIQUID. WHITE

A MOST VALUABLE NON-IRRITATING MUCOUS ASTRINGENT.

INDICATIONS.—Albuminuria, Diarrhea, Dysentery, Night-Sweats, Hemorrhages, Profuse Expectoration, Catarrh, Sore Throat, Leucorrhea, and other Vaginal Diseases, Piles, Sores, Ulcers, Burns, Scalds, Gonorrhea, Gleet, Etc.

When Used as an Injection to Avoid Staining of Linen, the WHITE Pinus should be Used.

Recommended by DR. J. MARION SIMS, and other Prominent Physicians.

Jerome Kidder Manufacturing Co., 820 Broadway, New York.

GOOD INVESTMENTS
FOR PHYSICIANS.

1. **Farm Mortgages** bearing **7** per cent. *guaranteed* and **8** per cent. unguaranteed, are unequalled securities, and are safer than Eastern mortgages. Not a dollar of principal or interest has been lost.

2. **Farm Lands** can be bought now at a low price, and will probably sell at an advance of 10 to 15 per cent. within six months. There is nothing more profitable in real estate investments than lands bought in a section where values are all the time increasing.

3. **Small Loans** to thrifty farmers on short time with full security, made through a responsible bank, pay 10 per cent. guaranteed. Nine-tenths of the banking capital of Dakota is used in this way.

4. **County Warrants** are considered among the best investments to be had in the West, and are eagerly sought by capitalists. They are made payable by law from the tax levies. They pay about 12 per cent.

The above investments are made through the *Security Mortgage and Investment Company*, Pierre, Dak., the *First National Bank*, Pierre, Dak., each with $50,000 capital, and the *South Platte Loan and Trust Co. Holdrege*, Neb., capital, $40,000.

Write for full particulars about loans and the *guarantee* given, to

HENRY A. RILEY, Eastern Manager,
170 BROADWAY.

Reference is given to Dr. Daniel G. Brinton, MEDICAL AND SURGICAL REPORTER; Dr. Frank Woodbury, 218 South 16th St., Philadelphia; Dr. Alonzo Clark, 23 East 21st St., New York; Dr. Geo. F. Shrady, 247 Lexington Ave., New York; Dr. William H. Welch, Johns Hopkins University, Baltimore, Md.

Since the introduction—1870—of the substance known as **COSMOLINE** (Unguentum Petrolei) to the College of Pharmacy in Philadelphia, by the late Professor Parrish, who was one of the very first to recognize its merits, it has become very widely known and variously used by the Physicians, Surgeons, and Pharmacists of all schools throughout this country and abroad. Pure Petroleum will not oxidize, but the processes resorted to by many, in order to obtain special products from petroleum, introduce properties that will oxidize in ordinary temperatures, and develop other objections with age. Such products may be used in the arts, but they were decided years ago to be exceedingly irritating and otherwise interfering as surgical dressings or bases for ointments. The Manufacturers of **COSMOLINE** (Unguentum Petrolei) took advantage of the possibility of producing an article which would not only not become rancid, but also one which would be absolutely free from those properties which affected the ordinary residuums and products of the petroleum still. Notwithstanding numerous other petroleum preparations of variable merit and ostensibly for the same purpose, have since been offered, **COSMOLINE** (Unguentum Petrolei) has continued to increase steadily in professional favor. **COSMOLINE** (Unguentum Petrolei) was not recommended to the profession at large until the leading Physicians and Pharmacists of Philadelphia were thoroughly satisfied of its fitness and absolute purity, and since then it has not been changed to meet every speculative fancy, or to compete in price with those preparations of petroleum having some outward resemblance to Cosmoline, but found either deficient in action or positively irritating, owing to chemical agencies used to cheapen the cost of manufacture. It was apparent from its first introduction, that **COSMOLINE** (Unguentum Petrolei) was adapted to a very wide range of uses in Surgery and Pharmacy; and when it was found that its uniformity could invariably be depended upon, it is not surprising that it obtained supremacy over those products which have been varying as commercial experiments, and lacking in all the essential and absolutely pure characteristics needed for a general surgical dressing and base for ointments.

Yours very respectfully,

E. F. HOUGHTON & CO.,

No. 211 South Front St.,

PHILADELPHIA.

BUFFALO LITHIA WATER,

FOR GOUTY, RHEUMATIC, AND RENAL AFFECTIONS.

ROBERTS BARTHOLOW, M. A., M. D., LL. D., Prof. of Materia Medica and General Therapeutics in the Jefferson Medical College of Philadelphia. See his "Materia Medica and Therapeutics."

"Buffalo Lithia Spring of Virginia contains well-defined traces of Lithia, and is Alkaline. This has been used with great advantage in Gouty, Rheumatic, and Renal Affections." * * * * * * * * * "There is little doubt that the continuous use of Alkaline Waters for a long period will cause the solution of Uric Acid Renal Calculi. For this purpose those Alkaline Waters rich in POTASSA are preferable."

This water has a large percentage of the CARBONATE OF POTASSA, making it rich in valuable Alkali.

Dr. Wm. A. Hammond, of New York, Surgeon-General U. S. Army (retired), Professor of Diseases of the Mind and Nervous System in the University of New York, etc.

"I have for some time made use of the Buffalo Lithia Water in cases of affections of the Nervous System complicated with Bright's Disease of the Kidneys, or with a Gouty Diathesis. The results have been eminently satisfactory. Lithia has for many years been a favorite remedy with me in like cases, but the Buffalo Water certainly acts better than any extemporaneous solution of the Lithia Salts, and is, moreover, better borne by the stomach. I also often prescribe it in those cases of Cerebral Hyperæmia, resulting from over mental work—in which the condition called Nervous Dyspepsia exists—and generallly with marked benefit."

Dr. Robert Battey, of Georgia, Suggester of Battey's Operation, Member of the American Medical Association, etc.

"I would state that I have been using the Buffalo Lithia Water, No. 2, in my practice for three years past, in cases of Chronic Inflammation of the Bladder, whether induced by Stone, by Enlarged Prostate in the aged, or by Neglected Gonorrhœa, and have secured excellent results, which encourages me to prescribe it for the future."

Dr. Hunter McGuire, Richmond, Virginia, late Professor of Surgery, Medical College of Virginia.

"Buffalo Lithia Water, Spring No. 2, as an Alkaline Diuretic, is invaluable. In Uric Acid Gravel, and, indeed, in diseases generally dependent upon a Uric Acid Diathesis, it is a remedy of extraordinary potency. I have prescribed it in cases of Rheumatic Gout, which had resisted the ordinary remedies, with wonderfully good results. I have used it also in my own case, being a great sufferer from this malady, and have derived more benefit from it than from any other remedy."

Dr. Alfred L. Loomis, of New York, Professor of Institutes and Practice of Medicine, Medical Department University of New York.

"For the past four years I have used the Buffalo Lithia Water in the treatment of Chronic Interstitial Nephritis occurring in Gouty and Rheumatic subjects, with the most marked benefit. In all Gouty and Rheumatic Affections I regard it as highly efficacious."

Dr. Harvey L. Byrd, of Baltimore, President and Professor of Obstetrics and Diseases of Women and Children, in the Baltimore Medical College, formerly Professor of Practical Medicine, etc.

"I have witnessed the best results from the action of the Buffalo Lithia Water, Spring No. 2, in Chronic Gout, Rheumatic Gout, Rheumatism, Gravel, and Stone in the Bladder, and I do not hesitate to express the opinion that in all diseases depending upon or having their origin in Uric Acid Diathesis, it is unsurpassed, if, indeed, it is equaled by any water thus far known to the profession.

"It has an ascertained value in Bright's Disease. A knowledge of its action in that disease thus far would seem to warrant the belief that it would, in many instances, at least in its early stages, arrest it entirely; and in its more advanced stages prove a decided comfort and palliative."

Water, in cases of one dozen half gallon bottles, $5.00 per case, at the Springs. Testimonials sent free on application. The Virginia Buffalo Lithia Springs Company have no longer control of this water. To get it **FRESH**, order directly of or from parties who deal directly with

THOMAS F. GOODE, Prop. Buffalo Lithia Springs, Va.

CASCARA CORDIAL.

IN HABITUAL CONSTIPATION.

The great desideratum in the treatment of chronic constipation has heretofore been a remedy which possessed not only a temporary specific action on the bowels, but which would be followed by no reaction and no repression of secretion, and which could be administered for a sufficient length of time to permit of restoration of normal function; a remedy which would not only alleviate temporarily the existing mal-condition, but permanently remove the cause upon which it depended for its continuance, and thus effect a radical cure. The extensive trial of Cascara Sagrada by physicians of this country and Europe has shown it to be the drug that most fully meets all these indications. It has been added to the British Pharmacopœia, and its efficacy is attested by all physicians who have given it a trial. Cascara Cordial is prepared to disguise the inherent bitter principle of the drug, and without detracting from its medicinal value, render it acceptable to the most fastidious palate.

AS A VEHICLE FOR NAUSEOUS MEDICINES.

Cascara Cordial has become widely known to the profession. It not only effectually disguises the taste of such inherently bitter medicines as Quinine, but on account of its laxative properties, is a most valuable adjuvant or corrigent to any prescription containing drugs, such as iron, the continued administration of which tends to constipate. It will be seen that Cascara Cordial has a wide range of utility as an agreeable laxative excipient.

TO DISPEL THE ACUTE EFFECTS OF ALCOHOL AND OPIUM ABUSE.

From letters received from physicians, we are led to call the attention of the profession to the use of Cascara Cordial by those addicted to the alcohol and opium habits. The headache and gastric irritation following excessive indulgence in alcohol is avoided by adding a little Cascara Cordial to the alcoholic stimulant taken, or by taking a full dose of the cordial on retiring, after too free indulgence. The severe constipation also often attending indulgence in opium may be relieved by the systematic administration of Cascara Cordial.

We can not assume the responsibility for lack of success physicians may meet with in prescribing the many imitations and spurious varieties of Cascara on the market, and would request those wishing a genuine and reliable preparation to specify P. D. & Co's.

☞ **Samples furnished on application, to those physicians who will pay express charges.**

A NEW EMMENAGOGUE.

The following is an abstract from a letter written by one of the most prominent gynæcologists of the country, to another:

"Thus far no perfect emmenagogue has been discovered, but I regard the manganese as the best I have met with. It should be styled a regulator of menstruation rather than a pure emmenagogue, for it is useful in the absence of the menses, irregularity of their recurrence, and even in excess of flow.

"The preparation which I now employ is McKesson & Robbins' pills of the binoxide of manganese. Of this preparation I give two grains three times a day throughout the month and during the period.

"I also employ manganese in chlorosis and anæmia, and I think that by its use I obtain better results than I have heretofore done by iron." (See *Medical Record* of March 6th, page 274.)

Specify McK. & R.'s Pills Manganese Binoxide.

Important additions to McK. & R.'s list of Gelatine Coated Pills:

McK. & R. *Cascara Sagrada* and *Nux Vomica*: Ext. Cas. Sagr. gr. ii; Ext. Nux Vom. gr. 1-5.

McK. & R. Cascara Sagrada, Nux Vomica and Belladonna: Ext. Cas. Sag. gr. ii; Ext. Nucis Vom. gr. 1-8; Ext. Bellad. gr. 1-16.

McK. & R. Hydrobromide of Hyoscin 1-100 gr.

McK. & R. Binoxide of Manganese 2 grs.

McK. & R. Valerianate of Quinine ½, 1, 2, and 3 grs.

McK. & R. Valerianates Iron, Quinine, and Zinc: Ferri Valer., Quin. Valer., Zinci Valer., āā gr. i.

McK. & R. Oleate of Manganese 20 per cent. May be used to advantage when the pills cannot be administered.

Always specify McK. & R's.

COCAINE.

Although only eighteen months have elapsed since Koller's announcement of his discovery of the anæsthetic properties of this alkaloid, Cocaine already ranks among the most important agents of the practitioner. In general and dental surgery, ophthalmology, laryngology and general therapeutics, its value is everywhere attested.

We began its manufacture immediately after the announcement of Dr. Koller, and samples of our product were submitted to many noted specialists for their experiments, and the results were highly gratifying. The demand for our manufacture of the salt, solutions, and oleates, has continued to increase, and we desire to express our sincere thanks to the medical, pharmaceutical, and dental professions for their kind encouragement as shown in their recognition of the merits of our preparations. Our appreciation of this will be shown in our constant efforts to supply all their requirements in chemicals and pharmaceuticals, of a quality worthy of their entire confidence.

Special quotations on Terebene and Cocaine for specified quantities. Very respectfully,

McKESSON & ROBBINS.

TEREBENE.

McKESSON & ROBBINS

WERE THE FIRST IN THIS COUNTRY TO MANUFACTURE THIS VALUABLE REMEDY FOR

Winter Cough, Bronchial and Chest Affections, Flatulency, Acidity, and other forms of Dyspepsia.

It may be used as an inhalation, or taken internally in doses of five or six drops on sugar every four hours, gradually increasing the dose to twenty minims.

Terebene was brought to the notice of the medical profession as far back as 1873, by M. Ribon, who read a series of papers on this and similar substances before the Pharmaceutical Society of Paris. It has lately been brought into prominence by Dr. Wm. Murrell, of London, who has given it in over 114 cases; he has also notes of its value in 81 out of 90 cases. Dr. Murrell says has much of the Terebene now being sold may be described as inferior, and to this fact he ascribes some irritating effects noted in a few of his cases.

We would therefore caution the physician in prescribing and the druggist in ordering to, in all cases,

SESSIONS OF 1887-88.

The REGULAR SESSION begins on Wednesday, September 21, 1887, and ends about the middle of March, 1888. During this Session, in addition to the regular didactic lectures, two or three hours are daily allotted to clinical instruction. Attendance upon at least two regular courses of lectures is required for graduation.

The SPRING SESSION consists of recitations, clinical lectures and exercises, and didactic lectures on special subjects. This Session begins about the middle of March and continues until the middle of June. During this Session, daily recitations in all the departments are held by a corps of Examiners appointed by the Faculty.

The CARNEGIE LABORATORY is open during the collegiate year, for instruction in microscopical examinations of urine, practical demonstrations in medical and surgical pathology, and lessons in normal histology and pathology, including bacteriology.

For the annual Circular and Catalogue, giving requirements for graduation and other information, address Prof. AUSTIN FLINT, Secretary, Bellevue Hospital Medical College, foot of East 26th Street, New York City.

30,000 PHYSICIANS
NOW PRESCRIBE
HYDROLEINE

(HYDRATED OIL,)

For Consumption and Wasting Diseases. It Produces Immediate Increase in Flesh and Weight.

FORMULA.

{ Each Dose of Two Teaspoonfuls, equal to 120 Drops, contains:

Pure Cod Liver Oil	80 m. (drops)	Soda	½ Grain.
Distilled Water	35 "	Boric Acid	¼ "
Soluble Pancreatin	5 Grains.	Hyocholic Acid	⅛ "

DOSE:

Two teaspoonfuls alone, or with twice the quantity of water, to be taken thrice daily after meals.

Hydroleine (Hydrated Oil) is not a simple alkaline emulsion of oleum morrhua, but a hydro-pancreated preparation containing acids and a medicum of soda. Pancreatin is the digestive principle of fatty foods, and, in the soluble form here used, completely saponifies the oleaginous material so necessary to the reparative process in all wasting diseases.

Lautenbach's researches on the function of the liver would show the beautiful adjustment of therapeutics in preparation of Hydroleine, furnishing, as it does, the acid and soda necessary to prevent self-poisoning by reabsorption of morbid tubercular detritus and purulent matters into the general circulation.

Each bottle in nutritive value exceeds ten times the same bulk of cod liver oil. It is economical in use and certain in result.

Sold at all Drug Stores at $1.00 per Bottle.

The principles upon which this discovery is based have been described in a treatise on "The Digestion and Assimilation of Fats in the Human Body," by H. C. BARTLETT, Ph. D., F. C. S., and the experiments which were made, together with cases illustrating the effect of Hydrated Oil in practice, are concisely stated in a Treatise on "Consumption and Wasting Diseases," by G. OVEREND DREWRY, M. D.

Copies of these Works sent free on Application.

RECTAL ALIMENTATION.

Peptonized Milk the Ideal Substance for Nutritive Enemas.

It would be difficult to conceive of a substance more perfectly adapted for feeding per rectum than thoroughly peptonized milk. It is perfectly absorbable, non-irritant, and may be continuously used for long periods without local disturbance and with entirely adequate nutrition; patients even sometimes increasing in weight.

The artificial digestion of the milk may be carried to the point of complete conversion of the caseine into peptone, or the process may be left to proceed in the alkaline secretion of the rectum. Peptonized Milk *Gruel*—of arrow-root and milk—may be used if preferred, the PEPTONIZING TUBES digesting both starch and milk.

PEPTONIZING TUBES

are sold in boxes at retail for 50 cents, one dozen tubes in a box, each tube peptonizing a pint of milk.

FAIRCHILD BROS. & FOSTER,

82 and 84 FULTON STREET, NEW YORK.

Infantile Atrophy.

"INFANTILE ATROPHY, or the slow wasting which is a familiar symptom in hand-fed babies, is one of the commonest causes of death in early infancy."

"INFANTILE ATROPHY is the consequence of insufficient nourishment. The child wastes because he is starved. But it is not to actual lack of feeding that the starvation is usually to be ascribed. A baby fed from a breast which secretes milk poor in quality and insufficient for the child's support, will, of course, grow slowly thinner; but an infant supplied largely with farinaceous compounds, from which his feeble digestive organs fail to derive even a minimum of nourishment, will waste with startling rapidity."

"Mellin's Food may be used from the first, and is almost always well digested. Farinaceous matters, unless guarded by malt, as in Mellin's Food, should not be given to a child younger than six months."

From "Disease in Children," by Eustace Smith, M. D., F. R. C. P., London, England.

A sample of Mellin's Food, sufficient for trial, will be sent free to any Physician desiring it.

PHYSICIANS!

YOUR ATTENTION IS INVITED

—TO THE—

DR. McINTOSH NATURAL UTERINE SUPPORTER.

THIS INSTRUMENT MEETS THE WANTS OF THE PROFESSION MORE PERFECTLY than any other Uterine Supporter ever made. This is proven by the fact that during the past fifteen years more have been sold than of all other Supporters combined. *It never fails to give perfect satisfaction, even in the most difficult cases,* where any instrument can be used.

The **ABDOMINAL PORTION** is a broad morocco leather belt with elastic straps to buckle around the hips, with concave front, so shaped as to hold up the abdomen.

The **UTERINE PORTION** is a cup and stem made of highly-polished hard rubber, very light and durable, shaped to fit the neck of the womb, with openings for the secretions to pass out, as shown by the cuts. Cups are made with extended lips to correct flexions and versions of the womb.

The cup and stem is suspended from the belt by two soft elastic rubber tubes, which are fastened to the front of the belt by simple loops, pass down and through the stem of the cup and up to the back of the belt. These soft rubber tubes being elastic adapt themselves to all the varying positions of the body and perform the service of the ligaments of the womb.

Anteversion. Prolapsus. Retroversion

The instrument is very comfortable to the patient, can be removed or replaced by her at will, can be worn at all times, will not interfere with nature's necessities, will not corrode, and is lighter than metal. It will answer for all cases of Anteversion, Retroversion, or Prolapsus of the Womb. It is used by our leading physicians with never-failing success.

OUR REDUCED PRICE TO PHYSICIANS IS $5.00 EACH.

Instruments sent by mail at our risk on receipt of price; or we can send by express, C. O. D., with express charge for returning money added.

CAUTION.

Owing to the great success of our Supporter, several worthless imitations have been made which are often substituted for our instruments, to the detriment of the patient and the disappointment of the physician. To protect our patrons from imposture, we stamp each pad of the Abdominal belt in gilt letters, "Dr. McIntosh N. U. Supporter, Chicago, Ill."; the base of each cup is stamped "Dr. McIntosh N. U. S. Co., Chicago, Ill., U. S. A."

The box in which the instrument is put up contains directions for the application of the instrument pasted inside the cover, having the fac simile signature of Dr. L. D. McIntosh.

For further information in regard to the instrument, address

DR. McINTOSH NATURAL UTERINE SUPPORTER CO.,

300 AND 302 DEARBORN STREET, CHICAGO, ILL.

Our valuable Pamphlet on "Displacement of the Womb," giving a more complete description of the Instrument, will be sent you free on application.

CELERINA

NERVE-TONIC, STIMULANT AND ANTISPASMODIC.

FORMULA.—Every Fluid-Drachm represents FIVE grains EACH—Celery, Coca, Kola, Viburnum and Aromatics.

INDICATIONS.—Impotency, Spermatorrhea, Loss of Nerve-Power (so usual with Lawyers, Preachers, Writers and Business Men), Nervous Headache, Neuralgia, Paralysis, Dysmenorrhea, Hysteria, Opium-Habit, Inebriety, Prostatitis, Dyspepsia, and ALL LANGUID or DEBILITATED conditions of the System.—*Indispensable to restore a patient after alcoholic excess.*

DOSE.—One or two teaspoonfuls three or more times a day, as directed by the Physician.

ALETRIS CORDIAL

UTERINE TONIC AND RESTORATIVE.

PREPARED FROM THE ALETRIS FARINOSA OR TRUE UNICORN.

INDICATIONS.—Amenorrhea, Dysmenorrhea, Leucorrhea, Prolapsus Uteri, Sterility, to PREVENT Miscarriage, Etc.

DOSE.—One teaspoonful three or four times a day.

Unrivaled as a Uterine Tonic in Irregular, Painful, Suppressed and Excessive Menstruation,

IT RESTORES NORMAL ACTION TO THE UTERUS, AND IMPARTS VIGOR TO THE ENTIRE UTERINE SYSTEM.

☞Where Women have aborted during previous Pregnancies, or in any case where abortion is feared, the Aletris Cordial is indicated, and should be continuously administered during entire gestation.

ACID MANNATE

A MILD, SAFE AND PLEASANT APERIENT.

Prepared from Manna, Purified Cathartic Acid, and Fruit Juices.

INDICATIONS.—Constipation, Biliousness, Congestions, Etc. **INDISPENSABLE** AS AN APERIENT FOR WOMEN DURING PREGNANCY. In teaspoonful doses, 3 times a day, it favors the SECRETION and EXCRETION of bile, and gradually removes the congested and torpid states of the liver, and keeps the bowels in a regular and soluble condition.

DOSE.—ONE or MORE teaspoonfuls as directed by the Physician.

S. H. KENNEDY'S
CONCENTRATED EXTRACT OF
PINUS CANADENSIS
DARK A NON-ALCOHOLIC LIQUID. WHITE

A MOST VALUABLE NON-IRRITATING MUCOUS ASTRINGENT.

INDICATIONS.—Albuminuria, Diarrhea, Dysentery, Night-Sweats, Hemorrhages, Profuse Expectoration, Catarrh, Sore Throat, Leucorrhea, and other Vaginal Diseases, Piles, Sores, Ulcers, Burns, Scalds, Gonorrhea, Gleet, Etc.

When Used as an Injection, to Avoid Staining of Linen, the WHITE Pinus should be Used.

Recommended by DR. J. MARION SIMS, and other Prominent Physicians.

PACKER'S TAR SOAP.

ABSOLUTELY PURE AND NON-IRRITATING.

MADE FROM VEGETABLE OILS, PINE TAR, AND GLYCERINE.

A perfect soap should be made from pure and sweet oils, and clean, well-washed alkalies. Such is **Packer's Tar Soap.** It is combined with distilled **pine-tar,** and hence has had the most gratifying effects in the treatment of Dermatic Diseases, as chafing, eczema, erythema, seborrhea, herpes, etc.

As a Disinfectant, Antiseptic, and Detergent, it is admirably adapted for use in ulcers, foul wounds, fetid discharges, bed sores, and similar conditions. For the bath, toilet, and shampoo, it is unrivaled. 25 cents per cake, from Druggists.

It is supplied to Hospitals, Asylums, and Physicians, in one pound bars, at reasonable prices.

P. O. Box 2985. THE PACKER MFG. CO., 100 Fulton St., New York.

"PALLAS" SYRINGE.

VAGINAL AND RECTAL.

A MOST PERFECT and simply constructed Syringe for medicating and irrigating the vaginal cavity. The novel bulb of this Syringe, when doubled upon itself, as shown in the cut, will cause no fluid to be left, as is so apt to happen with the ordinary bulbs, and when filled will contain just enough fluid for the expansion of the vaginal folds. The hard rubber labial shield, with its plug, when firmly pressed against the labia, will both prevent spilling and soiling of linen, and the fluid can therefore be kept in circulation and in contact with the parts by repeating the pumping motion of the bulb. It will also be noticed that the fluid escapes as a spray from the large holes at the point of the stem and returns through the holes at the root of same, which is provided with hard rubber screen-bars, preventing the folds from interfering with the rapid return of the fluid into the bulb. In filling the bulb, a couple of turns will unscrew it. In handsome case, satin lined. Retail price, $3.75. To physicians, $3.00.

NOTABLE POINTS

RELATIVE TO

Lactated Food.

IT IS A COOKED FOOD.

By the use of high steam heat the gluten flour used is partially torrefied. This is done while the flour is dry, and during the process it is in constant motion, which insures perfect cooking to every particle.

Routh says, (Infant Feeding, page 380) that by this process, "the starch granules are rendered more separable, the gluten is reduced to a more porous condition, readily acted on by the gastric juice, and as an aliment, therefore, is more nutritious and digestible."

IT IS A PREDIGESTED FOOD.

"You state that it is self-digestive as regards the conversion of insoluble starch into soluble dextrine and maltose. My experiments with it lead me to hold that this is correct." J. MILNER FOTHERGILL.

IT CONTAINS NO UNCHANGED STARCH.

By the peculiar process of manufacture, every particle of the gluten flour is subjected to the action of the malto-diastase, and by it all the starch contained is transformed into soluble carbo-hydrates.

Professor CARL SEILER says, "Examination has proved that all the starch granules are converted, as shown by their behavior to polarized light."

NO CANE SUGAR USED.

The basis of Lactated Food is the pure sugar of milk made by the improved processes of the American Milk Sugar Co. The great value of this article has been shown conclusively. Cane sugar is not used in the composition or preparation of the Food on account of its liability to cause irritation by reason of the acetic fermentation which it creates in the stomach. Milk sugar never causes this fermentation or irritation.

IT IS NON-IRRITATING.

By reason of the fact that Lactated Food is partially digested in process of Preparation, it is assimilated by the feeblest stomach, and no undigested particles pass into the bowels to irritate, and thus cause troublesome and dangerous bowel disorders.

IT IS HIGHLY NUTRITIOUS.

The nutritive elements of Lactated Food are derived from the three great cereals, Wheat, Barley, and Oats. From the Wheat is taken the pure gluten, the most nourishing substance known for the muscles and tissues; from the Barley, all the soluble albuminoid and extractive matter resulting from the most careful malting; and from the Oat, the strengthening properties for which it is so well known. The result is a food which never disappoints, and under which the feeble child or invalid rapidly rallies.

FOR CHOLERA INFANTUM.

It is the chief reliance of many eminent practitioners, and it is the safest food in summer for all young or delicate children.

Another important consideration is its low price, it being much more economical than other foods. We make four sizes, selling for 25 cents, 50 cents, $1 00, and $2.50. *A dollar can will furnish one hundred and fifty meals for an infant.*

If any physician that has not yet made a trial of the Lactated Food will write us, we will send a package of our regular size, postpaid, without charge, with the understanding that it will be given a careful trial as soon as possible.

We shall use every precaution to maintain the high standard of this Food, and to insure perfect satisfaction to the profession in its use.

WELLS, RICHARDSON & CO.,

BURLINGTON, VT.

THE CANTON SURGICAL

AND

GYNÆCOLOGICAL CHAIR.

A chair especially constructed for the use of the general practitioner, as well as for the specialist in the treatment of gynæcological cases. For treating diseases of the Eye, Ear, Throat, and Chest, it has no equal. Every chair fully warranted to be first-class.

As a speculum chair it secures ease and comfort to the patient, and at the same time gives the operator such perfect control of all the various changes and positions, that it robs gynæcology of its usual embarrassment and annoyance.

McINTOSH GALVANIC AND FARADIC BATTERY CO.,

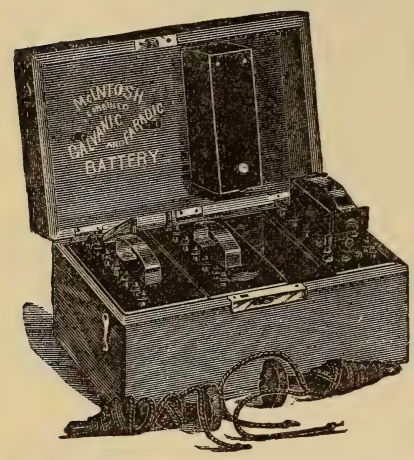
MANUFACTURERS OF THE CELEBRATED

McIntosh Combined Galvanic and Faradic Batteries,

Table, Office, and Family Batteries, Electrodes, Electric Bath Apparatus, Statical Electric Machines, Stereopticons, Solar, Monocular, and Binocular Microscopes.

AND ALL KINDS NF

PHILOSOPHICAL ELECTRICAL APPARATUS.



Schools, Colleges, Physicians, or Hospitals wanting new Apparatus, will do well to favor us with correspondence and obtain estimates. Men of scientific experience have charge of the manufacturing department. We employ the most skillful mechanics, and have the largest facilities in America for manufacturing.

We would call the Special Attention of the Medical Profession to our

Combined Galvanic and Faradic Batteries.

These Batteries are recommended by the Medical Faculty of both America and Europe, and have been adopted by the United States Government for use in Medical Department of the Army and Navy. They are

The First and Only Portable Batteries ever Invented which Give both the Galvanic and Faradic Current,

TWO DISTINCT BATTERIES IN ONE CASE.

No Physician can afford to be without one.

This celebrated Battery is constructed on an improved plan. The zincs and carbons are fastened to hard-rubber plates in sections of six each; this manner of connecting brings the plates nearer together than in any other battery, thus giving less internal resistance. The cells are composed of one piece of hard rubber, and are made in sections of six each with a drip-cup, thus one section can be handled, emptied, and cleaned, as easily and quickly as one cell. The drip-cup is to receive the elements when the battery is not in use. The fluid cannot spill or run between the cells, and there is no danger of breaking, as with glass cells. This is the only battery in which the zinc and carbon plates can be kept clean and always in order by simply rinsing them.

An extra cell (with a zinc and carbon element) is added to the combined batteries, for the purpose of producing the Faradic current. This cell gives as much force as is ever needed, and avoids exhausting the current from the Galvanic cells. All the metal work is finely nickel-plated and highly polished, and every part is put together so that it can be easily replaced by the operator. Our batteries weigh less, occupy less space, give a current of greater intensity and quantity, than any other battery manufactured.

Our illustrated Catalogue, a handsome book giving full description of all our goods, and other valuable information, sent free on application.

McINTOSH GALVANIC AND FARADIC BATTERY CO.
300 & 302 DEARBORN STREET, CHICAGO, ILL.

WHEELER'S TISSUE PHOSPHATES

Bone-Calcium Phosphate $Ca_3 2P.O._4$, Sodium Phosphate $Na_2H.P.O._4$, Ferrous Phosphate $Fe_2 2P.O._4$, Trihydrogen Phosphate $H_3P.O._4$.

WHEELER'S COMPOUND ELIXIR OF PHOSPHATES AND CALISAYA. A Nerve Food and Nutritive Tonic, for the treatment of Consumption, Bronchitis, Scrofula, and all forms of Nervous Debility.

The Lactophosphates prepared from the formula of Prof. Dusart, of the University of Paris. Combines with a superior Pemartin Sherry Wine and Aromatics in an agreeable cordial easily assimilable and acceptable to the most irritable stomachs.

Phosphorus, the oxidizing element of the Nerve Centres for the generation of Nerve Force; Lime Phosphate, an agent of Cell Development and Nutrition; Soda Phosphate, an excitant of Functional Activity of Liver and Pancreas, and Corrective of Acid Fermentation in the Alimentary Canal; Iron, the Oxidizing Constituent of the Blood for the Generation of Heat and Motion; Phosphoric Acid, Tonic in Sexual Debility; Alkaloids of Calisaya, Anti-Malarial and Febrifuge; Extract of Wild Cherry, uniting with tonic power the property of Calming Irritation and Diminishing Nervous Excitement.

THE SUPERIORITY OF THE ELIXIR consists in uniting with the Phosphates the special properties of the Cinchona and Prunus, of Subduing Fever and Allaying Irritation of the Mucous Membrane of the Alimentary Canal, which adapts it to the successful treatment of Stomach Derangements and all diseases of Faulty Nutrition, the outcome of Indigestion. Malassimilation of Food, and *failure of supply* of these essential elements of Nerve Force and Tissue Repair.

The special indication of this combination of Phosphates in Spinal Affections, Caries, Necrosis, Ununited Fractures Marasmus, Poorly Developed Children, Retarded Dentition, Alcohol, Opium, Tobacco Habits, Gestation and Lactation, to promote Development, etc., and as a *physiological restorative* in Sexual Debility, and all used up conditions of the Nervous System, should receive the careful attention of good therapeutists.

There is no strychnia in this preparation, but when indicated, the Liquor Strychniæ of the U. S. Dispensatory may be added, each fluid drachm of the solution to a pound bottle of the Elixir making the 64th of a grain to a half fluid ounce, an ordinary dose, a combination of a wide range of usefulness.

DOSE—For an adult, one tablespoonful three times a day, after eating; from seven to twelve years of age, one dessertspoonful; from two to seven, one teaspoonful. For infants, from five to twenty drops, according to age.

Prepared at the Chemical Laboratory of T. B. WHEELER, M. D., Montreal, D. C.

Put up in pound bottles and sold by all Druggists at One Dollar.

MATHEY-CAYLUS' GLUTEN

SILVER

CAPSULES

OF

PURE COPAIBA AND OTHER MEDICINES.

SILVER

Adapted and recommended for the cure recent or chronic Gleets, Fluor Albus, etc., etc.

The MATHEY-CAYLUS' CAPSULES, *coated with gluten*, present the most perfect mode for administering Copaiba, Cubebs, Norway Tar, Turpentine, and other remedies, the disagreeable odor and taste of which are often a hindrance to their use. This mode of preparing capsules, which has been approved by the Academy of Medicine, has been recommended in their clinical lectures by eminent Professors in the hospitals of Paris, as well as in those of New York and London.

By the first physicians of the hospitals of Paris, London, and New York.

SPECIAL ADVANTAGES OF MATHEY-CAYLUS' GLUTEN CAPSULES.—Being formed of thin, transparent, and readily assimilated coating, they so cover and disguise the medicine to be given, that it can be taken without disgust, but with ease. In this respect, they differ widely from the gelatine capsules, which have a hard, thick coating, which swells beyond measure, in the stomach, are hard to be swallowed, and what is of great importance, they create disturbance in the digestive functions.

The special advantage of the coating of gluten consists in the fact that, notwithstanding its extra thinness, and although it softens under the action of the gastric juice, it can pass the stomach without breaking, and only in the intestines is the medicinal matter liberated; this accounts for the fact that Mathey-Caylus' Capsules never cause the nausea, eructations, and dyspeptic symptoms, which are complained of by many persons using other preparations.

Finally, their regular ovoid form, which is so favorable to swallowing, their pleasant appearance, which dispels all disgust, and the advantage of being entirely free from taste and smell, recommend the use of these capsules even to the most delicate persons.

Thankful to the Medical Profession for the liberal patronage heretofore bestowed upon us, we hope that they will continue their favors, and we are convinced that they will never have any reason to regret the generous welcome they have given to our preparations.

MATHEY-CAYLUS' CAPSULES are never sold, except in bottles having the following inscription printed in the glass: MATHEY-CAYLUS A PARIS. And each bottle contains 64 capsules, making them the cheapest capsules in the market.

The following different kinds of Mathey-Caylus' Gluten Capsules are now offered:

COPAIBA AND TANNIC ACID,
COPAIBA AND S. N. OF BISMUTH,
COPAIBA AND CATECHU,
COPAIBA AND MAGNESIA,
COPAIBA, CUBEBS AND ALUM,
COPAIBA, CUBEBS AND RHATANY,
COPAIBA AND RHATANY,
COPAIBA AND CITRATE OF IRON,
COPAIBA AND CUBEBS,
COPAIBA PURE,

TANRET'S PELLETIERINE

For the Treatment of Tape-Worm (Tænia Solium.)

This New Tænifuge, the Active Alkaloid of Pomegranate Bark, has of late come into extensive use in France for the treatment of Tape-Worm (Tænia Solium). The results of numerous experiments with it at the Marine Hospitals of Toulon, St. Mandrier, etc., and in the Hospitals of Paris, St. Antoine, La Charite, Necker, Beaujon, etc., have all been most satisfactory. Doctor Dujardin Beaumetz, Member of the Academy of Medicine, and Prof. Laboulbene, in their report to the Society of Therapeutics, have given it their unqualified approval after the most searching experiments. This preparation is pleasant to administer, and if certain preliminaries are observed success will be insured.

Sold only in Bottles containing one dose.

TANRET'S ERGOTININE.

ALKALOID AND ACTIVE PRINCIPLE OF SPURRED RYE.

This is a well defined Alkaloid that must not be confounded with Ergotine or other extracts; it is given in doses of from ¼ to ½ Milligramme (1-240th to 1-120th of a grain), in all cases where Ergot is indicated, viz.: Flooding, Post-partum Hemorrhages, Metrorrhagia, etc., etc.

It is put up in the following forms:

Syrup Containing ¼ Milligramme to each teaspoonful; DOSE from 1 to 6 teaspoonsfuls per day.

Solution for hypodermic purposes, Containing 1 Milligramme to each cubic Centimeter; DOSE, from 3 to 10 drops.

The Institute of France has awarded one of its Prizes to Mr. Chas. Tanret for the discovery of these Alkaloids.

Tanret's Pelletierine and Ergotinine are only prepared by Mr. Chas. Tanret, Laureate of the Institute of France, 66 Rue du Rempart, Paris.

Sole Agents for the United States, E. FOUGERA & CO., 30 North William St., N. Y.

PAMPHLET ON PELLETIERINE AND ERGOTININE SENT ON APPLICATION.

BOUDAULT'S PEPSINE

The Only Pepsine Used in the Hospitals of Paris for the Last 30 Years.

Unlike the various substitutes which, in most cases, are but unscientific or incompatible compounds, forced upon the Medical Profession as aids to digestion by extensive advertising, but which, when submitted to the proper tests, are found to be useless as digestive agents, Pepsine is constantly gaining in the esteem of the careful practitioner.

Since the introduction of Pepsine by Boudault and Corvisart, in 1854, the original BOUDAULT'S PEPSINE HAS BEEN AT ALL TIMES CONSIDERED THE BEST, as is attested by the awards it has received at the Expositions of 1867, 1868, 1872, 1873, in 1876 at the Centennial Exposition of Philadelphia, and in 1878 at the Paris Exposition.

The most reliable tests, carefully applied, will satisfy every one that BOUDAULT'S PEPSINE HAS A MUCH HIGHER DIGESTIVE POWER than the best Pepsines now before the Profession, and is therefore especially worthy of their attention.

BOUDAULT'S PEPSINE is prepared in the form of Pepsine Acid and Pepsine Neutral. It is sold in bottles of one ounce, with a measure containing exactly five grains; also in bottles of 4, 8, and 16 ounces for dispensing.

BOUDAULT'S WINE OF PEPSINE.

Formula of Dr. Corvisart.

The taste of Pepsine being perfectly disguised in this Wine, it may be recommended to persons who have difficulty in taking Pepsine in the form of powder. This Wine is tested so that a tablespoonful of it is equal in digestive power to ten grains of Boudault's Pepsine in powder. Sold only in 8 oz. Bottles.

Agents for the United States, E. FOUGERA & CO., New York.

BROMIDIA

The Hypnotic.

FORMULA:

Every fluid drachm contains 15 grains EACH of pure Chloral Hydrat. and purified Brom. Pot., and ⅛ grain EACH of Gen. Imp., Ext. Cannabis Ind., and Hyoscyam.

DOSE:

One-half to one fluid drachm, in WATER or SYRUP, every hour, until sleep is produced.

INDICATIONS:

Sleeplessness, Nervousness, Neuralgia, Headache, Convulsions, Colic, Mania, Epilepsy, Irritability, etc. In the restlessness and delirium of Fevers, it is absolutely invaluable.

It does not Lock Up the Secretions.

PAPINE

The Denarcotized Opiate.

Papine is the Anodyne or pain-relieving principle of Opium, the Narcotic and Convulsive elements being eliminated. It has less tendency to cause Nausea, Vomiting, Constipation, etc.

INDICATIONS:

Same as Opium or Morphia.

DOSE:

One fluid drachm represents the Anodyne principle of ⅛ grain of Morphia.

IODIA

The Alterative and Uterine Tonic.

FORMULA:

Iodia is a combination of Active Principles obtained from the Green Roots of STILLINGIA, HELONIAS, SAXIFRAGA, MENISPERMUM, AND AROMATICS. Each fluid drachm also contains five grains Iod. Pot., and three grains Phos. Iron.

DOSE:

One to two fluid drachms (more or less, as indicated,) three times a day, before meals.

INDICATIONS:

Syphilitic, Scrofulous and Cutaneous Diseases, Dysmenorrhœa, Menorrhagia, Leucorrhœa, Amenorrhœa, Impaired Vitality, Habitual Abortion, and General Uterine Debility.

New, Beautiful and Valuable Books.

A TEXT-BOOK OF

OPERATIVE SURGERY AND SURGICAL ANATOMY,

By ARTHUR TREHERN NORTON, F. R. C. S., Etc.

BASED ON THE ORIGINAL WORK OF

PROFS. CLAUDE BERNARD and CH. HUETTE.

SECOND EDITION. Illustrated by 83 full-page plates, drawn from nature, engraved on steel, BEAUTIFULLY COLORED, and many wood cuts. London and Philadelphia, 1886. Bound in half Russia, marbled sides and edges. Price (mailed post-paid and registered), $12.50.

A TEXT-BOOK OF

NAKED-EYE ANATOMY,

BEING AN ACCOMPANYING TEXT TO MASSE'S PLATES.

By JAMES CANTLIE, A. M., M. D., etc.

THIRD EDITION. Illustrated with 113 full page plates, engraved on steel and BEAUTIFULLY COLORED after nature. London and Philadelphia, 1886. Bound in half Russia, marbled sides and edges Price (mailed postpaid and registered), $12.50.

The above works are presented in the highest style of the publishing art, and are not less useful than they are beautiful. Mr. Norton explains all the leading and approved operations of surgery with constant reference to the faithfully colored plates, and his instructions are second only to operations on the cadaver.

The "Naked-eye Anatomy" of Dr. Cantlie, with its numerous tinted engravings, illustrates both the position and contrasting hues of the various organs and tissues. The physician who has not frequent opportunities to practice on the dead subject, will find this volume the best substitute he can obtain for practical dissection.

THE SCIENCE AND PRACTICE OF

SURGERY.

By FREDERICK JAMES GANT, F. R. C. S., etc., etc.

THIRD EDITION. Revised and enlarged throughout. With ONE THOUSAND AND NINETY engravings on wood. In two volumes. Vol. I, pp. xxviii, 1087. Vol. II, pp. xxxv, 1183; large octavo; bound in half Russia, marbled sides and edges. London and Philadelphia, 1886. Price (express prepaid), $12.00.

This monumental work is here offered in the finest London edition, on English paper, and bound in the most handsome and durable style. As a treatise on Surgery it stands at the head of the list of those produced by the best school of English Surgeons, clear, complete and practical.

Remit prices with orders to

D. G. BRINTON, M. D., Publisher,

115 South Seventh St., Philadelphia.

Put up in 1, 5, 10, 25, 50, and 100-lb. cans. Samples furnished on application. The post-office laws forbid anything of an oleaginous nature being sent through the mail.

In chemical composition, Cosmoline (Unguentum Petrolei) is an oleaginous hydrocarbon, corresponding to the heavy petroleum oils, and containing a large amount of the paraffines and olefines of the formulæ $C_{16}H_{34}$ and $C_{16}H_{32}$. It contains but a small percentage of the paraffines and olefines corresponding to the formulæ C_7H_{16} and C_7H_{14}, respectively, and the offensive and irritating properties of the crude oil have been carefully removed. In the process of purification, no acids, alkalies, or other chemicals are employed, and no injurious additions of any kind are made to the natural product. The result is a semi-solid, translucent substance, with a faint odor and unctuous feel.

Cosmoline (Unguentum Petrolei) melts at about 100° Fah. (38° Cent.); and boils at about 625° Fah. (329° Cent.); its specific gravity is about 0.875 at 60° Fah.

As it contains no oxydizable or organic matter capable of change by putrefaction or fermentation, and is absolutely without affinity for moisture, it offers to the profession an admirable unguent, which can never decompose, ferment, or become rancid in any climate or temperature.

PHILADELPHIA, July 10, 1880.

MESSRS. E. F. HOUGHTON & Co.: I have for a number of years made extensive use of Cosmoline (Unguentum Petrolei), and consider it a most valuable article for surgical purposes. Either as a dressing by itself, or as a vehicle for the application of medicaments, it is greatly superior to lard or other fatty matters, especially by reason of its non-liability to change by time or temperature.

Yours truly, JOHN H. PACKARD, M. D.

1031 WALNUT STREET, PHILADELPHIA.

MESSRS. E. F. HOUGHTON & Co.: I have used extensively Cosmoline (Unguentum Petrolei) both in Dispensary and private practice, with very great satisfaction. As a vehicle in making ointments it is invaluable, and far superior to lard, for the reason that it will not become rancid or undergo chemical change like the latter, when exposed to the atmosphere. I cannot too highly commend it as an application in various skin diseases. Yours truly, JOHN V. SHOEMAKER, A. M., M. D.,

Physician to the Pennsylvania Free Dispensary for Skin Disease.

208 WEST 34TH STREET, NEW YORK.

MESSRS. E. F. HOUGHTON & Co.—*Gents:* I fully appreciate the value of your Cosmoline, or Unguentum Petrolei, and prescribe it frequently in ointments. Fluid Cosmoline I have used constantly for several years, as a lubricant of urethral sounds. It is the cleanest oil I know of for this purpose.

Yours truly, GEO. HENRY FOX.

CHERRY MALT PHOSPHITES.

This preparation is believed to be the only Malt Extract continuously acceptable to the stomach. The attention of those who have ceased prescribing other extracts of malt because of excessive sweetness is specially called to this.

CHERRY MALT PHOSPHITES is a combination of Wild Cherry, the condensed extract of the important Cereals and the Elixir of the Hypophosphites. Its flavor is delicious, and it is medicinally invaluable in all cases of General and Nervous Debility, Dyspepsia, Imperfect Nutrition, Impure Blood, Wasting Diseases of Children and Adults. It is extensively prescribed in European countries, and has received the cordial endorsement of the leading practitioners of this country.

PRICE $1.00 PER BOTTLE.

To Physicians not familiar with its merits, who will pay express charges, we will send a full-sized bottle *free*.

Please mention this journal.

W. C. JACOBS, Manager.

LIEBIG'S LIQUID FOOD,

A Concentrated Extract of Beef possessing both tonic and nutrient properties.

MANUFACTURED ONLY BY THE

LIEBIG PHARMACAL CO., N. Y.

SUCCUS ALTERANS.

(McDADE).

SUCCUS ALTERANS is a purely vegetable compound of the preserved juices of Stillingia Sylvatica, Lappa Minor, Phytolacca Decandra Smilax Sarsaparilla, and Xanthoxylum Fraxineum, as collected by DR. GEO. W. MCDADE exclusively for ELI LILLY & CO., and endorsed by DR. J. MARION SIMS.

SUCCUS ALTERANS continues to gain favor from its remarkable Alterative and Tonic properties, *eliminating specific poison from the blood*, and *increasing the proportion of red corpuscles in anæmic patients* to a wonderful degree.

SUCCUS ALTERANS in venereal and cutaneous diseases is fast supplanting Mercury, the Iodides and Arsenic; and is a certain remedy for Mercurialization, Iodism, and the dreadful effects often following the use of Arsenic in skin diseases.

SUCCUS ALTERANS is also strongly recommended for its Tonic and Alterative effects in the myriad forms of scrofulous disease, and in all cases where anæmia is a factor. Such patients rapidly develop a good appetite, sleep soundly, and gain flesh rapidly. Many cases are on record where patients increased ten to twenty-five pounds in weight in a few weeks.

SUCCUS ALTERANS may be given for any length of time without injury to the patient.

SUCCUS ALTERANS is now endorsed by leading members of the medical profession, and in use by many hospitals of note.

SUCCUS ALTERANS is put up only in round amber bottles holding sixteen fluid ounces, which is sufficient for from two to six weeks' treatment.

ANY PHYSICIAN who has not received DR. MCDADE'S latest publication, the MONOGRAPHIA SYPHILITICA for JANUARY, 1887, should send their address, mentioning this journal, and we will mail a copy. It contains a paper, illustrated with colored plates, by Dr. D. H. GOODWILLIE, of New York, on the "Sequelæ of Syphilis," reports of cases in practice, and many other valuable papers.

SUCCUS ALTERANS is supplied by reputable wholesale and retail druggists everywhere. Agency for Great Britain, etc., JOHN M. RICHARDS, 46 HOLBORN VIADUCT, LONDON, E. C.

COCA CORDIAL!

A Palatable Preparation of Coca Erythroxylon,

Containing, in an agreeable vehicle, the active medicinal principle, free from the bitter astringent constituents of the drug.

The sedative, tonic, and stimulant effects of coca erythroxylon and its preparations, and their wide application in medical practice, are now too well known to the medical profession to need extended comment.

Coca has been extensively used with gratifying success for the relief of morbid conditions depending on nervous exhaustion, in the nervous irritability following excesses of any kind, in neurasthenia, to facilitate digestion in dyspepsia, to relieve the morbid depression of spirits resulting from exhausting mental labor, in nausea and vomiting of reflex origin, and in the treatment of the alcohol and opium habits.

In a great variety of affections it has proved itself to be a drug ranking in therapeutic importance with opium and quinine.

The Coca Cordial presents the drug in a palatable form, commending it especially to the large class of persons of delicate nervous organization, for whom it is most often indicated.

In its preparation the astringent and bitter constituents of Coca, which are not essential to its medicinal action, have been eliminated, while care has been taken to retain unchanged the active principle cocaine. One fluidounce of the cordial represents 60 grains of coca leaves of good quality, the vehicle employed being an agreeable cordial of a rich vinous flavor.

☞ **We shall be pleased to send on application a circular more fully descriptive of Coca Cordial and its application, and we trust physicians will communicate to us the results of their experience in the use of this preparation, so far as it is likely to be of general interest to the profession.**

30,000 PHYSICIANS
NOW PRESCRIBE

HYDROLEINE

(HYDRATED OIL,)

For Consumption and Wasting Diseases. It Produces Immediate Increase in Flesh and Weight.

FORMULA.

Each Dose of Two Teaspoonfuls, equal to 120 Drops, contains:

Pure Cod Liver Oil	80 m. (drops)	Soda	½ Grain.
Distilled Water	35 "	Boric Acid	¾ "
Soluble Pancreatin	5 Grains.	Hyocholic Acid	⅛ "

DOSE:

Two teaspoonfuls alone, or with twice the quantity of water, to be taken thrice daily after meals.

Hydroleine (Hydrated Oil) is not a simple alkaline emulsion of oleum morrhua, but a hydro-pancreated preparation containing acids and a medicum of soda. Pancreatin is the digestive principle of fatty foods, and, in the soluble form here used, completely saponifies the oleaginous material so necessary to the reparative process in all wasting diseases.

Lautenbach's researches on the function of the liver would show the beautiful adjustment of therapeutics in preparation of Hydroleine, furnishing, as it does, the acid and soda necessary to prevent self-poisoning by reabsorption of morbid tubercular detritus and purulent matters into the general circulation.

Each bottle in nutritive value exceeds ten times the same bulk of cod liver oil. It is economical in use and certain in result.

Sold at all Drug Stores at $1.00 per Bottle.

The principles upon which this discovery is based have been described in a treatise on "The Digestion and Assimilation of Fats in the Human Body," by H. C. BARTLETT, Ph. D., F. C. S., and the experiments which were made, together with cases illustrating the effect of Hydrated Oil in practice, are concisely stated in a Treatise on "Consumption and Wasting Diseases," by G. OVEREND DREWRY, M. D.

Copies of these Works sent free on Application.

WM. F. KIDDER & CO., 83 John Street, New York.

Agents for U. S.

Also exclusive Agents for SVAPNIA, or Bigelow's purified Opium, in SCALES and HALF-GRAIN GRANULES.

THE BEST ANTISEPTIC.

FOR BOTH INTERNAL AND EXTERNAL USE.

LISTERINE.

FORMULA.—Listerine is the essential antiseptic constituent of Thyme, Eucalyptus, Baptisia, Gaultheria, and Mentha Arvensis, in combination. Each fluid drachm also contains two grains of refined and purified Benzo-boracic Acid.

DOSE.—Internally: One teaspoonful three or more times a day (as indicated), either full strength, or diluted, as necessary for varied conditions.

LISTERINE is a well-proven antiseptic agent—an anti-zymotic—especially adapted to internal use, and to make and maintain surgical cleanliness—asepsis—in the treatment of all parts of the human body, whether by spray, irrigation, atomization, or simple local application, and therefore characterized by its particular adaptability to the field of

PREVENTIVE MEDICINE—INDIVIDUAL PROPHYLAXIS.

Physicians interested in LISTERINE will please send us their address, and receive by return mail our new and complete pamphlet of 36 quarto pages, embodying:

A TABULATED EXHIBIT of the action of LISTERINE upon inert Laboratory Compounds.

FULL AND EXHAUSTIVE REPORTS and Clinical Observations from all sources, confirming the utility of LISTERINE as a General Antiseptic for both internal and external use; and particularly

MICROSCOPIC OBSERVATIONS, showing the comparative value and availability of various antiseptics in the treatment of Diseases of the Oral Cavity, by W. D. MILLER, A. B., Ph. D., D. D. S., Prof. of Operative and Clinical Dentistry, University of Berlin, from whose deductions LISTERINE appears to be the most acceptable prophylactic for the care and preservation of the teeth.

LAMBERT PHARMACAL COMPANY,

116 OLIVE STREET, ST. LOUIS.

SCOTT'S EMULSION

OF PURE COD LIVER OIL WITH HYPOPHOSPHITES OF LIME AND SODA.

THE STANDARD EMULSION OF COD LIVER OIL.

The ONLY Preparation of its class that will not SEPARATE nor SPOIL in any climate.

IT IS MADE FROM THE PUREST NORWEGIAN COD LIVER OIL, COMBINED WITH CHEMICALLY PURE HYPOPHOSPHITES AND GLYCERINE.

Acknowledged by leading Physicians in the U. S. and many other Countries to be the most ELEGANT most PALATABLE and EASILY DIGESTED preparation in the World, and can be tolerated longer by Children and persons with delicate stomachs than any other.

WE ASK A CAREFUL COMPARATIVE TEST WITH ANY OR ALL SIMILAR PREPARATIONS.

FORMULA: 5 per cent. of Pure Cod Liver Oil, 6 grs. of the Hypophosphites of Lime, and 3 grs. of the Hypophosphite of Soda to a fluid ounce. Emulsified with mucilage and Glycerine.

S. & B's BUCKTHORN CORDIAL, RHAMNUS FRANGULA.

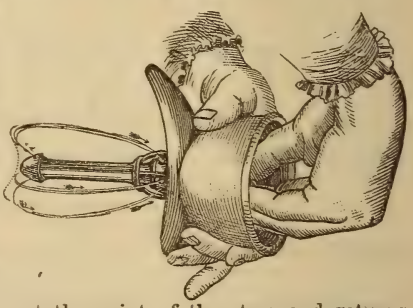
Is giving universal satisfaction to the profession, for its mild but certain and efficient cathartic action. It seems to be *almost* a *specific* for *habitual constipation*, and we are constantly in receipt of the most flattering reports regarding it. The care we use in its preparation—having the bark always the proper age, and properly exhausted—makes it always reliable in its action. Be sure and specify S. & B. Buckthorn Cordial.

To those who have for any reason never yet tried these preparations, we will be pleased to send samples free by express

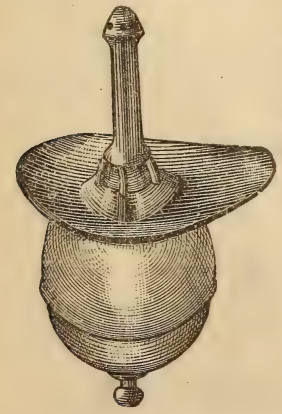
SCOTT & BOWNE, Mfg. Chemists, 132 & 134 S. 5th Ave., N. Y.

"PALLAS" SYRINGE.

VAGINAL AND RECTAL.



A MOST PERFECT and simply constructed Syringe for medicating and irrigating the vaginal cavity. The novel bulb of this Syringe, when doubled upon itself, as shown in the cut, will cause no fluid to be left, as is so apt to happen with the ordinary bulbs, and when filled will contain just enough fluid for the expansion of the vaginal folds. The hard rubber labial shield, with its plug, when firmly pressed against the labia, will both prevent spilling and soiling of linen, and the fluid can therefore be kept in circulation and in contact with the parts by repeating the pumping motion of the bulb. It will also be noticed that the fluid escapes as a spray from the large holes at the point of the stem and returns through the holes at the root of same, which is provided with hard rubber screen-bars, preventing the folds from interfering with the rapid return of the fluid into the bulb. In filling the bulb, a couple of turns will unscrew it. In handsome case, satin lined. Retail price, $3.75. To physicians, $3.00.



CHRISTIAN JENSEN & CO.,

2207 Fairmount Avenue,

PHILADELPHIA, PA.

COLDEN'S Liquid Beef Tonic.

Established 15 Years.
OBSERVE the NAME.
Beware of Imitations.

ORIGINAL LABEL:
"Colden's Liebig's Liquid Extract of Beef and Tonic Invigorator."

An Invaluable Aid in Medical Practice.

Differs Essentially from all other Beef Tonics.

COLDEN'S Liquid Beef Tonic is endorsed by scores of physicians, who are growing to realize more and more its importance in repairing, in accordance with the principles of dietetics, the **waste which disease entails.** It consists of the extract of Beef (by Baron Liebig's process) spirit rendered non-injurious to the most delicate stomach by extraction of the Fusel Oil, soluble Citrate of Iron, Cinchona, Gentian and other bitter tonics. An official analysis of this preparation by the eminent Chemist, ARTHUR HILL HASSALL, M. D., F. R. S., and an endorsement by the late SIR ERASMUS WILSON, F. R. S., is printed on the label of each bottle.

As a **blood food,** and a **reliable tonic** in all cases of debility and weakness, Malarial Fever, Anæmia, Chlorosis, Incipient Consumption, etc., it is the best preparation ever used. It acts directly on the sentient Gastric Nerves, stimulating the follicles to secretion, and gives to weakened individuals that first prerequisite to improvement—an appetite. It strengthens the nervous system when unstrung by disease, and has been employed with remarkable success as a remedy for Drunkenness and the Opium Habit.

Its Range of Action Embraces all Cases of Debility.

In order that physicians may form some idea of the nature of its ingredients, I will upon application in person, or by letter (enclosing a card), send a sample bottle of COLDEN'S LIQUID BEEF TONIC to any physician in regular standing, in the United States. Please ask your Dispensing Druggist (if he has not already a supply) to order it. In prescribing this preparation, physicians should be particular to mention "COLDEN'S"—*viz.:* "***Ext. carnis, fl. comp. (Colden's.)***" It is put up in pint bottles, and can be had of Wholesale and Retail Druggists generally throughout the United States.

C. N. CRITTENTON, Sole Agent, 115 Fulton St. New-York.

GLENN'S Sulphur Soap.

ALL physicians know that ***skin diseases*** are more or less constitutional, or dependent upon some specific poison in the blood, which if eradicated by internal treatment needs something to remove its appearance from the surface. Experience has proved that the best possible aid in the accomplishment of this end is obtained by the use of ***Sulphur in soap.*** GLENN'S SULPHUR SOAP is the best combination of its kind, and the one now generally used. It is for sale by all Druggists, at **25** cents a cake, or 3 cakes for **60** cents.

CONSTANTINE'S PINE TAR SOAP

Has been on trial among physicians for very many years as a toilet Soap and Healing Agent, and its superior virtues have been unanimously conceded **in all cases where the use of tar is indicated.** Unsolicited expressions of its excellence have been received from the Medical Faculty generally. IT IS THE BEST TAR SOAP MADE. None genuine unless stamped "A. Constantine's Persian Healing Pine-Tar Soap." For sale by all Druggists.

Samples of either of the above-named Soaps will be sent free upon application in person or by letter (enclosing card) to any physician in regular standing in the United States. C. N. Crittenton, 115 Fulton Street, New York. Please mention "THE MEDICAL AND SURGICAL REPORTER."

Carl L. Jensen

Sole Originator of

Pepsin in Scales

OR

"Crystal" Pepsin

2039 Green St.
Philadelphia

Physicians desirous of obtaining the genuine article, when prescribing Scale Pepsin or "Cryst." Pepsin, will not alone lend their aid and encouragement to the inventor, but will benefit themselves and patients as well, by simply prescribing this Pepsin thus: "Jensen's Pepsin," drawing a heavy line under the name "Jensen."

The profession generally takes it for granted that druggists are well aware that the physicians never intend to prescribe the imitations of preparations of established merits, which are brought to light solely through the knowledge and technicalities of the inventor or originator, acquired by protracted study and experiments. Imitations have never yet been known to supersede the article imitated, but furnish most convincing testimony to the worth of the article counterfeited. I am continually improving this valuable preparation. Besides its enormous digestive strength, it possesses a keeping quality not before found in any Pepsin preparation, owing to its being of a brittle, scaly texture, reduced to the shape of small granular fragments, it is perfectly soluble and pulverizes easily. It contains no foreign matter like preparations of other make, as Pepsin Manufacturers, heretofore, could not accomplish this without adding large quantities of either starch or sugar of milk.

Physicians who have not yet tried this preparation, or who have been imposed upon, will meet with gratifying results by simply prescribing this Pepsin, thus: "Jensen's Pepsin," as it will prevent substitutions.

Samples promptly forwarded, post-paid.

Faithfully **CARL L. JENSEN.**

Apollinaris

"THE QUEEN OF TABLE WATERS,"

HAS RECEIVED THE

HIGHEST AWARD

LONDON, 1884,

AND IS SUPPLIED UNDER

ROYAL WARRANT

TO

H. R. H. THE PRINCE OF WALES.

ANNUAL SALE, 10 MILLIONS.

Of all Grocers, Druggists & Min. Wat. Dealers.

BEWARE OF IMITATIONS.

Friedrichshall.

THE WELL-KNOWN APERIENT MINERAL WATER.

IMPORTANT NOTICE.

By reason of an improved method of caption, by which dilution is avoided, FRIEDRICHSHALL WATER will be found now to be of considerably greater strength *and* efficacy *than heretofore.*

The ordinary dose is a large wineglassful (4 ounces). Most efficacious when taken fasting and mixed with an equal quantity of hot water.

"I know nothing at all equal to Friedrichs all. The LONGER it is taken, the SMALLER is the quantity necessary to effect the purpose."

Sir HENRY THOMPSON, F.R.C.S., London

OF ALL DRUGGISTS AND MINERAL WATER DEALERS.

In corresponding with Advertisers, please mention THE MEDICAL AND SURGICAL REPORTER

SAVORY & MOORE beg to call the attention of the Profession to some of their Special Preparations, the purity and uniform strength of which are guaranteed.

Pancreatic Emulsion. In Consumption, Wasting, LOSS OF THE POWER OF DIGESTION AND ASSIMILATION, this pure drug is the MOST POTENT REMEDY. This is now attested by the published records of numerous medical men, extracts of which accompany each bottle.

Peptodyn, the New Digestive, is a combination of the whole of the digestive secretions, forming an invaluable remedy in the treatment of all forms of Dyspepsia, and all diseases arising from imperfect nutrition. Peptodyn is intended as a general promoter of digestion for persons not necessarily considered in bad health; thus, when taken about a quarter of an hour after a meal, it will be found to assist digestion in a remarkable manner, and prevent the discomfort which often follows the partaking of a full meal by persons in good health.

Pancreatine Powder, for Indigestion and Loss of APPETITE. This palatable and popular remedy effects the digestion and assimilation of all food, especially of FATTY SUBSTANCES, and is therefore invaluable to patients who are unable to digest Cod Liver Oil, and who are thus deprived of its nourishing and invigorating properties.

Gelatine Discs for Hypodermic Use—Of Morphia, CODEIA, ERGOTINE, ATROPIA, STRYCHNIA, APOMORPHIA, etc. The chief features of these discs are their instant solubility, by which hypodermic solutions can be instantly obtained of uniform and reliable strengths; they keep good for an unlimited period in their dry state, and are extremely portable. (Prepared in accordance with Dr. Sansom's recommendation.)
In tubes, each containing 25 discs.

Etherodine (Substitute for Chlorodyne). A clear, bright fluid, pleasant to the taste, readily miscible with water or any suitable menstruum. The therapeutical properties of ETHERODINE are identical with those of CHLORODYNE, but the former is an elegant preparation, and more convenient for use.

Gelatine Discs for Ophthalmic Purposes.
"Much smaller doses of medicaments such as Atropine, Calabar Bean Extract, Sulphate of Zinc, Morphia, etc., etc., suffice to produce a marked effect by this form of application, than when drops are introduced."—*The Lancet.*
In tubes, each containing 100 discs.

Gelatine Lamels for Internal Administration, consist of thin, pliable, and, in most cases, transparent sheets of uniform thickness, accurately divided into squares by raised lines, each square containing an exact dose of the medicine with which the sheet is impregnated.
In sheets, each consisting of 24 squares.

Datura Tatula, for Asthma, Hay Fever, and Chronic BRONCHITIS. Recommended by the Profession as a remedy of great power and usefulness in cases of short and difficult breathing, spasmodic coughing, etc. The most convenient forms for use are—
Datura Tatula Cigars. Datura Tatula—prepared for use by means of a pipe.
Datura Tatula Cigarettes. Datura Tatula Pastilles—for Inhalation.

PHYSICIANS!

YOUR ATTENTION IS INVITED

—TO THE—

DR. McINTOSH NATURAL UTERINE SUPPORTER.

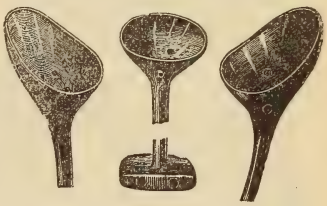
THIS INSTRUMENT MEETS THE WANTS OF THE PROFESSION MORE PERFECTLY than any other Uterine Supporter ever made. This is proven by the fact that during the past fifteen years more have been sold than of all other Supporters combined. *It never fails to give perfect satisfaction, even in the most difficult cases,* where any instrument can be used.

The **ABDOMINAL PORTION** is a broad morocco leather belt with elastic straps to buckle around the hips, with concave front, so shaped as to hold up the abdomen.

The **UTERINE PORTION** is a cup and stem made of highly-polished hard rubber, very light and durable, shaped to fit the neck of the womb, with openings for the secretions to pass out, as shown by the cuts. Cups are made with extended lips to correct flexions and versions of the womb.

The cup and stem is suspended from the belt by two soft elastic rubber tubes, which are fastened to the front of the belt by simple loops, pass down and through the stem of the cup and up to the back of the belt. These soft rubber tubes being elastic adapt themselves to all the varying positions of the body and perform the service of the ligaments of the womb.

The instrument is very comfortable to the patient, can be removed or replaced by her at will, can be worn at all times, will not interfere with nature's necessities, will not corrode, and is lighter than metal. It will answer for all cases of Anteversion, Retroversion, or Prolapsus of the Womb. It is used by our leading physicians with never-failing success.



Anteversion. Prolapsus. Retroversion

OUR REDUCED PRICE TO PHYSICIANS IS $5.00 EACH.

Instruments sent by mail at our risk on receipt of price; or we can send by express, C. O. D., with express charge for returning money added.

CAUTION.

Owing to the great success of our Supporter, several worthless imitations have been made which are often substituted for our instruments, to the detriment of the patient and the disappointment of the physician. To protect our patrons from imposture, we stamp each pad of the Abdominal belt in gilt letters, "Dr. McIntosh N. U. Supporter, Chicago, Ill."; the base of each cup is stamped "Dr. McIntosh N. U. S. Co., Chicago, Ill., U. S. A."

The box in which the instrument is put up contains directions for the application of the instrument pasted inside the cover, having the fac simile signature of Dr. L. D. McIntosh.

For further information in regard to the instrument, address

DR. McINTOSH NATURAL UTERINE SUPPORTER CO.,

300 AND 302 DEARBORN STREET, CHICAGO, ILL.

Our valuable Pamphlet on "Displacement of the Womb," giving a more complete description of the Instrument, will be sent you free on application.

LEVIS'S METALLIC SPLINTS.

FLEXIBLE, PERFORATED, NICKEL-PLATED, Conformable to every size and condition of Limbs. **VERY LIGHT, INDESTRUCTIBLE,** and **INEXPENSIVE.** The complete set consists of **21 pieces** in a neat, compact case. Full descriptive circulars sent on application. ☞ **PRICE, $15.00 Per Set.** ☜

McINTOSH GALVANIC AND FARADIC BATTERY CO.,

MANUFACTURERS OF THE CELEBRATED

McIntosh Combined Galvanic and Faradic Batteries,

Table, Office, and Family Batteries, Electrodes, Electric Bath Apparatus, Statical Electric Machines, Stereopticons, Solar, Monocular, and Binocular Microscopes.

AND ALL KINDS NF

PHILOSOPHICAL ELECTRICAL APPARATUS.

Schools, Colleges, Physicians, or Hospitals wanting new Apparatus, will do well to favor us with correspondence and obtain estimates. Men of scientific experience have charge of the manufacturing department. We employ the most skillful mechanics, and have the largest facilities in America for manufacturing.

We would call the Special Attention of the Medical Profession to our

Combined Galvanic and Faradic Batteries.

These Batteries are recommended by the Medical Faculty of both America and Europe, and have been adopted by the United States Government for use in Medical Department of the Army and Navy. They are

The First and Only Portable Batteries ever Invented which Give both the Galvanic and Faradic Current,

TWO DISTINCT BATTERIES IN ONE CASE.

No Physician can afford to be without one.

This celebrated Battery is constructed on an improved plan. The zincs and carbons are fastened to hard-rubber plates in sections of six each; this manner of connecting brings the plates nearer together than in any other battery, thus giving less internal resistance. The cells are composed of one piece of hard rubber, and are made in sections of six each with a drip-cup, thus one section can be handled, emptied, and cleaned, as easily and quickly as one cell. The drip-cup is to receive the elements when the battery is not in use. The fluid cannot spill or run between the cells, and there is no danger of breaking, as with glass cells. This is the only battery in which the zinc and carbon plates can be kept clean and always in order by simply rinsing them.

An extra cell (with a zinc and carbon element) is added to the combined batteries, for the purpose of producing the Faradic current. This cell gives as much force as is ever needed, and avoids exhausting the current from the Galvanic cells. All the metal work is finely nickel-plated and highly polished, and every part is put together so that it can be easily replaced by the operator. Our batteries weigh less, occupy less space, give a current of greater intensity and quantity, than any other battery manufactured.

Our illustrated Catalogue, a handsome book giving full description of all our goods, and other valuable information, sent free on application.

McINTOSH GALVANIC AND FARADIC BATTERY CO.
300 & 302 DEARBORN STREET, CHICAGO, ILL.

WHEELER'S TISSUE PHOSPHATES

Bone-Calcium Phosphate $Ca_3 2P.O._4$, Sodium Phosphate $Na_2 H.P.O._4$, Ferrous Phosphate $Fe_3 2P.O._4$, Trihydrogen Phosphate $H_3 P.O._4$.

WHEELER'S COMPOUND ELIXIR OF PHOSPHATES AND CALISAYA. A Nerve Food and Nutritive Tonic, for the treatment of Consumption, Bronchitis, Scrofula, and all forms of Nervous Debility.

The Lactophosphates prepared from the formula of Prof. Dusart, of the University of Paris. Combines with a superior Pemartin Sherry Wine and Aromatics in an agreeable cordial easily assimilable and acceptable to the most irritable stomachs.

Phosphorus, the oxidizing element of the Nerve Centres for the generation of Nerve Force; Lime Phosphate, an agent of Cell Development and Nutrition; Soda Phosphate, an excitant of Functional Activity of Liver and Pancreas, and Corrective of Acid Fermentation in the Alimentary Canal; Iron, the Oxidizing Constituent of the Blood for the Generation of Heat and Motion; Phosphoric Acid, Tonic in Sexual Debility; Alkaloids of Calisaya, Anti-Malarial and Febrifuge; Extract of Wild Cherry, uniting with tonic power the property of Calming Irritation and Diminishing Nervous Excitement.

THE SUPERIORITY OF THE ELIXIR consists in uniting with the Phosphates the special properties of the Cinchona and Prunus, of Subduing Fever and Allaying Irritation of the Mucous Membrane of the Alimentary Canal, which adapts it to the successful treatment of Stomach Derangements and all diseases of Faulty Nutrition, the outcome of Indigestion. Malassimilation of Food, and *failure of supply* of these essential elements of Nerve Force and Tissue Repair.

The special indication of this combination of Phosphates in Spinal Affections, Caries, Necrosis, Ununited Fractures Marasmus, Poorly Developed Children, Retarded Dentition, Alcohol, Opium, Tobacco Habits, Gestation and Lactation, to promote Development, etc., and as a *physiological restorative* in Sexual Debility, and all used up conditions of the Nervous System, should receive the careful attention of good therapeutists.

There is no strychnia in this preparation, but when indicated, the Liquor Strychniæ of the U. S. Dispensatory may be added, each fluid drachm of the solution to a pound bottle of the Elixir making the 64th of a grain to a half fluid ounce, an ordinary dose, a combination of a wide range of usefulness.

DOSE—For an adult, one tablespoonful three times a day, after eating; from seven to twelve years of age, one dessertspoonful; from two to seven, one teaspoonful. For infants, from five to twenty drops, according to age.

Prepared at the Chemical Laboratory of T. B. WHEELER, M. D., Montreal, D. C.

Put up in pound bottles and sold by all Druggists at One Dollar.

THREE MORE MEDALS IN 1886.

The recent International Expositions at Edinburgh and Liverpool, and the American Institute, New York, each awarded us the Highest Silver Medal, which swells our list to about

THIRTY-FIVE GOLD, SILVER AND BRONZE MEDALS

FROM ALL PARTS OF THE WORLD.

THE REASON FOR IT IS PLAIN.

We make but one quality, and that ***the best.*** WE SCRUPULOUSLY CONFORM TO THE PHARMACOPŒIAL, or other recognized standards, in the incorporation of medicinal ingredients. We command perfect skill in manipulation, we use pure and superior fabrics, our packages are neat, elegant, and convenient, and our prices are not only uniform, but the most reasonable that can be placed on honest goods of the first quality.

THE STATUS OF THE WHOLE PLASTER BUSINESS

is well shown by the analyses of Belladonna Plasters, the leading article on the list of spread goods, made in March, 1886 by Dr. Albert B. Prescott, Prof. of Chemistry at the University of Michigan, and President of the American Chemical Society, from goods purchased by him in open market. The analyses were made by the same process, in parallel operations, for the quantity of total Belladonna alkaloids, estimated as atropine, and show our Belladonna plaster to contain 0.543 of a grain of alkaloid, which represents the strength of a plaster made after the standard prescribed by the U. S. P. from the highest grade of belladonna root. The same analyses showed the next highest belladonna plaster to contain but 0.264 grains of alkaloid, or less than half U. S. P. strength; while the several other brands examined contained from 0.230 grains to 0.045 grains, proving the S. & J. plaster to contain more than twice as much belladonna as the one approaching nearest to it, the rest falling below the line of any valid comparison, a number having scarcely a trace of belladonna alkaloid.

IN FURTHER PROOF OF OUR DESIRE AND PURPOSE

to maintain, and, if possible, to enhance, the high standard and reputation of our goods, we cite the fact that we have recently erected one of the most complete and best equipped laboratories in the United States, and we shall hereafter manufacture every medicinal extract incorporated in our specialties, and can guarantee, through our own analyses, the strength and quality of all drugs we employ; thus, also, ensuring the perfect uniformity of all our products. For many years, physicians have preferred our goods because they always found them therapeutically reliable, as others were not; and our new departure will set up a stronger safeguard than ever against cheap and worthless plasters and dressings.

WE HAVE ESTABLISHED THE STANDARD.

Failing to make goods equal to ours, and which would sell on their merits, our competitors have heretofore striven to introduce their goods to the notice of the trade and the medical profession by imitating our trade-marks, packages, circulars, and price lists. Now, certain plaster makers have evidently found it necessary to adopt more desperate tactics, since we learn from retailers in Pennsylvania and New Jersey that jobbing-house salesmen have solicited them to buy other goods when ours were indicated on their order. In one case the salesmen said the house he represented no longer stocked our goods; in another, that we no longer made some of the articles desired. On inquiry, we learn that the representatives of these desperate plaster manufacturers offered these men a personal consideration to perform this dishonorable service. In one or two cases a direct money bribe was tendered and refused. The whole scheme shows to what straits our competitors are reduced, and indicates clearly the necessity for physicians specifying "S. & J." goods when prescribing, if they would be assured of obtaining the therapeutic results expected from medicinal plasters, or the strict reliability of goods for surgical use.

NOTABLE POINTS

RELATIVE TO

Lactated Food.

IT IS A COOKED FOOD.

By the use of high steam heat the gluten flour used is partially torrefied. This is done while the flour is dry, and during the process it is in constant motion, which insures perfect cooking to every particle.

Routh says, (Infant Feeding, page 380) that by this process, "the starch granules are rendered more separable, the gluten is reduced to a more porous condition, readily acted on by the gastric juice, and as an aliment, therefore, is more nutritious and digestible."

IT IS A PREDIGESTED FOOD.

"You state that it is self-digestive as regards the conversion of insoluble starch into soluble dextrine and maltose. My experiments with it lead me to hold that this is correct." J. MILNER FOTHERGILL.

IT CONTAINS NO UNCHANGED STARCH.

By the peculiar process of manufacture, every particle of the gluten flour is subjected to the action of the malto-diastase, and by it all the starch contained is transformed into soluble carbo-hydrates.

Professor CARL SEILER says, "Examination has proved that all the starch granules are converted, as shown by their behavior to polarized light."

NO CANE SUGAR USED.

The basis of Lactated Food is the pure sugar of milk made by the improved processes of the American Milk Sugar Co. The great value of this article has been shown conclusively. Cane sugar is not used in the composition or preparation of the Food on account of its liability to cause irritation by reason of the acetic fermentation which it creates in the stomach. Milk sugar never causes this fermentation or irritation.

IT IS NON-IRRITATING.

By reason of the fact that Lactated Food is partially digested in process of Preparation, it is assimilated by the feeblest stomach, and no undigested particles pass into the bowels to irritate, and thus cause troublesome and dangerous bowel disorders.

IT IS HIGHLY NUTRITIOUS.

The nutritive elements of Lactated Food are derived from the three great cereals, Wheat, Barley, and Oats. From the Wheat is taken the pure gluten, the most nourishing substance known for the muscles and tissues; from the Barley, all the soluble albuminoid and extractive matter resulting from the most careful malting; and from the Oat, the strengthening properties for which it is so well known. The result is a food which never disappoints, and under which the feeble child or invalid rapidly rallies.

FOR CHOLERA INFANTUM.

It is the chief reliance of many eminent practitioners, and it is the safest food in summer for all young or delicate children.

Another important consideration is its low price, it being much more economical than other foods. We make four sizes, selling for 25 cents, 50 cents, $1 00, and $2.50. *A dollar can will furnish one hundred and fifty meals for an infant.*

If any physician that has not yet made a trial of the Lactated Food will write us, we will send a package of our regular size, postpaid, without charge, with the understanding that it will be given a careful trial as soon as possible.

We shall use every precaution to maintain the high standard of this Food, and to insure perfect satisfaction to the profession in its use.

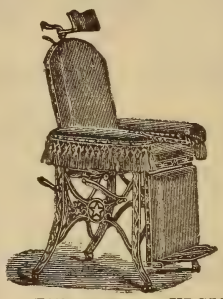
WELLS, RICHARDSON & CO.,

BURLINGTON, VT.

THE CANTON SURGICAL

AND

GYNÆCOLOGICAL CHAIR.



A chair especially constructed for the use of the general practitioner, as well as for the specialist in the treatment of gynæcological cases. For treating diseases of the Eye, Ear, Throat, and Chest, it has no equal. Every chair fully warranted to be first-class.

As a speculum chair it secures ease and comfort to the patient, and at the same time gives the operator such perfect control of all the various changes and positions, that it robs gynæcology of its usual embarrassment and annoyance.

DR. RABUTEAU'S

[Laureate of the Institute of France]

DRAGEES, ELIXIR, AND SYRUP OF IRON.

"The experiments made in the hospitals of Paris have demonstrated that *Dr. Rabuteau's Dragees, Elixir, and Syrup* regenerate the red globules of the blood with a rapidity never observed with the use of the other ferruginous preparations. These results have been proved by the various *Compi-Globules.*

"The ferruginous preparations of *Dr. Rabuteau* do not cause any constipation, and are perfectly tolerated by the weakest persons."—*Gazette des Hopitaux.*

Dr. Rabuteau's Elixir is prescribed when some difficulty is experienced in swallowing the Dragees; it is especially adapted to weak persons, whose digestive functions need strengthening or stimulating.

Dr. Rabuteau's Syrup is especially prepared for children, who take it readily because of its agreeable taste.

A sample of Rabuteau's Dragees will be sent free to any Physician mentioning *The St. Louis Medical and Surgical Journal.*

Prepared by CLINN & Co., Pharmacists, Paris.

E. FOUGERA & Co., Agents for the United States.

Ducro's Alimentary Elixir,

A COMBINATION UNITING THE PROPERTIES OF

ALCOHOLIC STIMULANTS AND RAW MEAT

This preparation, which has been used with great success in the hospitals of Paris, since 1868, is adapted to the treatment of all diseases requiring the administration, in a small volume, of a tonic able to stimulate and support the vital forces, as *Pulmonary Phthisis, Depression and Nervous Debility, Adynamia, Malarious Cachexia,* etc.

Prepared by EMILE DURIEZ & Co., Successors to DUCRO & CIE, Paris.

KIRKWOOD'S INHALER,

This is the only complete, reliable, and effective inhaler in use, arranged for the direct application of Muriate of Ammonia and other remedial agents in the state of vapor to the diseased parts of the air passages in the treatment of catarrh and diseases of the throat and lungs. No heat or warm liquids required in its use.

It is entirely different from the various frail, cheap instruments that have been introduced.

KIRKWOOD'S INHALER is accompanied by testimonials of the highest professional character, together with carefully-prepared formulas for use.

Retail Price, complete, $2.50.

☞A liberal discount allowed to the trade and profession.

☞For descriptive pamphlets or other information, address

E. FOUGERA & CO., 30 North William Street, New York.

Rigollot's Mustard Paper

is one of the most important and useful discoveries of the age. It is the only preparation which has been adopted by the civil and military hospitals, and the armies and navies of France and England, and which has obtained a medal at the Centennial Exposition at Philadelphia. All other mustard plasters or leaves, of whatever name, are but imitations of the original.

Physicians will find it the most reliable sinapism, prompt and certain in its action, and will therefore always prescribe it. Every sheet, in order to be genuine, must bear the annexed signature of the inventor.

Sold in tin boxes containing 10 sheets, also 25 and 100 sheets, by all respectable chemists throughout the world.

TAMAR INDIEN GRILLON.

A laxative, refreshing, and medicated Fruit Lozenge, very agreeable to take, and never causing irritation. Its physiological action assures the immediate relief and effectual cure of

CONSTIPATION,

HÆMORRHOIDS, BILE, CEREBRAL CONGESTION, HEADACHE, LOSS OF APPETITE, INTESTINAL OBSTRUCTIONS, ETC.,

by augmenting the peristaltic movement of the intestine without producing undue secretion of the liquids. Unlike pills and the usual purgatives, it does not predispose to intestinal sluggishness, and the same dose always produces the same effect, that is to say, never needs increasing.

It is recommended by the most eminent physicians of Paris, notably Drs. BELIN and TARDIEU, who prescribe it constantly for the above complaints, and with most marked success.

Paris: E. GRILLON, 27 Rue Rambuteau.

SOLD BY ALL DRUGGISTS.

PRIVATE SCHOOL FOR THE DEAF.

THE VALUE OF MURDOCK'S LIQUID FOOD IS RECOGNIZED IN ALL COUNTRIES, AND IS ENDORSED BY ALL NATIONAL MEDICAL SOCIETIES THAT HAVE INVESTIGATED ITS VALUE.

There never was an essay read before any Medical Society on Raw Food Extracts, except on Murdock's Liquid Food, and counterfeit manufacturers of Extracts have published many of our essays to show the value of their counterfeits.

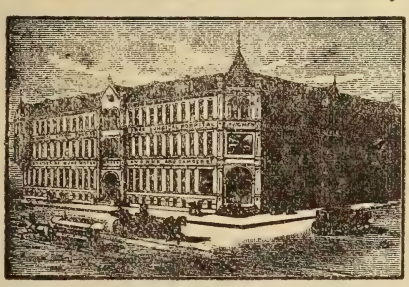
Send for Essay and DISCUSSION before the British Medical Association at Brighton, England, 1886 (Essay), by the Vice-President of the American Medical Association, and others, on the value of MURDOCK'S LIQUID FOOD over all Foods and Extracts known, it being the ONLY Raw Condensed Food free from insoluble matter.

Also essay read before the American Medical Association at Richmond, Va., and Washington, D. C.

Its value was recognized by the profession from results obtained in the Free Hospitals that have been established and supported by our Mr. A. L. Murdock during the last four years.

They now equal

140 FREE BEDS,



And contain 38,000 feet of floor.

Our Liquid Food can be retained by the weakest stomach. Four tablespoonfuls daily will make eight per cent. new blood weekly. When used for infants, never change their food, but add five or more drops of Liquid Food at each feeding, and their lost or needed vitality will be restored in less than thirty days.

Send for the Report of the Chairman of the Section of Obstetrics of the American Institute of Homœopathy, read at Saratoga at the annual meeting of 1886.

Circulars were sent by him to all the Physicians in the United States, asking what their experience was with Murdock's Liquid Food in its use for infants under, as well as over, one year old.

Then what results, with all the different Milk preparations, Grain Foods, Peptonoid Foods, and Beef Extracts, compared with MURDOCK'S LIQUID FOOD.

The returns show that it is the Standard Food and Extract, as the percentage of lives restored was the largest when used.

We extract from the report. After calling attention to the fact that one-quarter of the homœopathic profession are accustomed frequently to prescribe this food for children less than a year old, as well as over, he remarks:

"It is singularly adapted to scrofulous, syphilitic, and tubercular constitutions, its life-restoring power manifesting itself in each with a relative clearness and power corresponding to the order of enumeration. For fair-haired children who are inclined to grow fleshy it is more symptomatically recommended, while Duncan's *acid* babies find it particularly useful. Accordingly, it is chiefly employed for marasmus and anæmic conditions resulting either from non-assimilation of food, or from smple summer complaints. Should a child vomit all milk food and suffer synchronously with diarrhœa or dysentery, the demand for this food is emphatic and unmistakable; also in general irritability of the stomach, particularly if there be sour-smelling diarrhœa, the food passing through undigested. For the prematurely born it stands pre-eminent. For those 'weak and debilitated from any cause, Murdock's Food is probably the best in the world.' Should any indication of cerebral hyperæmia appear, the quantity of food must be diminished; so, too, if after its protracted use vomiting and diarrhœa ensue, the child has been overfed. Should the taste or odor of any given bottle chance to be disagreeable, add water until they disappear, and let the purchaser congratulate himself upon getting more nutriment than he paid for. When given in combination with milk in cases of indigestion, the quantity of milk should be diminished until all curds disappear from the stool, the quantity of Food, of course, being proportionately increased."

The Surgical Staff at MURDOCK'S FREE HOSPITAL FOR WOMEN are in daily attendance, except Saturdays, to examine patients and assign beds.

EVERY BED FREE.

Our Free Surgical Hospital for Women, located on Huntington avenue, above West Chester park, contains fifty (50) beds, in charge of a staff of five surgeons, members of the Massachusetts Medical Society.

Our Free Surgical Hospital for Women, located on Gainsborough street, corner of Huntington avenue, contains 50 beds, in charge of a staff of five surgeons. members of the Massachusetts Homœopathic Medical Society.

Our Free Home for Homeless Boys contains 40 beds, and is located at 11 to 21 Causeway street. Many of these boys suffer from Scrofula, Eczema, and other skin diseases, which yield quickly by the use of our Liquid Food.

From the fact that no two beeves or sheep are alike, is the reason of our different brands being different in flavor.

All brands are made by the same formula. The letter represents the day of make, and the figure the tank.

If richer, it is stronger in smell and flavor, and will bear a greater reduction. It cannot be reduced so low but it wil be superior to all other preparations in treating chronic cases.

If you cannot obtain Murdock's Liquid Food from your druggist, we deliver, free of express, 12 oz. for $1. Any physician that has not used our Liquid Food, we will deliver free to the Boston express 12 oz.

MURDOCK'S LIQUID FOOD CO.,

BOSTON

CELERINA

NERVE-TONIC, STIMULANT AND ANTISPASMODIC.

FORMULA.—Every Fluid-Drachm represents FIVE grains EACH—Celery, Coca, Kola, Viburnum and Aromatics.

INDICATIONS.—Impotency, Spermatorrhœa, Loss of Nerve-Power (so usual with Lawyers, Preachers, Writers and Business Men), Nervous Headache, Neuralgia, Paralysis, Dysmenorrhea, Hysteria, Opium-Habit, Inebriety, Prostatitis, Dyspepsia, and ALL LANGUID or DEBILITATED conditions of the System.—*Indispensable to restore a patient after alcoholic excess.*

DOSE.—One or two teaspoonfuls three or more times a day, as directed by the Physician.

ALETRIS CORDIAL

UTERINE TONIC AND RESTORATIVE.

PREPARED FROM THE ALETRIS FARINOSA OR TRUE UNICORN.

INDICATIONS.—Amenorrhea, Dysmenorrhea, Leucorrhea, Prolapsus Uteri, Sterility, to PREVENT Miscarriage, Etc.

DOSE.—One teaspoonful three or four times a day.

Unrivaled as a Uterine Tonic in Irregular, Painful, Suppressed and Excessive Menstruation,

IT RESTORES NORMAL ACTION TO THE UTERUS, AND IMPARTS VIGOR TO THE ENTIRE UTERINE SYSTEM.

☞ Where Women have aborted during previous Pregnancies, or in any case where abortion is feared, the Aletris Cordial is indicated, and should be continuously administered during entire gestation.

ACID MANNATE

A MILD, SAFE AND PLEASANT APERIENT.

Prepared from Manna, Purified Cathartic Acid, and Fruit Juices.

INDICATIONS.—Constipation, Biliousness, Congestions, Etc. **INDISPENSABLE AS AN APERIENT FOR WOMEN DURING PREGNANCY.** In teaspoonful doses, 3 times a day, it favors the SECRETION and EXCRETION of bile, and gradually removes the congested and torpid states of the liver, and keeps the bowels in a regular and soluble condition.

DOSE.—ONE or MORE teaspoonfuls as directed by the Physician.

S. H. KENNEDY'S
CONCENTRATED EXTRACT OF
PINUS CANADENSIS

DARK A NON-ALCOHOLIC LIQUID. **WHITE**

A MOST VALUABLE NON-IRRITATING MUCOUS ASTRINGENT.

INDICATIONS.—Albuminuria, Diarrhea, Dysentery, Night-Sweats, Hemorrhages, Profuse Expectoration, Catarrh, Sore Throat, Leucorrhea, and other Vaginal Diseases, Piles, Sores, Ulcers, Burns, Scalds, Gonorrhea, Gleet, Etc.

When Used as an Injection, to Avoid Staining of Linen, the WHITE Pinus should be Used.

Recommended by DR. J. MARION SIMS, and other Prominent Physicians.

RIO CHEMICAL CO., ST. LOUIS: LONDON: PARIS.

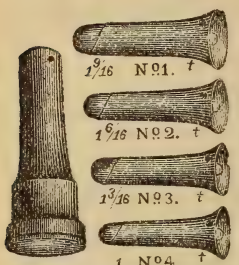
STAUFER'S
HARD RUBBER SPECULUMS GUARANTEED.



Prices, Single, $2.50
Series encased, 12.00

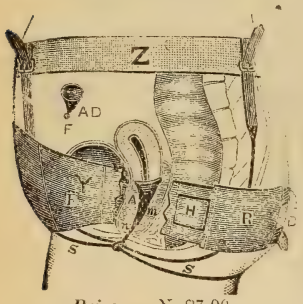
The engraving shows the shape, conductor and case so complete, that scarcely any description is necessary. For compactness there is but one conductor stem, on which each size of bulb screws. Speculums and case are all of the best quality hard rubber, and do not break from ordinary falling. Dental red enamelled inside. The mouth is polished very smooth, and shaped so that the cervix can be brought in entirely by rotation. And when brought in can be rotated to bring into view all the parts. The vaginal portion of the uterus can be seen as clearly as if located externally. When obtained, single, No. 2, is the most useful, since it reveals fully the point of the cervix in almost all multipara, and freely enters, when the position is correct, in many nullipara.

Guarantee.—One or two speculums are guaranteed; thus when returned sound and in the original wooden boxes, within six months of purchase, the money will be refunded without any deduction.

Plates.—The *First* contains 16 engravings and groups of engravings, illustrating the uterine examining instruments. *Second* contains 17 engravings and groups of engravings, illustrating the uterine replacing and supporting instruments.

Catalogue.—The catalogue comprises over 150 sizes and styles of uterine examining and supporting instruments, of which the hard rubber parts are exchanged and interchanged at cost, without limit of time. It also contains full directions and explanations for the use of this series of hard rubber gynecological instruments; together with common information collected through many years to simplify this line of treatment.

STAUFER'S
SPRING STEM UTERINE SUPPORTERS.
GUARANTEED.



Price, on Y, $7.00
" " Z, 6.00

The engraving shows the Spring Stem Cup, which consists of over a dozen sizes. The series contains Spring Stem Balls, Spring Stem Levers, for Anteversions and Retroversions. also Spring Stem Cup with posterior projections, all of assorted sizes.

Explanation.—The stem is screwed on cup A, and when unscrewed, the spring is put in tube *m*, or taken out when it needs cleaning. Thus the coil spring lays between the cup and base *n*. When there is pressure from above, or below, or both, the spring is compressed and again stretches out at the first opportunity. The movement of the base stem *n*, is governed by a slot and pin through tube *m*.

A D.—Represents the cup transformed into a self-sustaining cup, virtually an instrument of double capacity. In most cases after the uterus is held in "health line" for a time by external support, contraction of the walls of the vagina takes place, and it is sufficient at night or until forced down next day by bodily exertion, against which the stem and bandage guards if applied in time.

Belt Y.—The manner in which belt Y, sets on the abdomen is shown in above engraving. The widest or lifting part is in front. Over each hip as seen at H, are two elastics, and on large belts three. It closes on the back by buckling at B. It is of fine sateen outside, fine lining inside, and a slight stiffening between, and stayed with soft whalebones. Accurate hip measure is to be taken over a thin undergarment; since it needs to fit with a space of one or two inches apart on the back, for the buckle straps to draw. The perineal attachments are short and buckle at F and R.

Belt Z.—This is an elastic waist strap and carries any supporter of this series. Yet the common difficulty presents itself, where long and slender attachments are used, that they do not govern the internal part so efficiently as on the low grasping abdominal supporter Y.

The Series.—This series of imstruments has been invented as cases presented themselves, requiring different styles and sizes of instruments, without change of proprietor, until it has reached its present efficiency.

Guarantee.—The money lost by purchasing uterine supporters, unscientifically constructed, of irritating material, or limited in deficiency of sizes, and in consequence loss of families in practice, has set a large portion of the medical profession against the mechanical support of the uterus. By these conditions the risk of the first purchase by a physician of a stem and bandage supporter of this series is obviated. After the first purchase the instruments are supposed to be known, yet the guarantee is extended by special contract in doubtful cases.

Refunding.—On return of the hard rubber part or parts within six months of purchase, Five Dollars of the purchase money will be refunded. The belt remains with the patient as an abdominal supporter and only risk.

The above Guarantee and Refunding is secured when the Instrnments are obtained through this Office. Any other Instrument of STAUFER'S SERIES is also obtained through this Office at Catalogue Prices, and Catalogue free, on application.

BUFFALO LITHIA WATER,

FOR GOUTY, RHEUMATIC, AND RENAL AFFECTIONS.

ROBERTS BARTHOLOW, M. A., M. D., LL. D., Prof. of Materia Medica and General Therapeutics in the Jefferson Medical College of Philadelphia. See his "Materia Medica and Therapeutics."

"Buffalo Lithia Spring of Virginia contains well-defined traces of Lithia, and is Alkaline. This has been used with great advantage in Gouty, Rheumatic, and Renal Affections." * * * * * * * * * "There is little doubt that the continuous use of Alkaline Waters for a long period will cause the solution of Uric Acid Renal Calculi. For this purpose those Alkaline Waters rich in POTASSA are preferable."

This water has a large percentage of the CARBONATE OF POTASSA, making it rich in valuable Alkali.

Dr. Wm. A Hammond, of New York, Surgeon-General U. S. Army (retired), Professor of Diseases of the Mind and Nervous System in the University of New York, etc.

"I have for some time made use of the Buffalo Lithia Water in cases of affections of the Nervous System complicated with Bright's Disease of the Kidneys, or with a Gouty Diathesis. The results have been eminently satisfactory. Lithia has for many years been a favorite remedy with me in like cases, but the Buffalo Water certainly acts better than any extemporaneous solution of the Lithia Salts, and is, moreover, better borne by the stomach. I also often prescribe it in those cases of Cerebral Hyperæmia, resulting from over mental work—in which the condition called Nervous Dyspepsia exists—and generallly with marked benefit."

Dr. Robert Battey, of Georgia, Suggester of Battey's Operation, Member of the American Medical Association, etc.

"I would state that I have been using the Buffalo Lithia Water, No. 2, in my practice for three years past, in cases of Chronic Inflammation of the Bladder, whether induced by Stone, by Enlarged Prostate in the aged, or by Neglected Gonorrhœa, and have secured excellent results, which encourages me to prescribe it for the future."

Dr. Hunter McGuire, Richmond, Virginia, late Professor of Surgery, Medical College of Virginia.

"Buffalo Lithia Water, Spring No. 2, as an Alkaline Diuretic, is invaluable. In Uric Acid Gravel, and, indeed, in diseases generally dependent upon a Uric Acid Diathesis, it is a remedy of extraordinary potency. I have prescribed it in cases of Rheumatic Gout, which had resisted the ordinary remedies, with wonderfully good results. I have used it also in my own case, being a great sufferer from this malady, and have derived more benefit from it than from any other remedy."

Dr. Alfred L. Loomis, of New York, Professor of Institutes and Practice of Medicine, Medical Department University of New York.

"For the past four years I have used the Buffalo Lithia Water in the treatment of Chronic Interstitial Nephritis occurring in Gouty and Rheumatic subjects, with the most marked benefit. In all Gouty and Rheumatic Affections I regard it as highly efficacious."

Dr. Harvey L. Byrd, of Baltimore, President and Professor of Obstetrics and Diseases of Women and Children, in the Baltimore Medical College, formerly Professor of Practical Medicine, etc.

"I have witnessed the best results from the action of the Buffalo Lithia Water, Spring No. 2, in Chronic Gout, Rheumatic Gout, Rheumatism, Gravel, and Stone in the Bladder, and I do not hesitate to express the opinion that in all diseases depending upon or having their origin in Uric Acid Diathesis, it is unsurpassed, if, indeed, it is equaled by any water thus far known to the profession.

"It has an ascertained value in Bright's Disease. A knowledge of its action in that disease thus far would seem to warrant the belief that it would, in many instances, at least in its early stages, arrest it entirely; and in its more advanced stages prove a decided comfort and palliative."

Water, in cases of one dozen half gallon bottles, $5.00 per case, at the Springs. Testimonials sent free on application. The Virginia Buffalo Lithia Springs Company have no longer control of this water. To get it **FRESH**, order directly of or from parties who deal directly with

THOMAS F. GOODE, Prop. Buffalo Lithia Springs, Va.

Smithsonian Institute

New Medicaments for Bronchitis and other Respiratory Affections.

CHEKEN.
(Myrtus Chekan.)

THIS PLANT, indigenous to Chili, was introduced to the profession by Dr. Murrell, the famous English therapeutist and collaborator of Ringer. Dr. Murrell found Cheken to be of great value in chronic cough, especially in the "winter cough" of elderly people.

An extensive trial of this remedy has not only confirmed Dr. Murrell's observations, but has widened the range of the therapeutic application of Cheken so that at the present time it is looked upon, on account of its alterative and demulcent properties, as an indispensable addition to "cough mixtures," particularly in those intractable cases of long standing which have assumed a subacute or chronic course. The dose of the fluid extract which we manufacture is from 1 to 2 fluidrachms.

TEREBENE.

TO DR. MURRELL the profession is indebted for the introduction of another remedy which seems to be almost a specific in winter cough or chronic bronchitis, than which there are few more annoying maladies. Terebene facilitates expectoration, relieves the cough and shortness of breath, and also the acidity and flatulency which so often accompany bronchitis. Dr. Murrell, in *British Med. Journal*, Dec. 12th, 1885, states that he has employed Terebene in 114 cases of winter cough, with the most gratifying results.

We furnish *Terebene Pure; Terebene Inhalant* after Murrell's formula, and *Soluble Elastic Capsules Terebene*, each containing 10 minims.

YERBA SANTA.
(Eriodictyon Californicum.)

YERBA SANTA is a demulcent expectorant in harassing cough. Both in hospital and private practice this remedy has been subjected to a thorough trial, and the reports of its use are unanimous in according it a high place among remedial agents in the treatment of the distressing cough accompanying inflammatory affections of the respiratory mucous membrane. Its action has been likened to the combined action of ipecac and balsam of Peru, but it possesses, in addition, through its resinous principles, an action which is wanting in these valuable drugs in irritative bronchitis.

LIPPIA MEXICANA.

IN ITS native habitat this remedy was long known to possess medicinal virtue in the treatment of coughs. Its popular use led to a scientific investigation of its claims which has resulted in its general introduction to the medical profession, and a clinical test of its merits by physicians has confirmed the popular opinion of its value. Alone or in combination with other remedies, such as Yerba Santa, Cheken, etc., it has been found most serviceable in controlling cough.

Working Bulletins and Circulars fully descriptive of above remedies, together with reprints of Dr. Murrell's articles on winter cough, will be mailed on application.

BROMIDIA

THE HYPNOTIC.

FORMULA.—
Every Fluid drachm contains 15 grains EACH of pure Chloral Hydrat. and purified Brom. Pot., and one-eighth grain EACH, of gen. imp. ext. Cannabis Ind. and Hyoscyam.

Dose.—One-half to one fluid drachm in WATER or SYRUP every hour until sleep is produced.

Indications.—
Sleeplessness, Nervousness, Neuralgia, Headache, Convulsions, Colic, Mania, Epilepsy, Irritability, etc. In the restlessness and delirium of fevers, it is absolutely invaluable.

IT DOES NOT LOCK UP THE SECRETIONS.

PAPINE

THE ANODYNE.

Papine is the Anodyne or pain-relieving principle of Opium, the Narcotic and Convulsive elements being eliminated. It has less tendency to cause Nausea, Vomiting, Constipation, etc.

Indications.—
Same as Opium or Morphia.

Dose.—(ONE FLUID DRACHM)—represents the Anodyne principle of one-eighth grain of Morphia.

IODIA

THE ALTERATIVE AND UTERINE TONIC.

FORMULA.—
Iodia is a combination of Active Principles obtained from the Green Roots of STILLINGIA, HELONIAS, SAXIFRAGA, Menispermum, and Aromatics. Each fluid drachm also contains five grains Iod. POTAS. and three grains PHOS. IRON.

Dose.—One or two fluid drachms (more or less, as indicated,) three times a day, before meals.

Indications.—
Syphilitic, Scrofulous and Cutaneous Diseases, Dysmenorrhœa, Menorrhagia, Leucorrhœa, Amenorrhœa, Impaired Vitality, Habitual Abortions, and General Uterine Debility.

SESSIONS OF 1887-88.

The REGULAR SESSION begins on Wednesday, September 21, 1887, and ends about the middle of March, 1888. During this Session, in addition to the regular didactic lectures, two or three hours are daily allotted to clinical instruction. Attendance upon at least two regular courses of lectures is required for graduation.

The SPRING SESSION consists of recitations, clinical lectures and exercises, and didactic lectures on special subjects. This Session begins about the middle of March and continues until the middle of June. During this Session, daily recitations in all the departments are held by a corps of Examiners appointed by the Faculty.

The CARNEGIE LABORATORY is open during the collegiate year, for instruction in microscopical examinations of urine, practical demonstrations in medical and surgical pathology, and lessons in normal histology and pathology, including bacteriology.

For the annual Circular and Catalogue, giving requirements for graduation and other information, address Prof. AUSTIN FLINT, Secretary, Bellevue Hospital Medical College, foot of East 26th Street, New York City.

30,000 PHYSICIANS
NOW PRESCRIBE

HYDROLEINE

(HYDRATED OIL,)

For Consumption and Wasting Diseases. It Produces Immediate Increase in Flesh and Weight.

FORMULA.

{Each Dose of Two Teaspoonfuls, equal to 120 Drops, contains:

Pure Cod Liver Oil	80 m. (drops)	Soda	½ Grain.
Distilled Water	35 "	Boric Acid	½ "
Soluble Pancreatin	5 Grains.	Hyocholic Acid	⅒ "

DOSE:

Two teaspoonfuls alone, or with twice the quantity of water, to be taken thrice daily after meals.

Hydroleine (Hydrated Oil) is not a simple alkaline emulsion of oleum morrhua, but a hydro-pancreated preparation containing acids and a medicum of soda. Pancreatin is the digestive principle of fatty foods, and, in the soluble form here used, completely saponifies the oleaginous material so necessary to the reparative process in all wasting diseases.

Lautenbach's researches on the function of the liver would show the beautiful adjustment of therapeutics in preparation of Hydroleine, furnishing, as it does, the acid and soda necessary to prevent self-poisoning by reabsorption of morbid tubercular detritus and purulent matters into the general circulation.

Each bottle in nutritive value exceeds ten times the same bulk of cod liver oil. It is economical in use and certain in result.

Sold at all Drug Stores at $1.00 per Bottle.

The principles upon which this discovery is based have been described in a treatise on "The Digestion and Assimilation of Fats in the Human Body," by H. C. BARTLETT, Ph. D., F. C. S., and the experiments which were made, together with cases illustrating the effect of Hydrated Oil in practice, are concisely stated in a Treatise on "Consumption and Wasting Diseases," by G. OVEREND DREWRY, M. D.

Copies of these Works sent free on Application.

WM. F. KIDDER & CO., 83 John Street, New York.

Agents for U. S.

Also exclusive Agents for SVAPNIA, or Bigelow's purified Opium, in SCALES and HALF-GRAIN GRANULES.

TAMAR INDIEN GRILLON.

A laxative, refreshing, and medicated Fruit Lozenge, very agreeable to take, and never causing irritation. Its physiological action assures the immediate relief and effectual cure of

CONSTIPATION,

HÆMORRHOIDS, BILE,
CEREBRAL CONGESTION, HEADACHE,
LOSS OF APPETITE,
INTESTINAL OBSTRUCTIONS, ETC.,

by augmenting the peristaltic movement of the intestine without producing undue secretion of the liquids. Unlike pills and the usual purgatives, it does not predispose to intestinal sluggishness, and the same dose always produces the same effect, that is to say, never needs increasing.

It is recommended by the most eminent physicians of Paris, notably Drs. BELIN and TARDIEU, who prescribe it constantly for the above complaints, and with most marked success.

Paris: E. GRILLON, 27 Rue Rambuteau.

FREDERICK STEARNS & CO.,

Mnf'g Pharmacists, DETROIT, MICH., U. S. A.

HORSFORD'S ACID PHOSPHATE,

(Liquid.)

Prepared according to the directions of Prof. E. N. HORSFORD, of Cambridge, Mass.

FORMULA: Its analysis shows that each fluid drachm contains 5 1-2 grains free Phosphoric Acid (P_2O_5), **and nearly 4 grains Phosphate of Lime, Magnesia, Iron, and Potash.**

Among the numerous forms of Phosphorus in combination, Horsford's Acid Phosphate seems best adapted as a medicinal remedy, and it has been in use by the medical fraternity of the United States and elsewhere for several years, with the most satisfactory results, in

Dyspepsia, Indigestion,

Mental and Physical Exhaustion,

Insomnia, Nervousness,

Diminished Vitality, etc.

Especially serviceable as a menstruum for the administration of such alkaloids as strychnia, morphia, quinia, and other organic bases which are usually exhibited in acid combination.

It Makes a Refreshing and Nutritious Drink in Fevers,

and with water and sugar a delicious beverage.

We have received a very large number of letters from physicians of the highest standing, in all parts of the country, relating their experience with the Acid Phosphate, and speaking of it in high terms of commendation.

Physicians who have not used Horsford's Acid Phosphate, and who wish to test it, will be furnished a sample on application, without expense except express charges.

BEWARE OF IMITATIONS.

Friedrichshall.

THE WELL-KNOWN APERIENT MINERAL WATER.

IMPORTANT NOTICE.

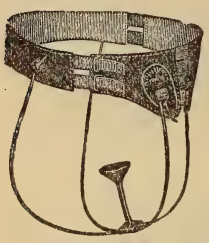
By reason of an improved method of caption, by which dilution is avoided, FRIEDRICHSHALL WATER will be found now to be of considerably greater strength *and* efficacy *than heretofore.*

The ordinary dose is a large wineglassful (4 ounces). Most efficacious when taken fasting and mixed with an equal quantity of hot water.

"I know nothing at all equal to Friedrichs all. The LONGER it is taken, the SMALLER is the quantity necessary to effect the purpose."

Sir HENRY THOMPSON, F.R.C.S., London

OF ALL DRUGGISTS AND MINERAL WATER DEALERS.



PHYSICIANS!

YOUR ATTENTION IS INVITED

—TO THE—

DR. McINTOSH NATURAL UTERINE SUPPORTER.

THIS INSTRUMENT MEETS THE WANTS OF THE PROFESSION MORE PERFECTLY than any other Uterine Supporter ever made. This is proven by the fact that during the past fifteen years more have been sold than of all other Supporters combined. *It never fails to give perfect satisfaction, even in the most difficult cases*, where any instrument can be used.

The **ABDOMINAL PORTION** is a broad morocco leather belt with elastic straps to buckle around the hips, with concave front, so shaped as to hold up the abdomen.

The **UTERINE PORTION** is a cup and stem made of highly-polished hard rubber, very light and durable, shaped to fit the neck of the womb, with openings for the secretions to pass out, as shown by the cuts. Cups are made with extended lips to correct flexions and versions of the womb.

The cup and stem is suspended from the belt by two soft elastic rubber tubes, which are fastened to the front of the belt by simple loops, pass down and through the stem of the cup and up to the back of the belt. These soft rubber tubes being elastic adapt themselves to all the varying positions of the body and perform the service of the ligaments of the womb.

Anteversion. Prolapsus. Retroversion

The instrument is very comfortable to the patient, can be removed or replaced by her at will, can be worn at all times, will not interfere with nature's necessities, will not corrode, and is lighter than metal. It will answer for all cases of Anteversion, Retroversion, or Prolapsus of the Womb. It is used by our leading physicians with never-failing success.

OUR REDUCED PRICE TO PHYSICIANS IS $5.00 EACH.

Instruments sent by mail at our risk on receipt of price; or we can send by express, C. O. D., with express charge for returning money added.

CAUTION.

Owing to the great success of our Supporter, several worthless imitations have been made which are often substituted for our instruments, to the detriment of the patient and the disappointment of the physician. To protect our patrons from imposture, we stamp each pad of the Abdominal belt in gilt letters, "Dr. McIntosh N. U. Supporter, Chicago, Ill." the base of each cup is stamped "Dr. McIntosh N. U. S. Co., Chicago, Ill., U. S. A."

The box in which the instrument is put up contains directions for the application of the instrument pasted inside the cover, having the fac simile signature of Dr. L. D. McIntosh.

For further information in regard to the instrument, address

DR. McINTOSH NATURAL UTERINE SUPPORTER CO.,

300 AND 302 DEARBORN STREET, CHICAGO, ILL.

Our valuable Pamphlet on "Displacement of the Womb," giving a more complete description of the Instrument, will be sent you free on application.

LEVIS'S METALLIC SPLINTS.

CELERINA

NERVE-TONIC, STIMULANT AND ANTISPASMODIC.

FORMULA.—Every Fluid-Drachm represents FIVE grains EACH—Celery, Coca, Kola, Viburnum and Aromatics.

INDICATIONS.—Impotency, Spermatorrhea, Loss of Nerve-Power (so usual with Lawyers, Preachers, Writers and Business Men), Nervous Headache, Neuralgia, Paralysis, Dysmenorrhea, Hysteria, Opium-Habit, Inebriety, Prostatitis, Dyspepsia, and ALL LANGUID or DEBILITATED conditions of the System.—*Indispensable to restore a patient after alcoholic excess.*

DOSE.—One or two teaspoonfuls three or more times a day, as directed by the Physician.

ALETRIS CORDIAL

UTERINE TONIC AND RESTORATIVE.

PREPARED FROM THE ALETRIS FARINOSA OR TRUE UNICORN.

INDICATIONS.—Amenorrhea, Dysmenorrhea, Leucorrhea, Prolapsus Uteri, Sterility, to PREVENT Miscarriage, Etc.

DOSE.—One teaspoonful three or four times a day.

Unrivaled as a Uterine Tonic in Irregular, Painful, Suppressed and Excessive Menstruation, IT RESTORES NORMAL ACTION TO THE UTERUS, AND IMPARTS VIGOR TO THE ENTIRE UTERINE SYSTEM.

☞ Where Women have aborted during previous Pregnancies, or in any case where abortion is feared, the Aletris Cordial is indicated, and should be continuously administered during entire gestation.

ACID MANNATE

A MILD, SAFE AND PLEASANT APERIENT.

Prepared from Manna, Purified Cathartic Acid, and Fruit Juices.

INDICATIONS.—Constipation, Biliousness, Congestions, Etc. **INDISPENSABLE AS AN APERIENT FOR WOMEN DURING PREGNANCY.** In teaspoonful doses, 3 times a day, it favors the SECRETION and EXCRETION of bile, and gradually removes the congested and torpid states of the liver, and keeps the bowels in a regular and soluble condition.

DOSE.—ONE or MORE teaspoonfuls as directed by the Physician.

S. H. KENNEDY'S
CONCENTRATED EXTRACT OF
PINUS CANADENSIS
DARK — A NON-ALCOHOLIC LIQUID. — WHITE

A MOST VALUABLE NON-IRRITATING MUCOUS ASTRINGENT.

INDICATIONS.—Albuminuria, Diarrhea, Dysentery, Night-Sweats, Hemorrhages, Profuse Expectoration, Catarrh, Sore Throat, Leucorrhea, and other Vaginal Diseases, Piles, Sores, Ulcers, Burns, Scalds, Gonorrhea, Gleet, Etc.

When Used as an Injection, to Avoid Staining of Linen, the WHITE Pinus should be Used.

Recommended by DR. J. MARION SIMS, and other Prominent Physicians.

RIO CHEMICAL CO., ST. LOUIS: LONDON: PARIS.

Samples FREE to any Physician who will pay Express charges, and mention this Journal.

PACKER'S TAR SOAP.

ABSOLUTELY PURE AND NON-IRRITATING.

MADE FROM VEGETABLE OILS, PINE TAR, AND GLYCERINE.

A perfect soap should be made from pure and sweet oils, and clean, well-washed alkalies. Such is **Packer's Tar Soap.** It is combined with distilled **pine-tar,** and hence has had the most gratifying effects in the treatment of Dermatic Diseases, as chafing, eczema, erythema, seborrhea, herpes, etc.

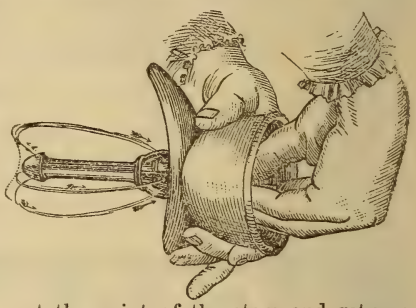
As a Disinfectant, Antiseptic, and Detergent, it is admirably adapted for use in ulcers, foul wounds, fetid discharges, bed sores, and similar conditions. For the bath, toilet, and shampoo, it is unrivaled. 25 cents per cake, from Druggists.

It is supplied to Hospitals, Asylums, and Physicians, in one pound bars, at reasonable prices.

P. O. Box 2985. THE PACKER MFG. CO., 100 Fulton St., New York.

"PALLAS" SYRINGE.

VAGINAL AND RECTAL.



A MOST PERFECT and simply constructed Syringe for medicating and irrigating the vaginal cavity. The novel bulb of this Syringe, when doubled upon itself, as shown in the cut, will cause no fluid to be left, as is so apt to happen with the ordinary bulbs, and when filled will contain just enough fluid for the expansion of the vaginal folds. The hard rubber labial shield, with its plug, when firmly pressed against the labia, will both prevent spilling and soiling of linen, and the fluid can therefore be kept in circulation and in contact with the parts by repeating the pumping motion of the bulb. It will also be noticed that the fluid escapes as a spray from the large holes at the point of the stem and returns through the holes at the root of same, which is provided with hard rubber screen-bars, preventing the folds from interfering with the rapid return of the fluid into the bulb. In filling the bulb, a couple of turns will unscrew it. In handsome case, satin lined. Retail price, $3.75. To physicians, $3.00.

NOTABLE POINTS

RELATIVE TO

Lactated Food.

IT IS A COOKED FOOD.

By the use of high steam heat the gluten flour used is partially torrefied. This is done while the flour is dry, and during the process it is in constant motion, which insures perfect cooking to every particle.

Routh says, (Infant Feeding, page 380) that by this process, "the starch granules are rendered more separable, the gluten is reduced to a more porous condition, readily acted on by the gastric juice, and as an aliment, therefore, is more nutritious and digestible."

IT IS A PREDIGESTED FOOD.

"You state that it is self-digestive as regards the conversion of insoluble starch into soluble dextrine and maltose. My experiments with it lead me to hold that this is correct." J. MILNER FOTHERGILL.

IT CONTAINS NO UNCHANGED STARCH.

By the peculiar process of manufacture, every particle of the gluten flour is subjected to the action of the malto-diastase, and by it all the starch contained is transformed into soluble carbo-hydrates.

Professor CARL SEILER says, "Examination has proved that all the starch granules are converted, as shown by their behavior to polarized light."

NO CANE SUGAR USED.

The basis of Lactated Food is the pure sugar of milk made by the improved processes of the American Milk Sugar Co. The great value of this article has been shown conclusively. Cane sugar is not used in the composition or preparation of the Food on account of its liability to cause irritation by reason of the acetic fermentation which it creates in the stomach. Milk sugar never causes this fermentation or irritation.

IT IS NON-IRRITATING.

By reason of the fact that Lactated Food is partially digested in process of Preparation, it is assimilated by the feeblest stomach, and no undigested particles pass into the bowels to irritate, and thus cause troublesome and dangerous bowel disorders.

IT IS HIGHLY NUTRITIOUS.

The nutritive elements of Lactated Food are derived from the three great cereals, Wheat, Barley, and Oats. From the Wheat is taken the pure gluten, the most nourishing substance known for the muscles and tissues; from the Barley, all the soluble albuminoid and extractive matter resulting from the most careful malting; and from the Oat, the strengthening properties for which it is so well known. The result is a food which never disappoints, and under which the feeble child or invalid rapidly rallies.

FOR CHOLERA INFANTUM.

It is the chief reliance of many eminent practitioners, and it is the safest food in summer for all young or delicate children.

Another important consideration is its low price, it being much more economical than other foods. We make four sizes, selling for 25 cents, 50 cents, $1 00, and $2.50. *A dollar can will furnish one hundred and fifty meals for an infant.*

If any physician that has not yet made a trial of the Lactated Food will write us, we will send a package of our regular size, postpaid, without charge, with the understanding that it will be given a careful trial as soon as possible.

We shall use every precaution to maintain the high standard of this Food, and to insure perfect satisfaction to the profession in its use.

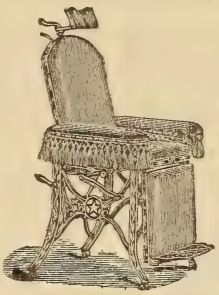
WELLS, RICHARDSON & CO.,

BURLINGTON, VT.

THE CANTON SURGICAL

AND

GYNÆCOLOGICAL CHAIR.



A chair especially constructed for the use of the general practitioner, as well as for the specialist in the treatment of gynæcological cases. For treating diseases of the Eye, Ear, Throat, and Chest, it has no equal. Every chair fully warranted to be first-class.

As a speculum chair it secures ease and comfort to the patient, and at the same time gives the operator such perfect control of all the various changes and positions, that it robs gynæcology of its usual embarrassment and annoyance.

McINTOSH GALVANIC AND FARADIC BATTERY CO.,

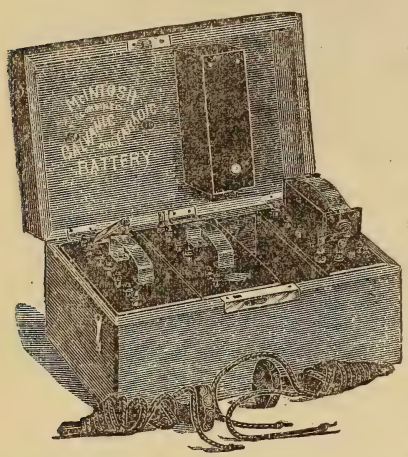
MANUFACTURERS OF THE CELEBRATED

McIntosh Combined Galvanic and Faradic Batteries,

Table, Office, and Family Batteries, Electrodes, Electric Bath Apparatus, Statical Electric Machines, Stereopticons, Solar, Monocular, and Binocular Microscopes.

AND ALL KINDS OF

PHILOSOPHICAL ELECTRICAL APPARATUS.



Schools, Colleges, Physicians, or Hospitals wanting new Apparatus, will do well to favor us with correspondence and obtain estimates. Men of scientific experience have charge of the manufacturing department. We employ the most skillful mechanics, and have the largest facilities in America for manufacturing.

We would call the Special Attention of the Medical Profession to our

Combined Galvanic and Faradic Batteries.

These Batteries are recommended by the Medical Faculty of both America and Europe, and have been adopted by the United States Government for use in Medical Department of the Army and Navy. They are

The First and Only Portable Batteries ever Invented which Give both the Galvanic and Faradic Current,

TWO DISTINCT BATTERIES IN ONE CASE.

No Physician can afford to be without one.

This celebrated Battery is constructed on an improved plan. The zincs and carbons are fastened to hard-rubber plates in sections of six each; this manner of connecting brings the plates nearer together than in any other battery, thus giving less internal resistance. The cells are composed of one piece of hard rubber, and are made in sections of six each with a drip-cup, thus one section can be handled, emptied, and cleaned, as easily and quickly as one cell. The drip-cup is to receive the elements when the battery is not in use. The fluid cannot spill or run between the cells, and there is no danger of breaking, as with glass cells. This is the only battery in which the zinc and carbon plates can be kept clean and always in order by simply rinsing them.

An extra cell (with a zinc and carbon element) is added to the combined batteries, for the purpose of producing the Faradic current. This cell gives as much force as is ever needed, and avoids exhausting the current from the Galvanic cells. All the metal work is finely nickel-plated and highly polished, and every part is put together so that it can be easily replaced by the operator. Our batteries weigh less, occupy less space, give a current of greater intensity and quantity, than any other battery manufactured.

Our illustrated Catalogue, a handsome book giving full description of all our goods, and other valuable information, sent free on application.

McINTOSH GALVANIC AND FARADIC BATTERY CO.
300 & 302 DEARBORN STREET, CHICAGO, ILL.

WHEELER'S TISSUE PHOSPHATES

Bone-Calcium Phosphate $Ca_3 2P.O._4$, Sodium Phosphate $Na_2 H.P.O._4$, Ferrous Phosphate $Fe_3 2P.O._4$, Trihydrogen Phosphate $H_3 P.O._4$.

WHEELER'S COMPOUND ELIXIR OF PHOSPHATES AND CALISAYA. A Nerve Food and Nutritive Tonic, for the treatment of Consumption, Bronchitis, Scrofula, and all forms of Nervous Debility.

The Lactophosphates prepared from the formula of Prof. Dusart, of the University of Paris. Combines with a superior Pemartin Sherry Wine and Aromatics in an agreeable cordial easily assimilable and acceptable to the most irritable stomachs.

Phosphorus, the oxidizing element of the Nerve Centres for the generation of Nerve Force; Lime Phosphate, an agent of Cell Development and Nutrition; Soda Phosphate, an excitant of Functional Activity of Liver and Pancreas, and Corrective of Acid Fermentation in the Alimentary Canal; Iron, the Oxidizing Constituent of the Blood for the Generation of Heat and Motion; Phosphoric Acid, Tonic in Sexual Debility; Alkaloids of Calisaya, Anti-Malarial and Febrifuge; Extract of Wild Cherry, uniting with tonic power the property of Calming Irritation and Diminishing Nervous Excitement.

THE SUPERIORITY OF THE ELIXIR consists in uniting with the Phosphates the special properties of the Cinchona and Prunus, of Subduing Fever and Allaying Irritation of the Mucous Membrane of the Alimentary Canal, which adapts it to the successful treatment of Stomach Derangements and all diseases of Faulty Nutrition, the outcome of Indigestion. Malassimilation of Food, and *failure of supply* of these essential elements of Nerve Force and Tissue Repair.

The special indication of this combination of Phosphates in Spinal Affections, Caries, Necrosis, Ununited Fractures Marasmus, Poorly Developed Children, Retarded Dentition, Alcohol, Opium, Tobacco Habits, Gestation and Lactation, to promote Development, etc., and as a *physiological restorative* in Sexual Debility, and all used up conditions of the Nervous System, should receive the careful attention of good therapeutists.

There is no strychnia in this preparation, but when indicated, the Liquor Strychniæ of the U. S. Dispensatory may be added, each fluid drachm of the solution to a pound bottle of the Elixir making the 64th of a grain to a half fluid ounce, an ordinary dose, a combination of a wide range of usefulness.

DOSE—For an adult, one tablespoonful three times a day, after eating; from seven to twelve years of age, one dessert-spoonful; from two to seven, one teaspoonful. For infants, from five to twenty drops, according to age.

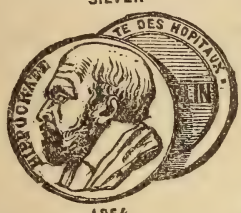
Prepared at the Chemical Laboratory of T. B. WHEELER, M. D., Montreal, D. C.

Put up in pound bottles and sold by all Druggists at One Dollar.

MATHEY-CAYLUS' GLUTEN CAPSULES

OF

PURE COPAIBA AND OTHER MEDICINES.



Adapted and recommended for the cure recent or chronic Gleets, Fluor Albus, etc., etc.

The MATHEY-CAYLUS' CAPSULES, *coated with gluten*, present the most perfect mode for administering Copaiba, Cubebs, Norway Tar, Turpentine, and other remedies, the disagreeable odor and taste of which are often a hindrance to their use. This mode of preparing capsules, which has been approved by the Academy of Medicine, has been recommended in their clinical lectures by eminent Professors in the hospitals of Paris, as well as in those of New York and London.

By the first physicians of the hospitals of Paris, London, and New York.

SPECIAL ADVANTAGES OF MATHEY-CAYLUS' GLUTEN CAPSULES.—Being formed of thin, transparent, and readily assimilated coating, they so cover and disguise the medicine to be given, that it can be taken without disgust, but with ease. In this respect, they differ widely from the gelatine capsules, which have a hard, thick coating, which swells beyond measure, in the stomach, are hard to be swallowed, and which is of great importance, they create disturbance in the digestive functions.

The special advantage of the coating of gluten consists in the fact that, notwithstanding its extra thinness, and although it softens under the action of the gastric juice, it can pass the stomach without breaking, and only in the intestines is the medicinal matter liberated; this accounts for the fact that Mathey-Caylus' Capsules never cause the nausea, eructations, and dyspeptic symptoms, which are complained of by many persons using other preparations.

Finally, their regular ovoid form, which is so favorable to swallowing, their pleasant appearance, which dispels all disgust, and the advantage of being entirely free from taste and smell, recommend the use of these capsules even to the most delicate persons.

Thankful to the Medical Profession for the liberal patronage heretofore bestowed upon us, we hope that they will continue their favors, and we are convinced that they will never have any reason to regret the generous welcome they have given to our preparations.

MATHEY-CAYLUS' CAPSULES are never sold, except in bottles having the following inscription printed in the glass: MATHEY-CAYLUS A PARIS. And each bottle contains 64 capsules, making them the cheapest capsules in the market.

The following different kinds of Mathey-Caylus' Gluten Capsules are now offered:

COPAIBA AND TANNIC ACID,
COPAIBA AND S. N. OF BISMUTH,
COPAIBA AND CATECHU,
COPAIBA AND MAGNESIA,
COPAIBA, CUBEBS AND ALUM,
COPAIBA, CUBEBS AND RHATANY,
COPAIBA AND RHATANY,
COPAIBA AND CITRATE OF IRON,
COPAIBA AND CUBEBS,
COPAIBA PURE,
COPAIBA, CUBEBS AND CARB. OF IRON,
VENICE TURPENTINE, NORWAY TAR, PURIFIED,
CUBEBS AND TURPENTINE,
CUBEBS AND TANNATE OF IRON,
CUBEBS AND ALUM,
CUBEBS PURE,
COPAIBA AND MATICO,
COPAIBA, IRON AND OIL OF SANDAL,
COPAIBA AND OIL OF SANDAL,
COPAIBA, PEPSIN AND BISMUTH,
COPAIBA AND TAR,
COPAIBA, CUBEBS AND OIL OF SANDAL.

TANRET'S PELLETIERINE

For the Treatment of Tape-Worm (Tænia Solium.)

This New Tænifuge, the Active Alkaloid of Pomegranate Bark, has of late come into extensive use in France for the treatment of Tape-Worm (Tænia Solium). The results of numerous experiments with it at the Marine Hospitals of Toulon, St. Mandrier, etc., and in the Hospitals of Paris, St. Antoine, La Charite, Necker, Beaujon, etc., have all been most satisfactory. Doctor Dujardin Beaumetz, Member of the Academy of Medicine, and Prof. Laboulbene, in their report to the Society of Therapeutics, have given it their unqualified approval after the most searching experiments. This preparation is pleasant to administer, and if certain preliminaries are observed success will be insured.

Sold only in Bottles containing one dose.

TANRET'S ERGOTININE.

ALKALOID AND ACTIVE PRINCIPLE OF SPURRED RYE.

This is a well defined Alkaloid that must not be confounded with Ergotine or other extracts; it is given in doses of from ¼ to ½ Milligramme (1-240th to 1-120th of a grain), in all cases where Ergot is indicated, viz.: Flooding, Post-partum Hemorrhages, Metrorrhagia, etc., etc.

It is put up in the following forms:

Syrup Containing ¼ Milligramme to each teaspoonful; DOSE from 1 to 6 teaspoonsfuls per day.

Solution for hypodermic purposes, Containing 1 Milligramme to each cubic Centimeter; DOSE, from 3 to 10 drops.

The Institute of France has awarded one of its Prizes to Mr. Chas. Tanret for the discovery of these Alkaloids.

Tanret's Pelletierine and Ergotinine are only prepared by Mr. Chas. Tanret, Laureate of the Institute of France, 64 Rue du Rempart, Paris.

PAMPHLET ON PELLETIERINE AND ERGOTININE SENT ON APPLICATION.

BOUDAULT'S PEPSINE

The Only Pepsine Used in the Hospitals of Paris for the Last 30 Years.

Unlike the various substitutes which, in most cases, are but unscientific or incompatible compounds, forced upon the Medical Profession as aids to digestion by extensive advertising, but which, when submitted to the proper tests, are found to be useless as digestive agents, Pepsine is constantly gaining in the esteem of the careful practitioner.

Since the introduction of Pepsine by Boudault and Corvisart, in 1854, the original BOUDAULT'S PEPSINE HAS BEEN AT ALL TIMES CONSIDERED THE BEST, as is attested by the awards it has received at the Expositions of 1867, 1868, 1872, 1873, in 1876 at the Centennial Exposition of Philadelphia, and in 1878 at the Paris Exposition.

The most reliable tests, carefully applied, will satisfy every one that BOUDAULT'S PEPSINE HAS A MUCH HIGHER DIGESTIVE POWER than the best Pepsines now before the Profession, and is therefore especially worthy of their attention.

BOUDAULT'S PEPSINE is prepared in the form of Pepsine Acid and Pepsine Neutral. It is sold in bottles of one ounce, with a measure containing exactly five grains; also in bottles of 4, 8, and 16 ounces for dispensing.

BOUDAULT'S WINE OF PEPSINE.

Formula of Dr. Corvisart.

The taste of Pepsine being perfectly disguised in this Wine, it may be recommended to persons who have difficulty in taking Pepsine in the form of powder. This Wine is tested so that a tablespoonful of it is equal in digestive power to ten grains of Boudault's Pepsine in powder. Sold only in 8 oz. Bottles.

Agents for the United States, E. FOUGERA & CO., New York.

New, Beautiful and Valuable Books.

A TEXT-BOOK OF

OPERATIVE SURGERY AND SURGICAL ANATOMY,

By ARTHUR TREHERN NORTON, F. R. C. S., Etc.

BASED ON THE ORIGINAL WORK OF

PROFS. CLAUDE BERNARD and CH. HUETTE.

SECOND EDITION. Illustrated by 88 full-page plates, drawn from nature, engraved on steel, BEAUTIFULLY COLORED, and many wood cuts. London and Philadelphia, 1886. Bound in half Russia, marbled sides and edges. Price (mailed post-paid and registered), $12.50.

A TEXT-BOOK OF

NAKED-EYE ANATOMY,

BEING AN ACCOMPANYING TEXT TO MASSE'S PLATES.

By JAMES CANTLIE, A. M., M. D., etc.

THIRD EDITION. Illustrated with 113 full page plates, engraved on steel and BEAUTIFULLY COLORED after nature. London and Philadelphia, 1886. Bound in half Russia, marbled sides and edges Price (mailed postpaid and registered), $12.50.

The above works are presented in the highest style of the publishing art, and are not less useful than they are beautiful. Mr. Norton explains all the leading and approved operations of surgery with constant reference to the faithfully colored plates, and his instructions are second only to operations on the cadaver.

The "Naked-eye Anatomy" of Dr. Cantlie, with its numerous tinted engravings, illustrates both the position and contrasting hues of the various organs and tissues. The physician who has not frequent opportunities to practice on the dead subject, will find this volume the best substitute he can obtain for practical dissection.

THE SCIENCE AND PRACTICE OF

SURGERY.

By FREDERICK JAMES GANT, F. R. C. S., etc., etc.

THIRD EDITION. Revised and enlarged throughout. With ONE THOUSAND AND NINETY engravings on wood. In two volumes. Vol. I, pp. xxviii, 1087. Vol. II, pp. xxxv, 1183; large octavo; bound in half Russia, marbled sides and edges. London and Philadelphia, 1886. Price (express prepaid), $12.00.

This monumental work is here offered in the finest London edition, on English paper, and bound in the most handsome and durable style. As a treatise on Surgery it stands at the head of the list of those produced by the best school of English Surgeons, clear, complete and practical.

Remit prices with orders to

D. G. BRINTON, M. D., Publisher,

115 South Seventh St., Philadelphia.

Since the introduction—1870—of the substance known as **COSMOLINE** (Unguentum Petrolei) to the College of Pharmacy in Philadelphia, by the late Professor Parrish, who was one of the very first to recognize its merits, it has become very widely known and variously used by the Physicians, Surgeons, and Pharmacists of all schools throughout this country and abroad. Pure Petroleum will not oxidize, but the processes resorted to by many, in order to obtain special products from petroleum, introduce properties that will oxidize in ordinary temperatures, and develop other objections with age. Such products may be used in the arts, but they were decided years ago to be exceedingly irritating and otherwise interfering as surgical dressings or bases for ointments. The Manufacturers of **COSMOLINE** (Unguentum Petrolei) took advantage of the possibility of producing an article which would not only not become rancid, but also one which would be absolutely free from those properties which affected the ordinary residuums and products of the petroleum still. Notwithstanding numerous other petroleum preparations of variable merit and ostensibly for the same purpose, have since been offered, **COSMOLINE** (Unguentum Petrolei) has continued to increase steadily in professional favor. **COSMOLINE** (Unguentum Petrolei) was not recommended to the profession at large until the leading Physicians and Pharmacists of Philadelphia were thoroughly satisfied of its fitness and absolute purity, and since then it has not been changed to meet every speculative fancy, or to compete in price with those preparations of petroleum having some outward resemblance to Cosmoline, but found either deficient in action or positively irritating, owing to chemical agencies used to cheapen the cost of manufacture. It was apparent from its first introduction, that **COSMOLINE** (Unguentum Petrolei) was adapted to a very wide range of uses in Surgery and Pharmacy; and when it was found that its uniformity could invariably be depended upon, it is not surprising that it obtained supremacy over those products which have been varying as commercial experiments, and lacking in all the essential and absolutely pure characteristics needed for a general surgical dressing and base for ointments.

Yours very respectfully,

E. F. HOUGHTON & CO.,

No. 211 South Front St.,

PHILADELPHIA.

FELLOWS'

HYPO-PHOS-PHITES

(SYR: HYPOPHOS: COMP: FELLOWS)

Contains The Essential Elements to the Animal Organization—Potash and Lime;
The Oxydizing Agents—Iron and Manganese;
The Tonics—Quinine and Strychnine;
And the Vitalizing Constituent—Phosphorus,
Combined in the form of a Syrup, with *slight alkaline reaction.*

It Differs in Effect from all others, being pleasant to taste, acceptable to the stomach, and harmless under prolonged use.

It has Sustained a High Reputation in America and England for efficiency in the treatment of Pulmonary Tuberculosis, Chronic Bronchitis, and other affections of the respiratory organs, and is employed also in various nervous and debilitating diseases with success.

Its Curative Properties are largely attributable to Stimulant, Tonic, and Nutritive qualities, whereby the various organic functions are recruited.

In Cases where innervating constitutional treatment is applied, and tonic treatment is desirable, this preparation will be found to act with safety and satisfaction.

Its Action is Prompt; stimulating the appetite and the digestion, it promotes assimilation, and enters directly into the circulation with the food products.

The Prescribed Dose produces a feeling of buoyancy, removing depression or melancholy, and hence is of great value in the treatment of MENTAL AND NERVOUS AFFECTIONS.

From its exerting a double tonic effect and influencing a healthy flow of the secretions, its use is indicated in a wide range of diseases.

Prepared by JAMES I. FELLOWS, Chemist,

48 VESEY STREET, NEW YORK.

Circulars Sent to Physicians on Application.

FOR SALE BY ALL DRUGGISTS.

SUCCUS ALTERANS.

(McDADE).

SUCCUS ALTERANS is a purely vegetable compound of the preserved juices of Stillingia Sylvatica, Lappa Minor, Phytolacca Decandra Smilax Sarsaparilla, and Xanthoxylum Fraxineum, as collected by DR. GEO. W. MCDADE exclusively for ELI LILLY & CO., and endorsed by DR. J. MARION SIMS.

SUCCUS ALTERANS continues to gain favor from its remarkable Alterative and Tonic properties, *eliminating specific poison from the blood*, and *increasing the proportion of red corpuscles in anæmic patients* to a wonderful degree.

SUCCUS ALTERANS in venereal and cutaneous diseases is fast supplanting Mercury, the Iodides and Arsenic; and is a certain remedy for Mercurialization, Iodism, and the dreadful effects often following the use of Arsenic in skin diseases.

SUCCUS ALTERANS is also strongly recommended for its Tonic and Alterative effects in the myriad forms of scrofulous disease, and in all cases where anæmia is a factor. Such patients rapidly develop a good appetite, sleep soundly, and gain flesh rapidly. Many cases are on record where patients increased ten to twenty-five pounds in weight in a few weeks.

SUCCUS ALTERANS may be given for any length of time without injury to the patient.

SUCCUS ALTERANS is now endorsed by leading members of the medical profession, and in use by many hospitals of note.

SUCCUS ALTERANS is put up only in round amber bottles holding sixteen fluid ounces, which is sufficient for from two to six weeks' treatment.

ANY PHYSICIAN who has not received DR. MCDADE'S latest publication, the MONOGRAPHIA SYPHILITICA for JANUARY, 1887, should send their address, mentioning this journal, and we will mail a copy. It contains a paper, illustrated with colored plates, by Dr. D. H. GOODWILLIE, of New York, on the "Sequelæ of Syphilis," reports of cases in practice, and many other valuable papers.

SUCCUS ALTERANS is supplied by reputable wholesale and retail druggists everywhere Agency for Great Britain, etc., JOHN M. RICHARDS, 46 HOLBORN VIADUCT, LONDON E. C.

ELI LILLY & CO., PHARMACEUTICAL CHEMISTS, INDIANAPOLIS, IND., U. S. A.

DUSART'S SYRUP AND WINE OF LACTO-PHOSPHATE OF LIME,

The properties of which are scientifically founded on physiological experiments, and have received the sanction of several years' successful trial by the French and English medical profession, as producing durable reconstituent effects in all cases of *Cachexia* or *Adynamia*, when nutrition has been impaired by acute or chronic complaints.

As an article of diet it acts as general excitant of all the nutritive functions, insures digestion, brings back or increases the appetite, enriches the milk of the mother, and generally improves the vital energies. As a medicament it is chiefly used in convalescence, teething, rickets, and imperfect growth, dyspepsia, various nervous diseases, wounds, fractures, and all complaints of the osseous system.

Dusart's Syrup of Lacto-Phosphate of Lime and Iron is a ferruginous medicament specially invaluable in the above cases, when complicated with anæmia.

Dusart's work on the "Physiological and Therapeutic Action of Phosphate of Lime" will be sent free to any physician on application to Messrs. E. FOUGERA & CO.

PARIS: L. DUSART, 8 Rue Vivienne. NEW YORK: E. FOUGERA & CO., Importing Pharmacists.

CHAPOTEAUT'S MORRHUOL.

Morrhuol contains all the active curative principles of Cod-Liver Oil, except the fatty part. It represents twenty-five times its weight of brown Cod-Liver Oil, and is dispensed in small round capsules containing each twenty centigrammes, thus equal to five grammes of Cod-Liver Oil. The daily dose is of two or three capsules for children, and from three to six for adults, to be taken before the chief meals.

PARIS: P. CHAPOTEAUT, 8 Rue Vivienne. NEW YORK: FOUGERA & CO.

Prof SF Baird C
1445 Mass ave

Concentrated Palatable Nutrients.

PEPTONIZED EXTRACT OF BEEF.

Contains all the nutritive constituents of beef.

The superiority of this preparation over other extracts of beef depends upon:

1. **The large proportion of albuminoids which it contains.**
2. **The fact that its albuminoid constituents are chiefly in the form of peptones, insuring rapid absorption and ready assimilation.**
3. **Its appetizing flavor.**
4. **Its perfect and ready solubility in water.**

The uses of such a preparation are obvious. It is a concentrated, and at the same time an easily assimilated food, useful in all cases of acute disease where sustaining treatment is indicated, and especially valuable in convalescence, and in chronic conditions of inanition or malnutrition, particularly where the functions of the stomach are not well performed.

One part of the Peptonized Extract of Beef may be said to be the equivalent of eight parts of fresh beef. One teaspoonful (about one-half ounce) will make a pint of excellent beef tea.

A like quantity added to a pint of vegetable soup communicates to it a rich flavor, and converts it into a highly nutritious food.

It may be employed in a still more concentrated form, if desired, but from half an ounce to one ounce of the extract is as much as it is generally advisable to give at one time.

POWDER OF BEEF.

A concentrated food of the highest nutritive value.

It represents in an exceedingly concentrated form the total nutritive value of the beef.

It is tasteless, and can be taken for a longer time than the various extracts of beef, beef juices, etc., without exciting nausea.

It is not only more readily digested and assimilated, but also incomparably easier of administration than other concentrated aliments, and may be added to water, milk, or wine, or beaten up with the yolk of an egg.

Drs. Debove and Dujardin-Beaumetz, of Paris, France, Dr. Lauder Brunton, of London, England, Dr. Henry B. Millard, of New York City, and many others, have given Powder of Beef a most thorough trial, and report that it is a most valuable adjuvant in the treatment of dyspepsia, indigestion, gastritis, ulcer of the stomach, tuberculosis, and in all chronic wasting diseases accompanied by enfeeblement of the digestive and assimilative functions.

PURE POWDERED BONE.

For the treatment of such affections as nervous exhaustion, rickets, and all diseases depending upon a lack of the proper supply of the inorganic elements of the tissues, it is believed that Pure Powdered Bone will be found invaluable.

It has the exact chemical composition required for a true nerve and bone food.

Its mechanical construction is such as to aid digestion to the greatest possible degree.

It is tasteless and odorless.

It is miscible with all ordinary foods in the proportions required, without detection.

It is inexpensive, and therefor adapted for general use.

☞ **Send for descriptive circulars, which will be mailed free on application.**

PARKE, DAVIS & CO.,

Manufacturing Chemists,

New York: 60 Maiden Lane, 21 Liberty Street.

DETROIT, MICH.

30,000 PHYSICIANS
NOW PRESCRIBE

HYDROLEINE

(HYDRATED OIL,)

For Consumption and Wasting Diseases. It Produces Immediate Increase in Flesh and Weight.

FORMULA.

Each Dose of Two Teaspoonfuls, equal to 120 Drops, contains:

Pure Cod Liver Oil	80 m. (drops)	Soda	½ Grain.
Distilled Water	35 "	Boric Acid	½ "
Soluble Pancreatin	5 Grains.	Hyocholic Acid	½ "

DOSE:

Two teaspoonfuls alone, or with twice the quantity of water, to be taken thrice daily after meals.

Hydroleine (Hydrated Oil) is not a simple alkaline emulsion of oleum morrhua, but a hydro-pancreated preparation containing acids and a medicum of soda. Pancreatin is the digestive principle of fatty foods, and, in the soluble form here used, completely saponifies the oleaginous material so necessary to the reparative process in all wasting diseases.

Lautenbach's researches on the function of the liver would show the beautiful adjustment of therapeutics in preparation of Hydroleine, furnishing, as it does, the acid and soda necessary to prevent self-poisoning by reabsorption of morbid tubercular detritus and purulent matters into the general circulation.

Each bottle in nutritive value exceeds ten times the same bulk of cod liver oil. It is economical in use and certain in result.

Sold at all Drug Stores at $1.00 per Bottle.

The principles upon which this discovery is based have been described in a treatise on "The Digestion and Assimilation of Fats in the Human Body," by H. C. BARTLETT, Ph. D., F. C. S., and the experiments which were made, together with cases illustrating the effect of Hydrated Oil in practice, are concisely stated in a Treatise on "Consumption and Wasting Diseases," by G. OVEREND DREWRY, M. D.

Copies of these Works sent free on Application.

WM. F. KIDDER & CO., 83 John Street, New York.

Agents for U. S.

Also exclusive Agents for SVAPNIA, or Bigelow's purified Opium, in SCALES and HALF-GRAIN GRANULES.

DISEASES OF THE URIC ACID DIATHESIS.

LAMBERT'S

LITHIATED HYDRANGEA.

KIDNEY ALTERATIVE—ANTI-LITHIC.

Formula.—Each fluid drachm of "Lithiated Hydrangea" represents thirty grains of FRESH HYDRANGEA and three grains of CHEMICALLY PURE Benzo-Salicylate of Lithia. Prepared by our improved process of osmosis, it is INVARIABLY of DEFINITE and UNIFORM therapeutic strength, and hence can be depended upon in clinical practice.

Dose.—One or two teaspoonfuls four times a day (preferably between meals).

Urinary Calculus, Gout, Rheumatism, Bright's Disease, Diabetes, Cystitis, Hæmaturia Albuminuria, and Vesical Irritations generally.

WE have had prepared for the convenience of Physicians **Dietetic Notes,** *suggesting the articles of food to be allowed or prohibited in several of these diseases.*

These Dietetic Notes have been bound in the form of small perforated slips for Physicians to distribute to their patients. Mailed gratis upon request, together with our latest compilation of case reports and clinical observations, bearing upon the treatment of this class of Diseases.

LAMBERT PHARMACAL COMPANY,

116 OLIVE STREET, ST. LOUIS.

RHEUMATISM.

DIETETIC NOTE.—A fruit and vegetable diet is most favorable for patients with chromic rheumatic troubles.

Allowed.—Beef and mutton in moderation, with horse-radish as a relish; fish and eggs, green vegetables and fruit, especially lemons. The skimmed milk diet has been advocated by some authors.

Avoid.—Starchy and saccharine food; all malt liquors, wines, and coffee.

SCOTT'S EMULSION

OF PURE COD LIVER OIL WITH HYPOPHOSPHITES OF LIME AND SODA.

THE STANDARD EMULSION OF COD LIVER OIL.

The ONLY Preparation of its class that will not SEPARATE nor SPOIL in any climate.

IT IS MADE FROM THE PUREST NORWEGIAN COD LIVER OIL, COMBINED WITH CHEMICALLY PURE HYPOPHOSPHITES AND GLYCERINE.

Acknowledged by leading Physicians in the U. S. and many other Countries to be the most ELEGANT most PALATABLE and EASILY DIGESTED preparation in the World, and can be tolerated longer by children and persons with delicate stomachs than any other.

WE ASK A CAREFUL COMPARATIVE TEST WITH ANY OR ALL SIMILAR PREPARATIONS.

FORMULA: 50 per cent. of Pure Cod Liver Oil, 6 grs. of the Hypophosphites of Lime. and 3 grs. of the Hypophosphite of Soda to a fluid ounce. Emulsified with mucilage and Glycerine.

S. & B's BUCKTHORN CORDIAL, RHAMNUS FRANGULA.

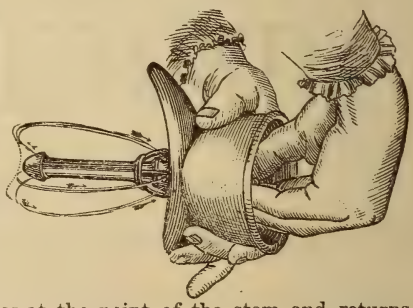
Is giving universal satisfaction to the profession, for its mild but certain and efficient cathartic action. It seems to be *almost* a *specific* for *habitual constipation*, and we are constantly in receipt of the most flattering reports regarding it. The care we use in its preparation—having the bark always the proper age, and properly exhausted—makes it always reliable in its action. Be sure and specify S. & B. Buckthorn Cordial.

To those who have for any reason never yet tried these preparations, we will be pleased to send samples free by express

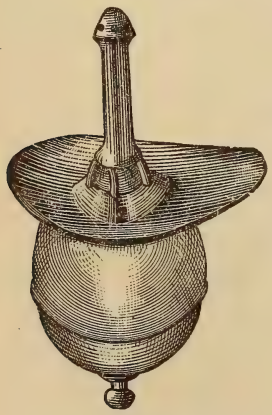
SCOTT & BOWNE, Mfg. Chemists, 132 & 134 S. 5th Ave., N. Y.

"PALLAS" SYRINGE.

VAGINAL AND RECTAL.



A MOST PERFECT and simply constructed Syringe for medicating and irrigating the vaginal cavity. The novel bulb of this Syringe, when doubled upon itself, as shown in the cut, will cause no fluid to be left, as is so apt to happen with the ordinary bulbs, and when filled will contain just enough fluid for the expansion of the vaginal folds. The hard rubber labial shield, with its plug, when firmly pressed against the labia, will both prevent spilling and soiling of linen, and the fluid can therefore be kept in circulation and in contact with the parts by repeating the pumping motion of the bulb. It will also be noticed that the fluid escapes as a spray from the large holes at the point of the stem and returns through the holes at the root of same, which is provided with hard rubber screen-bars, preventing the folds from interfering with the rapid return of the fluid into the bulb. In filling the bulb, a couple of turns will unscrew it. In handsome case, satin lined. Retail price, $3.75. To physicians, $3.00.



CHRISTIAN JENSEN & CO.,

2207 Fairmount Avenue,

PHILADELPHIA, PA.

COLDEN'S Liquid Beef Tonic.

Established 15 Years.
OBSERVE the NAME.
Beware of Imitations.

ORIGINAL LABEL:
"Colden's Liebig's Liquid Extract of Beef and Tonic Invigorator."

An Invaluable Aid in Medical Practice.

Differs Essentially from all other Beef Tonics.

COLDEN'S Liquid Beef Tonic is endorsed by scores of physicians, who are growing to realize more and more its importance in repairing, in accordance with the principles of dietetics, the **waste which disease entails.** It consists of the extract of Beef (by Baron Liebig's process) spirit rendered non-injurious to the most delicate stomach by extraction of the Fusel Oil, soluble Citrate of Iron, Cinchona, Gentian and other bitter tonics. An official analysis of this preparation by the eminent Chemist, ARTHUR HILL HASSALL, M. D., F. R. S., and an endorsement by the late SIR ERASMUS WILSON, F. R. S., is printed on the label of each bottle.

As a **blood food,** and a **reliable tonic** in all cases of debility and weakness, Malarial Fever, Anæmia, Chlorosis, Incipient Consumption, etc., it is the best preparation ever used. It acts directly on the sentient Gastric Nerves, stimulating the follicles to secretion, and gives to weakened individuals that first prerequisite to improvement—an appetite. It strengthens the nervous system when unstrung by disease, and has been employed with remarkable success as a remedy for Drunkenness and the Opium Habit.

Its Range of Action Embraces all Cases of Debility.

In order that physicians may form some idea of the nature of its ingredients, I will upon application in person, or by letter (enclosing a card), send a sample bottle of COLDEN'S LIQUID BEEF TONIC to any physician in regular standing, in the United States. Please ask your Dispensing Druggist (if he has not already a supply) to order it. In prescribing this preparation, physicians should be particular to mention "COLDEN'S"—*viz.:* "***Ext. carnis, fl. comp. (Colden's.)***" It is put up in pint bottles, and can be had of Wholesale and Retail Druggists generally throughout the United States.

C. N. CRITTENTON, Sole Agent, 115 Fulton St. New-York.

GLENN'S Sulphur Soap.

ALL physicians know that ***skin diseases*** are more or less constitutional, or dependent upon some specific poison in the blood, which if eradicated by internal treatment needs something to remove its appearance from the surface. Experience has proved that the best possible aid in the accomplishment of this end is obtained by the use of ***Sulphur in soap.*** GLENN'S SULPHUR SOAP is the best combination of its kind, and the one now generally used. It is for sale by all Druggists, at **25** cents a cake, or 3 cakes for **60** cents.

CONSTANTINE'S PINE TAR SOAP

Has been on trial among physicians for very many years as a toilet Soap and Healing Agent, and its superior virtues have been unanimously conceded **in all cases where the use of tar is indicated.** Unsolicited expressions of its excellence have been received from the Medical Faculty generally. IT IS THE BEST TAR SOAP MADE. None genuine unless stamped "A. Constantine's Persian Healing Pine-Tar Soap." For sale by all Druggists.

Samples of either of the above-named Soaps will be sent free upon application in person or by letter (enclosing card) to any physician in regular standing in the United States. C. N. Crittenton, 115 Fulton Street, New York. Please mention "THE MEDICAL AND SURGICAL REPORTER."

ESTABLISHED 1852.

HYDRASTIS

AND ITS PREPARATIONS.

The WM. S. MERRELL CHEMICAL CO. of Cincinnati—"The largest consumers of Golden Seal Root in the world" (see "Drugs and Medicines of North America")—offer to the medical profession, through the drug trade, the following well-known and highly approved preparations of this leading American drug.

FLUID HYDRASTIS.

A neutral solution of all the active medicinal constituents, forming a perfectly clear solution with alcohol, glycerin, syrup, or water. May be properly and profitably substituted for the Fluid Extract of the U. S. P. in the manufacture of syrup, wine or tincture.

COLORLESS HYDRASTIS.

A neutral solution of the White Alkaloid alone—without color or stain.

SULPHATE HYDRASTIA—CRYSTALLIZED.

[SULPHATE BERBERINA.]

This is the Sulphate of Yellow Alkaloid, which we present in crystals to guard against the substitution of impure and unskillful preparations in a powdered form.

Subsequent to its introduction by us under its present commercial title, this salt was identified as Berberina by Mahla, Durand and others. To avoid confusion with the Alkaloid Bebeerine and its salts, and to fully establish its identity, we continue the name by which it was originally introduced.

SOLUTION BISMUTH AND HYDRASTIA,

A neutral solution of the double Citrate of Bismuth and Hydrastia (White Alkaloid); each fluid drachm containing 2½ grains of the double salt.

Represented in New York City by

LEHN & FINK, 128 William Street.

Prices Current and Descriptive Circulars cheerfully supplied. Correspondence invited.

Apollinaris

"THE QUEEN OF TABLE WATERS,"

HAS RECEIVED THE

HIGHEST AWARD

LONDON, 1884,

AND IS SUPPLIED UNDER

ROYAL WARRANT

TO

H. R. H. THE PRINCE OF WALES.

ANNUAL SALE, 10 MILLIONS.

Of all Grocers, Druggists & Min. Wat. Dealers.

BEWARE OF IMITATIONS.

Friedrichshall.

THE WELL-KNOWN APERIENT MINERAL WATER.

IMPORTANT NOTICE.

By reason of an improved method of caption, by which dilution is avoided, FRIEDRICHSHALL WATER will be found now to be of considerably greater strength *and* efficacy *than heretofore.*

The ordinary dose is a large wineglassful (4 ounces). Most efficacious when taken fasting and mixed with an equal quantity of hot water.

"I know nothing at all equal to Friedrichs all. The LONGER it is taken, the SMALLER is the quantity necessary to effect the purpose."

Sir HENRY THOMPSON, F.R.C.S., London

OF ALL DRUGGISTS AND MINERAL WATER DEALERS.

In corresponding with Advertisers, please mention THE MEDICAL AND SURGICAL REPORTER

SAVORY & MOORE beg to call the attention of the Profession to some of their Special Preparations, the purity and uniform strength of which are guaranteed.

Pancreatic Emulsion. In Consumption, Wasting, LOSS OF THE POWER OF DIGESTION AND ASSIMILATION, this pure drug is the MOST POTENT REMEDY. This is now attested by the published records of numerous medical men, extracts of which accompany each bottle.

Peptodyn, the New Digestive, is a combination of the whole of the digestive secretions, forming an invaluable remedy in the treatment of all forms of Dyspepsia, and all diseases arising from imperfect nutrition. Peptodyn is intended as a general promoter of digestion for persons not necessarily considered in bad health; thus, when taken about a quarter of an hour after a meal, it will be found to assist digestion in a remarkable manner, and prevent the discomfort which often follows the partaking of a full meal by persons in good health.

Pancreatine Powder, for Indigestion and Loss of APPETITE. This palatable and popular remedy effects the digestion and assimilation of all food, especially of FATTY SUBSTANCES, and is therefore invaluable to patients who are unable to digest Cod Liver Oil, and who are thus deprived of its nourishing and invigorating properties.

Gelatine Discs for Hypodermic Use—Of Morphia, CODEIA, ERGOTINE, ATROPIA, STRYCHNIA, APOMORPHIA, etc. The chief features of these discs are their instant solubility, by which hypodermic solutions can be instantly obtained of uniform and reliable strengths; they keep good for an unlimited period in their dry state, and are extremely portable. (Prepared in accordance with Dr. Sansom's recommendation.)
In tubes, each containing 25 discs.

Etherodine (Substitute for Chlorodyne). A clear, bright fluid, pleasant to the taste, readily miscible with water or any suitable menstruum. The therapeutical properties of ETHERODINE are identical with those of CHLORODYNE, but the former is an elegant preparation, and more convenient for use.

Gelatine Discs for Ophthalmic Purposes.
"Much smaller doses of medicaments such as Atropine, Calabar Bean Extract, Sulphate of Zinc, Morphia, etc., etc., suffice to produce a marked effect by this form of application, than when drops are introduced."—*The Lancet.*
In tubes, each containing 100 discs.

Gelatine Lamels for Internal Administration, consist of thin, pliable, and, in most cases, transparent sheets of uniform thickness, accurately divided into squares by raised lines, each square containing an exact dose of the medicine with which the sheet is impregnated.
In sheets, each consisting of 24 squares.

Datura Tatula, for Asthma, Hay Fever, and Chronic BRONCHITIS. Recommended by the Profession as a remedy of great power and usefulness in cases of short and difficult breathing, spasmodic coughing, etc. The most convenient forms for use are—
Datura Tatula Cigars. Datura Tatula—prepared for use by means of a pipe.
Datura Tatula Cigarettes. Datura Tatula Pastilles—for Inhalation.

PHYSICIANS!

YOUR ATTENTION IS INVITED

—TO THE—

DR. McINTOSH NATURAL UTERINE SUPPORTER.

THIS INSTRUMENT MEETS THE WANTS OF THE PROFESSION MORE PERFECTLY than any other Uterine Supporter ever made. This is proven by the fact that during the past fifteen years more have been sold than of all other Supporters combined. *It never fails to give perfect satisfaction, even in the most difficult cases,* where any instrument can be used.

The **ABDOMINAL PORTION** is a broad morocco leather belt with elastic straps to buckle around the hips, with concave front, so shaped as to hold up the abdomen.

The **UTERINE PORTION** is a cup and stem made of highly-polished hard rubber, very light and durable, shaped to fit the neck of the womb, with openings for the secretions to pass out, as shown by the cuts. Cups are made with extended lips to correct flexions and versions of the womb.

The cup and stem is suspended from the belt by two soft elastic rubber tubes, which are fastened to the front of the belt by simple loops, pass down and through the stem of the cup and up to the back of the belt. These soft rubber tubes being elastic adapt themselves to all the varying positions of the body and perform the service of the ligaments of the womb.

Anteversion. Prolapsus. Retroversion

The instrument is very comfortable to the patient, can be removed or replaced by her at will, can be worn at all times, will not interfere with nature's necessities, will not corrode, and is lighter than metal. It will answer for all cases of Anteversion, Retroversion, or Prolapsus of the Womb. It is used by our leading physicians with never-failing success.

OUR REDUCED PRICE TO PHYSICIANS IS $5.00 EACH.

Instruments sent by mail at our risk on receipt of price; or we can send by express, C. O. D., with express charge for returning money added.

CAUTION.

Owing to the great success of our Supporter, several worthless imitations have been made which are often substituted for our instruments, to the detriment of the patient and the disappointment of the physician. To protect our patrons from imposture, we stamp each pad of the Abdominal belt in gilt letters, "Dr. McIntosh N. U. Supporter, Chicago, Ill."; the base of each cup is stamped "Dr. McIntosh N. U. S. Co., Chicago, Ill., U. S. A."

The box in which the instrument is put up contains directions for the application of the instrument pasted inside the cover, having the fac simile signature of Dr. L. D. McIntosh.

For further information in regard to the instrument, address

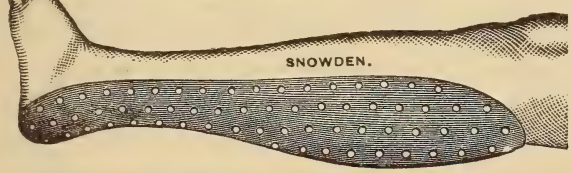
DR. McINTOSH NATURAL UTERINE SUPPORTER CO.,

300 AND 302 DEARBORN STREET, CHICAGO, ILL.

Our valuable Pamphlet on "Displacement of the Womb," giving a more complete description of the Instrument, will be sent you free on application.

LEVIS'S METALLIC SPLINTS.

FLEXIBLE, PERFORATED, NICKEL-PLATED, Conformable to every size and condition of Limbs. VERY LIGHT, INDESTRUCTIBLE, and INEXPENSIVE. The complete set consists of **21 pieces** in a neat, compact case. Full descriptive circulars sent on application. **PRICE, $15.00 Per Set.**



The Polyclinic Never-Leaking Ether Bottle

Price, $1.00.

McINTOSH GALVANIC AND FARADIC BATTERY CO.,

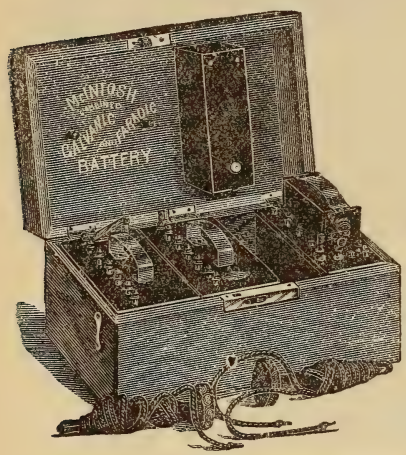
MANUFACTURERS OF THE CELEBRATED

McIntosh Combined Galvanic and Faradic Batteries,

Table, Office, and Family Batteries, Electrodes, Electric Bath Apparatus, Statical Electric Machines, Stereopticons, Solar, Monocular, and Binocular Microscopes.

AND ALL KINDS OF

PHILOSOPHICAL ELECTRICAL APPARATUS.



Schools, Colleges, Physicians, or Hospitals wanting new Apparatus, will do well to favor us with correspondence and obtain estimates. Men of scientific experience have charge of the manufacturing department. We employ the most skillful mechanics, and have the largest facilities in America for manufacturing.

We would call the Special Attention of the Medical Profession to our

Combined Galvanic and Faradic Batteries.

These Batteries are recommended by the Medical Faculty of both America and Europe, and have been adopted by the United States Government for use in Medical Department of the Army and Navy. They are

The First and Only Portable Batteries ever Invented which Give both the Galvanic and Faradic Current,

TWO DISTINCT BATTERIES IN ONE CASE.

No Physician can afford to be without one.

This celebrated Battery is constructed on an improved plan. The zincs and carbons are fastened to hard-rubber plates in sections of six each; this manner of connecting brings the plates nearer together than in any other battery, thus giving less internal resistance. The cells are composed of one piece of hard rubber, and are made in sections of six each with a drip-cup, thus one section can be handled, emptied, and cleaned, as easily and quickly as one cell. The drip-cup is to receive the elements when the battery is not in use. The fluid cannot spill or run between the cells, and there is no danger of breaking, as with glass cells. This is the only battery in which the zinc and carbon plates can be kept clean and always in order by simply rinsing them.

An extra cell (with a zinc and carbon element) is added to the combined batteries, for the purpose of producing the Faradic current. This cell gives as much force as is ever needed, and avoids exhausting the current from the Galvanic cells. All the metal work is finely nickel-plated and highly polished, and every part is put together so that it can be easily replaced by the operator. Our batteries weigh less, occupy less space, give a current of greater intensity and quantity, than any other battery manufactured.

Our illustrated Catalogue, a handsome book giving full description of all our goods, and other valuable information, sent free on application.

McINTOSH GALVANIC AND FARADIC BATTERY CO.
300 & 302 DEARBORN STREET, CHICAGO, ILL.

WHEELER'S TISSUE PHOSPHATES

Bone-Calcium Phosphate $Ca_3 2P.O._4$, Sodium Phosphate $Na_2 H.P.O._4$, Ferrous Phosphate $Fe_2 2P.O._4$, Trihydrogen Phosphate $H_3 P.O._4$.

WHEELER'S COMPOUND ELIXIR OF PHOSPHATES AND CALISAYA. A Nerve Food and Nutritive Tonic, for the treatment of Consumption, Bronchitis, Scrofula, and all forms of Nervous Debility.

The Lactophosphates prepared from the formula of Prof. Dusart, of the University of Paris. Combines with a superior Pemartin Sherry Wine and Aromatics in an agreeable cordial easily assimilable and acceptable to the most irritable stomachs.

Phosphorus, the oxidizing element of the Nerve Centres for the generation of Nerve Force; Lime Phosphate, an agent of Cell Development and Nutrition; Soda Phosphate, an excitant of Functional Activity of Liver and Pancreas, and Corrective of Acid Fermentation in the Alimentary Canal; Iron, the Oxidizing Constituent of the Blood for the Generation of Heat and Motion; Phosphoric Acid, Tonic in Sexual Debility; Alkaloids of Calisaya, Anti-Malarial and Febrifuge; Extract of Wild Cherry, uniting with tonic power the property of Calming Irritation and Diminishing Nervous Excitement.

THE SUPERIORITY OF THE ELIXIR consists in uniting with the Phosphates the special properties of the Cinchona and Prunus, of Subduing Fever and Allaying Irritation of the Mucous Membrane of the Alimentary Canal, which adapts it to the successful treatment of Stomach Derangements and all diseases of Faulty Nutrition, the outcome of Indigestion. Malassimilation of Food, and *failure of supply* of these essential elements of Nerve Force and Tissue Repair.

The special indication of this combination of Phosphates in Spinal Affections, Caries, Necrosis, Ununited Fractures Marasmus, Poorly Developed Children, Retarded Dentition, Alcohol, Opium, Tobacco Habits, Gestation and Lactation, to promote Development, etc., and as a *physiological restorative* in Sexual Debility, and all used up conditions of the Nervous System, should receive the careful attention of good therapeutists.

There is no strychnia in this preparation, but when indicated, the Liquor Strychniæ of the U. S. Dispensatory may be added, each fluid drachm of the solution to a pound bottle of the Elixir making the 64th of a grain to a half fluid ounce, an ordinary dose, a combination of a wide range of usefulness.

DOSE—For an adult, one tablespoonful three times a day, after eating; from seven to twelve years of age, one dessert-spoonful; from two to seven, one teaspoonful. For infants, from five to twenty drops, according to age.

Prepared at the Chemical Laboratory of T. B. WHEELER, M. D., Montreal, D. C.

Put up in pound bottles and sold by all Druggists at One Dollar.

In corresponding with Advertisers please mention the MEDICAL AND SURGICAL REPORT

THREE MORE MEDALS IN 1886.

The recent International Expositions at Edinburgh and Liverpool, and the American Institute, New York, each awarded us the Highest Silver Medal, which swells our list to about

THIRTY-FIVE GOLD, SILVER AND BRONZE MEDALS

FROM ALL PARTS OF THE WORLD.

THE REASON FOR IT IS PLAIN.

We make but one quality, and that the best. WE SCRUPULOUSLY CONFORM TO THE PHARMACOPŒIAL, or other recognized standards, in the incorporation of medicinal ingredients. We command perfect skill in manipulation, we use pure and superior fabrics, our packages are neat, elegant, and convenient, and our prices are not only uniform, but the most reasonable that can be placed on honest goods of the first quality.

THE STATUS OF THE WHOLE PLASTER BUSINESS

is well shown by the analyses of Belladonna Plasters, the leading article on the list of spread goods, made in March, 1886 by Dr. Albert B. Prescott, Prof. of Chemistry at the University of Michigan, and President of the American Chemical Society, from goods purchased by him in open market. The analyses were made by the same process, in parallel operations, for the quantity of total Belladonna alkaloids, estimated as atropine, and show our Belladonna plaster to contain 0.543 of a grain of alkaloid, which represents the strength of a plaster made after the standard prescribed by the U. S. P. from the highest grade of belladonna root. The same analyses showed the next highest belladonna plaster to contain but 0.264 grains of alkaloid, or less than half U. S. P. strength; while the several other brands examined contained from 0.230 grains to 0.045 grains, proving the S. & J. plaster to contain more than twice as much belladonna as the one approaching nearest to it, the rest falling below the line of any valid comparison, a number having scarcely a trace of belladonna alkaloid.

IN FURTHER PROOF OF OUR DESIRE AND PURPOSE

to maintain, and, if possible, to enhance, the high standard and reputation of our goods, we cite the fact that we have recently erected one of the most complete and best equipped laboratories in the United States, and we shall hereafter manufacture every medicinal extract incorporated in our specialties, and can guarantee, through our own analyses, the strength and quality of all drugs we employ; thus, also, ensuring the perfect uniformity of all our products. For many years, physicians have preferred our goods because they always found them therapeutically reliable, as others were not; and our new departure will set up a stronger safeguard than ever against cheap and worthless plasters and dressings.

WE HAVE ESTABLISHED THE STANDARD.

Failing to make goods equal to ours, and which would sell on their merits, our competitors have heretofore striven to introduce their goods to the notice of the trade and the medical profession by imitating our trade-marks, packages, circulars, and price lists. Now, certain plaster makers have evidently found it necessary to adopt more desperate tactics, since we learn from retailers in Pennsylvania and New Jersey that jobbing-house salesmen have solicited them to buy other goods when ours were indicated on their order. In one case the salesmen said the house he represented no longer stocked our goods; in another, that we no longer made some of the articles desired. On inquiry, we learn that the representatives of these desperate plaster manufacturers offered these men a personal consideration to perform this dishonorable service. In one or two cases a direct money bribe was tendered and refused. The whole scheme shows to what straits our competitors are reduced, and indicates clearly the necessity for physicians specifying "S. & J." goods when prescribing, if they would be assured of obtaining the therapeutic results expected from medicinal plasters, or the strict reliability of goods for surgical use.

NOTABLE POINTS

RELATIVE TO

Lactated Food.

IT IS A COOKED FOOD.

By the use of high steam heat the gluten flour used is partially torrefied. This is done while the flour is dry, and during the process it is in constant motion, which insures perfect cooking to every particle.

Routh says, (Infant Feeding, page 380) that by this process, "the starch granules are rendered more separable, the gluten is reduced to a more porous condition, readily acted on by the gastric juice, and as an aliment, therefore, is more nutritious and digestible."

IT IS A PREDIGESTED FOOD.

"You state that it is self-digestive as regards the conversion of insoluble starch into soluble dextrine and maltose. My experiments with it lead me to hold that this is correct." J. MILNER FOTHERGILL.

IT CONTAINS NO UNCHANGED STARCH.

By the peculiar process of manufacture, every particle of the gluten flour is subjected to the action of the malto-diastase, and by it all the starch contained is transformed into soluble carbo-hydrates.

Professor CARL SEILER says, "Examination has proved that all the starch granules are converted, as shown by their behavior to polarized light."

NO CANE SUGAR USED.

The basis of Lactated Food is the pure sugar of milk made by the improved processes of the American Milk Sugar Co. The great value of this article has been shown conclusively. Cane sugar is not used in the composition or preparation of the Food on account of its liability to cause irritation by reason of the acetic fermentation which it creates in the stomach. Milk sugar never causes this fermentation or irritation.

IT IS NON-IRRITATING.

By reason of the fact that Lactated Food is partially digested in process of Preparation, it is assimilated by the feeblest stomach, and no undigested particles pass into the bowels to irritate, and thus cause troublesome and dangerous bowel disorders.

IT IS HIGHLY NUTRITIOUS.

The nutritive elements of Lactated Food are derived from the three great cereals, Wheat, Barley, and Oats. From the Wheat is taken the pure gluten, the most nourishing substance known for the muscles and tissues; from the Barley, all the soluble albuminoid and extractive matter resulting from the most careful malting; and from the Oat, the strengthening properties for which it is so well known. The result is a food which never disappoints, and under which the feeble child or invalid rapidly rallies.

FOR CHOLERA INFANTUM.

It is the chief reliance of many eminent practitioners, and it is the safest food in summer for all young or delicate children.

Another important consideration is its low price, it being much more economical than other foods. We make four sizes, selling for 25 cents, 50 cents, $1 00, and $2.50. *A dollar can will furnish one hundred and fifty meals for an infant.*

If any physician that has not yet made a trial of the Lactated Food will write us, we will send a package of our regular size, postpaid, without charge, with the understanding that it will be given a careful trial as soon as possible.

We shall use every precaution to maintain the high standard of this Food, and to insure perfect satisfaction to the profession in its use.

WELLS, RICHARDSON & CO.,

BURLINGTON, VT.

THE CANTON SURGICAL

AND

GYNÆCOLOGICAL CHAIR.

A chair especially constructed for the use of the general practitioner, as well as for the specialist in the treatment of gynæcological cases. For treating diseases of the Eye, Ear, Throat, and Chest, it has no equal. Every chair fully warranted to be first-class.

As a speculum chair it secures ease and comfort to the patient, and at the same time gives the operator such perfect control of all the various changes and positions, that it robs gynæcology of its usual embarrassment and annoyance.

Send for descriptive catalogue.

DR. RABUTEAU'S

[Laureate of the Institute of France]

DRAGEES, ELIXIR, AND SYRUP OF IRON.

"The experiments made in the hospitals of Paris have demonstrated that *Dr. Rabuteau's Dragees, Elixir, and Syrup* regenerate the red globules of the blood with a rapidity never observed with the use of the other ferruginous preparations. These results have been proved by the various *Compi-Globules.*

"The ferruginous preparations of *Dr. Rabuteau* do not cause any constipation, and are perfectly tolerated by the weakest persons."—*Gazette des Hopitaux.*

Dr. Rabuteau's Elixir is prescribed when some difficulty is experienced in swallowing the Dragees; it is especially adapted to weak persons, whose digestive functions need strengthening or stimulating.

Dr. Rabuteau's Syrup is especially prepared for children, who take it readily because of its agreeable taste.

A sample of Rabuteau's Dragees will be sent free to any Physician mentioning *The St. Louis Medical and Surgical Journal.*

Prepared by CLINN & Co., Pharmacists, Paris.

E. FOUGERA & Co., Agents for the United States.

Ducro's Alimentary Elixir,

A COMBINATION UNITING THE PROPERTIES OF

ALCOHOLIC STIMULANTS AND RAW MEAT

This preparation, which has been used with great success in the hospitals of Paris, since 1868, is adapted to the treatment of all diseases requiring the administration, in a small volume, of a tonic able to stimulate and support the vital forces, as *Pulmonary Phthisis, Depression and Nervous Debility, Adynamia, Malarious Cachexia,* etc.

Prepared by EMILE DURIEZ & Co., Successors to DUCRO & CIE, Paris.

KIRKWOOD'S INHALER,

This is the only complete, reliable, and effective inhaler in use, arranged for the direct application of Muriate of Ammonia and other remedial agents in the state of vapor to the diseased parts of the air passages in the treatment of catarrh and diseases of the throat and lungs. No heat or warm liquids required in its use.

It is entirely different from the various frail, cheap instruments that have been introduced.

KIRKWOOD'S INHALER is accompanied by testimonials of the highest professional character, together with carefully-prepared formulas for use.

Retail Price, complete, $2.50.

☞A liberal discount allowed to the trade and profession.

☞For descriptive pamphlets or other information, address

E. FOUGERA & CO., 30 North William Street, New York.

Rigollot's Mustard Paper

Is one of the most important and useful discoveries of the age. It is the only preparation which has been adopted by the civil and military hospitals, and the armies and navies of France and England, and which has obtained a medal at the Centennial Exposition at Philadelphia. All other mustard plasters or leaves, of whatever name, are but imitations of the original.

Physicians will find it the most reliable sinapism, prompt and certain in its action, and will therefore always prescribe it. Every sheet, in order to be genuine, must bear the annexed signature of the inventor.

Sold in tin boxes containing 10 sheets, also 25 and 100 sheets, by all respectable chemists throughout the world.

Rigollot

E. FOUGERA & CO., New York Depositaries.

TAMAR INDIEN GRILLON.

A laxative, refreshing, and medicated Fruit Lozenge, very agreeable to take, and never causing irritation. Its physiological action assures the immediate relief and effectual cure of

CONSTIPATION,

HÆMORRHOIDS, BILE, CEREBRAL CONGESTION, HEADACHE, LOSS OF APPETITE, INTESTINAL OBSTRUCTIONS, ETC.,

by augmenting the peristaltic movement of the intestine without producing undue secretion of the liquids. Unlike pills and the usual purgatives, it does not predispose to intestinal sluggishness, and the same dose always produces the same effect, that is to say, never needs increasing.

It is recommended by the most eminent physicians of Paris, notably Drs. BELIN and TARDIEU, who prescribe it constantly for the above complaints, and with most marked success.

Paris: E. GRILLON, 27 Rue Rambuteau.

SOLD BY ALL DRUGGISTS.

PRIVATE SCHOOL FOR THE DEAF.

Deaf Children Taught to Speak and Educated through Lip Reading. Aural Training and Defective Speech treated and improved. A Kindergarten Department for Deaf Children from three to six years old. A Training Class for Teachers of Articulation.

School re-opens September 20, 1886, at No. 7 South Merrick Street (opposite Public Buildings), Philadelphia, Pa.

Directions to Parents of Deaf Children for their Treatment from Infancy in order that they may learn Speech and Lip Reading, furnished free on application to **MARY S. GARRETT, Principal.**

THE VALUE OF MURDOCK'S LIQUID FOOD IS RECOGNIZED IN ALL COUNTRIES, AND IS ENDORSED BY ALL NATIONAL MEDICAL SOCIETIES THAT HAVE INVESTIGATED ITS VALUE.

There never was an essay read before any Medical Society on Raw Food Extracts, except on Murdock's Liquid Food, and counterfeit manufacturers of Extracts have published many of our essays to show the value of their counterfeits.

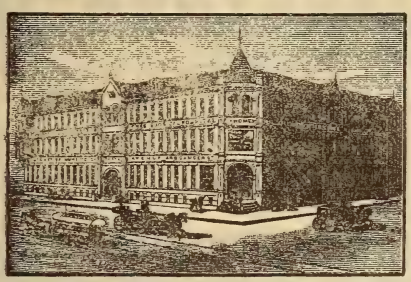
Send for Essay and DISCUSSION before the British Medical Association at Brighton, England, 1886 (Essay), by the Vice-President of the American Medical Association, and others, on the value of MURDOCK'S LIQUID FOOD over all Foods and Extracts known, it being the ONLY Raw Condensed Food free from insoluble matter.

Also essay read before the American Medical Association at Richmond, Va., and Washington, D. C.

Its value was recognized by the profession from results obtained in the Free Hospitals that have been established and supported by our Mr. A. L. Murdock during the last four years.

They now equal

140 FREE BEDS,



And contain 38,000 feet of floor.

Our Liquid Food can be retained by the weakest stomach. Four tablespoonfuls daily will make eight per cent. new blood weekly. When used for infants, never change their food, but add five or more drops of Liquid Food at each feeding, and their lost or needed vitality will be restored in less than thirty days.

Send for the Report of the Chairman of the Section of Obstetrics of the American Institute of Homœopathy, read at Saratoga at the annual meeting of 1886.

Circulars were sent by him to all the Physicians in the United States, asking what their experience was with Murdock's Liquid Food in its use for infants under, as well as over, one year old.

Then what results, with all the different Milk preparations, Grain Foods, Peptonoid Foods, and Beef Extracts, compared with MURDOCK'S LIQUID FOOD.

The returns show that it is the Standard Food and Extract, as the percentage of lives restored was the largest when used.

We extract from the report. After calling attention to the fact that one-quarter of the homœopathic profession are accustomed frequently to prescribe this food for children less than a year old, as well as over, he remarks:

"It is singularly adapted to scrofulous, syphilitic, and tubercular constitutions, its life-restoring power manifesting itself in each with a relative clearness and power corresponding to the order of enumeration. For fair-haired children who are inclined to grow fleshy it is more symptomatically recommended, while Duncan's *acid* babies find it particularly useful. Accordingly, it is chiefly employed for marasmus and anæmic conditions resulting either from non-assimilation of food, or from smple summer complaints. Should a child vomit all milk food and suffer synchronously with diarrhœa or dysentery, the demand for this food is emphatic and unmistakable; also in general irritability of the stomach, particularly if there be sour-smelling diarrhœa, the food passing through undigested. For the prematurely born it stands pre-eminent. For those 'weak and debilitated from any cause, Murdock's Food is probably the best in the world.' Should any indication of cerebral hyperæmia appear, the quantity of food must be diminished; so, too, if after its protracted use vomiting and diarrhœa ensue, the child has been overfed. Should the taste or odor of any given bottle chance to be disagreeable, add water until they disappear, and let the purchaser congratulate himself upon getting more nutriment than he paid for. When given in combination with milk in cases of indigestion, the quantity of milk should be diminished until all curds disappear from the stool, the quantity of Food, of course, being proportionately increased."

The Surgical Staff at MURDOCK'S FREE HOSPITAL FOR WOMEN are in daily attendance, except Saturdays, to examine patients and assign beds.

EVERY BED FREE.

Our Free Surgical Hospital for Women, located on Huntington avenue, above West Chester park, contains fifty (50) beds, in charge of a staff of five surgeons, members of the Massachusetts Medical Society.

Our Free Surgical Hospital for Women, located on Gainsborough street, corner of Huntington avenue, contains 50 beds, in charge of a staff of five surgeons, members of the Massachusetts Homœopathic Medical Society.

Our Free Home for Homeless Boys contains 40 beds, and is located at 11 to 21 Causeway street. Many of these boys suffer from Scrofula, Eczema, and other skin diseases, which yield quickly by the use of our Liquid Food.

From the fact that no two beeves or sheep are alike, is the reason of our different brands being different in flavor.

All brands are made by the same formula. The letter represents the day of make, and the figure the tank.

If richer, it is stronger in smell and flavor, and will bear a greater reduction. It cannot be reduced so low but it will be superior to all other preparations in treating chronic cases.

If you cannot obtain Murdock's Liquid Food from your druggist, we deliver, free of express, 12 oz. for $1. Any physician that has not used our Liquid Food, we will deliver free to the Boston express 12 oz.

CELERINA

NERVE-TONIC, STIMULANT AND ANTISPASMODIC.

FORMULA.—Every Fluid-Drachm represents FIVE grains EACH — Celery, Coca, Kola, Viburnum and Aromatics.

INDICATIONS.—Impotency, Spermatorrhea, Loss of Nerve-Power (so usual with Lawyers, Preachers, Writers and Business Men), Nervous Headache, Neuralgia, Paralysis, Dysmenorrhea, Hysteria, Opium-Habit, Inebriety, Prostatitis, Dyspepsia, and ALL LANGUID or DEBILITATED conditions of the System.—*Indispensable to restore a patient after alcoholic excess.*

DOSE.—One or two teaspoonfuls three or more times a day, as directed by the Physician.

ALETRIS CORDIAL

UTERINE TONIC AND RESTORATIVE.

PREPARED FROM THE ALETRIS FARINOSA OR TRUE UNICORN.

INDICATIONS.—Amenorrhea, Dysmenorrhea, Leucorrhea, Prolapsus Uteri, Sterility, to PREVENT Miscarriage, Etc.

DOSE.—One teaspoonful three or four times a day.

Unrivaled as a Uterine Tonic in Irregular, Painful, Suppressed and Excessive Menstruation,

IT RESTORES NORMAL ACTION TO THE UTERUS, AND IMPARTS VIGOR TO THE ENTIRE UTERINE SYSTEM.

☞ Where Women have aborted during previous Pregnancies, or in any case where abortion is feared, the Aletris Cordial is indicated, and should be continuously administered during entire gestation.

ACID MANNATE

A MILD, SAFE AND PLEASANT APERIENT.

Prepared from Manna, Purified Cathartic Acid, and Fruit Juices.

INDICATIONS.—Constipation, Biliousness, Congestions, Etc. INDISPENSABLE AS AN APERIENT FOR WOMEN DURING PREGNANCY. In teaspoonful doses, 3 times a day, it favors the SECRETION and EXCRETION of bile, and gradually removes the congested and torpid states of the liver, and keeps the bowels in a regular and soluble condition.

DOSE.—ONE or MORE teaspoonfuls as directed by the Physician.

S. H. KENNEDY'S
CONCENTRATED EXTRACT OF
PINUS CANADENSIS

DARK — A NON-ALCOHOLIC LIQUID. — WHITE

A MOST VALUABLE NON-IRRITATING MUCOUS ASTRINGENT.

INDICATIONS.—Albuminuria, Diarrhea, Dysentery, Night-Sweats, Hemorrhages, Profuse Expectoration, Catarrh, Sore Throat, Leucorrhea, and other Vaginal Diseases, Piles, Sores, Ulcers, Burns, Scalds, Gonorrhea, Gleet, Etc.

When Used as an Injection, to Avoid Staining of Linen, the WHITE Pinus should be Used.

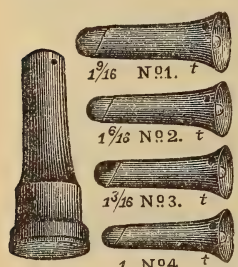
The best apparatus extant for the convenient and thorough application of hot water in uterine and pelvic diseases. Descriptive circular and prices furnished on application.

"THE PERFECTION DOUCHE," Box 7, Albany, N Y.

STAUFER'S
HARD RUBBER SPECULUMS GUARANTEED.



Prices, Single, $2.50
Series encased, 12.00

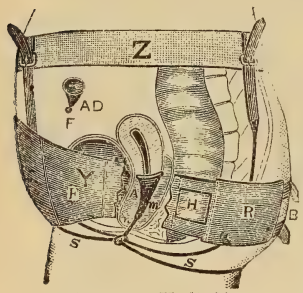
The engraving shows the shape, conductor and case so complete, that scarcely any description is necessary. For compactness there is but one conductor stem, on which each size of bulb screws. Speculums and case are all of the best quality hard rubber, and do not break from ordinary falling. Dental red enamelled inside. The mouth is polished very smooth, and shaped so that the cervix can be brought in entirely by rotation. And when brought in can be rotated to bring into view all the parts. The vaginal portion of the uterus can be seen as clearly as if located externally. When obtained, single, No. 2, is the most useful, since it reveals fully the point of the cervix in almost all multipara, and freely enters, when the position is correct, in many nullipara.

Guarantee.—One or two speculums are guaranteed; thus when returned sound and in the original wooden boxes, within six months of purchase, the money will be refunded without any deduction.

Plates.—The *First* contains 16 engravings and groups of engravings, illustrating the uterine examining instruments. *Second* contains 17 engravings and groups of engravings, illustrating the uterine replacing and supporting instruments.

Catalogue.—The catalogue comprises over 150 sizes and styles of uterine examining and supporting instruments, of which the hard rubber parts are exchanged and interchanged at cost, without limit of time. It also contains full directions and explanations for the use of this series of hard rubber gynecological instruments; together with common information collected through many years to simplify this line of treatment.

STAUFER'S
SPRING STEM UTERINE SUPPORTERS.
GUARANTEED.



Price, on Y, $7.00
" " Z, 6.00

The engraving shows the Spring Stem Cup, which consists of over a dozen sizes. The series contains Spring Stem Balls, Spring Stem Levers, for Anteversions and Retroversions. also Spring Stem Cup with posterior projections, all of assorted sizes.

Explanation.—The stem is screwed on cup A, and when unscrewed, the spring is put in tube *m*, or taken out when it needs cleaning. Thus the coil spring lays between the cup and base *n*. When there is pressure from above, or below, or both, the spring is compressed and again stretches out at the first opportunity. The movement of the base stem *n*, is governed by a slot and pin through tube *m*.

A D.—Represents the cup transformed into a self-sustaining cup, virtually an instrument of double capacity. In most cases after the uterus is held in "health line" for a time by external support, contraction of the walls of the vagina takes place, and it is sufficient at night or until forced down next day by bodily exertion, against which the stem and bandage guards if applied in time.

Belt Y.—The manner in which belt Y, sets on the abdomen is shown in above engraving. The widest or lifting part is in front. Over each hip as seen at H, are two elastics, and on large belts three. It closes on the back by buckling at B. It is of fine sateen outside, fine lining inside, and a slight stiffening between, and stayed with soft whalebones. Accurate hip measure is to be taken over a thin undergarment; since it needs to fit with a space of one or two inches apart on the back, for the buckle straps to draw. The perineal attachments are short and buckle at F and R.

Belt Z.—This is an elastic waist strap and carries any supporter of this series. Yet the common difficulty presents itself, where long and slender attachments are used, that they do not govern the internal part so efficiently as on the low grasping abdominal supporter Y.

The Series.—This series of imstruments has been invented as cases presented themselves, requiring different styles and sizes of instruments, without change of proprietor, until it has reached its present efficiency.

Guarantee.—The money lost by purchasing uterine supporters, unscientifically constructed, of irritating material, or limited in deficiency of sizes, and in consequence loss of families in practice, has set a large portion of the medical profession against the mechanical support of the uterus. By these conditions the risk of the first purchase by a physician of a stem and bandage supporter of this series is obviated. After the first purchase the instruments are supposed to be known, yet the guarantee is extended by special contract in doubtful cases.

Refunding.—On return of the hard rubber part or parts within six months of purchase, Five Dollars of the purchase money will be refunded. The belt remains with the patient as an abdominal supporter and only risk.

The above Guarantee and Refunding is secured when the Instrnments are obtained through this Office. Any other Instrument of STAUFER'S SERIES is also obtained through this Office at Catalogue Prices, and Catalogue free, on application.

COSMOLINE

Unguentum Petrolei

Prepared by E.F.Houghton & Co. Philadelphia U.S.A.

Put up in 1, 5, 10, 25, 50, and 100-lb. cans. Samples furnished on application. The post-office laws forbid anything of an oleaginous nature being sent through the mail.

In chemical composition, Cosmoline (Unguentum Petrolei) is an oleaginous hydrocarbon, corresponding to the heavy petroleum oils, and containing a large amount of the paraffines and olefines of the formulæ $C_{16}H_{34}$ and $C_{16}H_{32}$. It contains but a small percentage of the paraffines and olefines corresponding to the formulæ C_7H_{16} and C_7H_{14}, respectively, and the offensive and irritating properties of the crude oil have been carefully removed. In the process of purification, no acids, alkalies, or other chemicals are employed, and no injurious additions of any kind are made to the natural product. The result is a semi-solid, translucent substance, with a faint odor and unctuous feel.

Cosmoline (Unguentum Petrolei) melts at about 100° Fah. (38° Cent.); and boils at about 625° Fah. (329° Cent.); its specific gravity is about 0.875 at 60° Fah.

As it contains no oxydizable or organic matter capable of change by putrefaction or fermentation, and is absolutely without affinity for moisture, it offers to the profession an admirable unguent, which can never decompose, ferment, or become rancid in any climate or temperature.

PHILADELPHIA, July 10, 1880.

MESSRS. E. F. HOUGHTON & Co.: I have for a number of years made extensive use of Cosmoline (Unguentum Petrolei), and consider it a most valuable article for surgical purposes. Either as a dressing by itself, or as a vehicle for the application of medicaments, it is greatly superior to lard or other fatty matters, especially by reason of its non-liability to change by time or temperature.

Yours truly, JOHN H. PACKARD, M. D.

1031 WALNUT STREET, PHILADELPHIA.

MESSRS. E. F. HOUGHTON & Co.: I have used extensively Cosmoline (Unguentum Petrolei) both in Dispensary and private practice, with very great satisfaction. As a vehicle in making ointments it is invaluable, and far superior to lard, for the reason that it will not become rancid or undergo chemical change like the latter, when exposed to the atmosphere. I cannot too highly commend it as an application in various skin diseases. Yours truly, JOHN V. SHOEMAKER, A. M., M. D.,

Physician to the Pennsylvania Free Dispensary for Skin Disease.

208 WEST 34TH STREET, NEW YORK.

MESSRS. E. F. HOUGHTON & Co.—*Gents:* I fully appreciate the value of your Cosmoline, or Unguentum Petrolei, and prescribe it frequently in ointments. Fluid Cosmoline I have used constantly for several years, as a lubricant of urethral sounds. It is the cleanest oil I know of for this purpose.

Yours truly, GEO. HENRY FOX.

BUFFALO LITHIA WATER,

FOR GOUTY, RHEUMATIC, AND RENAL AFFECTIONS.

ROBERTS BARTHOLOW, M. A., M. D., LL. D., Prof. of Materia Medica and General Therapeutics in the Jefferson Medical College of Philadelphia. See his "Materia Medica and Therapeutics."

"Buffalo Lithia Spring of Virginia contains well-defined traces of Lithia, and is Alkaline. This has been used with great advantage in Gouty, Rheumatic, and Renal Affections." * * * * * * * * * "There is little doubt that the continuous use of Alkaline Waters for a long period will cause the solution of Uric Acid Renal Calculi. For this purpose those Alkaline Waters rich in POTASSA are preferable."

This water has a large percentage of the CARBONATE OF POTASSA, making it rich in valuable Alkali.

Dr. Wm. A. Hammond, of New York, Surgeon-General U. S. Army (retired), Professor of Diseases of the Mind and Nervous System in the University of New York, etc.

"I have for some time made use of the Buffalo Lithia Water in cases of affections of the Nervous System complicated with Bright's Disease of the Kidneys, or with a Gouty Diathesis. The results have been eminently satisfactory. Lithia has for many years been a favorite remedy with me in like cases, but the Buffalo Water certainly acts better than any extemporaneous solution of the Lithia Salts, and is, moreover, better borne by the stomach. I also often prescribe it in those cases of Cerebral Hyperæmia, resulting from over mental work—in which the condition called Nervous Dyspepsia exists—and generallly with marked benefit."

Dr. Robert Battey, of Georgia, Suggester of Battey's Operation, Member of the American Medical Association, etc.

"I would state that I have been using the Buffalo Lithia Water, No. 2, in my practice for three years past, in cases of Chronic Inflammation of the Bladder, whether induced by Stone, by Enlarged Prostate in the aged, or by Neglected Gonorrhœa, and have secured excellent results, which encourages me to prescribe it for the future."

Dr. Hunter McGuire, Richmond, Virginia, late Professor of Surgery, Medical College of Virginia.

"Buffalo Lithia Water, Spring No. 2, as an Alkaline Diuretic, is invaluable. In Uric Acid Gravel, and, indeed, in diseases generally dependent upon a Uric Acid Diathesis, it is a remedy of extraordinary potency. I have prescribed it in cases of Rheumatic Gout, which had resisted the ordinary remedies, with wonderfully good results. I have used it also in my own case, being a great sufferer from this malady, and have derived more benefit from it than from any other remedy."

Dr. Alfred L. Loomis, of New York, Professor of Institutes and Practice of Medicine, Medical Department University of New York.

"For the past four years I have used the Buffalo Lithia Water in the treatment of Chronic Interstitial Nephritis occurring in Gouty and Rheumatic subjects, with the most marked benefit. In all Gouty and Rheumatic Affections I regard it as highly efficacious."

Dr. Harvey L. Byrd, of Baltimore, President and Professor of Obstetrics and Diseases of Women and Children, in the Baltimore Medical College, formerly Professor of Practical Medicine, etc.

"I have witnessed the best results from the action of the Buffalo Lithia Water, Spring No. 2, in Chronic Gout, Rheumatic Gout, Rheumatism, Gravel, and Stone in the Bladder, and I do not hesitate to express the opinion that in all diseases depending upon or having their origin in Uric Acid Diathesis, it is unsurpassed, if, indeed, it is equaled by any water thus far known to the profession.

"It has an ascertained value in Bright's Disease. A knowledge of its action in that disease thus far would seem to warrant the belief that it would, in many instances, at least in its early stages, arrest it entirely; and in its more advanced stages prove a decided comfort and palliative."

Water, in cases of one dozen half gallon bottles, $5.00 per case, at the Springs. Testimonials sent free on application. The Virginia Buffalo Lithia Springs Company have no longer control of this water. To get it **FRESH**, order directly of or from parties who deal directly with

THOMAS F. GOODE, Prop. Buffalo Lithia Springs, Va.

By S. W. BUTLER, M. D. TWENTY-FIRST YEAR.

A New Revised Edition for 1887, with Metric Posological Table, &c., strongly bound in Dark Morocco, with Pocket for Blanks, and a Patent Steel Spring.

THIS VISITING LIST has been a favorite for many years. It is "perpetual" in arrangement, and may be used continuously one full year from the date of the first entry. Besides the Posological Table, it contains Tables of Doses for Hypodermic Injections, Inhalation, Suppositories, &c.; Directions for the treatment of Poisoning, Drowning, and other emergencies; Simple Directions for Testing the Urine; Obstetric Record, Cash Record, &c.

☞ This RECORD has met with the Highest Praise from those who have made use of it.

CASCARA CORDIAL.

IN HABITUAL CONSTIPATION.

The great desideratum in the treatment of chronic constipation has heretofore been a remedy which possessed not only a temporary specific action on the bowels, but which would be followed by no reaction and no repression of secretion, and which could be administered for a sufficient length of time to permit of restoration of normal function; a remedy which would not only alleviate temporarily the existing mal-condition, but permanently remove the cause upon which it depended for its continuance, and thus effect a radical cure. The extensive trial of Cascara Sagrada by physicians of this country and Europe has shown it to be the drug that most fully meets all these indications. It has been added to the British Pharmacopœia, and its efficacy is attested by all physicians who have given it a trial. Cascara Cordial is prepared to disguise the inherent bitter principle of the drug, and without detracting from its medicinal value, render it acceptable to the most fastidious palate.

AS A VEHICLE FOR NAUSEOUS MEDICINES.

Cascara Cordial has become widely known to the profession. It not only effectually disguises the taste of such inherently bitter medicines as Quinine, but on account of its laxative properties, is a most valuable adjuvant or corrigent to any prescription containing drugs, such as iron, the continued administration of which tends to constipate. It will be seen that Cascara Cordial has a wide range of utility as an agreeable laxative excipient.

TO DISPEL THE ACUTE EFFECTS OF ALCOHOL AND OPIUM ABUSE.

From letters received from physicians, we are led to call the attention of the profession to the use of Cascara Cordial by those addicted to the alcohol and opium habits. The headache and gastric irritation following excessive indulgence in alcohol is avoided by adding a little Cascara Cordial to the alcoholic stimulant taken, or by taking a full dose of the cordial on retiring, after too free indulgence. The severe constipation also often attending indulgence in opium may be relieved by the systematic administration of Cascara Cordial.

We can not assume the responsibility for lack of success physicians may meet with in prescribing the many imitations and spurious varieties of Cascara on the market, and would request those wishing a genuine and reliable preparation to specify P. D. & Co's.

☞ Samples furnished on application, to those physicians who will pay express charges.

DETROIT, MICH.

A NEW EMMENAGOGUE.

The following is an abstract from a letter written by one of the most prominent gynæcologists of the country, to another:

"Thus far no perfect emmenagogue has been discovered, but I regard the manganese as the best I have met with. It should be styled a regulator of menstruation rather than a pure emmenagogue, for it is useful in the absence of the menses, irregularity of their recurrence, and even in excess of flow.

"The preparation which I now employ is McKesson & Robbins' pills of the binoxide of manganese. Of this preparation I give two grains three times a day throughout the month and during the period.

"I also employ manganese in chlorosis and anæmia, and I think that by its use I obtain better results than I have heretofore done by iron." (See *Medical Record* of March 6th, page 274.)

Specify McK. & R.'s Pills Manganese Binoxide.

Important additions to McK. & R.'s list of Gelatine Coated Pills:

McK. & R. *Cascara Sagrada* and *Nux Vomica*: Ext. Cas. Sagr. gr. ii; Ext. Nux Vom. gr. 1-5.

McK. & R. Cascara Sagrada, Nux Vomica and Belladonna: Ext. Cas. Sag. gr. ii; Ext. Nucis Vom. gr. 1-8; Ext. Bellad. gr. 1-16.

McK. & R. Hydrobromide of Hyoscin 1-100 gr.

McK. & R. Binoxide of Manganese 2 grs.

McK. & R. Valerianate of Quinine ½, 1, 2, and 3 grs.

McK. & R. Valerianates Iron, Quinine, and Zinc: Ferri Valer., Quin. Valer., Zinci Valer., ää gr. i.

McK. & R. Oleate of Manganese 20 per cent. May be used to advantage when the pills cannot be administered.

Always specify McK. & R's.

COCAINE.

Although only eighteen months have elapsed since Koller's announcement of his discovery of the anæsthetic properties of this alkaloid, Cocaine already ranks among the most important agents of the practitioner. In general and dental surgery, ophthalmology, laryngology and general therapeutics, its value is everywhere attested.

We began its manufacture immediately after the announcement of Dr. Koller, and samples of our product were submitted to many noted specialists for their experiments, and the results were highly gratifying. The demand for our manufacture of the salt, solutions, and oleates, has continued to increase, and we desire to express our sincere thanks to the medical, pharmaceutical, and dental professions for their kind encouragement as shown in their recognition of the merits of our preparations. Our appreciation of this will be shown in our constant efforts to supply all their requirements in chemicals and pharmaceuticals, of a quality worthy of their entire confidence.

Special quotations on Terebene and Cocaine for specified quantities. Very respectfully,

McKESSON & ROBBINS.

TEREBENE.

McKESSON & ROBBINS

WERE THE FIRST IN THIS COUNTRY TO MANUFACTURE THIS VALUABLE REMEDY FOR

Winter Cough, Bronchial and Chest Affections, Flatulency, Acidity, and other forms of Dyspepsia.

It may be used as an inhalation, or taken internally in doses of five or six drops on sugar every four hours, gradually increasing the dose to twenty minims.

Terebene was brought to the notice of the medical profession as far back as 1873, by M. Riban, who read a series of papers on this and similar substances before the Pharmaceutical Society of Paris. It has lately been brought into prominence by Dr. Wm. Murrell, of London, who has given it in over 114 cases; he has also notes of its value in 81 out of 94 cases. Dr. Murrell says that much of the Terebene now being sold may be described as inferior, and to this fact he ascribes some irritating effects noted in a few of his cases.

We would therefore caution the physician in prescribing and the druggist in ordering to, in all cases,

SESSIONS OF 1887-88.

The REGULAR SESSION begins on Wednesday, September 21, 1887, and ends about the middle of March, 1888. During this Session, in addition to the regular didactic lectures, two or three hours are daily allotted to clinical instruction. Attendance upon at least two regular courses of lectures is required for graduation.

The SPRING SESSION consists of recitations, clinical lectures and exercises, and didactic lectures on special subjects. This Session begins about the middle of March and continues until the middle of June. During this Session, daily recitations in all the departments are held by a corps of Examiners appointed by the Faculty.

The CARNEGIE LABORATORY is open during the collegiate year, for instruction in microscopical examinations of urine, practical demonstrations in medical and surgical pathology, and lessons in normal histology and pathology, including bacteriology.

For the annual Circular and Catalogue, giving requirements for graduation and other information, address Prof. AUSTIN FLINT, Secretary, Bellevue Hospital Medical College, foot of East 26th Street, New York City.

30,000 PHYSICIANS
NOW PRESCRIBE
HYDROLEINE

(HYDRATED OIL,)

For Consumption and Wasting Diseases. It Produces Immediate Increase in Flesh and Weight.

FORMULA.

Each Dose of Two Teaspoonfuls, equal to 120 Drops, contains:

Pure Cod Liver Oil	80 m. (drops)	Soda	½ Grain.
Distilled Water	35 "	Boric Acid	½ "
Soluble Pancreatin	5 Grains.	Hyocholic Acid	⅛ "

DOSE:

Two teaspoonfuls alone, or with twice the quantity of water, to be taken thrice daily after meals.

Hydroleine (Hydrated Oil) is not a simple alkaline emulsion of oleum morrhua, but a hydro-pancreated preparation containing acids and a medicum of soda. Pancreatin is the digestive principle of fatty foods, and, in the soluble form here used, completely saponifies the oleaginous material so necessary to the reparative process in all wasting diseases.

Lautenbach's researches on the function of the liver would show the beautiful adjustment of therapeutics in preparation of Hydroleine, furnishing, as it does, the acid and soda necessary to prevent self-poisoning by reabsorption of morbid tubercular detritus and purulent matters into the general circulation.

Each bottle in nutritive value exceeds ten times the same bulk of cod liver oil. It is economical in use and certain in result.

Sold at all Drug Stores at $1.00 per Bottle.

The principles upon which this discovery is based have been described in a treatise on "The Digestion and Assimilation of Fats in the Human Body," by H. C. BARTLETT, Ph. D., F. C. S., and the experiments which were made, together with cases illustrating the effect of Hydrated Oil in practice, are concisely stated in a Treatise on "Consumption and Wasting Diseases," by G. OVEREND DREWRY, M. D.

Copies of these Works sent free on Application.

WM. F. KIDDER & CO., 83 John Street, New York.

Agents for U. S.

Also exclusive Agents for SVAPNIA, or Bigelow's purified Opium, in SCALES and HALF-GRAIN GRANULES.

TAMAR INDIEN GRILLON.

A laxative, refreshing, and medicated Fruit Lozenge, very agreeable to take, and never causing irritation. Its physiological action assures the immediate relief and effectual cure of

CONSTIPATION,

HÆMORRHOIDS, BILE, CEREBRAL CONGESTION, HEADACHE, LOSS OF APPETITE, INTESTINAL OBSTRUCTIONS, ETC.,

by augmenting the peristaltic movement of the intestine without producing undue secretion of the liquids. Unlike pills and the usual purgatives, it does not predispose to intestinal sluggishness, and the same dose always produces the same effect, that is to say, never needs increasing.

It is recommended by the most eminent physicians of Paris, notably Drs. BELIN and JARDIEU, who prescribe it constantly for the above complaints, and with most marked success.

Paris: E. GRILLON, 27 Rue Rambuteau.

SOLD BY ALL DRUGGISTS.

Practice and residence in a thriving town of Southeastern Pennsylvania. Property itself worth Thirty-five Hundred Dollars, and practice worth over Twenty-five Hundred per year. Buildings new and commodious. Opposition light to a good man. Advertiser sells to go to a city, and will use his influence for successor. A population of twenty-five hundred within one mile, and active works employing several hundred hands. Price for property and influence, Four Thousand Dollars. Two railroads terminate in the borough, which is located in a good farming community, good society, schools, and churches.

For particulars, address "H.,"
Care MED. AND SURG. REPORTER.

RECTAL ALIMENTATION.

Peptonized Milk the Ideal Substance for Nutritive Enemas.

It would be difficult to conceive of a substance more perfectly adapted for feeding per rectum than thoroughly peptonized milk. It is perfectly absorbable, non-irritant, and may be continuously used for long periods without local disturbance and with entirely adequate nutrition; patients even sometimes increasing in weight.

The artificial digestion of the milk may be carried to the point of complete conversion of the caseine into peptone, or the process may be left to proceed in the alkaline secretion of the rectum. Peptonized Milk *Gruel*—of arrow-root and milk—may be used if preferred, the PEPTONIZING TUBES digesting both starch and milk.

PEPTONIZING TUBES

are sold in boxes at retail for 50 cents, one dozen tubes in a box, each tube peptonizing a pint of milk.

FAIRCHILD BROS. & FOSTER,

82 and 84 FULTON STREET, NEW YORK.

Infantile Atrophy.

"INFANTILE ATROPHY, or the slow wasting which is a familiar symptom in hand-fed babies, is one of the commonest causes of death in early infancy."

"INFANTILE ATROPHY is the consequence of insufficient nourishment. The child wastes because he is starved. But it is not to actual lack of feeding that the starvation is usually to be ascribed. A baby fed from a breast which secretes milk poor in quality and insufficient for the child's support, will, of course, grow slowly thinner; but an infant supplied largely with farinaceous compounds, from which his feeble digestive organs fail to derive even a minimum of nourishment, will waste with startling rapidity."

"Mellin's Food may be used from the first, and is almost always well digested. Farinaceous matters, unless guarded by malt, as in Mellin's Food, should not be given to a child younger than six months."

From "Disease in Children," by Eustace Smith, M. D., F. R. C. P., London, England.

A sample of Mellin's Food, sufficient for trial, will be sent free to any Physician desiring it.

PHYSICIANS!

YOUR ATTENTION IS INVITED

—TO THE—

DR. McINTOSH NATURAL UTERINE SUPPORTER.

THIS INSTRUMENT MEETS THE WANTS OF THE PROFESSION MORE PERFECTLY than any other Uterine Supporter ever made. This is proven by the fact that during the past fifteen years more have been sold than of all other Supporters combined. *It never fails to give perfect satisfaction, even in the most difficult cases,* where any instrument can be used.

The **ABDOMINAL PORTION** is a broad morocco leather belt with elastic straps to buckle around the hips, with concave front, so shaped as to hold up the abdomen.

The **UTERINE PORTION** is a cup and stem made of highly-polished hard rubber, very light and durable, shaped to fit the neck of the womb, with openings for the secretions to pass out, as shown by the cuts. Cups are made with extended lips to correct flexions and versions of the womb.

The cup and stem is suspended from the belt by two soft elastic rubber tubes, which are fastened to the front of the belt by simple loops, pass down and through the stem of the cup and up to the back of the belt. These soft rubber tubes being elastic adapt themselves to all the varying positions of the body and perform the service of the ligaments of the womb.

Anteversion. Prolapsus. Retroversion

The instrument is very comfortable to the patient, can be removed or replaced by her at will, can be worn at all times, will not interfere with nature's necessities, will not corrode, and is lighter than metal. It will answer for all cases of Anteversion, Retroversion, or Prolapsus of the Womb. It is used by our leading physicians with never-failing success.

OUR REDUCED PRICE TO PHYSICIANS IS $5.00 EACH.

Instruments sent by mail at our risk on receipt of price; or we can send by express, C. O. D., with express charge for returning money added.

CAUTION.

Owing to the great success of our Supporter, several worthless imitations have been made which are often substituted for our instruments, to the detriment of the patient and the disappointment of the physician. To protect our patrons from imposture, we stamp each pad of the Abdominal belt in gilt letters, "Dr. McIntosh N. U. Supporter, Chicago, Ill."; the base of each cup is stamped "Dr. McIntosh N. U. S. Co., Chicago, Ill., U. S. A."

The box in which the instrument is put up contains directions for the application of the instrument pasted inside the cover, having the fac simile signature of Dr. L. D. McIntosh.

For further information in regard to the instrument, address

DR. McINTOSH NATURAL UTERINE SUPPORTER CO.,

300 AND 302 DEARBORN STREET, CHICAGO, ILL.

Our valuable Pamphlet on "Displacement of the Womb," giving a more complete description of the Instrument, will be sent you free on application.

CELERINA

NERVE-TONIC, STIMULANT AND ANTISPASMODIC.

FORMULA.—Every Fluid-Drachm represents FIVE grains EACH—Celery, Coca, Kola, Viburnum and Aromatics.

INDICATIONS.—Impotency, Spermatorrhea, Loss of Nerve-Power (so usual with Lawyers, Preachers, Writers and Business Men), Nervous Headache, Neuralgia, Paralysis, Dysmenorrhea, Hysteria, Opium-Habit, Inebriety, Prostatitis, Dyspepsia, and ALL LANGUID or DEBILITATED conditions of the System.—*Indispensable to restore a patient after alcoholic excess.*

DOSE.—One or two teaspoonfuls three or more times a day, as directed by the Physician.

ALETRIS CORDIAL

UTERINE TONIC AND RESTORATIVE.

PREPARED FROM THE ALETRIS FARINOSA OR TRUE UNICORN.

INDICATIONS.—Amenorrhea, Dysmenorrhea, Leucorrhea, Prolapsus Uteri, Sterility, to PREVENT Miscarriage, Etc.

DOSE.—One teaspoonful three or four times a day.

Unrivaled as a Uterine Tonic in Irregular, Painful, Suppressed and Excessive Menstruation,

IT RESTORES NORMAL ACTION TO THE UTERUS, AND IMPARTS VIGOR TO THE ENTIRE UTERINE SYSTEM.

☞Where Women have aborted during previous Pregnancies, or in any case where abortion is feared, the Aletris Cordial is indicated, and should be continuously administered during entire gestation.

ACID MANNATE

A MILD, SAFE AND PLEASANT APERIENT.

Prepared from Manna, Purified Cathartic Acid, and Fruit Juices.

INDICATIONS.—Constipation, Biliousness, Congestions, Etc. **INDISPENSABLE AS AN APERIENT FOR WOMEN DURING PREGNANCY.** In teaspoonful doses, 3 times a day, it favors the SECRETION and EXCRETION of bile, and gradually removes the congested and torpid states of the liver, and keeps the bowels in a regular and soluble condition.

DOSE.—ONE or MORE teaspoonfuls as directed by the Physician.

S. H. KENNEDY'S
CONCENTRATED EXTRACT OF
PINUS CANADENSIS

DARK A NON-ALCOHOLIC LIQUID. WHITE

A MOST VALUABLE NON-IRRITATING MUCOUS ASTRINGENT.

INDICATIONS.—Albuminuria, Diarrhea, Dysentery, Night-Sweats, Hemorrhages, Profuse Expectoration, Catarrh, Sore Throat, Leucorrhea, and other Vaginal Diseases, Piles, Sores, Ulcers, Burns, Scalds, Gonorrhea, Gleet, Etc.

When Used as an Injection, to Avoid Staining of Linen, the WHITE Pinus should be Used.

Recommended by DR. J. MARION SIMS, and other Prominent Physicians.

RIO CHEMICAL CO., ST. LOUIS: LONDON: PARIS.

Samples FREE to any Physician who will pay Express charges, and mention this Journal.

PACKER'S TAR SOAP.

ABSOLUTELY PURE AND NON-IRRITATING.

MADE FROM VEGETABLE OILS, PINE TAR, AND GLYCERINE.

A perfect soap should be made from pure and sweet oils, and clean, well-washed alkalies. Such is **Packer's Tar Soap.** It is combined with distilled **pine-tar,** and hence has had the most gratifying effects in the treatment of Dermatic Diseases, as chafing, eczema, erythema, seborrhea, herpes, etc.

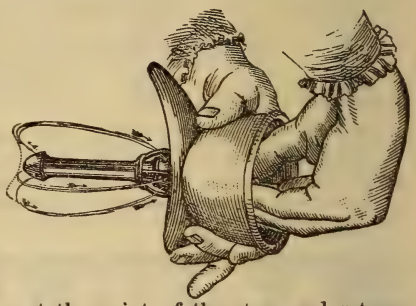
As a Disinfectant, Antiseptic, and Detergent, it is admirably adapted for use in ulcers, foul wounds, fetid discharges, bed sores, and similar conditions. For the bath, toilet, and shampoo, it is unrivaled. 25 cents per cake, from Druggists.

It is supplied to Hospitals, Asylums, and Physicians, in one pound bars, at reasonable prices.

P. O. Box 2985. **THE PACKER MFG. CO., 100 Fulton St., New York.**

"PALLAS" SYRINGE.

VAGINAL AND RECTAL.



A MOST PERFECT and simply constructed Syringe for medicating and irrigating the vaginal cavity. The novel bulb of this Syringe, when doubled upon itself, as shown in the cut, will cause no fluid to be left, as is so apt to happen with the ordinary bulbs, and when filled will contain just enough fluid for the expansion of the vaginal folds. The hard rubber labial shield, with its plug, when firmly pressed against the labia, will both prevent spilling and soiling of linen, and the fluid can therefore be kept in circulation and in contact with the parts by repeating the pumping motion of the bulb. It will also be noticed that the fluid escapes as a spray from the large holes at the point of the stem and returns through the holes at the root of same, which is provided with hard rubber screen-bars, preventing the folds from interfering with the rapid return of the fluid into the bulb. In filling the bulb, a couple of turns will unscrew it. In handsome case, satin lined. Retail price, $3.75. To physicians, $3.00.

NOTABLE POINTS

RELATIVE TO

Lactated Food.

IT IS A COOKED FOOD.

By the use of high steam heat the gluten flour used is partially torrefied. This is done while the flour is dry, and during the process it is in constant motion, which insures perfect cooking to every particle.

Routh says, (Infant Feeding, page 380) that by this process, "the starch granules are rendered more separable, the gluten is reduced to a more porous condition, readily acted on by the gastric juice, and as an aliment, therefore, is more nutritious and digestible."

IT IS A PREDIGESTED FOOD.

"You state that it is self-digestive as regards the conversion of insoluble starch into soluble dextrine and maltose. My experiments with it lead me to hold that this is correct." J. MILNER FOTHERGILL.

IT CONTAINS NO UNCHANGED STARCH.

By the peculiar process of manufacture, every particle of the gluten flour is subjected to the action of the malto-diastase, and by it all the starch contained is transformed into soluble carbo-hydrates.

Professor CARL SEILER says, "Examination has proved that all the starch granules are converted, as shown by their behavior to polarized light."

NO CANE SUGAR USED.

The basis of Lactated Food is the pure sugar of milk made by the improved processes of the American Milk Sugar Co. The great value of this article has been shown conclusively. Cane sugar is not used in the composition or preparation of the Food on account of its liability to cause irritation by reason of the acetic fermentation which it creates in the stomach. Milk sugar never causes this fermentation or irritation.

IT IS NON-IRRITATING.

By reason of the fact that Lactated Food is partially digested in process of Preparation, it is assimilated by the feeblest stomach, and no undigested particles pass into the bowels to irritate, and thus cause troublesome and dangerous bowel disorders.

IT IS HIGHLY NUTRITIOUS.

The nutritive elements of Lactated Food are derived from the three great cereals, Wheat, Barley, and Oats. From the Wheat is taken the pure gluten, the most nourishing substance known for the muscles and tissues; from the Barley, all the soluble albuminoid and extractive matter resulting from the most careful malting; and from the Oat, the strengthening properties for which it is so well known. The result is a food which never disappoints, and under which the feeble child or invalid rapidly rallies.

FOR CHOLERA INFANTUM.

It is the chief reliance of many eminent practitioners, and it is the safest food in summer for all young or delicate children.

Another important consideration is its low price, it being much more economical than other foods. We make four sizes, selling for 25 cents, 50 cents, $1 00, and $2.50. *A dollar can will furnish one hundred and fifty meals for an infant.*

If any physician that has not yet made a trial of the Lactated Food will write us, we will send a package of our regular size, postpaid, without charge, with the understanding that it will be given a careful trial as soon as possible.

We shall use every precaution to maintain the high standard of this Food, and to insure perfect satisfaction to the profession in its use.

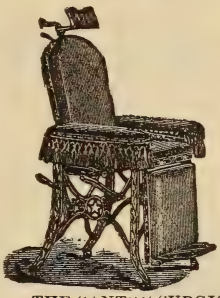
WELLS, RICHARDSON & CO.,

BURLINGTON, VT.

THE CANTON SURGICAL

AND

GYNÆCOLOGICAL CHAIR.



A chair especially constructed for the use of the general practitioner, as well as for the specialist in the treatment of gynæcological cases. For treating diseases of the Eye, Ear, Throat, and Chest, it has no equal. Every chair fully warranted to be first-class.

As a speculum chair it secures ease and comfort to the patient, and at the same time gives the operator such perfect control of all the various changes and positions, that it robs gynæcology of its usual embarrassment and annoyance.

Send for descriptive catalogue.

McINTOSH GALVANIC AND FARADIC BATTERY CO.,

MANUFACTURERS OF THE CELEBRATED

McIntosh Combined Galvanic and Faradic Batteries,

Table, Office, and Family Batteries, Electrodes, Electric Bath Apparatus, Statical Electric Machines, Stereopticons, Solar, Monocular, and Binocular Microscopes.

AND ALL KINDS OF

PHILOSOPHICAL ELECTRICAL APPARATUS.

Schools, Colleges, Physicians, or Hospitals wanting new Apparatus, will do well to favor us with correspondence and obtain estimates. Men of scientific experience have charge of the manufacturing department. We employ the most skillful mechanics, and have the largest facilities in America for manufacturing.

We would call the Special Attention of the Medical Profession to our

Combined Galvanic and Faradic Batteries.

These Batteries are recommended by the Medical Faculty of both America and Europe, and have been adopted by the United States Government for use in Medical Department of the Army and Navy. They are

The First and Only Portable Batteries ever Invented which Give both the Galvanic and Faradic Current,

TWO DISTINCT BATTERIES IN ONE CASE.

No Physician can afford to be without one.

This celebrated Battery is constructed on an improved plan. The zincs and carbons are fastened to hard-rubber plates in sections of six each; this manner of connecting brings the plates nearer together than in any other battery, thus giving less internal resistance. The cells are composed of one piece of hard rubber, and are made in sections of six each with a drip-cup, thus one section can be handled, emptied, and cleaned, as easily and quickly as one cell. The drip-cup is to receive the elements when the battery is not in use. The fluid cannot spill or run between the cells, and there is no danger of breaking, as with glass cells. This is the only battery in which the zinc and carbon plates can be kept clean and always in order by simply rinsing them.

An extra cell (with a zinc and carbon element) is added to the combined batteries, for the purpose of producing the Faradic current. This cell gives as much force as is ever needed, and avoids exhausting the current from the Galvanic cells. All the metal work is finely nickel-plated and highly polished, and every part is put together so that it can be easily replaced by the operator. Our batteries weigh less, occupy less space, give a current of greater intensity and quantity, than any other battery manufactured.

Our illustrated Catalogue, a handsome book giving full description of all our goods, and other valuable information sent free on application.

McINTOSH GALVANIC AND FARADIC BATTERY CO.
300 & 302 DEARBORN STREET, CHICAGO, ILL.

WHEELER'S TISSUE PHOSPHATES

Bone-Calcium Phosphate $Ca_3 2P.O._4$, Sodium Phosphate $Na_2 H.P.O._4$, Ferrous Phosphate $Fe_3 2P.O._4$, Trihydrogen Phosphate $H_3 P.O._4$.

WHEELER'S COMPOUND ELIXIR OF PHOSPHATES AND CALISAYA. A Nerve Food and Nutritive Tonic, for the treatment of Consumption, Bronchitis, Scrofula, and all forms of Nervous Debility.

The Lactophosphates prepared from the formula of Prof. Dusart, of the University of Paris. Combines with a superior Pemartin Sherry Wine and Aromatics in an agreeable cordial easily assimilable and acceptable to the most irritable stomachs.

Phosphorus, the oxidizing element of the Nerve Centres for the generation of Nerve Force; Lime Phosphate, an agent of Cell Development and Nutrition; Soda Phosphate, an excitant of Functional Activity of Liver and Pancreas, and Corrective of Acid Fermentation in the Alimentary Canal; Iron, the Oxidizing Constituent of the Blood for the Generation of Heat and Motion; Phosphoric Acid, Tonic in Sexual Debility; Alkaloids of Calisaya, Anti-Malarial and Febrifuge; Extract of Wild Cherry, uniting with tonic power the property of Calming Irritation and Diminishing Nervous Excitement.

THE SUPERIORITY OF THE ELIXIR consists in uniting with the Phosphates the special properties of the Cinchona and Prunus, of Subduing Fever and Allaying Irritation of the Mucous Membrane of the Alimentary Canal, which adapts it to the successful treatment of Stomach Derangements and all diseases of Faulty Nutrition, the outcome of Indigestion Malassimilation of Food, and *failure of supply* of these essential elements of Nerve Force and Tissue Repair.

The special indication of this combination of Phosphates in Spinal Affections, Caries, Necrosis, Ununited Fractures Marasmus, Poorly Developed Children, Retarded Dentition, Alcohol, Opium, Tobacco Habits, Gestation and Lactation, to promote Development, etc., and as a *physiological restorative* in Sexual Debility, and all used up conditions of the Nervous System, should receive the careful attention of good therapeutists.

There is no strychnia in this preparation, but when indicated, the Liquor Strychniæ of the U. S. Dispensatory may be added, each fluid drachm of the solution to a pound bottle of the Elixir making the 64th of a grain to a half fluid ounce, an ordinary dose, a combination of a wide range of usefulness.

DOSE—For an adult, one tablespoonful three times a day, after eating; from seven to twelve years of age, one dessertspoonful; from two to seven, one teaspoonful. For infants, from five to twenty drops, according to age.

Prepared at the Chemical Laboratory of T. B. WHEELER, M. D., Montreal, D. C.

Put up in pound bottles and sold by all Druggists at One Dollar.

MATHEY-CAYLUS' GLUTEN

CAPSULES

OF

PURE COPAIBA AND OTHER MEDICINES.

Adapted and recommended for the cure of recent or chronic Gleets, Fluor Albus, etc., etc.

The MATHEY-CAYLUS' CAPSULES, *coated with gluten*, present the most perfect mode for administering Copaiba, Cubebs, Norway Tar, Turpentine, and other remedies, the disagreeable odor and taste of which are often a hindrance to their use. This mode of preparing capsules, which has been approved by the Academy of Medicine, has been recommended in their clinical lectures by eminent Professors in the hospitals of Paris, as well as in those of New York and London.

By the first physicians of the hospitals of Paris, London, and New York.

SPECIAL ADVANTAGES OF MATHEY-CAYLUS' GLUTEN CAPSULES.—Being formed of thin, transparent, and readily assimilated coating, they so cover and disguise the medicine to be given, that it can be taken without disgust, but with ease. In this respect, they differ widely from the gelatine capsules, which have a hard, thick coating, which swells beyond measure, in the stomach, are hard to be swallowed, and what is of great importance, they create disturbance in the digestive functions.

The special advantage of the coating of gluten consists in the fact that, notwithstanding its extra thinness, and although it softens under the action of the gastric juice, it can pass the stomach without breaking, and only in the intestines is the medicinal matter liberated; this accounts for the fact that Mathey-Caylus' Capsules never cause the nausea, eructations, and dyspeptic symptoms, which are complained of by many persons using other preparations.

Finally, their regular ovoid form, which is so favorable to swallowing, their pleasant appearance, which dispels all disgust, and the advantage of being entirely free from taste and smell, recommend the use of these capsules even to the most delicate persons.

Thankful to the Medical Profession for the liberal patronage heretofore bestowed upon us, we hope that they will continue their favors, and we are convinced that they will never have any reason to regret the generous welcome they have given to our preparations.

MATHEY-CAYLUS' CAPSULES are never sold, except in bottles having the following inscription printed in the glass: MATHEY-CAYLUS A PARIS. And each bottle contains 64 capsules, making them the cheapest capsules in the market.

The following different kinds of Mathey-Caylus' Gluten Capsules are now offered:

COPAIBA AND TANNIC ACID,
COPAIBA AND S. N. OF BISMUTH,
COPAIBA AND CATECHU,
COPAIBA AND MAGNESIA,
COPAIBA, CUBEBS AND ALUM,
COPAIBA, CUBEBS AND RHATANY,
COPAIBA AND RHATANY,
COPAIBA AND CITRATE OF IRON,
COPAIBA AND CUBEBS,
COPAIBA PURE,

TANRET'S PELLETIERINE

For the Treatment of Tape-Worm (Tænia Solium.)

This New Tænifuge, the Active Alkaloid of Pomegranate Bark, has of late come into extensive use in France for the treatment of Tape-Worm (Tænia Solium). The results of numerous experiments with it at the Marine Hospitals of Toulon, St. Mandrier, etc., and in the Hospitals of Paris, St. Antoine, La Charite, Necker, Beaujon, etc., have all been most satisfactory. Doctor Dujardin Beaumetz, Member of the Academy of Medicine, and Prof. Laboulbene, in their report to the Society of Therapeutics, have given it their unqualified approval after the most searching experiments. This preparation is pleasant to administer, and if certain preliminaries are observed success will be insured.

Sold only in Bottles containing one dose.

TANRET'S ERGOTININE.

ALKALOID AND ACTIVE PRINCIPLE OF SPURRED RYE.

This is a well defined Alkaloid that must not be confounded with Ergotine or other extracts; it is given in doses of from ¼ to ½ Milligramme (1-240th to 1-120th of a grain), in all cases where Ergot is indicated, viz.: Flooding, Post-partum Hemorrhages, Metrorrhagia, etc., etc.

It is put up in the following forms:

Syrup Containing ¼ Milligramme to each teaspoonful; Dose from 1 to 6 teaspoonsfuls per day.

Solution for hypodermic purposes, Containing 1 Milligramme to each cubic Centimeter; Dose, from 3 to 10 drops.

The Institute of France has awarded one of its Prizes to Mr. Chas. Tanret for the discovery of these Alkaloids.

Tanret's Pelletierine and Ergotinine are only prepared by Mr. Chas. Tanret, Laureate of the Institute of France, 64 Rue du Rempart, Paris.

Sole Agents for the United States, E. FOUGERA & CO., 30 North William St., N. Y.

PAMPHLET ON PELLETIERINE AND ERGOTININE SENT ON APPLICATION.

BOUDAULT'S PEPSINE

The Only Pepsine Used in the Hospitals of Paris for the Last 30 Years.

Unlike the various substitutes which, in most cases, are but unscientific or incompatible compounds, forced upon the Medical Profession as aids to digestion by extensive advertising, but which, when submitted to the proper tests, are found to be useless as digestive agents, Pepsine is constantly gaining in the esteem of the careful practitioner.

Since the introduction of Pepsine by Boudault and Corvisart, in 1854, the original BOUDAULT'S PEPSINE HAS BEEN AT ALL TIMES CONSIDERED THE BEST, as is attested by the awards it has received at the Expositions of 1867, 1868, 1872, 1873, in 1876 at the Centennial Exposition of Philadelphia, and in 1878 at the Paris Exposition.

The most reliable tests, carefully applied, will satisfy every one that BOUDAULT'S PEPSINE HAS A MUCH HIGHER DIGESTIVE POWER than the best Pepsines now before the Profession, and is therefore especially worthy of their attention.

BOUDAULT'S PEPSINE is prepared in the form of Pepsine Acid and Pepsine Neutral. It is sold in bottles of one ounce, with a measure containing exactly five grains; also in bottles of 4, 8, and 16 ounces for dispensing.

BOUDAULT'S WINE OF PEPSINE.

Formula of Dr. Corvisart.

The taste of Pepsine being perfectly disguised in this Wine, it may be recommended to persons who have difficulty in taking Pepsine in the form of powder. This Wine is tested so that a tablespoonful of it is equal in digestive power to ten grains of Boudault's Pepsine in powder. Sold only in 8 oz. Bottles.

BROMIDIA

THE HYPNOTIC.

FORMULA.—

Every Fluid drachm contains 15 grains EACH of pure Chloral Hydrat. and purified Brom. Pot., and one-eighth grain EACH, of gen. imp. ext. Cannabis Ind. and Hyoscyam.

Dose.—One-half to one fluid drachm in WATER or SYRUP every hour until sleep is produced.

Indications.—

Sleeplessness, Nervousness, Neuralgia, Headache, Convulsions, Colic, Mania, Epilepsy, Irritability, etc. In the restlessness and delirium of fevers, it is absolutely invaluable.

IT DOES NOT LOCK UP THE SECRETIONS.

PAPINE

THE ANODYNE.

Papine is the Anodyne or pain-relieving principle of Opium, the Narcotic and Convulsive elements being eliminated. It has less tendency to cause Nausea, Vomiting, Constipation, etc.

Indications.—

Same as Opium or Morphia.

Dose.—(ONE FLUID DRACHM)—represents the Anodyne principle of one-eighth grain of Morphia.

IODIA

THE ALTERATIVE AND UTERINE TONIC.

FORMULA.—

Iodia is a combination of Active Principles obtained from the Green Roots of STILLINGIA, HELONIAS, SAXIFRAGA, Menispermum, and Aromatics. Each fluid drachm also contains five grains IOD. POTAS. and three grains PHOS. IRON.

Dose.—One or two fluid drachms (more or less, as indicated,) three times a day, before meals.

Indications.—

Syphilitic, Scrofulous and Cutaneous Diseases, Dysmenorrhœa, Menorrhagia, Leucorrhœa, Amenorrhœa, Impaired Vitality, Habitual Abortions, and General Uterine Debility.

CHERRY MALT PHOSPHITES.

W. C. JACOBS, Manager.

This preparation is believed to be the only Malt Extract continuously acceptable to the stomach. The attention of those who have ceased prescribing other extracts of malt because of excessive sweetness is specially called to this.

CHERRY MALT PHOSPHITES is a combination of Wild Cherry, the condensed extract of the important Cereals and the Elixir of the Hypophosphites. Its flavor is delicious, and it is medicinally invaluable in all cases of General and Nervous Debility, Dyspepsia, Imperfect Nutrition, Impure Blood, Wasting Diseases of Children and Adults. It is extensively prescribed in European countries, and has received the cordial endorsement of the leading practitioners of this country.

PRICE $1.00 PER BOTTLE.

To Physicians not familiar with its merits, who will pay express charges, we will send a full-sized bottle *free.*

Please mention this journal.

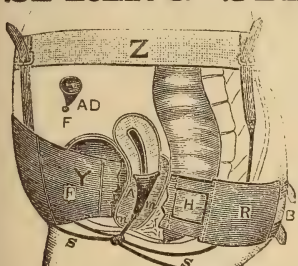
LIEBIG'S LIQUID FOOD,

A Concentrated Extract of Beef possessing both tonic and nutrient properties.

MANUFACTURED ONLY BY THE

LIEBIG PHARMACAL CO., N. Y.

STAUFFER'S
SPRING STEM UTERINE SUPPORTERS.



Price, $7.00.

The engraving shows the Spring Stem Cup, which consists of over a dozen styles. The series contains Spring Stem Balls, Spring Stem Levers, for Anteversions and Retroversions. also Spring Cup with posterior projections, all of assorted sizes.

Explanation.—The stem is screwed on cup A, and when unscrewed, the spring is put in tube *m*, or taken out when it needs cleaning. Thus the coil spring lays between the cup and base *n*. When there is pressure from above, or below, or both, the spring is compressed and again stretches out at the first opportunity. The movement of the base stem *n*, is governed by a slot and pin through tube *m*.

A D.—Represents the cup transformed into a self-sustaining cup, virtually an instrument of double capacity. In most cases after the uterus is held in "health line" for a time by external support, contraction of the walls of the vagina takes place at night or until forced down next day by bodily exertion, against which the stem and bandage guards if applied in time.

Belt Y.—The manner in which belt Y, sets on the abdomen is shown in above engraving. The widest or lifting part is in front. Over each hip as seen at H, are two elastics, and on large belts three. It closes on the back by buckling at B. It is of fine sateen outside, fine lining inside, and a slight stiffening between, and stayed with soft whalebones. Accurate hip measure is to be taken over a thin undergarment; since it needs to fit with a space of one or two inches apart on the back, for the buckle straps to draw. The perineal attachments are short and buckle at F and R.

Belt Z.—This is an elastic waist strap and carries any supporter of this series. Yet the common difficulty presents itself, where long and slender attachments are used, that they do not govern the internal part so efficiently as on the low grasping abdominal supporter Y.

Catalogue.—The catalogue comprises over 150 sizes and styles of uterine examining and supporting instruments, of which the hard rubber parts are exchanged and interchanged at cost, without limit of time. It also contains full directions and explanations for the use of this series of hard rubber gynecological instruments; together with common information collected through many years to simplify this line of treatment.

Guarantee.—The money lost by purchasing uterine supporters, unscientifically constructed, of irritating material, or limited in deficiency of sizes, and in consequence loss of families in practice, has set a large portion of the medical profession against the mechanical support of the uterus. By these conditions the risk of the first purchase by a physician of a stem and bandage supporter of this series is obviated. After the first purchase the instruments are supposed to be known, yet the guarantee is extended by special contract in doubtful cases.

Refunding.—On return of the hard rubber part or parts within six months of purchase, Five Dollars of the purchase money will be refunded. The belt remains with the patient as an abdominal supporter and only risk.

The above Guarantee and Refunding is secured when obtained through this Office. Any other Instrument of STAUFFER'S SERIES is also obtained through this Office at Catalogue Prices, and Catalogue free.

FLUID

32° Fah. 0° Cent.

Fluid Cosmoline [*Petroleol*] is a fixed oil of Petroleum, a pure hydro-carbon prepared expressly for medical use. From it all the volatile and otherwise offensive properties of the crude Petroleum have been separated, without the aid of chemicals. Perfectly indifferent to atmospheric action, it remains inalterable in any climate. It is neutral in reaction, bland, soothing, cooling, and may therefore be applied to the most sensitive conditions without irritation. Flowing at 32° Fahr., it may be used may be warmed to any temperature the body can endure. It will be found excellent to relax the skin, to protect irritated surfaces from the air, and to use as a constituent in liniments, ointments and plasters, where an emollient is needed. For these and many other purposes, obvious to the medical profession, it will be found superior to olive oil, or to any vegetable or animal oils, which undergo decomposition and turn rancid. It contains no foreign ingredient.

SAMPLES FURNISHED UPON APPLICATION.

SUCCUS ALTERANS.

(McDADE).

SUCCUS ALTERANS is a purely vegetable compound of the preserved juices of Stillingia Sylvatica, Lappa Minor, Phytolacca Decandra Smilax Sarsaparilla, and Xanthoxylum Fraxineum, as collected by DR. GEO. W. MCDADE exclusively for ELI LILLY & CO., and endorsed by DR. J. MARION SIMS.

SUCCUS ALTERANS continues to gain favor from its remarkable Alterative and Tonic properties, *eliminating specific poison from the blood*, and *increasing the proportion of red corpuscles in anæmic patients* to a wonderful degree.

SUCCUS ALTERANS in venereal and cutaneous diseases is fast supplanting Mercury, the Iodides and Arsenic; and is a certain remedy for Mercurialization, Iodism, and the dreadful effects often following the use of Arsenic in skin diseases.

SUCCUS ALTERANS is also strongly recommended for its Tonic and Alterative effects in the myriad forms of scrofulous disease, and in all cases where anæmia is a factor. Such patients rapidly develop a good appetite, sleep soundly, and gain flesh rapidly. Many cases are on record where patients increased ten to twenty-five pounds in weight in a few weeks.

SUCCUS ALTERANS may be given for any length of time without injury to the patient.

SUCCUS ALTERANS is now endorsed by leading members of the medical profession, and in use by many hospitals of note.

SUCCUS ALTERANS is put up only in round amber bottles holding sixteen fluid ounces, which is sufficient for from two to six weeks' treatment.

ANY PHYSICIAN who has not received DR. MCDADE'S latest publication, the MONOGRAPHIA SYPHILITICA for JANUARY, 1887, should send their address, mentioning this journal, and we will mail a copy. It contains a paper, illustrated with colored plates, by Dr. D. H. GOODWILLIE, of New York, on the "Sequelæ of Syphilis," reports of cases in practice, and many other valuable papers.

SUCCUS ALTERANS is supplied by reputable wholesale and retail druggists everywhere. Agency for Great Britain, etc., JOHN M. RICHARDS, 46 HOLBORN VIADUCT, LONDON, E. C.

ELI LILLY & CO., PHARMACEUTICAL CHEMISTS, INDIANAPOLIS, IND., U. S. A.

Chapoteaut's Wine of Peptone.

The Peptone used in the preparation of this Wine is obtained by the action of Sheep Pepsine on Beef of the best quality. Being pure and neutral, it is entirely assimilable, containing neither Glucose, Albumen, nor Chloride of Sodium; for this reason it is the only preparation used in the laboratory of Mr. Pasteur for the culture of microscopic liquids.

Each wineglassful of Chapoteaut's Wine contains the Peptone of ten grammes of Beef, and has, besides, the digestive properties of Pepsine.

It may be used for the following cases: Anæmia, Dyspepsia, Debility, Distaste of Food, Inaction of the Digestive Organs, Convalescence, Alimentation for Wet Nurses, Children, and the Aged; Phthisis, Persons Weakened by Fever, Dysentery, and by patients having been operated upon for Cancerous Affections.

DOSE—One or two small wineglassfuls after meals.

DEPOTS: CHAPOTEAUT, 8 RUE VIVIENNE, PARIS—E. FOUGERA & CO., 30 N. WILLIAM ST., NEW YORK.

MIDY'S SANTAL.

Midy's Essence of Santal is used with success in place of Copaiba and Cubebs, being harmless even in large doses. No matter what the color or amount of the secretion may be, the discharges are reduced and relief is obtained in forty-eight hours. No unpleasant effect is caused by its use, such as diarrhœa, eructations, or indigestion, and not giving to the Urine any odor.

In cases of Inflammation of the Bladder it acts rapidly, and in two or three days the bloody emission is suppressed; it is used with success in Chronic Catarrh, rendering the urine clear at once.

DEPOTS: MIDY, CHEMIST, 110 FAUBOURG ST. HONORE, PARIS—E. FOUGERA & CO., 30 N. WILLIAM ST.

GRIMAULT & CO.'S IODIZED SYRUP OF HORSE-RADISH.

This Syrup is a close combination of Iodine with the juices of antiscorbutic plants. It is very palatable, and is easily digested. It is a powerful auxiliary in cases of Scrofula, Rachitism, Goitres, Suppuration of the Glands of the Neck Dandruff, and Eruptions of the Skin. Each tablespoonful contains one and a half grains of Iodine, so intimately combined as to be insensible to the action of starch.

GRIMAULT & CO., PHARMACISTS, 8 RUE VIVIENNE, PARIS—E. FOUGERA & CO., NEW YORK.

COCA

CORDIAL.

—A—

PALATABLE PREPARATION

—OF—

Coca Erythroxylon,

CONTAINING

In an agreeable vehicle the active medicinal principle, free from the bitter astringent constituents of the drug.

THE SEDATIVE, tonic, and stimulant effects of Coca Erythroxolon and its preparations, and their wide application in medical practice, are now too well known to the medical profession to need extended comment.

Coca has been extensively used with gratifying success for the relief of morbid conditions depending on nervous exhaustion, in the nervous irritability following excesses of any kind, in neurasthenia, to facilitate digestion in dyspepsia, to relieve the morbid depresion of spirits resulting from exhausting mental labor, in nausea and vomiting of reflex origin, and in the treatment of the alcohol and opium habits.

In a great variety of affections it has proved itself to be a drug ranking in therapeutic importance with opium and quinine.

The Coca Cordial presents the drug in a palatable form, commending it especially to the large class of persons of delicate nervous organization, for whom it is most often indicated.

In its preparation the astringent and bitter constituents of Coca, which are not essential to its medicinal action, have been eliminated, while care has been taken to retain unchanged the active principle cocaine. One fluid-ounce of the cordial represents 60 grains of coca leaves of good quality, the vehicle employed being an agreeable cordial of a rich vinous flavor.

☞ **We shall be pleased to send on application a circular more fully descriptive of Coca Cordial and its application, and we trust physicians will communicate to us the results of their experience in the use of this preparation, so far as it is likely to be of general interest to the profession.**

PARKE, DAVIS & CO.,

Manufacturing Chemists,

New York: 60 Maiden Lane, 21 Liberty Street.

DETROIT, MICH.

30,000 PHYSICIANS
NOW PRESCRIBE

HYDROLEINE

(HYDRATED OIL,)

For Consumption and Wasting Diseases. It Produces Immediate Increase in Flesh and Weight.

FORMULA.

Each Dose of Two Teaspoonfuls, equal to 120 Drops, contains:

Pure Cod Liver Oil	80 m. (drops)	Soda	½ Grain.
Distilled Water	35 "	Boric Acid	½ "
Soluble Pancreatin	5 Grains.	Hyocholic Acid	⅛ "

DOSE:

Two teaspoonfuls alone, or with twice the quantity of water, to be taken thrice daily after meals.

Hydroleine (Hydrated Oil) is not a simple alkaline emulsion of oleum morrhua, but a hydro-pancreated preparation containing acids and a medicum of soda. Pancreatin is the digestive principle of fatty foods, and, in the soluble form here used, completely saponifies the oleaginous material so necessary to the reparative process in all wasting diseases.

Lautenbach's researches on the function of the liver would show the beautiful adjustment of therapeutics in preparation of Hydroleine, furnishing, as it does, the acid and soda necessary to prevent self-poisoning by reabsorption of morbid tubercular detritus and purulent matters into the general circulation.

Each bottle in nutritive value exceeds ten times the same bulk of cod liver oil. It is economical in use and certain in result.

Sold at all Drug Stores at $1.00 per Bottle.

The principles upon which this discovery is based have been described in a treatise on "The Digestion and Assimilation of Fats in the Human Body," by H. C. BARTLETT, Ph. D., F. C. S., and the experiments which were made, together with cases illustrating the effect of Hydrated Oil in practice, are concisely stated in a Treatise on "Consumption and Wasting Diseases," by G. OVEREND DREWRY, M. D.

Copies of these Works sent free on Application.

DISEASES OF THE URIC ACID DIATHESIS.

LAMBERT'S

LITHIATED HYDRANGEA.

KIDNEY ALTERATIVE—ANTI-LITHIC.

Formula.—Each fluid drachm of "Lithiated Hydrangea" represents thirty grains of FRESH HYDRANGEA and three grains of CHEMICALLY PURE Benzo-Salicylate of Lithia. Prepared by our improved process of osmosis, it is INVARIABLY of DEFINITE and UNIFORM therapeutic strength, and hence can be depended upon in clinical practice.

Dose.—One or two teaspoonfuls four times a day (preferably between meals).

Urinary Calculus, Gout, Rheumatism, Bright's Disease, Diabetes, Cystitis, Hæmaturia Albuminuria, and Vesical Irritations generally.

WE have had prepared for the convenience of Physicians **Dietetic Notes,** *suggesting the articles of food to be allowed or prohibited in several of these diseases.*

These Dietetic Notes have been bound in the form of small perforated slips for Physicians to distribute to their patients. Mailed gratis upon request, together with our latest compilation of case reports and clinical observations, bearing upon the treatment of this class of Diseases.

LAMBERT PHARMACAL COMPANY,

116 OLIVE STREET, ST. LOUIS.

RHEUMATISM.

DIETETIC NOTE.—A fruit and vegetable diet is most favorable for patients with chromic rheumatic troubles.

Allowed.—Beef and mutton in moderation, with horse-radish as a relish; fish and eggs, green vegetables and fruit, especially lemons. The skimmed milk diet has been advocated by some authors.

Avoid.—Starchy and saccharine food; all malt liquors, wines, and coffee.

SCOTT'S EMULSION

OF PURE COD LIVER OIL WITH HYPOPHOSPHITES OF LIME AND SODA.

THE STANDARD EMULSION OF COD LIVER OIL.

The ONLY Preparation of its class that will not SEPARATE nor SPOIL in any climate.

IT IS MADE FROM THE PUREST NORWEGIAN COD LIVER OIL, COMBINED WITH CHEMICALLY PURE HYPOPHOSPHITES AND GLYCERINE.

Acknowledged by leading Physicians in the U. S. and many other Countries to be the most ELEGANT most PALATABLE and EASILY DIGESTED preparation in the World, and can be tolerated longer by Children and persons with delicate stomachs than any other.

WE ASK A CAREFUL COMPARATIVE TEST WITH ANY OR ALL SIMILAR PREPARATIONS.

FORMULA: 50 per cent. of Pure Cod Liver Oil, 6 grs. of the Hypophosphites of Lime. and 3 grs. of the Hypophosphite of Soda to a fluid ounce. Emulsified with mucilage and Glycerine.

S. & B's BUCKTHORN CORDIAL, RHAMNUS FRANGULA.

Is giving universal satisfaction to the profession, for its mild but certain and efficient cathartic action. It seems to be *almost* a *specific* for *habitual constipation*, and we are constantly in receipt of the most flattering reports regarding it. The care we use in its preparation—having the bark always the proper age, and properly exhausted—makes it always reliable in its action. Be sure and specify S. & B. Buckthorn Cordial.

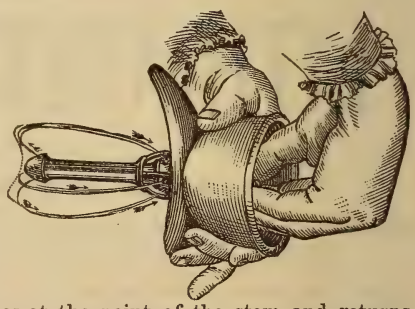
To those who have for any reason never yet tried these preparations, we will be pleased to send samples free by express.

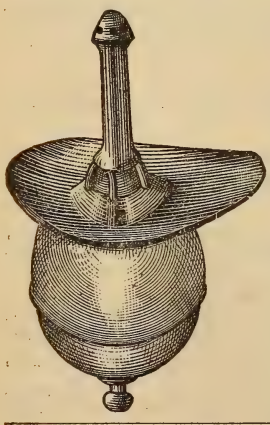
SCOTT & BOWNE, Mfg. Chemists, 132 & 134 S. 5th Ave., N. Y.

"PALLAS" SYRINGE.

VAGINAL AND RECTAL.

A MOST PERFECT and simply constructed Syringe for medicating and irrigating the vaginal cavity. The novel bulb of this Syringe, when doubled upon itself, as shown in the cut, will cause no fluid to be left, as is so apt to happen with the ordinary bulbs, and when filled will contain just enough fluid for the expansion of the vaginal folds. The hard rubber labial shield, with its plug, when firmly pressed against the labia, will both prevent spilling and soiling of linen, and the fluid can therefore be kept in circulation and in contact with the parts by repeating the pumping motion of the bulb. It will also be noticed that the fluid escapes as a spray from the large holes at the point of the stem and returns through the holes at the root of same, which is provided with hard rubber screen-bars, preventing the folds from interfering with the rapid return of the fluid into the bulb. In filling the bulb, a couple of turns will unscrew it. In handsome case, satin lined. Retail price, $3.75. To physicians, $3.00.





CHRISTIAN JENSEN & CO.,

2207 Fairmount Avenue,

PHILADELPHIA, PA.

COLDEN'S Liquid Beef Tonic.

Established 15 Years.
OBSERVE the NAME.
Beware of Imitations.

ORIGINAL LABEL:
"Colden's Liebig's Liquid Extract of Beef and Tonic Invigorator."

An Invaluable Aid in Medical Practice.

Differs Essentially from all other Beef Tonics.

COLDEN'S Liquid Beef Tonic is endorsed by scores of physicians, who are growing to realize more and more its importance in repairing, in accordance with the principles of dietetics, the **waste which disease entails.** It consists of the extract of Beef (by Baron Liebig's process) spirit rendered non-injurious to the most delicate stomach by extraction of the Fusel Oil, soluble Citrate of Iron, Cinchona, Gentian and other bitter tonics. An official analysis of this preparation by the eminent Chemist, ARTHUR HILL HASSALL, M. D., F. R. S., and an endorsement by the late SIR ERASMUS WILSON, F. R. S., is printed on the label of each bottle.

As a **blood food,** and a **reliable tonic** in all cases of debility and weakness, Malarial Fever, Anæmia, Chlorosis, Incipient Consumption, etc., it is the best preparation ever used. It acts directly on the sentient Gastric Nerves, stimulating the follicles to secretion, and gives to weakened individuals that first prerequisite to improvement—an appetite. It strengthens the nervous system when unstrung by disease, and has been employed with remarkable success as a remedy for Drunkenness and the Opium Habit.

Its Range of Action Embraces all Cases of Debility.

In order that physicians may form some idea of the nature of its ingredients, I will upon application in person, or by letter (enclosing a card), send a sample bottle of COLDEN'S LIQUID BEEF TONIC to any physician in regular standing, in the United States. Please ask your Dispensing Druggist (if he has not already a supply) to order it. In prescribing this preparation, physicians should be particular to mention "COLDEN'S"—*viz.:* "***Ext. carnis, fl. comp. (Colden's.)***" It is put up in pint bottles, and can be had of Wholesale and Retail Druggists generally throughout the United States.

C. N. CRITTENTON, Sole Agent, 115 Fulton St. New-York.

GLENN'S Sulphur Soap.

ALL physicians know that ***skin diseases*** are more or less constitutional, or dependent upon some specific poison in the blood, which if eradicated by internal treatment needs something to remove its appearance from the surface. Experience has proved that the best possible aid in the accomplishment of this end is obtained by the use of ***Sulphur in soap.*** GLENN'S SULPHUR SOAP is the best combination of its kind, and the one now generally used. It is for sale by all Druggists, at **25** cents a cake, or 3 cakes for **60** cents.

CONSTANTINE'S PINE TAR SOAP

Has been on trial among physicians for very many years as a toilet Soap and Healing Agent, and its superior virtues have been unanimously conceded **in all cases where the use of tar is indicated.** Unsolicited expressions of its excellence have been received from the Medical Faculty generally. IT IS THE BEST TAR SOAP MADE. None genuine unless stamped "A. Constantine's Persian Healing Pine-Tar Soap." For sale by all Druggists.

Samples of either of the above-named Soaps will be sent free upon application in person or by letter (enclosing card) to any physician in regular standing in the United States. C. N. Crittenton, 115 Fulton Street, New York. Please mention "THE MEDICAL AND SURGICAL REPORTER."

Carl L. Jensen

Sole Originator of

Pepsin in Scales

OR

"Crystal" Pepsin

2039 Green St.
Philadelphia

Physicians desirous of obtaining the genuine article, when prescribing Scale Pepsin or "Cryst." Pepsin, will not alone lend their aid and encouragement to the inventor, but will benefit themselves and patients as well, by simply prescribing this Pepsin thus: "Jensen's Pepsin," drawing a heavy line under the name "Jensen."

The profession generally takes it for granted that druggists are well aware that the physicians never intend to prescribe the imitations of preparations of established merits, which are brought to light solely through the knowledge and technicalities of the inventor or originator, acquired by protracted study and experiments. Imitations have never yet been known to supersede the article imitated, but furnish most convincing testimony to the worth of the article counterfeited. I am continually improving this valuable preparation. Besides its enormous digestive strength, it possesses a keeping quality not before found in any Pepsin preparation, owing to its being of a brittle, scaly texture, reduced to the shape of small granular fragments, it is perfectly soluble and pulverizes easily. It contains no foreign matter like preparations of other make, as Pepsin Manufacturers, heretofore, could not accomplish this without adding large quantities of either starch or sugar of milk.

Physicians who have not yet tried this preparation, or who have been imposed upon, will meet with gratifying results by simply prescribing this Pepsin, thus: "Jensen's Pepsin," as it will prevent substitutions.

Samples promptly forwarded, post-paid.

Faithfully

CARL L. JENSEN.

Apollinaris

"THE QUEEN OF TABLE WATERS,"

HAS RECEIVED THE

HIGHEST AWARD

LONDON, 1884,

AND IS SUPPLIED UNDER

ROYAL WARRANT

TO

H. R. H. THE PRINCE OF WALES.

ANNUAL SALE, 10 MILLIONS.

Of all Grocers, Druggists & Min. Wat. Dealers.

BEWARE OF IMITATIONS.

Friedrichshall.

THE WELL-KNOWN APERIENT MINERAL WATER.

IMPORTANT NOTICE.

By reason of an improved method of caption, by which dilution is avoided, FRIEDRICHSHALL WATER will be found now to be of ***considerably greater strength*** and ***efficacy*** than heretofore.

The ordinary dose is a large wineglassful (4 ounces), taken fasting. Most efficacious and more acceptable to the palate when heated or mixed with an equal quantity of very hot water.

"*The most suitable aperient for prolonged use.*"—***Prof. SEEGEN.***

"*After twenty years' use I appreciate it as highly as ever.*"—

Prof. VIRCHOW.

OF ALL DRUGGISTS AND MINERAL WATER DEALERS.

SAVORY & MOORE beg to call the attention of the Profession to some of their Special Preparations, the purity and uniform strength of which are guaranteed.

Pancreatic Emulsion. In Consumption, Wasting, LOSS OF THE POWER OF DIGESTION AND ASSIMILATION, this pure drug is the MOST POTENT REMEDY. This is now attested by the published records of numerous medical men, extracts of which accompany each bottle.

Peptodyn, the New Digestive, is a combination of the whole of the digestive secretions, forming an invaluable remedy in the treatment of all forms of Dyspepsia, and all diseases arising from imperfect nutrition. Peptodyn is intended as a general promoter of digestion for persons not necessarily considered in bad health; thus, when taken about a quarter of an hour after a meal, it will be found to assist digestion in a remarkable manner, and prevent the discomfort which often follows the partaking of a full meal by persons in good health.

Pancreatine Powder, for Indigestion and Loss of APPETITE. This palatable and popular remedy effects the digestion and assimilation of all food, especially of FATTY SUBSTANCES, and is therefore invaluable to patients who are unable to digest Cod Liver Oil, and who are thus deprived of its nourishing and invigorating properties.

Gelatine Discs for Hypodermic Use—Of Morphia, CODEIA, ERGOTINE, ATROPIA, STRYCHNIA, APOMORPHIA, etc. The chief features of these discs are their instant solubility, by which hypodermic solutions can be instantly obtained of uniform and reliable strengths; they keep good for an unlimited period in their dry state, and are extremely portable. (Prepared in accordance with Dr. Sansom's recommendation.)
In tubes, each containing 25 discs.

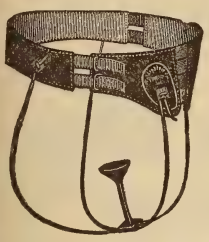
Etherodine (Substitute for Chlorodyne). A clear, bright fluid, pleasant to the taste, readily miscible with water or any suitable menstruum. The therapeutical properties of ETHERODINE are identical with those of CHLORODYNE, but the former is an elegant preparation, and more convenient for use.

Gelatine Discs for Ophthalmic Purposes.
"Much smaller doses of medicaments such as Atropine, Calabar Bean Extract, Sulphate of Zinc, Morphia, etc., etc., suffice to produce a marked effect by this form of application, than when drops are introduced."—*The Lancet.*
In tubes, each containing 100 discs.

Gelatine Lamels for Internal Administration, consist of thin, pliable, and, in most cases, transparent sheets of uniform thickness, accurately divided into squares by raised lines, each square containing an exact dose of the medicine with which the sheet is impregnated.
In sheets, each consisting of 24 squares.

Datura Tatula, for Asthma, Hay Fever, and Chronic BRONCHITIS. Recommended by the Profession as a remedy of great power and usefulness in cases of short and difficult breathing, spasmodic coughing, etc. The most convenient forms for use are—
Datura Tatula Cigars. Datura Tatula—prepared for use by means of a pipe.
Datura Tatula Cigarettes. Datura Tatula Pastilles—for Inhalation.

SAVORY & MOORE, 143 New Bond Street, London.
Agents for America, E. FOUGERA & CO., New York.



PHYSICIANS!

YOUR ATTENTION IS INVITED

—TO THE—

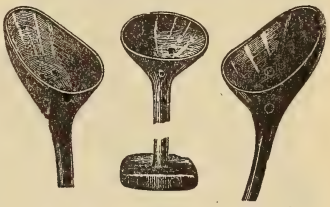
DR. McINTOSH NATURAL UTERINE SUPPORTER.

THIS INSTRUMENT MEETS THE WANTS OF THE PROFESSION MORE PERFECTLY than any other Uterine Supporter ever made. This is proven by the fact that during the past fifteen years more have been sold than of all other Supporters combined. *It never fails to give perfect satisfaction, even in the most difficult cases,* where any instrument can be used.

The **ABDOMINAL PORTION** is a broad morocco leather belt with elastic straps to buckle around the hips, with concave front, so shaped as to hold up the abdomen.

The **UTERINE PORTION** is a cup and stem made of highly-polished hard rubber, very light and durable, shaped to fit the neck of the womb, with openings for the secretions to pass out, as shown by the cuts. Cups are made with extended lips to correct flexions and versions of the womb.

The cup and stem is suspended from the belt by two soft elastic rubber tubes, which are fastened to the front of the belt by simple loops, pass down and through the stem of the cup and up to the back of the belt. These soft rubber tubes being elastic adapt themselves to all the varying positions of the body and perform the service of the ligaments of the womb.



Anteversion. Prolapsus. Retroversion

The instrument is very comfortable to the patient, can be removed or replaced by her at will, can be worn at all times, will not interfere with nature's necessities, will not corrode, and is lighter than metal. It will answer for all cases of Anteversion, Retroversion, or Prolapsus of the Womb. It is used by our leading physicians with never-failing success.

OUR REDUCED PRICE TO PHYSICIANS IS $5.00 EACH.

Instruments sent by mail at our risk on receipt of price; or we can send by express, C. O. D., with express charge for returning money added.

CAUTION.

Owing to the great success of our Supporter, several worthless imitations have been made which are often substituted for our instruments, to the detriment of the patient and the disappointment of the physician. To protect our patrons from imposture, we stamp each pad of the Abdominal belt in gilt letters, "Dr. McIntosh N. U. Supporter, Chicago, Ill."; the base of each cup is stamped "Dr. McIntosh N. U. S. Co., Chicago, Ill., U. S. A."

The box in which the instrument is put up contains directions for the application of the instrument pasted inside the cover, having the fac simile signature of Dr. L. D. McIntosh.

For further information in regard to the instrument, address

DR. McINTOSH NATURAL UTERINE SUPPORTER CO.,

300 AND 302 DEARBORN STREET, CHICAGO, ILL.

Our valuable Pamphlet on "Displacement of the Womb," giving a more complete description of the Instrument, will be sent you free on application.

LEVIS'S METALLIC SPLINTS.

FLEXIBLE, PERFORATED, NICKEL-PLATED, Conformable to every size and condition of Limbs. VERY LIGHT, INDESTRUCTIBLE, and INEXPENSIVE. The complete set consists of **21 pieces** in a neat, compact case. Full descriptive circulars sent on application. **PRICE, $15.00 Per Set.**

The Polyclinic Never-Leaking Ether Bottle

Price, $1.00.

Wm. Snowden,

7 S. Eleventh St.,

PHILADELPHIA, PA.

A sample card of **Iron-Dyed Silk** (14 sizes) will be sent to any address on application. **Price per Reel, 10 Cents.**

McINTOSH GALVANIC AND FARADIC BATTERY CO.,

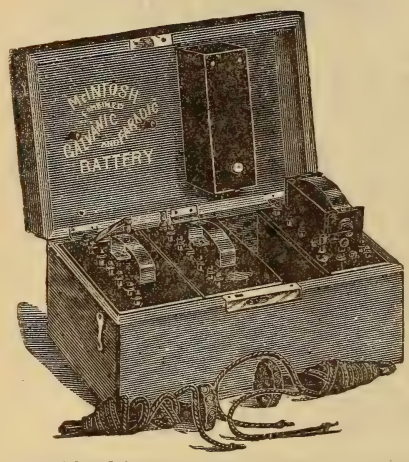
MANUFACTURERS OF THE CELEBRATED

McIntosh Combined Galvanic and Faradic Batteries,

Table, Office, and Family Batteries, Electrodes, Electric Bath Apparatus, Statical Electric Machines, Stereopticons, Solar, Monocular, and Binocular Microscopes.

AND ALL KINDS OF

PHILOSOPHICAL ELECTRICAL APPARATUS.



Schools, Colleges, Physicians, or Hospitals wanting new Apparatus, will do well to favor us with correspondence and obtain estimates. Men of scientific experience have charge of the manufacturing department. We employ the most skillful mechanics, and have the largest facilities in America for manufacturing.

We would call the Special Attention of the Medical Profession to our

Combined Galvanic and Faradic Batteries.

These Batteries are recommended by the Medical Faculty of both America and Europe, and have been adopted by the United States Government for use in Medical Department of the Army and Navy. They are

The First and Only Portable Batteries ever Invented which Give both the Galvanic and Faradic Current,

TWO DISTINCT BATTERIES IN ONE CASE.

No Physician can afford to be without one.

This celebrated Battery is constructed on an improved plan. The zincs and carbons are fastened to hard-rubber plates in sections of six each; this manner of connecting brings the plates nearer together than in any other battery, thus giving less internal resistance. The cells are composed of one piece of hard rubber, and are made in sections of six each with a drip-cup, thus one section can be handled, emptied, and cleaned, as easily and quickly as one cell. The drip-cup is to receive the elements when the battery is not in use. The fluid cannot spill or run between the cells, and there is no danger of breaking, as with glass cells. This is the only battery in which the zinc and carbon plates can be kept clean and always in order by simply rinsing them.

An extra cell (with a zinc and carbon element) is added to the combined batteries, for the purpose of producing the Faradic current. This cell gives as much force as is ever needed, and avoids exhausting the current from the Galvanic cells. All the metal work is finely nickel-plated and highly polished, and every part is put together so that it can be easily replaced by the operator. Our batteries weigh less, occupy less space, give a current of greater intensity and quantity, than any other battery manufactured.

Our illustrated Catalogue, a handsome book giving full description of all our goods, and other valuable information, sent free on application.

McINTOSH GALVANIC AND FARADIC BATTERY CO.
300 & 302 DEARBORN STREET, CHICAGO, ILL.

WHEELER'S TISSUE PHOSPHATES

Bone-Calcium Phosphate $Ca_3 2P.O._4$, Sodium Phosphate $Na_2 H.P.O._4$, Ferrous Phosphate $Fe_3 2P.O._4$, Trihydrogen Phosphate $H_3 P.O._4$.

WHEELER'S COMPOUND ELIXIR OF PHOSPHATES AND CALISAYA. A Nerve Food and Nutritive Tonic, for the treatment of Consumption, Bronchitis, Scrofula, and all forms of Nervous Debility.

The Lactophosphates prepared from the formula of Prof. Dusart, of the University of Paris. Combines with a superior Pemartin Sherry Wine and Aromatics in an agreeable cordial easily assimilable and acceptable to the most irritable stomachs.

Phosphorus, the oxidizing element of the Nerve Centres for the generation of Nerve Force; Lime Phosphate, an agent of Cell Development and Nutrition; Soda Phosphate, an excitant of Functional Activity of Liver and Pancreas, and Corrective of Acid Fermentation in the Alimentary Canal; Iron, the Oxidizing Constituent of the Blood for the Generation of Heat and Motion; Phosphoric Acid, Tonic in Sexual Debility; Alkaloids of Calisaya, Anti-Malarial and Febrifuge; Extract of Wild Cherry, uniting with tonic power the property of Calming Irritation and Diminishing Nervous Excitement.

THE SUPERIORITY OF THE ELIXIR consists in uniting with the Phosphates the special properties of the Cinchona and Prunus, of Subduing Fever and Allaying Irritation of the Mucous Membrane of the Alimentary Canal, which adapts it to the successful treatment of Stomach Derangements and all diseases of Faulty Nutrition, the outcome of Indigestion. Malassimilation of Food, and *failure of supply* of these essential elements of Nerve Force and Tissue Repair.

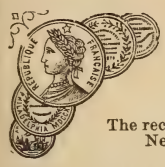
The special indication of this combination of Phosphates in Spinal Affections, Caries, Necrosis, Ununited Fractures Marasmus, Poorly Developed Children, Retarded Dentition, Alcohol, Opium, Tobacco Habits, Gestation and Lactation, to promote Development, etc., and as a *physiological restorative* in Sexual Debility, and all used up conditions of the Nervous System, should receive the careful attention of good therapeutists.

There is no strychnia in this preparation, but when indicated, the Liquor Strychniæ of the U. S. Dispensatory may be added, each fluid drachm of the solution to a pound bottle of the Elixir making the 64th of a grain to a half fluid ounce, an ordinary dose, a combination of a wide range of usefulness.

DOSE—For an adult, one tablespoonful three times a day, after eating; from seven to twelve years of age, one dessertspoonful; from two to seven, one teaspoonful. For infants, from five to twenty drops, according to age.

Prepared at the Chemical Laboratory of T. B. WHEELER, M. D., Montreal, D. C.

Put up in pound bottles and sold by all Druggists at One Dollar.



THREE MORE MEDALS IN 1886.

The recent International Expositions at Edinburgh and Liverpool, and the American Institute, New York, each awarded us the Highest Silver Medal, which swells our list to about

THIRTY-FIVE GOLD, SILVER AND BRONZE MEDALS

FROM ALL PARTS OF THE WORLD.

THE REASON FOR IT IS PLAIN.

We make but one quality, and that the best. WE SCRUPULOUSLY CONFORM TO THE PHARMACOPŒIAL, or other recognized standards, in the incorporation of medicinal ingredients. We command perfect skill in manipulation, we use pure and superior fabrics, our packages are neat, elegant, and convenient, and our prices are not only uniform, but the most reasonable that can be placed on honest goods of the first quality.

THE STATUS OF THE WHOLE PLASTER BUSINESS

is well shown by the analyses of Belladonna Plasters, the leading article on the list of spread goods, made in March, 1886 by Dr. Albert B. Prescott, Prof. of Chemistry at the University of Michigan, and President of the American Chemical Society, from goods purchased by him in open market. The analyses were made by the same process, in parallel operations, for the quantity of total Belladonna alkaloids, estimated as atropine, and show our Belladonna plaster to contain 0.543 of a grain of alkaloid, which represents the strength of a plaster made after the standard prescribed by the U. S. P. from the highest grade of belladonna root. The same analyses showed the next highest belladonna plaster to contain but 0.264 grains of alkaloid, or less than half U. S. P. strength; while the several other brands examined contained from 0.230 grains to 0.045 grains, proving the S. & J. plaster to contain more than twice as much belladonna as the one approaching nearest to it, the rest falling below the line of any valid comparison, a number having scarcely a trace of belladonna alkaloid.

IN FURTHER PROOF OF OUR DESIRE AND PURPOSE

to maintain, and, if possible, to enhance, the high standard and reputation of our goods, we cite the fact that we have recently erected one of the most complete and best equipped laboratories in the United States, and we shall hereafter manufacture every medicinal extract incorporated in our specialties, and can guarantee, through our own analyses, the strength and quality of all drugs we employ; thus, also, ensuring the perfect uniformity of all our products. For many years, physicians have preferred our goods because they always found them therapeutically reliable, as others were not; and our new departure will set up a stronger safeguard than ever against cheap and worthless plasters and dressings.

WE HAVE ESTABLISHED THE STANDARD.

Failing to make goods equal to ours, and which would sell on their merits, our competitors have heretofore striven to introduce their goods to the notice of the trade and the medical profession by imitating our trade-marks, packages, circulars, and price lists. Now, certain plaster makers have evidently found it necessary to adopt more desperate tactics, since we learn from retailers in Pennsylvania and New Jersey that jobbing-house salesmen have solicited them to buy other goods when ours were indicated on their order. In one case the salesmen said the house he represented no longer stocked our goods; in another, that we no longer made some of the articles desired. On inquiry, we learn that the representatives of these desperate plaster manufacturers offered these men a personal consideration to perform this dishonorable service. In one or two cases a direct money bribe was tendered and refused. The whole scheme shows to what straits our competitors are reduced, and indicates clearly the necessity for physicians specifying "S. & J." goods when prescribing, if they would be assured of obtaining the therapeutic results expected from medicinal plasters, or the strict reliability of goods for surgical use.

NOTABLE POINTS

RELATIVE TO

Lactated Food.

IT IS A COOKED FOOD.

By the use of high steam heat the gluten flour used is partially torrefied. This is done while the flour is dry, and during the process it is in constant motion, which insures perfect cooking to every particle.

Routh says, (Infant Feeding, page 380) that by this process, "the starch granules are rendered more separable, the gluten is reduced to a more porous condition, readily acted on by the gastric juice, and as an aliment, therefore, is more nutritious and digestible."

IT IS A PREDIGESTED FOOD.

"You state that it is self-digestive as regards the conversion of insoluble starch into soluble dextrine and maltose. My experiments with it lead me to hold that this is correct." J. MILNER FOTHERGILL.

IT CONTAINS NO UNCHANGED STARCH.

By the peculiar process of manufacture, every particle of the gluten flour is subjected to the action of the malto-diastase, and by it all the starch contained is transformed into soluble carbo-hydrates.

Professor CARL SEILER says, "Examination has proved that all the starch granules are converted, as shown by their behavior to polarized light."

NO CANE SUGAR USED.

The basis of Lactated Food is the pure sugar of milk made by the improved processes of the American Milk Sugar Co. The great value of this article has been shown conclusively. Cane sugar is not used in the composition or preparation of the Food on account of its liability to cause irritation by reason of the acetic fermentation which it creates in the stomach. Milk sugar never causes this fermentation or irritation.

IT IS NON-IRRITATING.

By reason of the fact that Lactated Food is partially digested in process of Preparation, it is assimilated by the feeblest stomach, and no undigested particles pass into the bowels to irritate, and thus cause troublesome and dangerous bowel disorders.

IT IS HIGHLY NUTRITIOUS.

The nutritive elements of Lactated Food are derived from the three great cereals, Wheat, Barley, and Oats. From the Wheat is taken the pure gluten, the most nourishing substance known for the muscles and tissues; from the Barley, all the soluble albuminoid and extractive matter resulting from the most careful malting; and from the Oat, the strengthening properties for which it is so well known. The result is a food which never disappoints, and under which the feeble child or invalid rapidly rallies.

FOR CHOLERA INFANTUM.

It is the chief reliance of many eminent practitioners, and it is the safest food in summer for all young or delicate children.

Another important consideration is its low price, it being much more economical than other foods. We make four sizes, selling for 25 cents, 50 cents, $1 00, and $2.50. *A dollar can will furnish one hundred and fifty meals for an infant.*

If any physician that has not yet made a trial of the Lactated Food will write us, we will send a package of our regular size, postpaid, without charge, with the understanding that it will be given a careful trial as soon as possible.

We shall use every precaution to maintain the high standard of this Food, and to insure perfect satisfaction to the profession in its use.

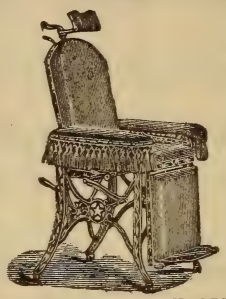
WELLS, RICHARDSON & CO.,

BURLINGTON, VT.

THE CANTON SURGICAL

AND

GYNÆCOLOGICAL CHAIR.



A chair especially constructed for the use of the general practitioner, as well as for the specialist in the treatment of gynæcological cases. For treating diseases of the Eye, Ear, Throat, and Chest, it has no equal. Every chair fully warranted to be first-class.

As a speculum chair it secures ease and comfort to the patient, and at the same time gives the operator such perfect control of all the various changes and positions, that it robs gynæcology of its usual embarrassment and annoyance.

Send for descriptive catalogue.

DR. RABUTEAU'S

[Laureate of the Institute of France]

DRAGEES, ELIXIR, AND SYRUP OF IRON.

"The experiments made in the hospitals of Paris have demonstrated that *Dr. Rabuteau's Dragees, Elixir, and Syrup* regenerate the red globules of the blood with a rapidity never observed with the use of the other ferruginous preparations. These results have been proved by the various *Compi-Globules*.

"The ferruginous preparations of *Dr. Rabuteau* do not cause any constipation, and are perfectly tolerated by the weakest persons."—*Gazette des Hopitaux.*

Dr. Rabuteau's Elixir is prescribed when some difficulty is experienced in swallowing the Dragees; it is especially adapted to weak persons, whose digestive functions need strengthening or stimulating.

Dr. Rabuteau's Syrup is especially prepared for children, who take it readily because of its agreeable taste.

A sample of Rabuteau's Dragees will be sent free to any Physician mentioning *The St. Louis Medical and Surgical Journal.*

A COMBINATION UNITING THE PROPERTIES OF

ALCOHOLIC STIMULANTS AND RAW MEAT

This preparation, which has been used with great success in the hospitals of Paris, since 1868, is adapted to the treatment of all diseases requiring the administration, in a small volume, of a tonic able to stimulate and support the vital forces, as *Pulmonary Phthisis, Depression and Nervous Debility, Adynamia, Malarious Cachexia*, etc.

Prepared by EMILE DURIEZ & Co., Successors to DUCRO & CIE, Paris.

KIRKWOOD'S INHALER,

This is the only complete, reliable, and effective inhaler in use, arranged for the direct application of Muriate of Ammonia and other remedial agents in the state of vapor to the diseased parts of the air passages in the treatment of catarrh and diseases of the throat and lungs. No heat or warm liquids required in its use.

It is entirely different from the various frail, cheap instruments that have been introduced.

KIRKWOOD'S INHALER is accompanied by testimonials of the highest professional character, together with carefully-prepared formulas for use.

Retail Price, complete, $2.50.

☞A liberal discount allowed to the trade and profession.

☞For descriptive pamphlets or other information, address

E. FOUGERA & CO., 30 North William Street, New York.

Rigollot's Mustard Paper

Is one of the most important and useful discoveries of the age. It is the only preparation which has been adopted by the civil and military hospitals, and the armies and navies of France and England, and which has obtained a medal at the Centennial Exposition at Philadelphia. All other mustard plasters or leaves, of whatever name, are but imitations of the original.

Physicians will find it the most reliable sinapism, prompt and certain in its action, and will therefore always prescribe it. Every sheet, in order to be genuine, must bear the annexed signature of the inventor.

Sold in tin boxes containing 10 sheets, also 25 and 100 sheets, by all respectable chemists throughout the world.

E. FOUGERA & CO., New York Depositaries.

TAMAR INDIEN GRILLON.

A laxative, refreshing, and medicated Fruit Lozenge, very agreeable to take, and never causing irritation. Its physiological action assures the immediate relief and effectual cure of

CONSTIPATION,

HÆMORRHOIDS, BILE, CEREBRAL CONGESTION, HEADACHE, LOSS OF APPETITE, INTESTINAL OBSTRUCTIONS, ETC.,

by augmenting the peristaltic movement of the intestine without producing undue secretion of the liquids. Unlike pills and the usual purgatives, it does not predispose to intestinal sluggishness, and the same dose always produces the same effect, that is to say, never needs increasing.

It is recommended by the most eminent physicians of Paris, notably Drs. BELIN and TARDIEU, who prescribe it constantly for the above complaints, and with most marked success.

Paris: E. GRILLON, 27 Rue Rambuteau.

SOLD BY ALL DRUGGISTS.

PRIVATE SCHOOL FOR THE DEAF.

Deaf Children Taught to Speak and Educated through Lip Reading. Aural Training and Defective Speech treated and improved. A Kindergarten Department for Deaf Children from three to six years old. A Training Class for Teachers of Articulation.

School re-opens September 20, 1886, at No. 16 South Broad Street (opposite Public Buildings), Philadelphia, Pa.

Directions to Parents of Deaf Children for their Treatment from Infancy in order that they may learn Speech and Lip Reading, furnished free on application to **MARY S. GARRETT, Principal.**

THE VALUE OF MURDOCK'S LIQUID FOOD IS RECOGNIZED IN ALL COUNTRIES, AND IS ENDORSED BY ALL NATIONAL MEDICAL SOCIETIES THAT HAVE INVESTIGATED ITS VALUE.

There never was an essay read before any Medical Society on Raw Food Extracts, except on Murdock's Liquid Food, and counterfeit manufacturers of Extracts have published many of our essays to show the value of their counterfeits.

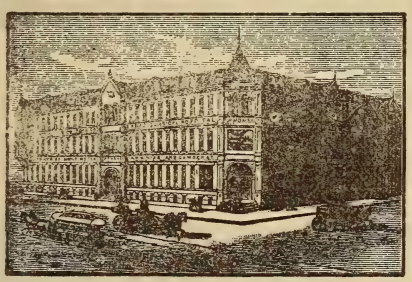
Send for Essay and DISCUSSION before the British Medical Association at Brighton, England, 1886 (Essay), by the Vice-President of the American Medical Association, and others, on the value of MURDOCK'S LIQUID FOOD over all Foods and Extracts known, it being the ONLY Raw Condensed Food free from insoluble matter.

Also essay read before the American Medical Association at Richmond, Va., and Washington, D. C.

Its value was recognized by the profession from results obtained in the Free Hospitals that have been established and supported by our Mr. A. L. Murdock during the last four years.

They now equal

140 FREE BEDS,



And contain 38,000 feet of floor.

Our Liquid Food can be retained by the weakest stomach. Four tablespoonfuls daily will make eight per cent. new blood weekly. When used for infants, never change their food, but add five or more drops of Liquid Food at each feeding, and their lost or needed vitality will be restored in less than thirty days.

Send for the Report of the Chairman of the Section of Obstetrics of the American Institute of Homœopathy, read at Saratoga at the annual meeting of 1886.

Circulars were sent by him to all the Physicians in the United States, asking what their experience was with Murdock's Liquid Food in its use for infants under, as well as over, one year old.

Then what results, with all the different Milk preparations, Grain Foods, Peptonoid Foods, and Beef Extracts, compared with MURDOCK'S LIQUID FOOD.

The returns show that it is the Standard Food and Extract, as the percentage of lives restored was the largest when used.

We extract from the report. After calling attention to the fact that one-quarter of the homœopathic profession are accustomed frequently to prescribe this food for children less than a year old, as well as over, he remarks:

"It is singularly adapted to scrofulous, syphilitic, and tubercular constitutions, its life-restoring power manifesting itself in each with a relative clearness and power corresponding to the order of enumeration. For fair-haired children who are inclined to grow fleshy it is more symptomatically recommended, while Duncan's *acid* babies find it particularly useful. Accordingly, it is chiefly employed for marasmus and anæmic conditions resulting either from non-assimilation of food, or from smple summer complaints. Should a child vomit all milk food and suffer synchronously with diarrhœa or dysentery, the demand for this food is emphatic and unmistakable; also in general irritability of the stomach, particularly if there be sour-smelling diarrhœa, the food passing through undigested. For the prematurely born it stands pre-eminent. For those 'weak and debilitated from any cause, Murdock's Food is probably the best in the world.' Should any indication of cerebral hyperæmia appear, the quantity of food must be diminished; so, too, if after its protracted use vomiting and diarrhœa ensue, the child has been overfed. Should the taste or odor of any given bottle chance to be disagreeable, add water until they disappear, and let the purchaser congratulate himself upon getting more nutriment than he paid for. When given in combination with milk in cases of indigestion, the quantity of milk should be diminished until all curds disappear from the stool, the quantity of Food, of course, being proportionately increased."

The Surgical Staff at MURDOCK'S FREE HOSPITAL FOR WOMEN are in daily attendance, except Saturdays, to examine patients and assign beds.

EVERY BED FREE.

Our Free Surgical Hospital for Women, located on Huntington avenue, above West Chester park, contains fifty (50) beds, in charge of a staff of five surgeons, members of the Massachusetts Medical Society.

Our Free Surgical Hospital for Women, located on Gainsborough street, corner of Huntington avenue, contains 50 beds, in charge of a staff of five surgeons. members of the Massachusetts Homœopathic Medical Society.

Our Free Home for Homeless Boys contains 40 beds, and is located at 11 to 21 Causeway street. Many of these boys suffer from Scrofula, Eczema, and other skin diseases, which yield quickly by the use of our Liquid Food.

From the fact that no two beeves or sheep are alike, is the reason of our different brands being different in flavor.

All brands are made by the same formula. The letter represents the day of make, and the figure the tank.

If richer, it is stronger in smell and flavor, and will bear a greater reduction. It cannot be reduced so low but it wil be superior to all other preparations in treating chronic cases.

If you cannot obtain Murdock's Liquid Food from your druggist, we deliver, free of express, 12 oz. for $1. Any physician that has not used our Liquid Food, we will deliver free to the Boston express 12 oz.

MURDOCK'S LIQUID FOOD CO.,

BOSTON

CELERINA

NERVE-TONIC, STIMULANT AND ANTISPASMODIC.

FORMULA.—Every Fluid-Drachm represents FIVE grains EACH—Celery, Coca, Kola, Viburnum and Aromatics.

INDICATIONS.—Impotency, Spermatorrhea, Loss of Nerve-Power (so usual with Lawyers, Preachers, Writers and Business Men), Nervous Headache, Neuralgia, Paralysis, Dysmenorrhea, Hysteria, Opium-Habit, Inebriety, Prostatitis, Dyspepsia, and ALL LANGUID or DEBILITATED conditions of the System.—*Indispensable to restore a patient after alcoholic excess.*

DOSE.—One or two teaspoonfuls three or more times a day, as directed by the Physician.

ALETRIS CORDIAL

UTERINE TONIC AND RESTORATIVE.

PREPARED FROM THE ALETRIS FARINOSA OR TRUE UNICORN.

INDICATIONS.—Amenorrhea, Dysmenorrhea, Leucorrhea, Prolapsus Uteri, Sterility, to PREVENT Miscarriage, Etc.

DOSE.—One teaspoonful three or four times a day.

Unrivaled as a Uterine Tonic in Irregular, Painful, Suppressed and Excessive Menstruation,

IT RESTORES NORMAL ACTION TO THE UTERUS, AND IMPARTS VIGOR TO THE ENTIRE UTERINE SYSTEM.

☞Where Women have aborted during previous Pregnancies, or in any case where abortion is feared, the Aletris Cordial is indicated, and should be continuously administered during entire gestation.

ACID MANNATE

A MILD, SAFE AND PLEASANT APERIENT.

☞ Prepared from Manna, Purified Cathartic Acid, and Fruit Juices. ☜

INDICATIONS.—Constipation, Biliousness, Congestions, Etc. **INDISPENSABLE AS AN APERIENT FOR WOMEN DURING PREGNANCY.** In teaspoonful doses, 3 times a day, it favors the SECRETION and EXCRETION of bile, and gradually removes the congested and torpid states of the liver, and keeps the bowels in a regular and soluble condition.

DOSE.—ONE or MORE teaspoonfuls as directed by the Physician.

S. H. KENNEDY'S
CONCENTRATED EXTRACT OF
PINUS CANADENSIS

DARK — A NON-ALCOHOLIC LIQUID. — WHITE

A MOST VALUABLE NON-IRRITATING MUCOUS ASTRINGENT.

INDICATIONS.—Albuminuria, Diarrhea, Dysentery, Night-Sweats, Hemorrhages, Profuse Expectoration, Catarrh, Sore Throat, Leucorrhea, and other Vaginal Diseases, Piles, Sores, Ulcers, Burns, Scalds, Gonorrhea, Gleet, Etc.

When Used as an Injection, to Avoid Staining of Linen, the WHITE Pinus should be Used.

Recommended by DR. J. MARION SIMS, and other Prominent Physicians.

RIO CHEMICAL CO., ST. LOUIS: LONDON: PARIS.

Samples FREE to any Physician who will pay Express charges, and mention this Journal.

SEELEY'S HARD RUBBER
TRUSSES.

Will successfully retain the most difficult form of **Hernia or Rupture** with comfort and safety, thereby resulting in a **radical cure.** Impervious to moisture, may be used in bathing; and, fitting perfectly to form of body, are worn without inconvenience by the youngest child, most delicate lady, or the laboring man, entirely *avoiding all sweaty, sour, padded unpleasantness*, being *light, cool, cleanly*, and **always reliable.** *Endorsed by leading Surgeons, Physicians, and Medical Colleges both here and in Europe.* Over 100,000 applied in Philadelphia.

Fig. 1.

Made in Every Desirable Pattern.

Fig. 5.

CAUTION.—Avoid the various imitations made to look like SEELEY'S, and to sell on the enviable reputation acquired by our goods during the past 25 years, by purchasing only Hard Rubber Trusses, stamped, spring and strap, "I. B. SEELEY & CO.—WARRANTED."

BUFFALO LITHIA WATER,

FOR GOUTY, RHEUMATIC, AND RENAL AFFECTIONS.

ROBERTS BARTHOLOW, M. A., M. D., LL. D., Prof. of Materia Medica and General Therapeutics in the Jefferson Medical College of Philadelphia. See his "Materia Medica and Therapeutics."

"Buffalo Lithia Spring of Virginia contains well-defined traces of Lithia, and is Alkaline. This has been used with great advantage in Gouty, Rheumatic, and Renal Affections." * * * * * * * * "There is little doubt that the continuous use of Alkaline Waters for a long period will cause the solution of Uric Acid Renal Calculi. For this purpose those Alkaline Waters rich in POTASSA are preferable."

This water has a large percentage of the CARBONATE OF POTASSA, making it rich in valuable Alkali.

Dr. Wm. A. Hammond, of New York, Surgeon-General U. S. Army (retired), Professor of Diseases of the Mind and Nervous System in the University of New York, etc.

"I have for some time made use of the Buffalo Lithia Water in cases of affections of the Nervous System complicated with Bright's Disease of the Kidneys, or with a Gouty Diathesis. The results have been eminently satisfactory. Lithia has for many years been a favorite remedy with me in like cases, but the Buffalo Water certainly acts better than any extemporaneous solution of the Lithia Salts, and is, moreover, better borne by the stomach. I also often prescribe it in those cases of Cerebral Hyperæmia, resulting from over mental work—in which the condition called Nervous Dyspepsia exists—and generallly with marked benefit."

Dr. Robert Battey, of Georgia, Suggester of Battey's Operation, Member of the American Medical Association, etc.

"I would state that I have been using the Buffalo Lithia Water, No. 2, in my practice for three years past, in cases of Chronic Inflammation of the Bladder, whether induced by Stone, by Enlarged Prostate in the aged, or by Neglected Gonorrhœa, and have secured excellent results, which encourages me to prescribe it for the future."

Dr. Hunter McGuire, Richmond, Virginia, late Professor of Surgery, Medical College of Virginia.

"Buffalo Lithia Water, Spring No. 2, as an Alkaline Diuretic, is invaluable. In Uric Acid Gravel, and, indeed, in diseases generally dependent upon a Uric Acid Diathesis, it is a remedy of extraordinary potency. I have prescribed it in cases of Rheumatic Gout, which had resisted the ordinary remedies, with wonderfully good results. I have used it also in my own case, being a great sufferer from this malady, and have derived more benefit from it than from any other remedy."

Dr. Alfred L. Loomis, of New York, Professor of Institutes and Practice of Medicine, Medical Department University of New York.

"For the past four years I have used the Buffalo Lithia Water in the treatment of Chronic Interstitial Nephritis occurring in Gouty and Rheumatic subjects, with the most marked benefit. In all Gouty and Rheumatic Affections I regard it as highly efficacious."

Dr. Harvey L. Byrd, of Baltimore, President and Professor of Obstetrics and Diseases of Women and Children, in the Baltimore Medical College, formerly Professor of Practical Medicine, etc.

"I have witnessed the best results from the action of the Buffalo Lithia Water, Spring No. 2, in Chronic Gout, Rheumatic Gout, Rheumatism, Gravel, and Stone in the Bladder, and I do not hesitate to express the opinion that in all diseases depending upon or having their origin in Uric Acid Diathesis, it is unsurpassed, if, indeed, it is equaled by any water thus far known to the profession.

"It has an ascertained value in Bright's Disease. A knowledge of its action in that disease thus far would seem to warrant the belief that it would, in many instances, at least in its early stages, arrest it entirely; and in its more advanced stages prove a decided comfort and palliative."

Water, in cases of one dozen half gallon bottles, $5.00 per case, at the Springs. Testimonials sent free on application. The Virginia Buffalo Lithia Springs Company have no longer control of this water. To get it **FRESH**, order directly of or from parties who deal directly with

THOMAS F. GOODE, Prop. Buffalo Lithia Springs, Va.

Since the introduction—1870—of the substance known as **COSMOLINE** (Unguentum Petrolei) to the College of Pharmacy in Philadelphia, by the late Professor Parrish, who was one of the very first to recognize its merits, it has become very widely known and variously used by the Physicians, Surgeons, and Pharmacists of all schools throughout this country and abroad. Pure Petroleum will not oxidize, but the processes resorted to by many, in order to obtain special products from petroleum, introduce properties that will oxidize in ordinary temperatures, and develop other objections with age. Such products may be used in the arts, but they were decided years ago to be exceedingly irritating and otherwise interfering as surgical dressings or bases for ointments. The Manufacturers of **COSMOLINE** (Unguentum Petrolei) took advantage of the possibility of producing an article which would not only not become rancid, but also one which would be absolutely free from those properties which affected the ordinary residuums and products of the petroleum still. Notwithstanding numerous other petroleum preparations of variable merit and ostensibly for the same purpose, have since been offered, **COSMOLINE** (Unguentum Petrolei) has continued to increase steadily in professional favor. **COSMOLINE** (Unguentum Petrolei) was not recommended to the profession at large until the leading Physicians and Pharmacists of Philadelphia were thoroughly satisfied of its fitness and absolute purity, and since then it has not been changed to meet every speculative fancy, or to compete in price with those preparations of petroleum having some outward resemblance to Cosmoline, but found either deficient in action or positively irritating, owing to chemical agencies used to cheapen the cost of manufacture. It was apparent from its first introduction, that **COSMOLINE** (Unguentum Petrolei) was adapted to a very wide range of uses in Surgery and Pharmacy; and when it was found that its uniformity could invariably be depended upon, it is not surprising that it obtained supremacy over those products which have been varying as commercial experiments, and lacking in all the essential and absolutely pure characteristics needed for a general surgical dressing and base for ointments.

Yours very respectfully,

E. F. HOUGHTON & CO.,

New Medicaments for Bronchitis and other Respiratory Affections.

CHEKEN.
(Myrtus Chekan.)

THIS PLANT, indigenous to Chili, was introduced to the profession by Dr. Murrell, the famous English therapeutist and collaborator of Ringer. Dr. Murrell found Cheken to be of great value in chronic cough, especially in the "winter cough" of elderly people.

An extensive trial of this remedy has not only confirmed Dr. Murrell's observations, but has widened the range of the therapeutic application of Cheken so that at the present time it is looked upon, on account of its alterative and demulcent properties, as an indispensable addition to "cough mixtures," particularly in those intractable cases of long standing which have assumed a subacute or chronic course. The dose of the fluid extract which we manufacture is from 1 to 2 fluidrachms.

TEREBENE.

TO DR. MURRELL the profession is indebted for the introduction of another remedy which seems to be almost a specific in winter cough or chronic bronchitis, than which there are few more annoying maladies. Terebene facilitates expectoration, relieves the cough and shortness of breath, and also the acidity and flatulency which so often accompany bronchitis. Dr. Murrell, in *British Med. Journal*, Dec. 12th, 1885, states that he has employed Terebene in 114 cases of winter cough, with the most gratifying results.

We furnish *Terebene Pure; Terebene Inhalant* after Murrell's formula, and *Soluble Elastic Capsules Terebene*, each containing 10 minims.

YERBA SANTA.
(Eriodictyon Californicum.)

YERBA SANTA is a demulcent expectorant in harassing cough. Both in hospital and private practice this remedy has been subjected to a thorough trial, and the reports of its use are unanimous in according it a high place among remedial agents in the treatment of the distressing cough accompanying inflammatory affections of the respiratory mucous membrane. Its action has been likened to the combined action of ipecac and balsam of Peru, but it possesses, in addition, through its resinous principles, an action which is wanting in these valuable drugs in irritative bronchitis.

LIPPIA MEXICANA.

IN ITS native habitat this remedy was long known to possess medicinal virtue in the treatment of coughs. Its popular use led to a scientific investigation of its claims which has resulted in its general introduction to the medical profession, and a clinical test of its merits by physicians has confirmed the popular opinion of its value. Alone or in combination with other remedies, such as Yerba Santa, Cheken, etc., it has been found most serviceable in controlling cough.

Working Bulletins and Circulars fully descriptive of above remedies, together with reprints of Dr. Murrell's articles on winter cough, will be mailed on application.

DISEASES OF THE URIC ACID DIATHESIS.

LAMBERT'S

LITHIATED HYDRANGEA.

KIDNEY ALTERATIVE—ANTI-LITHIC.

Formula.—Each fluid drachm of "Lithiated Hydrangea" represents thirty grains of FRESH HYDRANGEA and three grains of CHEMICALLY PURE Benzo-Salicylate of Lithia. Prepared by our improved process of osmosis, it is INVARIABLY of DEFINITE and UNIFORM therapeutic strength, and hence can be depended upon in clinical practice.

Dose.—One or two teaspoonfuls four times a day (preferably between meals).

Urinary Calculus, Gout, Rheumatism, Bright's Disease, Diabetes, Cystitis, Hæmaturia Albuminuria, and Vesical Irritations generally.

WE have had prepared for the convenience of Physicians **Dietetic Notes,** *suggesting the articles of food to be allowed or prohibited in several of these diseases.*

These Dietetic Notes have been bound in the form of small perforated slips for Physicians to distribute to their patients. Mailed gratis upon request, together with our latest compilation of case reports and clinical observations, bearing upon the treatment of this class of Diseases.

LAMBERT PHARMACAL COMPANY,
116 OLIVE STREET, ST. LOUIS.

RHEUMATISM.

DIETETIC NOTE.—A fruit and vegetable diet is most favorable for patients with chromic rheumatic troubles.

Allowed.—Beef and mutton in moderation, with horse-radish as a relish; fish and eggs, green vegetables and fruit, especially lemons. The skimmed milk diet has been advocated by some authors.

Avoid. — Starchy and saccharine food; all malt liquors, wines, and coffee.

THE PHYSICIAN'S

DAILY POCKET RECORD AND VISITING LIST.

By S. W. BUTLER, M. D. TWENTY-FIRST YEAR.

A New Revised Edition for 1887, with Metric Posological Table, &c., strongly bound in Dark Morocco, with Pocket for Blanks, and a Patent Steel Spring.

THIS VISITING LIST has been a favorite for many years. It is "perpetual" in arrangement, and may be used continuously one full year from the date of the first entry. Besides the Posological Table, it contains Tables of Doses for Hypodermic Injections, Inhalation, Suppositories, &c.; Directions for the treatment of Poisoning, Drowning, and other emergencies; Simple Directions for Testing the Urine; Obstetric Record, Cash Record, &c.

☞This RECORD has met with the Highest Praise from those who have made use of it.

PRICES.

Editions for Thirty Patients Daily, Patent Clasp, ... *$1.50*
Editions for Sixty Patients Daily, Patent Clasp, ... *$2.00*

☞ **The Name of the Purchaser will be Stamped in Gilt Letters, on the Back, for Ten Cents Extra.**

A reduction of 50 cents on these prices will be made to subscribers to THE MEDICAL AND SURGICAL REPORTER and QUARTERLY COMPENDIUM when taken together.

SESSIONS OF 1887-88.

The REGULAR SESSION begins on Wednesday, September 21, 1887, and ends about the middle of March, 1888. During this Session, in addition to the regular didactic lectures, two or three hours are daily allotted to clinical instruction. Attendance upon at least two regular courses of lectures is required for graduation.

The SPRING SESSION consists of recitations, clinical lectures and exercises, and didactic lectures on special subjects. This Session begins about the middle of March and continues until the middle of June. During this Session, daily recitations in all the departments are held by a corps of Examiners appointed by the Faculty.

The CARNEGIE LABORATORY is open during the collegiate year, for instruction in microscopical examinations of urine, practical demonstrations in medical and surgical pathology, and lessons in normal histology and pathology, including bacteriology.

For the annual Circular and Catalogue, giving requirements for graduation and other information, address Prof. AUSTIN FLINT, Secretary, Bellevue Hospital Medical College, foot of East 26th Street, New York City.

30,000 PHYSICIANS
NOW PRESCRIBE

HYDROLEINE

(HYDRATED OIL,)

For Consumption and Wasting Diseases. It Produces Immediate Increase in Flesh and Weight.

FORMULA.

Each Dose of Two Teaspoonfuls, equal to 120 Drops, contains:

Pure Cod Liver Oil	80 m. (drops)	Soda	½ Grain.
Distilled Water	35 "	Boric Acid	½ "
Soluble Pancreatin	5 Grains.	Hyocholic Acid	⅛ "

DOSE:

Two teaspoonfuls alone, or with twice the quantity of water, to be taken thrice daily after meals.

Hydroleine (Hydrated Oil) is not a simple alkaline emulsion of oleum morrhua, but a hydro-pancreated preparation containing acids and a medicum of soda. Pancreatin is the digestive principle of fatty foods, and, in the soluble form here used, completely saponifies the oleaginous material so necessary to the reparative process in all wasting diseases.

Lautenbach's researches on the function of the liver would show the beautiful adjustment of therapeutics in preparation of Hydroleine, furnishing, as it does, the acid and soda necessary to prevent self-poisoning by reabsorption of morbid tubercular detritus and purulent matters into the general circulation.

Each bottle in nutritive value exceeds ten times the same bulk of cod liver oil. It is economical in use and certain in result.

Sold at all Drug Stores at $1.00 per Bottle.

The principles upon which this discovery is based have been described in a treatise on "The Digestion and Assimilation of Fats in the Human Body," by H. C. BARTLETT, Ph. D., F. C. S., and the experiments which were made, together with cases illustrating the effect of Hydrated Oil in practice, are concisely stated in a Treatise on "Consumption and Wasting Diseases," by G. OVEREND DREWRY, M. D.

Copies of these Works sent free on Application.

WM. F. KIDDER & CO., 83 John Street, New York.

Agents for U. S.

"THE PERFECTION DOUCHE," Box 7, Albany, N Y.

COMBINATIONS FOR
HORSFORD'S ACID PHOSPHATE.

As the "Acid Phosphate" of Prof. Horsford is more extensively used, one of its characteristic qualities, that of an adjuvant, becomes better known and appreciated. The experience of physicians of the various schools, shows that it combines readily and very effectively with a great variety of other remedial agents. It is a superior substitute for the officinal Phos. Acid. Dil., as it acts more effectively, and does not produce the irritation sometimes noticed upon the exhibition of that remedy.

Below we give a series of prescriptions in combination with Horsford's Acid Phosphate, and believe them worthy the careful consideration of medical practitioners. These prescriptions are the result of careful study, and they serve to show the wide usefulness of Prof. Horsford's excellent preparation.

***These combinations are largely used by the profession.**

*ACID PHOSPHATE WITH STRYCHNIA.

℞ Horsford's Acid Phosphate, f℥viij.
Strychninæ Sulph., gr. j.
M.

Sig.—Half to one teaspoonful in a glass of water.

ACID PHOSPHATE WITH QUININE.

℞ Horsford's Acid Phosphate, f℥ss.
Quininæ Sulp., gr. xvj.
Syrupi Simplicis, f℥ij.
Aquæ, f℥vss.
M.

Sig.—A tablespoonful in a wine glass of water.

ACID PHOSPHATE AND EMULSION OF COD-LIVER OIL.

℞ Emul. Olei Morrhuæ 50 %., f℥vij.
Horsford's Acid Phosphate, f℥j.
M.

Sig.—A tablespoonful.

*ACID PHOSPHATE WITH WINE OF PEPSIN.

℞ Vini Pepsinæ, f℥vj.
Horsford's Acid Phosphate, f℥ij.
M.

Sig.—A dessertspoonful in water.

ACID PHOSPHATE WITH ELIXIR OF IRON AND QUININE.

℞ Elix. Ferri et Quininæ,
Horsford's Acid Phos., āā f℥iij.
M.

Sig.—A teaspoonful in water.

*ACID PHOSPHATE WITH TINCTURE NUX VOMICA AND COMPOUND TINCTURE OF GENTIAN.

℞ Horsford's Acid Phosphate, f℥vj.
Tinct. Nucis Vom., f℥j.
Tinct. Gentianæ Comp., f℥ij.
Syrupi Simplicis, f℥iij.
M.

Sig.—A tablespoonful in water.

We do not prepare the Acid Phosphate in any of the above combinations.

☞**Physicians** who have not used HORSFORD'S ACID PHOSPHATE, and who wish to test it, **will be furnished with a sample, without expense,** except express charges, on application to

PHYSICIANS!

YOUR ATTENTION IS INVITED

—TO THE—

DR. McINTOSH NATURAL UTERINE SUPPORTER.

THIS INSTRUMENT MEETS THE WANTS OF THE PROFESSION MORE PERFECTLY than any other Uterine Supporter ever made. This is proven by the fact that during the past fifteen years more have been sold than of all other Supporters combined. *It never fails to give perfect satisfaction, even in the most difficult cases,* where any instrument can be used.

The **ABDOMINAL PORTION** is a broad morocco leather belt with elastic straps to buckle around the hips, with concave front, so shaped as to hold up the abdomen.

The **UTERINE PORTION** is a cup and stem made of highly-polished hard rubber, very light and durable, shaped to fit the neck of the womb, with openings for the secretions to pass out, as shown by the cuts. Cups are made with extended lips to correct flexions and versions of the womb.

The cup and stem is suspended from the belt by two soft elastic rubber tubes, which are fastened to the front of the belt by simple loops, pass down and through the stem of the cup and up to the back of the belt. These soft rubber tubes being elastic adapt themselves to all the varying positions of the body and perform the service of the ligaments of the womb.

Anteversion. Prolapsus. Retroversion

The instrument is very comfortable to the patient, can be removed or replaced by her at will, can be worn at all times, will not interfere with nature's necessities, will not corrode, and is lighter than metal. It will answer for all cases of Anteversion, Retroversion, or Prolapsus of the Womb. It is used by our leading physicians with never-failing success.

OUR REDUCED PRICE TO PHYSICIANS IS $5.00 EACH.

Instruments sent by mail at our risk on receipt of price; or we can send by express, C. O. D., with express charge for returning money added.

CAUTION.

Owing to the great success of our Supporter, several worthless imitations have been made which are often substituted for our instruments, to the detriment of the patient and the disappointment of the physician. To protect our patrons from imposture, we stamp each pad of the Abdominal belt in gilt letters, "Dr. McIntosh N. U. Supporter, Chicago, Ill."; the base of each cup is stamped "Dr. McIntosh N. U. S. Co., Chicago, Ill., U. S. A."

The box in which the instrument is put up contains directions for the application of the instrument pasted inside the cover, having the fac simile signature of Dr. L. D. McIntosh.

For further information in regard to the instrument, address

DR. McINTOSH NATURAL UTERINE SUPPORTER CO.,

300 AND 302 DEARBORN STREET, CHICAGO, ILL.

Our valuable Pamphlet on "Displacement of the Womb," giving a more complete description of the Instrument, will be sent you free on application.

LEVIS'S METALLIC SPLINTS.

FLEXIBLE, PERFORATED, NICKEL-PLATED, Conformable to every size and condition of Limbs. VERY LIGHT, INDESTRUCTIBLE, and INEXPENSIVE. The complete set consists of **21 pieces** in a neat, compact case. Full descriptive circulars sent on application. ☞ **PRICE, $15.00 Per Set.** ☜

CELERINA

NERVE-TONIC, STIMULANT AND ANTISPASMODIC.

FORMULA.—Every Fluid-Drachm represents FIVE grains EACH — Celery, Coca, Kola, Viburnum and Aromatics.

INDICATIONS.—Impotency, Spermatorrhea. Loss of Nerve-Power (so usual with Lawyers, Preachers, Writers and Business Men), Nervous Headache, Neuralgia, Paralysis, Dysmenorrhea, Hysteria, Opium-Habit, Inebriety, Prostatitis, Dyspepsia, and ALL LANGUID or DEBILITATED conditions of the System.—*Indispensable to restore a patient after alcoholic excess.*

DOSE.—One or two teaspoonfuls three or more times a day, as directed by the Physician.

ALETRIS CORDIAL

UTERINE TONIC AND RESTORATIVE.

PREPARED FROM THE ALETRIS FARINOSA OR TRUE UNICORN.

INDICATIONS.—Amenorrhea, Dysmenorrhea, Leucorrhea, Prolapsus Uteri, Sterility, to PREVENT Miscarriage, Etc.

DOSE.—One teaspoonful three or four times a day.

Unrivaled as a Uterine Tonic in Irregular, Painful, Suppressed and Excessive Menstruation,

IT RESTORES NORMAL ACTION TO THE UTERUS, AND IMPARTS VIGOR TO THE ENTIRE UTERINE SYSTEM.

☞Where Women have aborted during previous Pregnancies, or in any case where abortion is feared, the Aletris Cordial is indicated, and should be continuously administered during entire gestation.

ACID MANNATE

A MILD, SAFE AND PLEASANT APERIENT.

Prepared from Manna, Purified Cathartic Acid, and Fruit Juices.

INDICATIONS.—Constipation, Biliousness, Congestions, Etc. **INDISPENSABLE** AS AN APERIENT FOR WOMEN DURING PREGNANCY. In teaspoonful doses, 3 times a day, it favors the SECRETION and EXCRETION of bile, and gradually removes the congested and torpid states of the liver, and keeps the bowels in a regular and soluble condition.

DOSE.—ONE or MORE teaspoonfuls as directed by the Physician.

S. H. KENNEDY'S
CONCENTRATED EXTRACT OF
PINUS CANADENSIS

DARK — A NON-ALCOHOLIC LIQUID. — WHITE

A MOST VALUABLE NON-IRRITATING MUCOUS ASTRINGENT.

INDICATIONS.—Albuminuria, Diarrhea, Dysentery, Night-Sweats, Hemorrhages, Profuse Expectoration, Catarrh, Sore Throat, Leucorrhea, and other Vaginal Diseases, Piles, Sores, Ulcers, Burns, Scalds, Gonorrhea, Gleet, Etc.

When Used as an Injection, to Avoid Staining of Linen, the WHITE Pinus should be Used.

Recommended by DR. J. MARION SIMS, and other Prominent Physicians.

RIO CHEMICAL CO., ST. LOUIS: LONDON: PARIS.

Samples FREE to any Physician who will pay Express charges, and mention this Journal.

PACKER'S TAR SOAP.

ABSOLUTELY PURE AND NON-IRRITATING.

MADE FROM VEGETABLE OILS, PINE TAR, AND GLYCERINE.

A perfect soap should be made from pure and sweet oils, and clean, well-washed alkalies. Such is **Packer's Tar Soap.** It is combined with distilled **pine-tar,** and hence has had the most gratifying effects in the treatment of Dermatic Diseases, as chafing, eczema, erythema, seborrhea, herpes, etc.

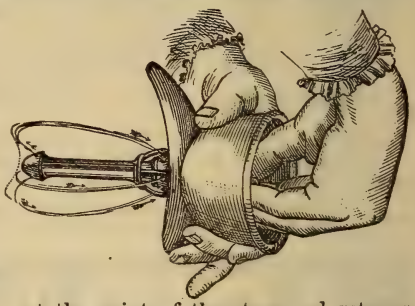
As a Disinfectant, Antiseptic, and Detergent, it is admirably adapted for use in ulcers, foul wounds, fetid discharges, bed sores, and similar conditions. For the bath, toilet, and shampoo, it is unrivaled. 25 cents per cake, from Druggists.

It is supplied to Hospitals, Asylums, and Physicians, in one pound bars, at reasonable prices.

P. O. Box 2985. **THE PACKER MFG. CO., 100 Fulton St., New York.**

"PALLAS" SYRINGE.

VAGINAL AND RECTAL.



A MOST PERFECT and simply constructed Syringe for medicating and irrigating the vaginal cavity. The novel bulb of this Syringe, when doubled upon itself, as shown in the cut, will cause no fluid to be left, as is so apt to happen with the ordinary bulbs, and when filled will contain just enough fluid for the expansion of the vaginal folds. The hard rubber labial shield, with its plug, when firmly pressed against the labia, will both prevent spilling and soiling of linen, and the fluid can therefore be kept in circulation and in contact with the parts by repeating the pumping motion of the bulb. It will also be noticed that the fluid escapes as a spray from the large holes at the point of the stem and returns through the holes at the root of same, which is provided with hard rubber screen-bars, preventing the folds from interfering with the rapid return of the fluid into the bulb. In filling the bulb, a couple of turns will unscrew it. In handsome case, satin lined. Retail price, $3.75. To physicians, $3.00.

NOTABLE POINTS

RELATIVE TO

Lactated Food.

IT IS A COOKED FOOD.

By the use of high steam heat the gluten flour used is partially torrefied. This is done while the flour is dry, and during the process it is in constant motion, which insures perfect cooking to every particle.

Routh says, (Infant Feeding, page 380) that by this process, "the starch granules are rendered more separable, the gluten is reduced to a more porous condition, readily acted on by the gastric juice, and as an aliment, therefore, is more nutritious and digestible."

IT IS A PREDIGESTED FOOD.

"You state that it is self-digestive as regards the conversion of insoluble starch into soluble dextrine and maltose. My experiments with it lead me to hold that this is correct." J. MILNER FOTHERGILL.

IT CONTAINS NO UNCHANGED STARCH.

By the peculiar process of manufacture, every particle of the gluten flour is subjected to the action of the malto-diastase, and by it all the starch contained is transformed into soluble carbo-hydrates.

Professor CARL SEILER says, "Examination has proved that all the starch granules are converted, as shown by their behavior to polarized light."

NO CANE SUGAR USED.

The basis of Lactated Food is the pure sugar of milk made by the improved processes of the American Milk Sugar Co. The great value of this article has been shown conclusively. Cane sugar is not used in the composition or preparation of the Food on account of its liability to cause irritation by reason of the acetic fermentation which it creates in the stomach. Milk sugar never causes this fermentation or irritation.

IT IS NON-IRRITATING.

By reason of the fact that Lactated Food is partially digested in process of Preparation, it is assimilated by the feeblest stomach, and no undigested particles pass into the bowels to irritate, and thus cause troublesome and dangerous bowel disorders.

IT IS HIGHLY NUTRITIOUS.

The nutritive elements of Lactated Food are derived from the three great cereals, Wheat, Barley, and Oats. From the Wheat is taken the pure gluten, the most nourishing substance known for the muscles and tissues; from the Barley, all the soluble albuminoid and extractive matter resulting from the most careful malting; and from the Oat, the strengthening properties for which it is so well known. The result is a food which never disappoints, and under which the feeble child or invalid rapidly rallies.

FOR CHOLERA INFANTUM.

It is the chief reliance of many eminent practitioners, and it is the safest food in summer for all young or delicate children.

Another important consideration is its low price, it being much more economical than other foods. We make four sizes, selling for 25 cents, 50 cents, $1 00, and $2.50. *A dollar can will furnish one hundred and fifty meals for an infant.*

If any physician that has not yet made a trial of the Lactated Food will write us, we will send a package of our regular size, postpaid, without charge, with the understanding that it will be given a careful trial as soon as possible.

We shall use every precaution to maintain the high standard of this Food, and to insure perfect satisfaction to the profession in its use.

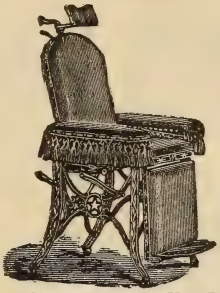
AND

GYNÆCOLOGICAL CHAIR.



A chair especially constructed for the use of the general practitioner, as well as for the specialist in the treatment of gynæcological cases. For treating diseases of the Eye, Ear, Throat, and Chest, it has no equal. Every chair fully warranted to be first-class.

As a speculum chair it secures ease and comfort to the patient, and at the same time gives the operator such perfect control of all the various changes and positions, that it robs gynæcology of its usual embarrassment and annoyance.

Send for descriptive catalogue.

McINTOSH GALVANIC AND FARADIC BATTERY CO.,

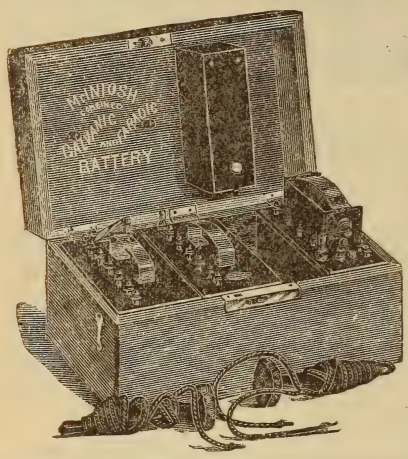
MANUFACTURERS OF THE CELEBRATED

McIntosh Combined Galvanic and Faradic Batteries,

Table, Office, and Family Batteries, Electrodes, Electric Bath Apparatus, Statical Electric Machines, Stereopticons, Solar, Monocular, and Binocular Microscopes.

AND ALL KINDS OF

PHILOSOPHICAL ELECTRICAL APPARATUS.



Schools, Colleges, Physicians, or Hospitals wanting new Apparatus, will do well to favor us with correspondence and obtain estimates. Men of scientific experience have charge of the manufacturing department. We employ the most skillful mechanics, and have the largest facilities in America for manufacturing.

We would call the Special Attention of the Medical Profession to our

Combined Galvanic and Faradic Batteries.

These Batteries are recommended by the Medical Faculty of both America and Europe, and have been adopted by the United States Government for use in Medical Department of the Army and Navy. They are

The First and Only Portable Batteries ever Invented which Give both the Galvanic and Faradic Current,

TWO DISTINCT BATTERIES IN ONE CASE.

No Physician can afford to be without one.

This celebrated Battery is constructed on an improved plan. The zincs and carbons are fastened to hard-rubber plates in sections of six each; this manner of connecting brings the plates nearer together than in any other battery, thus giving less internal resistance. The cells are composed of one piece of hard rubber, and are made in sections of six each with a drip-cup, thus one section can be handled, emptied, and cleaned, as easily and quickly as one cell. The drip-cup is to receive the elements when the battery is not in use. The fluid cannot spill or run between the cells, and there is no danger of breaking, as with glass cells. This is the only battery in which the zinc and carbon plates can be kept clean and always in order by simply rinsing them.

An extra cell (with a zinc and carbon element) is added to the combined batteries, for the purpose of producing the Faradic current. This cell gives as much force as is ever needed, and avoids exhausting the current from the Galvanic cells. All the metal work is finely nickel-plated and highly polished, and every part is put together so that it can be easily replaced by the operator. Our batteries weigh less, occupy less space, give a current of greater intensity and quantity, than any other battery manufactured.

Our illustrated Catalogue, a handsome book giving full description of all our goods, and other valuable information, sent free on application.

McINTOSH GALVANIC AND FARADIC BATTERY CO.
300 & 302 DEARBORN STREET, CHICAGO, ILL.

WHEELER'S TISSUE PHOSPHATES

Bone-Calcium Phosphate $Ca_3 2P.O._4$, Sodium Phosphate $Na_2H.P.O._4$, Ferrous Phosphate $Fe_3 2P.O._4$, Trihydrogen Phosphate $H_3P.O._4$.

WHEELER'S COMPOUND ELIXIR OF PHOSPHATES AND CALISAYA. A Nerve Food and Nutritive Tonic, for the treatment of Consumption, Bronchitis, Scrofula, and all forms of Nervous Debility.

The Lactophosphates prepared from the formula of Prof. Dusart, of the University of Paris. Combines with a superior Pemartin Sherry Wine and Aromatics in an agreeable cordial easily assimilable and acceptable to the most irritable stomachs.

Phosphorus, the oxidizing element of the Nerve Centres for the generation of Nerve Force; Lime Phosphate, an agent of Cell Development and Nutrition; Soda Phosphate, an excitant of Functional Activity of Liver and Pancreas, and Corrective of Acid Fermentation in the Alimentary Canal; Iron, the Oxidizing Constituent of the Blood for the Generation of Heat and Motion; Phosphoric Acid, Tonic in Sexual Debility; Alkaloids of Calisaya, Anti-Malarial and Febrifuge; Extract of Wild Cherry, uniting with tonic power the property of Calming Irritation and Diminishing Nervous Excitement.

THE SUPERIORITY OF THE ELIXIR consists in uniting with the Phosphates the special properties of the Cinchona and Prunus, of Subduing Fever and Allaying Irritation of the Mucous Membrane of the Alimentary Canal, which adapts it to the successful treatment of Stomach Derangements and all diseases of Faulty Nutrition, the outcome of Indigestion, Malassimilation of Food, and *failure of supply* of these essential elements of Nerve Force and Tissue Repair.

The special indication of this combination of Phosphates in Spinal Affections, Caries, Necrosis, Ununited Fractures, Marasmus, Poorly Developed Children, Retarded Dentition, Alcohol, Opium, Tobacco Habits, Gestation and Lactation, to promote Development, etc., and as a *physiological restorative* in Sexual Debility, and all used up conditions of the Nervous System, should receive the careful attention of good therapeutists.

There is no strychnia in this preparation, but when indicated, the Liquor Strychniæ of the U. S. Dispensatory may be added, each fluid drachm of the solution to a pound bottle of the Elixir making the 64th of a grain to a half fluid ounce, an ordinary dose, a combination of a wide range of usefulness.

DOSE—For an adult, one tablespoonful three times a day, after eating; from seven to twelve years of age, one dessert-spoonful; from two to seven, one teaspoonful. For infants, from five to twenty drops, according to age.

Prepared at the Chemical Laboratory of T. B. WHEELER, M. D., Montreal, D. C.

Put up in pound bottles and sold by all Druggists at One Dollar.

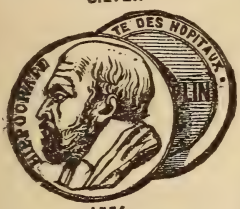
MATHEY-CAYLUS' GLUTEN

SILVER



1854

CAPSULES

OF

PURE COPAIBA AND OTHER MEDICINES.

SILVER

1854

Adapted and recommended for the cure recent or chronic Gleets, Fluor Albus, etc., etc.

The MATHEY-CAYLUS' CAPSULES, *coated with gluten*, present the most perfect mode for administering Copaiba, Cubebs, Norway Tar, Turpentine, and other remedies, the disagreeable odor and taste of which are often a hindrance to their use. This mode of preparing capsules, which has been approved by the Academy of Medicine, has been recommended in their clinical lectures by eminent Professors in the hospitals of Paris, as well as in those of New York and London.

By the first physicians of the hospitals of Paris, London, and New York.

SPECIAL ADVANTAGES OF MATHEY-CAYLUS' GLUTEN CAPSULES.—Being formed of thin, transparent, and readily assimilated coating, they so cover and disguise the medicine to be given, that it can be taken without disgust, but with ease. In this respect, they differ widely from the gelatine capsules which have a hard, thick coating, which swells beyond measure, in the stomach, are hard to be swallowed, and which is of great importance, they create disturbance in the digestive functions.

The special advantage of the coating of gluten consists in the fact that, notwithstanding its extra thinness, and although it softens under the action of the gastric juice, it can pass the stomach without breaking, and only in the intestines is the medicinal matter liberated; this accounts for the fact that Mathey-Caylus' Capsules never cause the nausea, eructations, and dyspeptic symptoms, which are complained of by many persons using other preparations.

Finally, their regular ovoid form, which is so favorable to swallowing, their pleasant appearance, which dispels all disgust, and the advantage of being entirely free from taste and smell, recommend the use of these capsules even to the most delicate persons.

Thankful to the Medical Profession for the liberal patronage heretofore bestowed upon us, we hope that they will continue their favors, and we are convinced that they will never have any reason to regret the generous welcome they have given to our preparations.

MATHEY-CAYLUS' CAPSULES are never sold, except in bottles having the following inscription printed in the glass: MATHEY-CAYLUS A PARIS. And each bottle contains 64 capsules, making them the cheapest capsules in the market.

The following different kinds of Mathey-Caylus' Gluten Capsules are now offered:

COPAIBA AND TANNIC ACID,
COPAIBA AND S. N. OF BISMUTH,
COPAIBA AND CATECHU,
COPAIBA AND MAGNESIA,
COPAIBA, CUBEBS AND ALUM,
COPAIBA, CUBEBS AND RHATANY,
COPAIBA AND RHATANY,
COPAIBA AND CITRATE OF IRON,
COPAIBA AND CUBEBS,
COPAIBA PURE,
COPAIBA, CUBEBS AND CARB. OF IRON,
VENICE TURPENTINE, NORWAY TAR, PURIFIED,
CUBEBS AND TURPENTINE,
CUBEBS AND TANNATE OF IRON,
CUBEBS AND ALUM,
CUBEBS PURE,
COPAIBA AND MATICO,
COPAIBA, IRON AND OIL OF SANDAL,
COPAIBA AND OIL OF SANDAL,
COPAIBA, PEPSIN AND BISMUTH,
COPAIBA AND TAR,
COPAIBA, CUBEBS AND OIL OF SANDAL.

TANRET'S PELLETIERINE

For the Treatment of Tape-Worm (Tænia Solium.)

This New Tænifuge, the Active Alkaloid of Pomegranate Bark, has of late come into extensive use in France for the treatment of Tape-Worm (Tænia Solium). The results of numerous experiments with it at the Marine Hospitals of Toulon, St. Mandrier, etc., and in the Hospitals of Paris, St. Antoine, La Charite, Necker, Beaujon, etc., have all been most satisfactory. Doctor Dujardin Beaumetz, Member of the Academy of Medicine, and Prof. Laboulbene, in their report to the Society of Therapeutics, have given it their unqualified approval after the most searching experiments. This preparation is pleasant to administer, and if certain preliminaries are observed success will be insured.

Sold only in Bottles containing one dose.

TANRET'S ERGOTININE.

ALKALOID AND ACTIVE PRINCIPLE OF SPURRED RYE.

This is a well defined Alkaloid that must not be confounded with Ergotine or other extracts; it is given in doses of from ¼ to ½ Milligramme (1-240th to 1-120th of a grain), in all cases where Ergot is indicated, viz.: Flooding, Post-partum Hemorrhages, Metrorrhagia, etc., etc.

It is put up in the following forms:

Syrup Containing ¼ Milligramme to each teaspoonful; DOSE from 1 to 6 teaspoonsfuls per day.

Solution for hypodermic purposes, Containing 1 Milligramme to each cubic Centimeter; DOSE, from 3 to 10 drops.

The Institute of France has awarded one of its Prizes to Mr. Chas. Tanret for the discovery of these Alkaloids.

Tanret's Pelletierine and Ergotinine are only prepared by Mr. Chas. Tanret, Laureate of the Institute of France, 64 Rue du Rempart, Paris.

Sole Agents for the United States, E. FOUGERA & CO., 30 North William St., N. Y.

PAMPHLET ON PELLETIERINE AND ERGOTININE SENT ON APPLICATION.

BOUDAULT'S PEPSINE

The Only Pepsine Used in the Hospitals of Paris for the Last 30 Years.

Unlike the various substitutes which, in most cases, are but unscientific or incompatible compounds, forced upon the Medical Profession as aids to digestion by extensive advertising, but which, when submitted to the proper tests, are found to be useless as digestive agents, Pepsine is constantly gaining in the esteem of the careful practitioner.

Since the introduction of Pepsine by Boudault and Corvisart, in 1854, the original BOUDAULT'S PEPSINE HAS BEEN AT ALL TIMES CONSIDERED THE BEST, as is attested by the awards it has received at the Expositions of 1867, 1868, 1872, 1873, in 1876 at the Centennial Exposition of Philadelphia, and in 1878 at the Paris Exposition.

The most reliable tests, carefully applied, will satisfy every one that BOUDAULT'S PEPSINE HAS A MUCH HIGHER DIGESTIVE POWER than the best Pepsines now before the Profession, and is therefore especially worthy of heir attention.

BOUDAULT'S PEPSINE is prepared in the form of Pepsine Acid and Pepsine Neutral. It is sold in bottles of on unce, with a measure containing exactly five grains; also in bottles of 4, 8, and 16 ounces for dispensing.

BOUDAULT'S WINE OF PEPSINE.

Formula of Dr. Corvisart.

The taste of Pepsine being perfectly disguised in this Wine, it may be recommended to persons who have difficulty in taking Pepsine in the form of powder. This Wine is tested so that a tablespoonful of it is equal in digestive power to ten grains of Boudault's Pepsine in powder. Sold only in 8 oz. Bottles.

Agents for the United States, E. FOUGERA & CO., New York.

BROMIDIA

THE HYPNOTIC.

FORMULA.—

Every Fluid drachm contains 15 grains EACH of pure Chloral Hydrat. and purified Brom. Pot., and one eighth grain EACH, of gen. imp. ext. Cannabis Ind. and Hyoscyam.

Dose.—One-half to one fluid drachm in WATER or SYRUP every hour until sleep is produced.

Indications.—

Sleeplessness, Nervousness, Neuralgia, Headache, Convulsions, Colic, Mania, Epilepsy, Irritability, etc. In the restlessness and delirium of fevers, it is absolutely invaluable.

IT DOES NOT LOCK UP THE SECRETIONS.

PAPINE

THE ANODYNE.

Papine is the Anodyne or pain-relieving principle of Opium, the Narcotic and Convulsive elements being eliminated. It has less tendency to cause Nausea, Vomiting, Constipation, etc.

Indications.—

Same as Opium or Morphia.

Dose.—(ONE FLUID DRACHM)—represents the Anodyne principle of one-eighth grain of Morphia.

IODIA

THE ALTERATIVE AND UTERINE TONIC.

FORMULA.—

Iodia is a combination of Active Principles obtained from the Green Roots of STILLINGIA, HELONIAS, SAXIFRAGA, Menispermum, and Aromatics. Each fluid drachm also contains five grains IOD. POTAS. and three grains PHOS. IRON.

Dose.—One or two fluid drachms (more or less, as indicated,) three times a day, before meals.

Indications.—

Syphilitic, Scrofulous and Cutaneous Diseases, Dysmenorrhœa, Menorrhagia, Leucorrhœa, Amenorrhœa, Impaired Vitality, Habitual Abortions, and General Uterine Debility.

Carl L. Jensen

Sole Originator of

Pepsin in Scales

OR

"Crystal" Pepsin

2039 Green St.
Philadelphia

Physicians desirous of obtaining the genuine article, when prescribing Scale Pepsin or "Cryst." Pepsin, will not alone lend their aid and encouragement to the inventor, but will benefit themselves and patients as well, by simply prescribing this Pepsin thus: "Jensen's Pepsin," drawing a heavy line under the name "Jensen."

The profession generally takes it for granted that druggists are well aware that the physicians never intend to prescribe the imitations of preparations of established merits, which are brought to light solely through the knowledge and technicalities of the inventor or originator, acquired by protracted study and experiments. Imitations have never yet been known to supersede the article imitated, but furnish most convincing testimony to the worth of the article counterfeited. I am continually improving this valuable preparation. Besides its enormous digestive strength, it possesses a keeping quality not before found in any Pepsin preparation, owing to its being of a brittle, scaly texture, reduced to the shape of small granular fragments, it is perfectly soluble and pulverizes easily. It contains no foreign matter like preparations of other make, as Pepsin Manufacturers, heretofore, could not accomplish this without adding large quantities of either starch or sugar of milk.

Physicians who have not yet tried this preparation, or who have been imposed upon, will meet with gratifying results by simply prescribing this Pepsin, thus: "Jensen's Pepsin," as it will prevent substitutions.

Samples promptly forwarded, post-paid.

Faithfully **CARL L. JENSEN.**

New, Beautiful and Valuable Books.

A TEXT-BOOK OF

OPERATIVE SURGERY AND SURGICAL ANATOMY,

By ARTHUR TREHERN NORTON, F. R. C. S., Etc.

BASED ON THE ORIGINAL WORK OF

PROFS. CLAUDE BERNARD and CH. HUETTE.

SECOND EDITION. Illustrated by 88 full-page plates, drawn from nature, engraved on steel, BEAUTIFULLY COLORED, and many wood cuts. London and Philadelphia, 1886. Bound in half Russia, marbled sides and edges. Price (mailed post-paid and registered), $12.50.

A TEXT-BOOK OF

NAKED-EYE ANATOMY,

BEING AN ACCOMPANYING TEXT TO MASSE'S PLATES.

By JAMES CANTLIE, A. M., M. D., etc.

THIRD EDITION. Illustrated with 113 full page plates, engraved on steel and BEAUTIFULLY COLORED after nature. London and Philadelphia, 1886. Bound in half Russia, marbled sides and edges Price (mailed postpaid and registered), $12.50.

The above works are presented in the highest style of the publishing art, and are not less useful than they are beautiful. Mr. Norton explains all the leading and approved operations of surgery with constant reference to the faithfully colored plates, and his instructions are second only to operations on the cadaver.

The "Naked-eye Anatomy" of Dr. Cantlie, with its numerous tinted engravings, illustrates both the position and contrasting hues of the various organs and tissues. The physician who has not frequent opportunities to practice on the dead subject, will find this volume the best substitute he can obtain for practical dissection.

THE SCIENCE AND PRACTICE OF

SURGERY.

By FREDERICK JAMES GANT, F. R. C. S., etc., etc.

THIRD EDITION. Revised and enlarged throughout. With ONE THOUSAND AND NINETY engravings on wood. In two volumes. Vol. I, pp. xxviii, 1087. Vol. II, pp. xxxv, 1183; large octavo; bound in half Russia, marbled sides and edges. London and Philadelphia, 1886. Price (express prepaid), $12.00.

This monumental work is here offered in the finest London edition, on English paper, and bound in the most handsome and durable style. As a treatise on Surgery it stands at the head of the list of those produced by the best school of English Surgeons, clear, complete and practical.

COSMOLINE

Unguentum Petrolei

Prepared by E.F.Houghton & Co. Philadelphia, U.S.A.

Put up in 1, 5, 10, 25, 50, and 100-lb. cans. Samples furnished on application. The post-office laws forbid anything of an oleaginous nature being sent through the mail.

In chemical composition, Cosmoline (Unguentum Petrolei) is an oleaginous hydrocarbon, corresponding to the heavy petroleum oils, and containing a large amount of the paraffines and olefines of the formulæ $C_{16}H_{34}$ and $C_{16}H_{32}$. It contains but a small percentage of the paraffines and olefines corresponding to the formulæ C_7H_{16} and C_7H_{14}, respectively, and the offensive and irritating properties of the crude oil have been carefully removed. In the process of purification, no acids, alkalies, or other chemicals are employed, and no injurious additions of any kind are made to the natural product. The result is a semi-solid, translucent substance, with a faint odor and unctuous feel.

Cosmoline (Unguentum Petrolei) melts at about 100° Fah. (38° Cent.); and boils at about 625° Fah. (329° Cent.); its specific gravity is about 0.875 at 60° Fah.

As it contains no oxydizable or organic matter capable of change by putrefaction or fermentation, and is absolutely without affinity for moisture, it offers to the profession an admirable unguent, which can never decompose, ferment, or become rancid in any climate or temperature.

PHILADELPHIA, July 10, 1880.

MESSRS. E. F. HOUGHTON & Co.: I have for a number of years made extensive use of Cosmoline (Unguentum Petrolei), and consider it a most valuable article for surgical purposes. Either as a dressing by itself, or as a vehicle for the application of medicaments, it is greatly superior to lard or other fatty matters, especially by reason of its non-liability to change by time or temperature.

Yours truly, JOHN H. PACKARD, M. D.

1031 WALNUT STREET, PHILADELPHIA.

MESSRS. E. F. HOUGHTON & Co.: I have used extensively Cosmoline (Unguentum Petrolei) both in Dispensary and private practice, with very great satisfaction. As a vehicle in making ointments it is invaluable, and far superior to lard, for the reason that it will not become rancid or undergo chemical change like the latter, when exposed to the atmosphere. I cannot too highly commend it as an application in various skin diseases. Yours truly, JOHN V. SHOEMAKER, A. M., M. D.,

Physician to the Pennsylvania Free Dispensary for Skin Disease.

208 WEST 34TH STREET, NEW YORK.

MESSRS. E. F. HOUGHTON & Co.—*Gents:* I fully appreciate the value of your Cosmoline, or Unguentum Petrolei, and prescribe it frequently in ointments. Fluid Cosmoline I have used constantly for several years, as a lubricant of urethral sounds. It is the cleanest oil I know of for this purpose.

Yours truly, GEO. HENRY FOX.

FELLOWS'

HYPO-PHOS-PHITES

(SYR: HYPOPHOS: COMP: FELLOWS)

Contains **The Essential Elements** to the Animal Organization—Potash and Lime;
The **Oxydizing Agents**—Iron and Manganese;
The **Tonics**—Quinine and Strychnine;
And the **Vitalizing Constituent**—Phosphorus,
Combined in the form of a Syrup, with *slight alkaline reaction.*

It Differs in Effect from all others, being pleasant to taste, acceptable to the stomach, and harmless under prolonged use.

It has Sustained a High Reputation in America and England for efficiency in the treatment of Pulmonary Tuberculosis, Chronic Bronchitis, and other affections of the respiratory organs, and is employed also in various nervous and debilitating diseases with success.

Its Curative Properties are largely attributable to Stimulant, Tonic, and Nutritive qualities, whereby the various organic functions are recruited.

In Cases where innervating constitutional treatment is applied, and tonic treatment is desirable, this preparation will be found to act with safety and satisfaction.

Its Action is Prompt; stimulating the appetite and the digestion, it promotes assimilation, and enters directly into the circulation with the food products.

The Prescribed Dose produces a feeling of buoyancy, removing depression or melancholy, and hence is of great value in the treatment of MENTAL AND NERVOUS AFFECTIONS.

From its exerting a double tonic effect and influencing a healthy flow of the secretions, its use is indicated in a wide range of diseases.

Prepared by JAMES I. FELLOWS, Chemist,

48 VESEY STREET, NEW YORK.

Circulars Sent to Physicians on Application.

FOR SALE BY ALL DRUGGISTS.

SUCCUS ALTERANS.

(McDADE).

SUCCUS ALTERANS is a purely vegetable compound of the preserved juices of Stillingia Sylvatica, Lappa Minor, Phytolacca Decandra Smilax Sarsaparilla, and Xanthoxylum Fraxineum, as collected by Dr. Geo. W. McDade exclusively for Eli Lilly & Co., and endorsed by Dr. J. Marion Sims.

SUCCUS ALTERANS continues to gain favor from its remarkable Alterative and Tonic properties, *eliminating specific poison from the blood*, and *increasing the proportion of red corpuscles in anæmic patients* to a wonderful degree.

SUCCUS ALTERANS in venereal and cutaneous diseases is fast supplanting Mercury, the Iodides and Arsenic; and is a certain remedy for Mercurialization, Iodism, and the dreadful effects often following the use of Arsenic in skin diseases.

SUCCUS ALTERANS is also strongly recommended for its Tonic and Alterative effects in the myriad forms of scrofulous disease, and in all cases where anæmia is a factor. Such patients rapidly develop a good appetite, sleep soundly, and gain flesh rapidly. Many cases are on record where patients increased ten to twenty-five pounds in weight in a few weeks.

SUCCUS ALTERANS may be given for any length of time without injury to the patient.

SUCCUS ALTERANS is now endorsed by leading members of the medical profession, and in use by many hospitals of note.

SUCCUS ALTERANS is put up only in round amber bottles holding sixteen fluid ounces, which is sufficient for from two to six weeks' treatment.

ANY PHYSICIAN who has not received Dr. McDade's latest publication, the Monographia Syphilitica for January, 1887, should send their address, mentioning this journal, and we will mail a copy. It contains a paper, illustrated with colored plates, by Dr. D. H. Goodwillie, of New York, on the "Sequelæ of Syphilis," reports of cases in practice, and many other valuable papers.

SUCCUS ALTERANS is supplied by reputable wholesale and retail druggists everywhere. Agency for Great Britain, etc., John M. Richards, 46 Holborn Viaduct, London, E. C.

ELI LILLY & CO., PHARMACEUTICAL CHEMISTS, INDIANAPOLIS, IND., U. S. A.

DUSART'S SYRUP AND WINE OF LACTO-PHOSPHATE OF LIME,

The properties of which are scientifically founded on physiological experiments, and have received the sanction of several years' successful trial by the French and English medical profession, as producing durable reconstituent effects in all cases of *Cachexia* or *Adynamia*, when nutrition has been impaired by acute or chronic complaints.

As an article of diet it acts as general excitant of all the nutritive functions, insures digestion, brings back or increases the appetite, enriches the milk of the mother, and generally improves the vital energies. As a medicament it is chiefly used in convalescence, teething, rickets, and imperfect growth, dyspepsia, various nervous diseases, wounds, fractures, and all complaints of the osseous system.

Dusart's Syrup of Lacto-Phosphate of Lime and Iron is a ferruginous medicament specially invaluable in the above cases, when complicated with anæmia.

Dusart's work on the "Physiological and Therapeutic Action of Phosphate of Lime" will be sent free to any physician on application to Messrs. E. Fougera & Co.

PARIS: L. DUSART, 8 Rue Vivienne. NEW YORK: E. FOUGERA & CO., Importing Pharmacists.

CHAPOTEAUT'S MORRHUOL.

Morrhuol, contains all the active curative principles of Cod-Liver Oil, except the fatty part. It represents twenty-five times its weight of brown Cod-Liver Oil, and is dispensed in small round capsules containing each twenty centigrammes, thus equal to five grammes of Cod-Liver Oil. The daily dose is of two or three capsules for children, and from three to six for adults, to be taken before the chief meals.

Prof SF Baird C
1445 Mass ave

Concentrated Palatable Nutrients.

PEPTONIZED EXTRACT OF BEEF.

Contains all the nutritive constituents of beef.

The superiority of this preparation over other extracts of beef depends upon:

1. The large proportion of albuminoids which it contains.

2. The fact that its albuminoid constituents are chiefly in the form of peptones, insuring rapid absorption and ready assimilation.

3. Its appetizing flavor.

4. Its perfect and ready solubility in water.

The uses of such a preparation are obvious. It is a concentrated, and at the same time an easily assimilated food, useful in all cases of acute disease where sustaining treatment is indicated, and especially valuable in convalescence, and in chronic conditions of inanition or malnutrition, particularly where the functions of the stomach are not well performed.

One part of the Peptonized Extract of Beef may be said to be the equivalent of eight parts of fresh beef. One teaspoonful (about one-half ounce) will make a pint of excellent beef tea.

A like quantity added to a pint of vegetable soup communicates to it a rich flavor, and converts it into a highly nutritious food.

It may be employed in a still more concentrated form, if desired, but from half an ounce to one ounce of the extract is as much as it is generally advisable to give at one time.

POWDER OF BEEF.

A concentrated food of the highest nutritive value.

It represents in an exceedingly concentrated form the total nutritive value of the beef.

It is tasteless, and can be taken for a longer time than the various extracts of beef, beef juices, etc., without exciting nausea.

It is not only more readily digested and assimilated, but also incomparably easier of administration than other concentrated aliments, and may be added to water, milk, or wine, or beaten up with the yolk of an egg.

Drs. Debove and Dujardin-Beaumetz, of Paris, France, Dr. Lauder Brunton, of London, England, Dr. Henry B. Millard, of New York City, and many others, have given Powder of Beef a most thorough trial, and report that it is a most valuable adjuvant in the treatment of dyspepsia, indigestion, gastritis, ulcer of the stomach, tuberculosis, and in all chronic wasting diseases accompanied by enfeeblement of the digestive and assimilative functions.

PURE POWDERED BONE.

For the treatment of such affections as nervous exhaustion, rickets, and all diseases depending upon a lack of the proper supply of the inorganic elements of the tissues, it is believed that Pure Powdered Bone will be found invaluable.

It has the exact chemical composition required for a true nerve and bone food.

Its mechanical construction is such as to aid digestion to the greatest possible degree.

It is tasteless and odorless.

It is miscible with all ordinary foods in the proportions required, without detection.

It is inexpensive, and therefor adapted for general use.

☞ **Send for descriptive circulars, which will be mailed free on application.**

PARKE, DAVIS & CO.,

Manufacturing Chemists,

New York: {60 Maiden Lane, 21 Liberty Street.

DETROIT, MICH.

30,000 PHYSICIANS
NOW PRESCRIBE
HYDROLEINE
(HYDRATED OIL,)
For Consumption and Wasting Diseases. It Produces Immediate Increase in Flesh and Weight.

FORMULA.

[Each Dose of Two Teaspoonfuls, equal to 120 Drops, contains:

Pure Cod Liver Oil	80 m. (drops)	Soda	½ Grain.
Distilled Water	85 "	Boric Acid	½ "
Soluble Pancreatin	5 Grains.	Hyocholic Acid	½ "

DOSE:

Two teaspoonfuls alone, or with twice the quantity of water, to be taken thrice daily after meals.

Hydroleine (Hydrated Oil) is not a simple alkaline emulsion of oleum morrhua, but a hydro-pancreated preparation containing acids and a medicum of soda. Pancreatin is the digestive principle of fatty foods, and, in the soluble form here used, completely saponifies the oleaginous material so necessary to the reparative process in all wasting diseases.

Lautenbach's researches on the function of the liver would show the beautiful adjustment of therapeutics in preparation of Hydroleine, furnishing, as it does, the acid and soda necessary to prevent self-poisoning by reabsorption of morbid tubercular detritus and purulent matters into the general circulation.

Each bottle in nutritive value exceeds ten times the same bulk of cod liver oil. It is economical in use and certain in result.

Sold at all Drug Stores at $1.00 per Bottle.

The principles upon which this discovery is based have been described in a treatise on "The Digestion and Assimilation of Fats in the Human Body," by H. C. BARTLETT, Ph. D., F. C. S., and the experiments which were made, together with cases illustrating the effect of Hydrated Oil in practice, are concisely stated in a Treatise on "Consumption and Wasting Diseases," by G. OVEREND DREWRY, M. D.

Copies of these Works sent free on Application.

BUFFALO LITHIA WATER,

FOR GOUTY, RHEUMATIC, AND RENAL AFFECTIONS.

ROBERTS BARTHOLOW, M. A., M. D., LL. D., Prof. of Materia Medica and General Therapeutics in the Jefferson Medical College of Philadelphia. See his "Materia Medica and Therapeutics."

"Buffalo Lithia Spring of Virginia contains well-defined traces of Lithia, and is Alkaline. This has been used with great advantage in Gouty, Rheumatic, and Renal Affections." * * * * * * * * "There is little doubt that the continuous use of Alkaline Waters for a long period will cause the solution of Uric Acid Renal Calculi. For this purpose those Alkaline Waters rich in POTASSA are preferable."

This water has a large percentage of the CARBONATE OF POTASSA, making it rich in valuable Alkali.

Dr. Wm. A. Hammond, of New York, Surgeon-General U. S. Army (retired), Professor of Diseases of the Mind and Nervous System in the University of New York, etc.

"I have for some time made use of the Buffalo Lithia Water in cases of affections of the Nervous System complicated with Bright's Disease of the Kidneys, or with a Gouty Diathesis. The results have been eminently satisfactory. Lithia has for many years been a favorite remedy with me in like cases, but the Buffalo Water certainly acts better than any extemporaneous solution of the Lithia Salts, and is, moreover, better borne by the stomach. I also often prescribe it in those cases of Cerebral Hyperæmia, resulting from over mental work—in which the condition called Nervous Dyspepsia exists—and generallily with marked benefit."

Dr. Robert Battey, of Georgia, Suggester of Battey's Operation, Member of the American Medical Association, etc.

"I would state that I have been using the Buffalo Lithia Water, No. 2, in my practice for three years past, in cases of Chronic Inflammation of the Bladder, whether induced by Stone, by Enlarged Prostate in the aged, or by Neglected Gonorrhœa, and have secured excellent results, which encourages me to prescribe it for the future."

Dr. Hunter McGuire, Richmond, Virginia, late Professor of Surgery, Medical College of Virginia.

"Buffalo Lithia Water, Spring No. 2, as an Alkaline Diuretic, is invaluable. In Uric Acid Gravel, and, indeed, in diseases generally dependent upon a Uric Acid Diathesis, it is a remedy of extraordinary potency. I have prescribed it in cases of Rheumatic Gout, which had resisted the ordinary remedies, with wonderfully good results. I have used it also in my own case, being a great sufferer from this malady, and have derived more benefit from it than from any other remedy."

Dr. Alfred L. Loomis, of New York, Professor of Institutes and Practice of Medicine, Medical Department University of New York.

"For the past four years I have used the Buffalo Lithia Water in the treatment of Chronic Interstitial Nephritis occurring in Gouty and Rheumatic subjects, with the most marked benefit. In all Gouty and Rheumatic Affections I regard it as highly efficacious."

Dr. Harvey L. Byrd, of Baltimore, President and Professor of Obstetrics and Diseases of Women and Children, in the Baltimore Medical College, formerly Professor of Practical Medicine, etc.

"I have witnessed the best results from the action of the Buffalo Lithia Water, Spring No. 2, in Chronic Gout, Rheumatic Gout, Rheumatism, Gravel, and Stone in the Bladder, and I do not hesitate to express the opinion that in all diseases depending upon or having their origin in Uric Acid Diathesis, it is unsurpassed, if, indeed, it is equaled by any water thus far known to the profession.

"It has an ascertained value in Bright's Disease. A knowledge of its action in that disease thus far would seem to warrant the belief that it would, in many instances, at least in its early stages, arrest it entirely; and in its more advanced stages prove a decided comfort and palliative."

Water, in cases of one dozen half gallon bottles, $5.00 per case, at the Springs. Testimonials sent free on application. The Virginia Buffalo Lithia Springs Company have no longer control of this water. To get it **FRESH**, order directly of or from parties who deal directly with

THOMAS F. GOODE, Prop. Buffalo Lithia Springs, Va.

WATER FOR SALE BY

FRED. BROWN, or J. F. HAYES, Philadelphia.

SCOTT'S EMULSION

OF PURE COD LIVER OIL WITH HYPOPHOSPHITES OF LIME AND SODA.

THE STANDARD EMULSION OF COD LIVER OIL.

The ONLY Preparation of its class that will not SEPARATE nor SPOIL in any climate.

IT IS MADE FROM THE PUREST NORWEGIAN COD LIVER OIL, COMBINED WITH CHEMICALLY PURE HYPOPHOSPHITES AND GLYCERINE.

Acknowledged by leading Physicians in the U. S. and many other Countries to be the most ELEGANT most PALATABLE and EASILY DIGESTED preparation in the World, and can be tolerated longer by Children and persons with delicate stomachs than any other.

WE ASK A CAREFUL COMPARATIVE TEST WITH ANY OR ALL SIMILAR PREPARATIONS.

FORMULA: 50 per cent. of Pure Cod Liver Oil, 6 grs. of the Hypophosphites of Lime. and 3 grs. of the Hypophosphite of Soda to a fluid ounce. Emulsified with mucilage and Glycerine.

S. & B's BUCKTHORN CORDIAL, RHAMNUS FRANGULA.

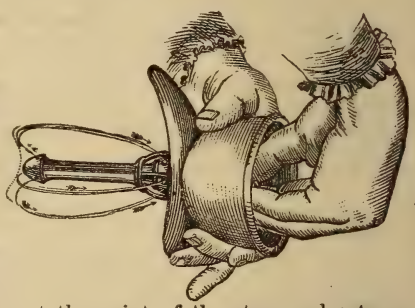
Is giving universal satisfaction to the profession, for its mild but certain and efficient cathartic action. It seems to be *almost* a *specific* for *habitual constipation*, and we are constantly in receipt of the most flattering reports regarding it. The care we use in its preparation—having the bark always the proper age, and properly exhausted—makes it always reliable in its action. Be sure and specify S. & B. Buckthorn Cordial.

To those who have for any reason never yet tried these preparations, we will be pleased to send samples free by express

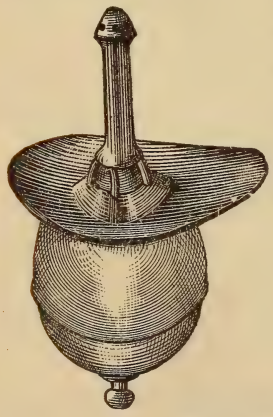
SCOTT & BOWNE, Mfg. Chemists, 132 & 134 S. 5th Ave., N. Y.

"PALLAS" SYRINGE.

VAGINAL AND RECTAL.



A MOST PERFECT and simply constructed Syringe for medicating and irrigating the vaginal cavity. The novel bulb of this Syringe, when doubled upon itself, as shown in the cut, will cause no fluid to be left, as is so apt to happen with the ordinary bulbs, and when filled will contain just enough fluid for the expansion of the vaginal folds. The hard rubber labial shield, with its plug, when firmly pressed against the labia, will both prevent spilling and soiling of linen, and the fluid can therefore be kept in circulation and in contact with the parts by repeating the pumping motion of the bulb. It will also be noticed that the fluid escapes as a spray from the large holes at the point of the stem and returns through the holes at the root of same, which is provided with hard rubber screen-bars, preventing the folds from interfering with the rapid return of the fluid into the bulb. In filling the bulb, a couple of turns will unscrew it. In handsome case, satin lined. Retail price, $3.75. To physicians, $3.00.



CHRISTIAN JENSEN & CO.,

2207 Fairmount Avenue,

PHILADELPHIA, PA.

COLDEN'S Liquid Beef Tonic.

Established 15 Years.
OBSERVE the NAME.
Beware of Imitations.

ORIGINAL LABEL:
"Colden's Liebig's Liquid Extract of Beef and Tonic Invigorator."

An Invaluable Aid in Medical Practice.

Differs Essentially from all other Beef Tonics.

COLDEN'S Liquid Beef Tonic is endorsed by scores of physicians, who are growing to realize more and more its importance in repairing, in accordance with the principles of dietetics, the **waste which disease entails.** It consists of the extract of Beef (by Baron Liebig's process) spirit rendered non-injurious to the most delicate stomach by extraction of the Fusel Oil, soluble Citrate of Iron, Cinchona, Gentian and other bitter tonics. An official analysis of this preparation by the eminent Chemist, ARTHUR HILL HASSALL, M. D., F. R. S., and an endorsement by the late SIR ERASMUS WILSON, F. R. S., is printed on the label of each bottle.

As a **blood food,** and a **reliable tonic** in all cases of debility and weakness, Malarial Fever, Anæmia, Chlorosis, Incipient Consumption, etc., it is the best preparation ever used. It acts directly on the sentient Gastric Nerves, stimulating the follicles to secretion, and gives to weakened individuals that first prerequisite to improvement—an appetite. It strengthens the nervous system when unstrung by disease, and has been employed with remarkable success as a remedy for Drunkenness and the Opium Habit.

Its Range of Action Embraces all Cases of Debility.

In order that physicians may form some idea of the nature of its ingredients, I will upon application in person, or by letter (enclosing a card), send a sample bottle of COLDEN'S LIQUID BEEF TONIC to any physician in regular standing, in the United States. Please ask your Dispensing Druggist (if he has not already a supply) to order it. In prescribing this preparation, physicians should be particular to mention "COLDEN'S"—*viz.:* **"*Ext. carnis, fl. comp. (Colden's.)*"** It is put up in pint bottles, and can be had of Wholesale and Retail Druggists generally throughout the United States.

C. N. CRITTENTON, Sole Agent, 115 Fulton St. New-York.

GLENN'S Sulphur Soap.

ALL physicians know that ***skin diseases*** are more or less constitutional, or dependent upon some specific poison in the blood, which if eradicated by internal treatment needs something to remove its appearance from the surface. Experience has proved that the best possible aid in the accomplishment of this end is obtained by the use of ***Sulphur in soap.*** GLENN'S SULPHUR SOAP is the best combination of its kind, and the one now generally used. It is for sale by all Druggists, at **25** cents a cake, or 3 cakes for **60** cents.

CONSTANTINE'S PINE TAR SOAP

Has been on trial among physicians for very many years as a toilet Soap and Healing Agent, and its superior virtues have been unanimously conceded **in all cases where the use of tar is indicated.** Unsolicited expressions of its excellence have been received from the Medical Faculty generally. IT IS THE BEST TAR SOAP MADE. None genuine unless stamped "A. Constantine's Persian Healing Pine-Tar Soap." For sale by all Druggists.

Samples of either of the above-named Soaps will be sent free upon application in person or by letter (enclosing card) to any physician in regular standing in the United States. C. N. Crittenton, 115 Fulton Street, New York. Please mention "THE MEDICAL AND SURGICAL REPORTER."

ESTABLISHED 1852.

HYDRASTIS

AND ITS PREPARATIONS.

The WM. S. MERRELL CHEMICAL CO. of Cincinnati—"The largest consumers of Golden Seal Root in the world" (see "Drugs and Medicines of North America")—offer to the medical profession, through the drug trade, the following well-known and highly approved preparations of this leading American drug.

FLUID HYDRASTIS.

A neutral solution of all the active medicinal constituents, forming a perfectly clear solution with alcohol, glycerin, syrup, or water. May be properly and profitably substituted for the Fluid Extract of the U. S. P. in the manufacture of syrup, wine or tincture.

COLORLESS HYDRASTIS.

A neutral solution of the White Alkaloid alone—without color or stain.

SULPHATE HYDRASTIA—CRYSTALLIZED.

[SULPHATE BERBERINA.]

This is the Sulphate of Yellow Alkaloid, which we present in crystals to guard against the substitution of impure and unskillful preparations in a powdered form.

Subsequent to its introduction by us under its present commercial title, this salt was identified as Berberina by Mahla, Durand and others. To avoid confusion with the Alkaloid Bebeerine and its salts, and to fully establish its identity, we continue the name by which it was originally introduced.

SOLUTION BISMUTH AND HYDRASTIA,

A neutral solution of the double Citrate of Bismuth and Hydrastia (White Alkaloid); each fluid drachm containing 2½ grains of the double salt.

Represented in New York City by

LEHN & FINK, 128 William Street.

Prices Current and Descriptive Circulars cheerfully supplied. Correspondence invited.

THE WELL-KNOWN APERIENT MINERAL WATER.

IMPORTANT NOTICE.

By reason of an improved method of caption, by which dilution is avoided, FRIEDRICHSHALL WATER will be found now to be of ***considerably greater strength*** and ***efficacy*** than heretofore.

The ordinary dose is a large wineglassful (4 ounces), taken fasting. Most efficacious and more acceptable to the palate when heated or mixed with an equal quantity of very hot water.

"*The most suitable aperient for prolonged use.*"—***Prof. SEEGEN.***

"*After twenty years' use I appreciate it as highly as ever.*"—

Prof. VIRCHOW.

OF ALL DRUGGISTS AND MINERAL WATER DEALERS.

SAVORY & MOORE beg to call the attention of the Profession to some of their Special Preparations, the purity and uniform strength of which are guaranteed.

Pancreatic Emulsion. In Consumption, Wasting, LOSS OF THE POWER OF DIGESTION AND ASSIMILATION, this pure drug is the MOST POTENT REMEDY. This is now attested by the published records of numerous medical men, extracts of which accompany each bottle.

Peptodyn, the New Digestive, is a combination of the whole of the digestive secretions, forming an invaluable remedy in the treatment of all forms of Dyspepsia, and all diseases arising from imperfect nutrition. Peptodyn is intended as a general promoter of digestion for persons not necessarily considered in bad health; thus, when taken about a quarter of an hour after a meal, it will be found to assist digestion in a remarkable manner, and prevent the discomfort which often follows the partaking of a full meal by persons in good health.

Pancreatine Powder, for Indigestion and Loss of APPETITE. This palatable and popular remedy effects the digestion and assimilation of all food, especially of FATTY SUBSTANCES, and is therefore invaluable to patients who are unable to digest Cod Liver Oil, and who are thus deprived of its nourishing and invigorating properties.

Gelatine Discs for Hypodermic Use—Of Morphia, CODEIA, ERGOTINE, ATROPIA, STRYCHNIA, APOMORPHIA, etc. The chief features of these discs are their instant solubility, by which hypodermic solutions can be instantly obtained of uniform and reliable strengths: they keep good for an unlimited period in their dry state, and are extremely portable. (Prepared in accordance with Dr. Sansom's recommendation.)
In tubes, each containing 25 discs.

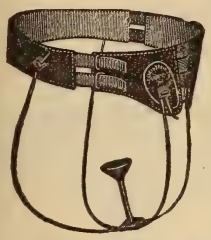
Etherodine (Substitute for Chlorodyne). A clear, bright fluid, pleasant to the taste, readily miscible with water or any suitable menstruum. The therapeutical properties of ETHERODINE are identical with those of CHLORODYNE, but the former is an elegant preparation, and more convenient for use.

Gelatine Discs for Ophthalmic Purposes.
"Much smaller doses of medicaments such as Atropine, Calabar Bean Extract, Sulphate of Zinc, Morphia, etc., etc., suffice to produce a marked effect by this form of application, than when drops are introduced."—*The Lancet.*
In tubes, each containing 100 discs.

Gelatine Lamels for Internal Administration, consist of thin, pliable, and, in most cases, transparent sheets of uniform thickness, accurately divided into squares by raised lines, each square containing an exact dose of the medicine with which the sheet is impregnated.
In sheets, each consisting of 24 squares.

Datura Tatula, for Asthma, Hay Fever, and Chronic BRONCHITIS. Recommended by the Profession as a remedy of great power and usefulness in cases of short and difficult breathing, spasmodic coughing, etc. The most convenient forms for use are—
Datura Tatula Cigars. Datura Tatula—prepared for use by means of a pipe.
Datura Tatula Cigarettes. Datura Tatula Pastilles—for Inhalation.

SAVORY & MOORE, 143 New Bond Street, London.
Agents for America, E. FOUGERA & CO., New York.



PHYSICIANS!

YOUR ATTENTION IS INVITED

—TO THE—

DR. McINTOSH NATURAL UTERINE SUPPORTER.

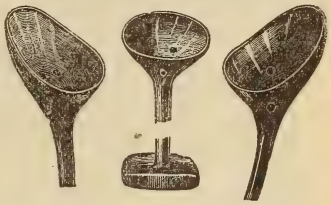
THIS INSTRUMENT MEETS THE WANTS OF THE PROFESSION MORE PERFECTLY than any other Uterine Supporter ever made. This is proven by the fact that during the past fifteen years more have been sold than of all other Supporters combined. *It never fails to give perfect satisfaction, even in the most difficult cases,* where any instrument can be used.

The **ABDOMINAL PORTION** is a broad morocco leather belt with elastic straps to buckle around the hips, with concave front, so shaped as to hold up the abdomen.

The **UTERINE PORTION** is a cup and stem made of highly-polished hard rubber, very light and durable, shaped to fit the neck of the womb, with openings for the secretions to pass out, as shown by the cuts. Cups are made with extended lips to correct flexions and versions of the womb.

The cup and stem is suspended from the belt by two soft elastic rubber tubes, which are fastened to the front of the belt by simple loops, pass down and through the stem of the cup and up to the back of the belt. These soft rubber tubes being elastic adapt themselves to all the varying positions of the body and perform the service of the ligaments of the womb.

The instrument is very comfortable to the patient, can be removed or replaced by her at will, can be worn at all times, will not interfere with nature's necessities, will not corrode, and is lighter than metal. It will answer for all cases of Anteversion, Retroversion, or Prolapsus of the Womb. It is used by our leading physicians with never-failing success.



Anteversion. Prolapsus. Retroversion

OUR REDUCED PRICE TO PHYSICIANS IS $5.00 EACH.

Instruments sent by mail at our risk on receipt of price; or we can send by express, C. O. D., with express charge for returning money added.

CAUTION.

Owing to the great success of our Supporter, several worthless imitations have been made which are often substituted for our instruments, to the detriment of the patient and the disappointment of the physician. To protect our patrons from imposture, we stamp each pad of the Abdominal belt in gilt letters, "Dr. McIntosh N. U. Supporter, Chicago, Ill."; the base of each cup is stamped "Dr. McIntosh N. U. S. Co., Chicago, Ill., U. S. A."

The box in which the instrument is put up contains directions for the application of the instrument pasted inside the cover, having the fac simile signature of Dr. L. D. McIntosh.

For further information in regard to the instrument, address

DR. McINTOSH NATURAL UTERINE SUPPORTER CO.,

300 AND 302 DEARBORN STREET, CHICAGO, ILL.

Our valuable Pamphlet on "Displacement of the Womb," giving a more complete description of the Instrument, will be sent you free on application.

LEVIS'S METALLIC SPLINTS.

FLEXIBLE, PERFORATED, NICKEL-PLATED, Conformable to every size and condition of Limbs. VERY LIGHT, INDESTRUCTIBLE, and INEXPENSIVE. The complete set consists of **21 pieces** in a neat, compact case. Full descriptive circulars sent on application. ☞ **PRICE, $15.00 Per Set.** ☜

McINTOSH GALVANIC AND FARADIC BATTERY CO.,

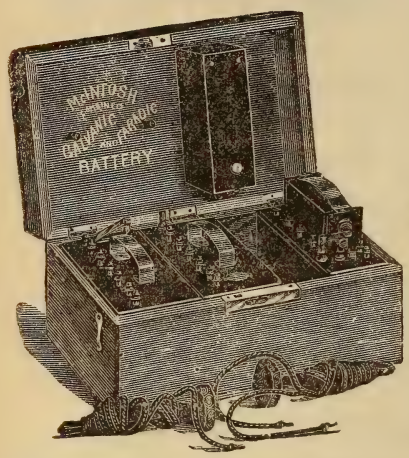
MANUFACTURERS OF THE CELEBRATED

McIntosh Combined Galvanic and Faradic Batteries,

Table, Office, and Family Batteries, Electrodes, Electric Bath Apparatus, Statical Electric Machines, Stereopticons, Solar, Monocular, and Binocular Microscopes.

AND ALL KINDS OF

PHILOSOPHICAL ELECTRICAL APPARATUS.



Schools, Colleges, Physicians, or Hospitals wanting new Apparatus, will do well to favor us with correspondence and obtain estimates. Men of scientific experience have charge of the manufacturing department. We employ the most skillful mechanics, and have the largest facilities in America for manufacturing.

We would call the Special Attention of the Medical Profession to our

Combined Galvanic and Faradic Batteries.

These Batteries are recommended by the Medical Faculty of both America and Europe, and have been adopted by the United States Government for use in Medical Department of the Army and Navy. They are

The First and Only Portable Batteries ever Invented which Give both the Galvanic and Faradic Current,

TWO DISTINCT BATTERIES IN ONE CASE.

No Physician can afford to be without one.

This celebrated Battery is constructed on an improved plan. The zincs and carbons are fastened to hard-rubber plates in sections of six each; this manner of connecting brings the plates nearer together than in any other battery, thus giving less internal resistance. The cells are composed of one piece of hard rubber, and are made in sections of six each with a drip-cup, thus one section can be handled, emptied, and cleaned, as easily and quickly as one cell. The drip-cup is to receive the elements when the battery is not in use. The fluid cannot spill or run between the cells, and there is no danger of breaking, as with glass cells. This is the only battery in which the zinc and carbon plates can be kept clean and always in order by simply rinsing them.

An extra cell (with a zinc and carbon element) is added to the combined batteries, for the purpose of producing the Faradic current. This cell gives as much force as is ever needed, and avoids exhausting the current from the Galvanic cells. All the metal work is finely nickel-plated and highly polished, and every part is put together so that it can be easily replaced by the operator. Our batteries weigh less, occupy less space, give a current of greater intensity and quantity, than any other battery manufactured.

Our illustrated Catalogue, a handsome book giving full description of all our goods, and other valuable information, sent free on application.

McINTOSH GALVANIC AND FARADIC BATTERY CO.

300 & 302 DEARBORN STREET, CHICAGO, ILL.

WHEELER'S TISSUE PHOSPHATES

Bone-Calcium Phosphate $Ca_3 2P.O._4$, Sodium Phosphate $Na_2 H.P.O._4$, Ferrous Phosphate $Fe_2 2P.O._4$, Trihydrogen Phosphate $H_3 P.O._4$.

WHEELER'S COMPOUND ELIXIR OF PHOSPHATES AND CALISAYA. A Nerve Food and Nutritive Tonic, for the treatment of Consumption, Bronchitis, Scrofula, and all forms of Nervous Debility.

The Lactophosphates prepared from the formula of Prof. Dusart, of the University of Paris. Combines with a superior Pemartin Sherry Wine and Aromatics in an agreeable cordial easily assimilable and acceptable to the most irritable stomachs.

Phosphorus, the oxidizing element of the Nerve Centres for the generation of Nerve Force; Lime Phosphate, an agent of Cell Development and Nutrition; Soda Phosphate, an excitant of Functional Activity of Liver and Pancreas, and Corrective of Acid Fermentation in the Alimentary Canal; Iron, the Oxidizing Constituent of the Blood for the Generation of Heat and Motion; Phosphoric Acid, Tonic in Sexual Debility; Alkaloids of Calisaya, Anti-Malarial and Febrifuge; Extract of Wild Cherry, uniting with tonic power the property of Calming Irritation and Diminishing Nervous Excitement.

THE SUPERIORITY OF THE ELIXIR consists in uniting with the Phosphates the special properties of the Cinchona and Prunus, of Subduing Fever and Allaying Irritation of the Mucous Membrane of the Alimentary Canal, which adapts it to the successful treatment of Stomach Derangements and all diseases of Faulty Nutrition, the outcome of Indigestion. Malassimilation of Food, and *failure of supply* of these essential elements of Nerve Force and Tissue Repair.

The special indication of this combination of Phosphates in Spinal Affections, Caries, Necrosis, Ununited Fractures Marasmus, Poorly Developed Children, Retarded Dentition, Alcohol, Opium, Tobacco Habits, Gestation and Lactation, to promote Development, etc., and as a *physiological restorative* in Sexual Debility, and all used up conditions of the Nervous System, should receive the careful attention of good therapeutists.

There is no strychnia in this preparation, but when indicated, the Liquor Strychniæ of the U. S. Dispensatory may be added, each fluid drachm of the solution to a pound bottle of the Elixir making the 64th of a grain to a half fluid ounce, an ordinary dose, a combination of a wide range of usefulness.

DOSE—For an adult, one tablespoonful three times a day, after eating; from seven to twelve years of age, one dessertspoonful; from two to seven, one teaspoonful. For infants, from five to twenty drops, according to age.

Prepared at the Chemical Laboratory of T. B. WHEELER, M. D., Montreal, D. C.

Put up in pound bottles and sold by all Druggists at One Dollar.

THREE MORE MEDALS IN 1886,

The recent International Expositions at Edinburgh and Liverpool, and the American Institute, New York, each awarded us the Highest Silver Medal, which swells our list to about

THIRTY-FIVE GOLD, SILVER AND BRONZE MEDALS

FROM ALL PARTS OF THE WORLD.

THE REASON FOR IT IS PLAIN.

We make but one quality, and that the best. WE SCRUPULOUSLY CONFORM TO THE PHARMACOPŒIAL, or other recognized standards, in the incorporation of medicinal ingredients. We command perfect skill in manipulation, we use pure and superior fabrics, our packages are neat, elegant, and convenient, and our prices are not only uniform, but the most reasonable that can be placed on honest goods of the first quality.

THE STATUS OF THE WHOLE PLASTER BUSINESS

is well shown by the analyses of Belladonna Plasters, the leading article on the list of spread goods, made in March, 1886 by Dr. Albert B. Prescott, Prof. of Chemistry at the University of Michigan, and President of the American Chemical Society, from goods purchased by him in open market. The analyses were made by the same process, in parallel operations, for the quantity of total Belladonna alkaloids, estimated as atropine, and show our Belladonna plaster to contain 0.543 of a grain of alkaloid, which represents the strength of a plaster made after the standard prescribed by the U. S. P. from the highest grade of belladonna root. The same analyses showed the next highest belladonna plaster to contain but 0.264 grains of alkaloid, or less than half U. S. P. strength; while the several other brands examined contained from 0.230 grains to 0.045 grains, proving the S. & J. plaster to contain more than twice as much belladonna as the one approaching nearest to it, the rest falling below the line of any valid comparison, a number having scarcely a trace of belladonna alkaloid.

IN FURTHER PROOF OF OUR DESIRE AND PURPOSE

to maintain, and, if possible, to enhance, the high standard and reputation of our goods, we cite the fact that we have recently erected one of the most complete and best equipped laboratories in the United States, and we shall hereafter manufacture every medicinal extract incorporated in our specialties, and can guarantee, through our own analyses, the strength and quality of all drugs we employ; thus, also, ensuring the perfect uniformity of all our products. For many years, physicians have preferred our goods because they always found them therapeutically reliable, as others were not; and our new departure will set up a stronger safeguard than ever against cheap and worthless plasters and dressings.

WE HAVE ESTABLISHED THE STANDARD.

Failing to make goods equal to ours, and which would sell on their merits, our competitors have heretofore striven to introduce their goods to the notice of the trade and the medical profession by imitating our trade-marks, packages, circulars, and price lists. Now, certain plaster makers have evidently found it necessary to adopt more desperate tactics, since we learn from retailers in Pennsylvania and New Jersey that jobbing-house salesmen have solicited them to buy other goods when ours were indicated on their order. In one case the salesmen said the house he represented no longer stocked our goods; in another, that we no longer made some of the articles desired. On inquiry, we learn that the representatives of these desperate plaster manufacturers offered these men a personal consideration to perform this dishonorable service. In one or two cases a direct money bribe was tendered and refused. The whole scheme shows to what straits our competitors are reduced, and indicates clearly the necessity for physicians specifying "S. & J." goods when prescribing, if they would be assured of obtaining the therapeutic results expected from medicinal plasters, or the strict reliability of goods for surgical use.

NOTABLE POINTS

RELATIVE TO

Lactated Food.

IT IS A COOKED FOOD.

By the use of high steam heat the gluten flour used is partially torrefied. This is done while the flour is dry, and during the process it is in constant motion, which insures perfect cooking to every particle.

Routh says, (Infant Feeding, page 380) that by this process, "the starch granules are rendered more separable, the gluten is reduced to a more porous condition, readily acted on by the gastric juice, and as an aliment, therefore, is more nutritious and digestible."

IT IS A PREDIGESTED FOOD.

"You state that it is self-digestive as regards the conversion of insoluble starch into soluble dextrine and maltose. My experiments with it lead me to hold that this is correct." J. MILNER FOTHERGILL.

IT CONTAINS NO UNCHANGED STARCH.

By the peculiar process of manufacture, every particle of the gluten flour is subjected to the action of the malto-diastase, and by it all the starch contained is transformed into soluble carbo-hydrates.

Professor CARL SEILER says, "Examination has proved that all the starch granules are converted, as shown by their behavior to polarized light."

NO CANE SUGAR USED.

The basis of Lactated Food is the pure sugar of milk made by the improved processes of the American Milk Sugar Co. The great value of this article has been shown conclusively. Cane sugar is not used in the composition or preparation of the Food on account of its liability to cause irritation by reason of the acetic fermentation which it creates in the stomach. Milk sugar never causes this fermentation or irritation.

IT IS NON-IRRITATING.

By reason of the fact that Lactated Food is partially digested in process of Preparation, it is assimilated by the feeblest stomach, and no undigested particles pass into the bowels to irritate, and thus cause troublesome and dangerous bowel disorders.

IT IS HIGHLY NUTRITIOUS.

The nutritive elements of Lactated Food are derived from the three great cereals, Wheat, Barley, and Oats. From the Wheat is taken the pure gluten, the most nourishing substance known for the muscles and tissues; from the Barley, all the soluble albuminoid and extractive matter resulting from the most careful malting; and from the Oat, the strengthening properties for which it is so well known. The result is a food which never disappoints, and under which the feeble child or invalid rapidly rallies.

FOR CHOLERA INFANTUM.

It is the chief reliance of many eminent practitioners, and it is the safest food in summer for all young or delicate children.

Another important consideration is its low price, it being much more economical than other foods. We make four sizes, selling for 25 cents, 50 cents, $1 00, and $2.50. *A dollar can will furnish one hundred and fifty meals for an infant.*

If any physician that has not yet made a trial of the Lactated Food will write us, we will send a package of our regular size, postpaid, without charge, with the understanding that it will be given a careful trial as soon as possible.

We shall use every precaution to maintain the high standard of this Food, and to insure perfect satisfaction to the profession in its use.

WELLS, RICHARDSON & CO.,

BURLINGTON, VT.

THE CANTON SURGICAL

AND

GYNÆCOLOGICAL CHAIR.

A chair especially constructed for the use of the general practitioner, as well as for the specialist in the treatment of gynæcological cases. For treating diseases of the Eye, Ear, Throat, and Chest, it has no equal. Every chair fully warranted to be first-class.

As a speculum chair it secures ease and comfort to the patient, and at the same time gives the operator such perfect control of all the various changes and positions, that it robs gynæcology of its usual embarrassment and annoyance.

Send for descriptive catalogue.

DR. RABUTEAU'S

[Laureate of the Institute of France]

DRAGEES, ELIXIR, AND SYRUP OF IRON.

"The experiments made in the hospitals of Paris have demonstrated that *Dr. Rabuteau's Dragees, Elixir, and Syrup* regenerate the red globules of the blood with a rapidity never observed with the use of the other ferruginous preparations. These results have been proved by the various *Compt-Globules*.

"The ferruginous preparations of *Dr. Rabuteau* do not cause any constipation, and are perfectly tolerated by the weakest persons."—*Gazette des Hopitaux*.

Dr. Rabuteau's Elixir is prescribed when some difficulty is experienced in swallowing the Dragees; it is especially adapted to weak persons, whose digestive functions need strengthening or stimulating.

Dr. Rabuteau's Syrup is especially prepared for children, who take it readily because of its agreeable taste.

A sample of Rabuteau's Dragees will be sent free to any Physician mentioning *The St. Louis Medical and Surgical Journal*.

Prepared by CLINN & Co., Pharmacists, Paris.

E. FOUGERA & Co., Agents for the United States.

Ducro's Alimentary Elixir,

A COMBINATION UNITING THE PROPERTIES OF

ALCOHOLIC STIMULANTS AND RAW MEAT

This preparation, which has been used with great success in the hospitals of Paris, since 1868, is adapted to the treatment of all diseases requiring the administration, in a small volume, of a tonic able to stimulate and support the vital forces, as *Pulmonary Phthisis, Depression and Nervous Debility, Adynamia, Malarious Cachexia*, etc.

Prepared by EMILE DURIEZ & Co., Successors to DUCRO & CIE, Paris.

KIRKWOOD'S INHALER,

This is the only complete, reliable, and effective inhaler in use, arranged for the direct application of Muriate of Ammonia and other remedial agents in the state of vapor to the diseased parts of the air passages in the treatment of catarrh and diseases of the throat and lungs. No heat or warm liquids required in its use.

It is entirely different from the various frail, cheap instruments that have been introduced.

KIRKWOOD'S INHALER is accompanied by testimonials of the highest professional character, together with carefully-prepared formulas for use.

Retail Price, complete, $2.50.

☞ A liberal discount allowed to the trade and profession.

☞ For descriptive pamphlets or other information, address

E. FOUGERA & CO., 30 North William Street, New York.

Rigollot's Mustard Paper

Is one of the most important and useful discoveries of the age. It is the only preparation which has been adopted by the civil and military hospitals, and the armies and navies of France and England, and which has obtained a medal at the Centennial Exposition at Philadelphia. All other mustard plasters or leaves, of whatever name, are but imitations of the original.

Physicians will find it the most reliable sinapism, prompt and certain in its action, and will therefore always prescribe it. Every sheet, in order to be genuine, must bear the annexed signature of the inventor.

Sold in tin boxes containing 10 sheets, also 25 and 100 sheets, by all respectable chemists throughout the world.

E. FOUGERA & CO., New York Depositaries.

In corresponding with Advertisers, please mention THE MEDICAL AND SURGICAL REPORTER.

TAMAR INDIEN GRILLON.

A laxative, refreshing, and medicated Fruit Lozenge, very agreeable to take, and never causing irritation. Its physiological action assures the immediate relief and effectual cure of

CONSTIPATION,

HÆMORRHOIDS, BILE, CEREBRAL CONGESTION, HEADACHE, LOSS OF APPETITE, INTESTINAL OBSTRUCTIONS, ETC.,

by augmenting the peristaltic movement of the intestine without producing undue secretion of the liquids. Unlike pills and the usual purgatives, it does not predispose to intestinal sluggishness, and the same dose always produces the same effect, that is to say, never needs increasing.

It is recommended by the most eminent physicians of Paris, notably Drs. BELIN and TARDIEU, who prescribe it constantly for the above complaints, and with most marked success.

Paris: E. GRILLON, 27 Rue Rambuteau.

SOLD BY ALL DRUGGISTS.

PRIVATE SCHOOL FOR THE DEAF.

Deaf Children Taught to Speak and Educated through Lip Reading. Aural Training and Defective Speech treated and improved. A Kindergarten Department for Deaf Children from three to six years old. A Training Class for Teachers of Articulation.

School re-opens September 20, 1886, at No. 16 South Broad Street (opposite Public Buildings), Philadelphia, Pa.

Directions to Parents of Deaf Children for their Treatment from Infancy in order that they may learn Speech and Lip Reading, furnished free on application to **MARY S. GARRETT, Principal.**

THE VALUE OF MURDOCK'S LIQUID FOOD IS RECOGNIZED IN ALL COUNTRIES, AND IS ENDORSED BY ALL NATIONAL MEDICAL SOCIETIES THAT HAVE INVESTIGATED ITS VALUE.

There never was an essay read before any Medical Society on Raw Food Extracts, except on Murdock's Liquid Food, and counterfeit manufacturers of Extracts have published many of our essays to show the value of their counterfeits.

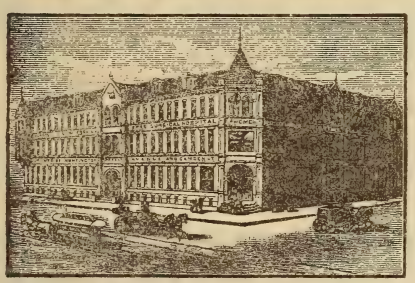
Send for Essay and DISCUSSION before the British Medical Association at Brighton, England, 1886 (Essay), by the Vice-President of the American Medical Association, and others, on the value of MURDOCK'S LIQUID FOOD over all Foods and Extracts known, it being the ONLY Raw Condensed Food free from insoluble matter.

Also essay read before the American Medical Association at Richmond, Va., and Washington, D. C.

Its value was recognized by the profession from results obtained in the Free Hospitals that have been established and supported by our Mr. A. L. Murdock during the last four years.

They now equal

140 FREE BEDS,



And contain 38,000 feet of floor.

Our Liquid Food can be retained by the weakest stomach. Four tablespoonfuls daily will make eight per cent. new blood weekly. When used for infants, never change their food, but add five or more drops of Liquid Food at each feeding, and their lost or needed vitality will be restored in less than thirty days.

Send for the Report of the Chairman of the Section of Obstetrics of the American Institute of Homœopathy, read at Saratoga at the annual meeting of 1886.

Circulars were sent by him to all the Physicians in the United States, asking what their experience was with Murdock's Liquid Food in its use for infants under, as well as over, one year old.

Then what results, with all the different Milk preparations, Grain Foods, Peptonoid Foods, and Beef Extracts, compared with MURDOCK'S LIQUID FOOD.

The returns show that it is the Standard Food and Extract, as the percentage of lives restored was the largest when used.

We extract from the report. After calling attention to the fact that one-quarter of the homœopathic profession are accustomed frequently to prescribe this food for children less than a year old, as well as over, he remarks:

"It is singularly adapted to scrofulous, syphilitic, and tubercular constitutions, its life-restoring power manifesting itself in each with a relative clearness and power corresponding to the order of enumeration. For fair-haired children who are inclined to grow fleshy it is more symptomatically recommended, while Duncan's *acid* babies find it particularly useful. Accordingly, it is chiefly employed for marasmus and anæmic conditions resulting either from non-assimilation of food, or from simple summer complaints. Should a child vomit all milk food and suffer synchronously with diarrhœa or dysentery, the demand for this food is emphatic and unmistakable; also in general irritability of the stomach, particularly if there be sour-smelling diarrhœa, the food passing through undigested. For the prematurely born it stands pre-eminent. For those 'weak and debilitated from any cause, Murdock's Food is probably the best in the world.' Should any indication of cerebral hyperæmia appear, the quantity of food must be diminished; so, too, if after its protracted use vomiting and diarrhœa ensue, the child has been overfed. Should the taste or odor of any given bottle chance to be disagreeable, add water until they disappear, and let the purchaser congratulate himself upon getting more nutriment than he paid for. When given in combination with milk in cases of indigestion, the quantity of milk should be diminished until all curds disappear from the stool, the quantity of Food, of course, being proportionately increased."

The Surgical Staff at MURDOCK'S FREE HOSPITAL FOR WOMEN are in daily attendance, except Saturdays, to examine patients and assign beds.

EVERY BED FREE.

Our Free Surgical Hospital for Women, located on Huntington avenue, above West Chester park, contains fifty (50) beds, in charge of a staff of five surgeons, members of the Massachusetts Medical Society.

Our Free Surgical Hospital for Women, located on Gainsborough street, corner of Huntington avenue, contains 50 beds, in charge of a staff of five surgeons, members of the Massachusetts Homœopathic Medical Society.

Our Free Home for Homeless Boys contains 40 beds, and is located at 11 to 21 Causeway street. Many of these boys suffer from Scrofula, Eczema, and other skin diseases, which yield quickly by the use of our Liquid Food.

From the fact that no two beeves or sheep are alike, is the reason of our different brands being different in flavor.

All brands are made by the same formula. The letter represents the day of make, and the figure the tank.

If richer, it is stronger in smell and flavor, and will bear a greater reduction. It cannot be reduced so low but it will be superior to all other preparations in treating chronic cases.

If you cannot obtain Murdock's Liquid Food from your druggist, we deliver, free of express, 12 oz. for $1. Any physician that has not used our Liquid Food, we will deliver free to the Boston express 12 oz.

MURDOCK'S LIQUID FOOD CO.,

BOSTON

CELERINA

NERVE-TONIC, STIMULANT AND ANTISPASMODIC.

FORMULA.—Every Fluid-Drachm represents FIVE grains EACH—Celery, Coca, Kola, Viburnum and Aromatics.

INDICATIONS.—Impotency, Spermatorrhea, Loss of Nerve-Power (so usual with Lawyers, Preachers, Writers and Business Men), Nervous Headache, Neuralgia, Paralysis, Dysmenorrhea, Hysteria, Opium-Habit, Inebriety, Prostatitis, Dyspepsia, and ALL LANGUID or DEBILITATED conditions of the System.—*Indispensable to restore a patient after alcoholic excess.*

DOSE.—One or two teaspoonfuls three or more times a day, as directed by the Physician.

ALETRIS CORDIAL

UTERINE TONIC AND RESTORATIVE.

PREPARED FROM THE ALETRIS FARINOSA OR TRUE UNICORN.

INDICATIONS.—Amenorrhea, Dysmenorrhea, Leucorrhea, Prolapsus Uteri, Sterility, to PREVENT Miscarriage, Etc.

DOSE.—One teaspoonful three or four times a day.

Unrivaled as a Uterine Tonic in Irregular, Painful, Suppressed and Excessive Menstruation,

IT RESTORES NORMAL ACTION TO THE UTERUS, AND IMPARTS VIGOR TO THE ENTIRE UTERINE SYSTEM.

☞Where Women have aborted during previous Pregnancies, or in any case where abortion is feared, the Aletris Cordial is indicated, and should be continuously administered during entire gestation.

ACID MANNATE

A MILD, SAFE AND PLEASANT APERIENT.

Prepared from Manna, Purified Cathartic Acid, and Fruit Juices.

INDICATIONS.—Constipation, Biliousness, Congestions, Etc. **INDISPENSABLE AS AN APERIENT FOR WOMEN DURING PREGNANCY.** In teaspoonful doses, 3 times a day, it favors the SECRETION and EXCRETION of bile, and gradually removes the congested and torpid states of the liver, and keeps the bowels in a regular and soluble condition.

DOSE.—ONE or MORE teaspoonfuls as directed by the Physician.

S. H. KENNEDY'S
CONCENTRATED EXTRACT OF
PINUS CANADENSIS

DARK — A NON-ALCOHOLIC LIQUID. — WHITE

A MOST VALUABLE NON-IRRITATING MUCOUS ASTRINGENT.

INDICATIONS.—Albuminuria, Diarrhea, Dysentery, Night-Sweats, Hemorrhages, Profuse Expectoration, Catarrh, Sore Throat, Leucorrhea, and other Vaginal Diseases, Piles, Sores, Ulcers, Burns, Scalds, Gonorrhea, Gleet, Etc.

When Used as an Injection to Avoid Staining of Linen, the WHITE Pinus should be Used.

Recommended by DR. J. MARION SIMS, and other Prominent Physicians.

CLINICAL MANUAL OF DISEASES OF THE EAR.

By LAURENCE TURNBULL, M. D., Ph.G., President of the Subsection of Otology of the British Medical Association at Cork. Second Revised Edition. In One Octavo Volume of over 500 pages. With 114 Illustrations. $4.00.

"The second edition of this most excellent treatise, published so shortly after the appearance of the first, attests the favor it has met with from the profession. This edition is improved, enlarged, and more fully illustrated. The author's experience in this department of medicine fits him especially for the preparation of such a work. We commend the work, not only to the specialist, but to the general practitioner, as one of the best treatises yet issued upon diseases of the ear."—*Nashville (Tenn.) Journal of Medicine and Surgery.*

ESTABLISHED 1855.

DRS. STRONG'S REMEDIAL INSTITUTE,

SARATOGA SPRINGS, NEW YORK,

Receives persons recommended to it by their home physicians for Treatment, Change, Rest or Recreation, and places them under well-regulated hygienic conditions, so helpful in the treatment of chronic invalids or the overtaxed.

For Treatment: In addition to the ordinary remedial agents, it employs Turkish, Russian, Roman, Sulphur, Electro-Thermal, the French Douche (Charcot's), and all Hydropathic Baths; Vacuum Treatment, Swedish Movements, Massage, Pneumatic Cabinet, Inhalations of Medicated, Compressed, and Rarefied Air; Electricity in various forms, Thermo-Cautery, Calisthenics, and Saratoga Waters, under the direction of a staff of educated physicians.

For Change: The Institution is located in a phenomenally dry, tonic, and quiet atmosphere, in the lower area of the Adirondack Zone, and within the "Snow Belt."

For Rest: The Institution offers a well-regulated, quiet home, heated by steam and thoroughly ventilated. With cheering influences and avoiding the depressing atmosphere of invalidism.

For Recreation: To prevent introspection, are household sports at all seasons of the year, and in winter tobogganing, elegant sleighing, etc; in summer, croquet, lawn-tennis, etc.

Private professional references furnished upon application. Physicians are invited to inspect the Institution at their convenience. A liberal discount to physicians and their families. For further information, address

Carl L. Jensen

Sole Originator of

Pepsin in Scales

OR

"Crystal" Pepsin

2039 Green St.
Philadelphia.

Physicians desirous of obtaining the genuine article, when prescribing Scale Pepsin or "Cryst." Pepsin, will not alone lend their aid and encouragement to the inventor, but will benefit themselves and patients as well, by simply prescribing this Pepsin thus: "Jensen's Pepsin," drawing a heavy line under the name "Jensen."

The profession generally takes it for granted that druggists are well aware that the physicians never intend to prescribe the imitations of preparations of established merits, which are brought to light solely through the knowledge and technicalities of the inventor or originator, acquired by protracted study and experiments. Imitations have never yet been known to supersede the article imitated, but furnish most convincing testimony to the worth of the article counterfeited. I am continually improving this valuable preparation. Besides its enormous digestive strength, it possesses a keeping quality not before found in any Pepsin preparation, owing to its being of a brittle, scaly texture, reduced to the shape of small granular fragments, it is perfectly soluble and pulverizes easily. It contains no foreign matter like preparations of other make, as Pepsin Manufacturers, heretofore, could not accomplish this without adding large quantities of either starch or sugar of milk.

Physicians who have not yet tried this preparation, or who have been imposed upon, will meet with gratifying results by simply prescribing this Pepsin, thus: "Jensen's Pepsin," as it will prevent substitutions.

Samples promptly forwarded, post-paid.

Faithfully **CARL L. JENSEN.**

MAINTAINED SUPERIORITY!!

FLUID

32° Fah. 0° Cent.

Fluid Cosmoline [*Petroleol*] is a fixed oil of Petroleum, a pure hydro-carbon prepared expressly for medical use. From it all the volatile and otherwise offensive properties of the crude Petroleum have been separated, without the aid of chemicals. Perfectly indifferent to atmospheric action, it remains inalterable in any climate. It is neutral in reaction, bland, soothing, cooling, and may therefore be applied to the most sensitive conditions without irritation. Flowing at 32° Fahr., it may be used may be warmed to any temperature the body can endure. It will be found excellent to relax the skin, to protect irritated surfaces from the air, and to use as a constituent in liniments, ointments and plasters, where an emollient is needed. For these and many other purposes, obvious to the medical profession, it will be found superior to olive oil, or to any vegetable or animal oils, which undergo decomposition and turn rancid. It contains no foreign ingredient.

SAMPLES FURNISHED UPON APPLICATION.

Compressed Tablet Triturates,

Combining Absolute Accuracy of Dose,

Convenience in Administration, Speedy Disintegration, and Consequent Rapid Absorption,

THEREBY INSURING

THE MOST EFFECTIVE RESULTS.

WE feel confident that few physicians will prescribe any of the more powerful remedies, such as Aconite, Morphia, Digitalis, Arsenic, etc., either in powders or in solutions, when fully aware of the advantages presented by our TRITURATES, their accuracy and convenience in administration, coupled with the absolute freedom from danger in prescribing, always attending to a greater or less extent the dispensing of dangerous drugs, in the form of powders, drops, or larger doses in solutions.

The TRITURATES are absolutely exact, and will keep indefinitely; they can be readily swallowed with a mouthful of water, or, if smaller doses be required for infants, the tablet can be reduced to a fine powder by simply crushing with a knife, or the thumb nail.

Our circular (which it will give us pleasure to forward) gives in detail all the claim we make for this series of preparations, together with a list of all the combinations. It embraces almost every drug in popular demand, and the doses are so graduated as to meet almost every indication. The following are a few of the active agents in almost every-day use:

ACONITE,	DIGITALIN,	LITHIA,
ACONITINE,	ELATERIUM,	MORPHINE,
ALOIN,	ESERINE,	NUX VOMICA,
ANTIMONY,	EXT. CANNABIS INDICA,	OPIUM,
APOMORPHIA,	EXT. COLOCYNTH COMP.	PILOCARPINE,
ARSENIC,	EXT. IGNATIA,	PODOPHYLLIN,
ATROPINE,	EXT. IPECAC,	RED IODIDE MERCURY,
BELLADONNA,	ETX. PILOCARPUS,	SALTS OF IRON,
CALOMEL,	GREEN IODID. MERCURY	SANTONINE,
COCAINE,	GELSEMIUM,	STRYCHNINE,
CODEINE,	HOMATROPINE,	ZINC PHOSPHIDE,
CORROSIVE SUBLIMATE	HYOSCYAMUS,	VERATRUM VIRIDE.

We shall be glad to send samples of these Triturates to any physician who may desire to try them in his practice.

Complete lists, with prices, etc., of all our preparations, will be sent by mail on application.

JOHN WYETH & BROTHER,

PHILADELPHIA.

Smithsonian Institute

CASCARA CORDIAL.

IN HABITUAL CONSTIPATION.

The great desideratum in the treatment of chronic constipation has heretofore been a remedy which possessed not only a temporary specific action on the bowels, but which would be followed by no reaction and no repression of secretion, and which could be administered for a sufficient length of time to permit of restoration of normal function; a remedy which would not only alleviate temporarily the existing mal-condition, but permanently remove the cause upon which it depended for its continuance, and thus effect a radical cure. The extensive trial of Cascara Sagrada by physicians of this country and Europe has shown it to be the drug that most fully meets all these indications. It has been added to the British Pharmacopœia, and its efficacy is attested by all physicians who have given it a trial. Cascara Cordial is prepared to disguise the inherent bitter principle of the drug, and without detracting from its medicinal value, render it acceptable to the most fastidious palate.

AS A VEHICLE FOR NAUSEOUS MEDICINES.

Cascara Cordial has become widely known to the profession. It not only effectually disguises the taste of such inherently bitter medicines as Quinine, but on account of its laxative properties, is a most valuable adjuvant or corrigent to any prescription containing drugs, such as iron, the continued administration of which tends to constipate. It will be seen that Cascara Cordial has a wide range of utility as an agreeable laxative excipient.

TO DISPEL THE ACUTE EFFECTS OF ALCOHOL AND OPIUM ABUSE.

From letters received from physicians, we are led to call the attention of the profession to the use of Cascara Cordial by those addicted to the alcohol and opium habits. The headache and gastric irritation following excessive indulgence in alcohol is avoided by adding a little Cascara Cordial to the alcoholic stimulant taken, or by taking a full dose of the cordial on retiring, after too free indulgence. The severe constipation also often attending indulgence in opium may be relieved by the systematic administration of Cascara Cordial.

We can not assume the responsibility for lack of success physicians may meet with in prescribing the many imitations and spurious varieties of Cascara on the market, and would request those wishing a genuine and reliable preparation to specify P. D. & Co's.

☞ Samples furnished on application, to those physicians who will pay express charges.

DETROIT, MICH.

A NEW EMMENAGOGUE.

The following is an abstract from a letter written by one of the most prominent gynæcologists of the country, to another:

"Thus far no perfect emmenagogue has been discovered, but I regard the manganese as the best I have met with. It should be styled a regulator of menstruation rather than a pure emmenagogue, for it is useful in the absence of the menses, irregularity of their recurrence, and even in excess of flow.

"The preparation which I now employ is McKesson & Robbins' pills of the binoxide of manganese. Of this preparation I give two grains three times a day throughout the month and during the period.

"I also employ manganese in chlorosis and anæmia, and I think that by its use I obtain better results than I have heretofore done by iron." (See *Medical Record* of March 6th, page 274.)

Specify McK. & R.'s Pills Manganese Binoxide.

Important additions to McK. & R.'s list of Gelatine Coated Pills:

McK. & R. *Cascara Sagrada* and *Nux Vomica*: Ext. Cas. Sagr. gr. ii; Ext. Nux Vom. gr. 1-5.

McK. & R. Cascara Sagrada, Nux Vomica and Belladonna: Ext. Cas. Sag. gr. ii; Ext. Nucis Vom. gr. 1-8; Ext. Bellad. gr. 1-16.

McK. & R. Hydrobromide of Hyoscin 1-100 gr.

McK. & R. Binoxide of Manganese 2 grs.

McK. & R. Valerianate of Quinine ½, 1, 2, and 3 grs.

McK. & R. Valerianates Iron, Quinine, and Zinc: Ferri Valer., Quin. Valer., Zinci Valer., āā gr. i.

McK. & R. Oleate of Manganese 20 per cent. May be used to advantage when the pills cannot be administered.

Always specify McK. & R's.

COCAINE.

Although only eighteen months have elapsed since Koller's announcement of his discovery of the anæsthetic properties of this alkaloid, Cocaine already ranks among the most important agents of the practitioner. In general and dental surgery, ophthalmology, laryngology and general therapeutics, its value is everywhere attested.

We began its manufacture immediately after the announcement of Dr. Koller, and samples of our product were submitted to many noted specialists for their experiments, and the results were highly gratifying. The demand for our manufacture of the salt, solutions, and oleates, has continued to increase, and we desire to express our sincere thanks to the medical, pharmaceutical, and dental professions for their kind encouragement as shown in their recognition of the merits of our preparations. Our appreciation of this will be shown in our constant efforts to supply all their requirements in chemicals and pharmaceuticals, of a quality worthy of their entire confidence.

Special quotations on Terebene and Cocaine for specified quantities. Very respectfully,

McKESSON & ROBBINS.

TEREBENE.

McKESSON & ROBBINS

WERE THE FIRST IN THIS COUNTRY TO MANUFACTURE THIS VALUABLE REMEDY FOR

Winter Cough, Bronchial and Chest Affections, Flatulency, Acidity, and other forms of Dyspepsia.

It may be used as an inhalation, or taken internally in doses of five or six drops on sugar every four hours, gradually increasing the dose to twenty minims.

Terebene was brought to the notice of the medical profession as far back as 1873, by M. Riban, who read a series of papers on this and similar substances before the Pharmaceutical Society of Paris. It has lately been brought into prominence by Dr. Wm. Murrell, of London, who has given it in over 114 cases; he has also notes of its value in 81 out of 91 cases. Dr. Murrell says that much of the Terebene now being sold may be described as inferior, and to this fact he ascribes some irritating effects noted in a few of his cases.

We would therefore caution the physician in prescribing and the druggist in ordering to, in all cases,

SESSIONS OF 1887-88.

The REGULAR SESSION begins on Wednesday, September 21, 1887, and ends about the middle of March, 1888. During this Session, in addition to the regular didactic lectures, two or three hours are daily allotted to clinical instruction. Attendance upon at least two regular courses of lectures is required for graduation.

The SPRING SESSION consists of recitations, clinical lectures and exercises, and didactic lectures on special subjects. This Session begins about the middle of March and continues until the middle of June. During this Session, daily recitations in all the departments are held by a corps of Examiners appointed by the Faculty.

The CARNEGIE LABORATORY is open during the collegiate year, for instruction in microscopical examinations of urine, practical demonstrations in medical and surgical pathology, and lessons in normal histology and pathology, including bacteriology.

For the annual Circular and Catalogue, giving requirements for graduation and other information, address Prof. AUSTIN FLINT, Secretary, Bellevue Hospital Medical College, foot of East 26th Street, New York City.

30,000 PHYSICIANS
NOW PRESCRIBE
HYDROLEINE

(HYDRATED OIL,)

For Consumption and Wasting Diseases. It Produces Immediate Increase in Flesh and Weight.

FORMULA.

Each Dose of Two Teaspoonfuls, equal to 120 Drops, contains:

Pure Cod Liver Oil	80 m. (drops)	Soda	½ Grain.
Distilled Water	35 "	Boric Acid	¼ "
Soluble Pancreatin	5 Grains.	Hyocholic Acid	⅒ "

DOSE:

Two teaspoonfuls alone, or with twice the quantity of water, to be taken thrice daily after meals.

Hydroleine (Hydrated Oil) is not a simple alkaline emulsion of oleum morrhua, but a hydro-pancreated preparation containing acids and a medicum of soda. Pancreatin is the digestive principle of fatty foods, and, in the soluble form here used, completely saponifies the oleaginous material so necessary to the reparative process in all wasting diseases.

Lautenbach's researches on the function of the liver would show the beautiful adjustment of therapeutics in preparation of Hydroleine, furnishing, as it does, the acid and soda necessary to prevent self-poisoning by reabsorption of morbid tubercular detritus and purulent matters into the general circulation.

Each bottle in nutritive value exceeds ten times the same bulk of cod liver oil. It is economical in use and certain in result.

Sold at all Drug Stores at $1.00 per Bottle.

The principles upon which this discovery is based have been described in a treatise on "The Digestion and Assimilation of Fats in the Human Body," by H. C. BARTLETT, Ph. D., F. C. S., and the experiments which were made, together with cases illustrating the effect of Hydrated Oil in practice, are concisely stated in a Treatise on "Consumption and Wasting Diseases," by G. OVEREND DREWRY, M. D.

Copies of these Works sent free on Application.

Infantile Atrophy.

"INFANTILE ATROPHY, or the slow wasting which is a familiar symptom in hand-fed babies, is one of the commonest causes of death in early infancy."

"INFANTILE ATROPHY is the consequence of insufficient nourishment. The child wastes because he is starved. But it is not to actual lack of feeding that the starvation is usually to be ascribed. A baby fed from a breast which secretes milk poor in quality and insufficient for the child's support, will, of course, grow slowly thinner; but an infant supplied largely with farinaceous compounds, from which his feeble digestive organs fail to derive even a minimum of nourishment, will waste with startling rapidity."

"Mellin's Food may be used from the first, and is almost always well digested. Farinaceous matters, unless guarded by malt, as in Mellin's Food, should not be given to a child younger than six months."

From "Disease in Children," by Eustace Smith, M. D., F. R. C. P., London, England.

A sample of Mellin's Food, sufficient for trial, will be sent free to any Physician desiring it.

CELERINA

NERVE-TONIC, STIMULANT AND ANTISPASMODIC.

FORMULA.—Every Fluid-Drachm represents FIVE grains EACH—Celery, Coca, Kola, Viburnum and Aromatics.

INDICATIONS.—Impotency, Spermatorrhea, Loss of Nerve-Power (so usual with Lawyers, Preachers, Writers and Business Men), Nervous Headache, Neuralgia, Paralysis, Dysmenorrhea, Hysteria, Opium-Habit, Inebriety, Prostatitis, Dyspepsia, and ALL LANGUID or DEBILITATED conditions of the System.—*Indispensable to restore a patient after alcoholic excess.*

DOSE.—One or two teaspoonfuls three or more times a day, as directed by the Physician.

ALETRIS CORDIAL

UTERINE TONIC AND RESTORATIVE.

PREPARED FROM THE ALETRIS FARINOSA OR TRUE UNICORN.

INDICATIONS.—Amenorrhea, Dysmenorrhea, Leucorrhèa, Prolapsus Uteri, Sterility, to PREVENT Miscarriage, Etc.

DOSE.—One teaspoonful three or four times a day.

Unrivaled as a Uterine Tonic in Irregular, Painful, Suppressed and Excessive Menstruation,

IT RESTORES NORMAL ACTION TO THE UTERUS, AND IMPARTS VIGOR TO THE ENTIRE UTERINE SYSTEM.

☞**Where Women have aborted during previous Pregnancies, or in any case where abortion is feared, the Aletris Cordial is indicated, and should be continuously administered during entire gestation.**

ACID MANNATE

A MILD, SAFE AND PLEASANT APERIENT.

☞ **Prepared from Manna, Purified Cathartic Acid, and Fruit Juices.** ☜

INDICATIONS.—Constipation, Biliousness, Congestions, Etc. **INDISPENSABLE AS AN APERIENT FOR WOMEN DURING PREGNANCY.** In teaspoonful doses, 3 times a day, it favors the SECRETION and EXCRETION of bile, and gradually removes the congested and torpid states of the liver, and keeps the bowels in a regular and soluble condition.

DOSE.—ONE or MORE teaspoonfuls as directed by the Physician.

S. H. KENNEDY'S
CONCENTRATED EXTRACT OF
PINUS CANADENSIS

DARK A NON-ALCOHOLIC LIQUID. **WHITE**

A MOST VALUABLE NON-IRRITATING MUCOUS ASTRINGENT.

INDICATIONS.—Albuminuria, Diarrhea, Dysentery, Night-Sweats, Hemorrhages, Profuse Expectoration, Catarrh, Sore Throat, Leucorrhea, and other Vaginal Diseases, Piles, Sores, Ulcers, Burns, Scalds, Gonorrhea, Gleet, Etc.

When Used as an Injection, to Avoid Staining of Linen, the WHITE Pinus should be Used.

Recommended by DR. J. MARION SIMS, and other Prominent Physicians.

PACKER'S TAR SOAP.

ABSOLUTELY PURE AND NON-IRRITATING.

MADE FROM VEGETABLE OILS, PINE TAR, AND GLYCERINE.

A perfect soap should be made from pure and sweet oils, and clean, well-washed alkalies. Such is **Packer's Tar Soap.** It is combined with distilled **pine-tar,** and hence has had the most gratifying effects in the treatment of Dermatic Diseases, as chafing, eczema, erythema, seborrhea, herpes, etc.

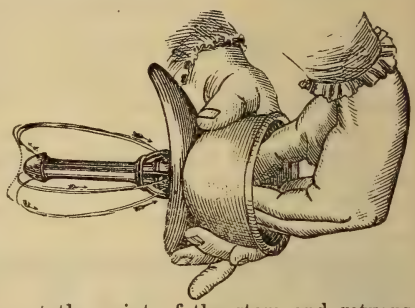
As a Disinfectant, Antiseptic, and Detergent, it is admirably adapted for use in ulcers, foul wounds, fetid discharges, bed sores, and similar conditions. For the bath, toilet, and shampoo, it is unrivaled. 25 cents per cake, from Druggists.

It is supplied to Hospitals, Asylums, and Physicians, in one pound bars, at reasonable prices.

P. O. Box 2985. **THE PACKER MFG. CO., 100 Fulton St., New York.**

"PALLAS" SYRINGE.

VAGINAL AND RECTAL.



A MOST PERFECT and simply constructed Syringe for medicating and irrigating the vaginal cavity. The novel bulb of this Syringe, when doubled upon itself, as shown in the cut, will cause no fluid to be left, as is so apt to happen with the ordinary bulbs, and when filled will contain just enough fluid for the expansion of the vaginal folds. The hard rubber labial shield, with its plug, when firmly pressed against the labia, will both prevent spilling and soiling of linen, and the fluid can therefore be kept in circulation and in contact with the parts by repeating the pumping motion of the bulb. It will also be noticed that the fluid escapes as a spray from the large holes at the point of the stem and returns through the holes at the root of same, which is provided with hard rubber screen-bars, preventing the folds from interfering with the rapid return of the fluid into the bulb. In filling the bulb, a couple of turns will unscrew it. In handsome case, satin lined. Retail price, $3.75. To physicians, $3.00.

NOTABLE POINTS

RELATIVE TO

Lactated Food.

IT IS A COOKED FOOD.

By the use of high steam heat the gluten flour used is partially torrefied. This is done while the flour is dry, and during the process it is in constant motion, which insures perfect cooking to every particle.

Routh says, (Infant Feeding, page 380) that by this process, "the starch granules are rendered more separable, the gluten is reduced to a more porous condition, readily acted on by the gastric juice, and as an aliment, therefore, is more nutritious and digestible."

IT IS A PREDIGESTED FOOD.

"You state that it is self-digestive as regards the conversion of insoluble starch into soluble dextrine and maltose. My experiments with it lead me to hold that this is correct." J. MILNER FOTHERGILL.

IT CONTAINS NO UNCHANGED STARCH.

By the peculiar process of manufacture, every particle of the gluten flour is subjected to the action of the malto-diastase, and by it all the starch contained is transformed into soluble carbo-hydrates.

Professor CARL SEILER says, "Examination has proved that all the starch granules are converted, as shown by their behavior to polarized light."

NO CANE SUGAR USED.

The basis of Lactated Food is the pure sugar of milk made by the improved processes of the American Milk Sugar Co. The great value of this article has been shown conclusively. Cane sugar is not used in the composition or preparation of the Food on account of its liability to cause irritation by reason of the acetic fermentation which it creates in the stomach. Milk sugar never causes this fermentation or irritation.

IT IS NON-IRRITATING.

By reason of the fact that Lactated Food is partially digested in process of Preparation, it is assimilated by the feeblest stomach, and no undigested particles pass into the bowels to irritate, and thus cause troublesome and dangerous bowel disorders.

IT IS HIGHLY NUTRITIOUS.

The nutritive elements of Lactated Food are derived from the three great cereals, Wheat, Barley, and Oats. From the Wheat is taken the pure gluten, the most nourishing substance known for the muscles and tissues; from the Barley, all the soluble albuminoid and extractive matter resulting from the most careful malting; and from the Oat, the strengthening properties for which it is so well known. The result is a food which never disappoints, and under which the feeble child or invalid rapidly rallies.

FOR CHOLERA INFANTUM.

It is the chief reliance of many eminent practitioners, and it is the safest food in summer for all young or delicate children.

Another important consideration is its low price, it being much more economical than other foods. We make four sizes, selling for 25 cents, 50 cents, $1 00, and $2.50. *A dollar can will furnish one hundred and fifty meals for an infant.*

If any physician that has not yet made a trial of the Lactated Food will write us, we will send a package of our regular size, postpaid, without charge, with the understanding that it will be given a careful trial as soon as possible.

We shall use every precaution to maintain the high standard of this Food, and to insure perfect satisfaction to the profession in its use.

BROMIDIA

THE HYPNOTIC.

FORMULA.—
Every Fluid drachm contains 15 grains EACH of pure Chloral Hydrat. and purified Brom. Pot., and one-eighth grain EACH, of gen. imp. ext. Cannabis Ind. and Hyoscyam.

Dose.—One-half to one fluid drachm in WATER or SYRUP every hour until sleep is produced.

Indications.—
Sleeplessness, Nervousness, Neuralgia, Headache, Convulsions, Colic, Mania, Epilepsy, Irritability, etc. In the restlessness and delirium of fevers, it is absolutely invaluable.

IT DOES NOT LOCK UP THE SECRETIONS.

PAPINE

THE ANODYNE.

Papine is the Anodyne or pain-relieving principle of Opium, the Narcotic and Convulsive elements being eliminated. It has less tendency to cause Nausea, Vomiting, Constipation, etc.

Indications.—
Same as Opium or Morphia.

Dose.—(ONE FLUID DRACHM)—represents the Anodyne principle of one-eighth grain of Morphia.

IODIA

THE ALTERATIVE AND UTERINE TONIC.

FORMULA.—
Iodia is a combination of Active Principles obtained from the Green Roots of STILLINGIA, HELONIAS, SAXIFRAGA, Menispermum, and Aromatics. Each fluid drachm also contains five grains IOD. POTAS. and three grains PHOS. IRON.

Dose.—One or two fluid drachms (more or less, as indicated,) three times a day, before meals.

Indications.—
Syphilitic, Scrofulous and Cutaneous Diseases, Dysmenorrhœa, Menorrhagia, Leucorrhœa, Amenorrhœa, Impaired Vitality, Habitual Abortions, and General Uterine Debility.

MATHEY-CAYLUS' GLUTEN

SILVER

1854

CAPSULES

OF

PURE COPAIBA AND OTHER MEDICINES.

SILVER

1854

Adapted and recommended for the cure of recent or chronic Gleets, Fluor Albus, etc., etc.

The MATHEY-CAYLUS' CAPSULES, *coated with gluten*, present the most perfect mode for administering Copaiba, Cubebs, Norway Tar, Turpentine, and other remedies, the disagreeable odor and taste of which are often a hindrance to their use. This mode of preparing capsules, which has been approved by the Academy of Medicine, has been recommended in their clinical lectures by eminent Professors in the hospitals of Paris, as well as in those of New York and London.

By the first physicians of the hospitals of Paris, London, and New York.

SPECIAL ADVANTAGES OF MATHEY-CAYLUS' GLUTEN CAPSULES.—Being formed of thin, transparent, and readily assimilated coating, they so cover and disguise the medicine to be given, that it can be taken without disgust, but with ease. In this respect, they differ widely from the gelatine capsules, which have a hard, thick coating, which swells beyond measure, in the stomach, are hard to be swallowed, and which is of great importance, they create disturbance in the digestive functions.

The special advantage of the coating of gluten consists in the fact that, notwithstanding its extra thinness, and although it softens under the action of the gastric juice, it can pass the stomach without breaking, and only in the intestines is the medicinal matter liberated; this accounts for the fact that Mathey-Caylus' Capsules never cause the nausea, eructations, and dyspeptic symptoms, which are complained of by many persons using other preparations.

Finally, their regular ovoid form, which is so favorable to swallowing, their pleasant appearance, which dispels all disgust, and the advantage of being entirely free from taste and smell, recommend the use of these capsules even to the most delicate persons.

Thankful to the Medical Profession for the liberal patronage heretofore bestowed upon us, we hope that they will continue their favors, and we are convinced that they will never have any reason to regret the generous welcome they have given to our preparations.

MATHEY-CAYLUS' CAPSULES are never sold, except in bottles having the following inscription printed in the glass: MATHEY-CAYLUS A PARIS. And each bottle contains 64 capsules, making them the cheapest capsules in the market.

The following different kinds of Mathey-Caylus' Gluten Capsules are now offered:

COPAIBA AND TANNIC ACID,
COPAIBA AND S. N. OF BISMUTH,
COPAIBA AND CATECHU,
COPAIBA AND MAGNESIA,
COPAIBA, CUBEBS AND ALUM,
COPAIBA, CUBEBS AND RHATANY,
COPAIBA AND RHATANY,
COPAIBA AND CITRATE OF IRON,
COPAIBA AND CUBEBS,
COPAIBA PURE,
COPAIBA, CUBEBS AND CARB. OF IRON,
VENICE TURPENTINE, NORWAY TAR, PURIFIED.
CUBEBS AND TURPENTINE,
CUBEBS AND TANNATE OF IRON,
CUBEBS AND ALUM,
CUBEBS PURE,
COPAIBA AND MATICO,
COPAIBA, IRON AND OIL OF SANDAL,
COPAIBA AND OIL OF SANDAL,
COPAIBA, PEPSIN AND BISMUTH,
COPAIBA AND TAR,
COPAIBA, CUBEBS AND OIL OF SANDAL.

TANRET'S PELLETIERINE

For the Treatment of Tape-Worm (Tænia Solium.)

This New Tænifuge, the Active Alkaloid of Pomegranate Bark, has of late come into extensive use in France for the treatment of Tape-Worm (Tænia Solium). The results of numerous experiments with it at the Marine Hospitals of Toulon, St. Mandrier, etc., and in the Hospitals of Paris, St. Antoine, La Charite, Necker, Beaujon, etc., have all been most satisfactory. Doctor Dujardin Beaumetz, Member of the Academy of Medicine, and Prof. Laboulbene, in their report to the Society of Therapeutics, have given it their unqualified approval after the most searching experiments. This preparation is pleasant to administer, and if certain preliminaries are observed success will be insured.

Sold only in Bottles containing one dose.

TANRET'S ERGOTININE.

ALKALOID AND ACTIVE PRINCIPLE OF SPURRED RYE.

This is a well defined Alkaloid that must not be confounded with Ergotine or other extracts; it is given in doses of from ¼ to ½ Milligramme (1-240th to 1-120th of a grain), in all cases where Ergot is indicated, viz.: Flooding, Post-partum Hemorrhages, Metrorrhagia, etc., etc.

It is put up in the following forms:

Syrup Containing ¼ Milligramme to each teaspoonful; DOSE from 1 to 6 teaspoonsfuls per day.

Solution for hypodermic purposes, Containing 1 Milligramme to each cubic Centimeter; DOSE, from 8 to 10 drops.

The Institute of France has awarded one of its Prizes to Mr. Chas. Tanret for the discovery of these Alkaloids.

Tanret's Pelletierine and Ergotinine are only prepared by Mr. Chas. Tanret, Laureate of the Institute of France, 64 Rue du Rempart, Paris.

Sole Agents for the United States, E. FOUGERA & CO., 30 North William St., N. Y.

PAMPHLET ON PELLETIERINE AND ERGOTININE SENT ON APPLICATION.

BOUDAULT'S PEPSINE

The Only Pepsine Used in the Hospitals of Paris for the Last 30 Years.

Unlike the various substitutes which, in most cases, are but unscientific or incompatible compounds, forced upon the Medical Profession as aids to digestion by extensive advertising, but which, when submitted to the proper tests, are found to be useless as digestive agents, Pepsine is constantly gaining in the esteem of the careful practitioner.

Since the introduction of Pepsine by Boudault and Corvisart, in 1854, the original BOUDAULT'S PEPSINE HAS BEEN AT ALL TIMES CONSIDERED THE BEST, as is attested by the awards it has received at the Expositions of 1867, 1868, 1872, 1873, in 1876 at the Centennial Exposition of Philadelphia, and in 1878 at the Paris Exposition.

The most reliable tests, carefully applied, will satisfy every one that BOUDAULT'S PEPSINE HAS A MUCH HIGHER DIGESTIVE POWER than the best Pepsines now before the Profession, and is therefore especially worthy of their attention.

BOUDAULT'S PEPSINE is prepared in the form of Pepsine Acid and Pepsine Neutral. It is sold in bottles of one unce, with a measure containing exactly five grains; also in bottles of 4, 8, and 16 ounces for dispensing.

BOUDAULT'S WINE OF PEPSINE.

Formula of Dr. Corvisart.

The taste of Pepsine being perfectly disguised in this Wine, it may be recommended to persons who have difficulty in taking Pepsine in the form of powder. This Wine is tested so that a tablespoonful of it is equal in digestive power to ten grains of Boudault's Pepsine in powder. Sold only in 8 oz. Bottles.

ESTABLISHED 1855.

DRS. STRONG'S REMEDIAL INSTITUTE,

SARATOGA SPRINGS, NEW YORK,

Receives persons recommended to it by their home physicians for Treatment, Change, Rest or Recreation, and places them under well-regulated hygienic conditions, so helpful in the treatment of chronic invalids or the overtaxed.

For Treatment: In addition to the ordinary remedial agents, it employs Turkish, Russian, Roman, Sulphur, Electro-Thermal, the French Douche (Charcot's), and all Hydropathic Baths; Vacuum Treatment, Swedish Movements, Massage, Pneumatic Cabinet, Inhalations of Medicated, Compressed, and Rarefied Air; Electricity in various forms, Thermo-Cautery, Calisthenics, and Saratoga Waters, under the direction of a staff of educated physicians.

For Change: This Institution is located in a phenomenally dry, tonic, and quiet atmosphere, in the lower arc of the Adirondack Zone, and within the "Snow Belt."

For Rest: The Institution offers a well-regulated, quiet home, heated by steam and thoroughly ventilated. With cheering influences and avoiding the depressing atmosphere of invalidism.

For Recreation: To prevent introspection, are household sports at all seasons of the year, and in winter tobogganing, elegant sleighing, etc.; in summer, croquet, lawn-tennis, etc.

Private professional references furnished upon application. Physicians are invited to inspect the Institution at their convenience. A liberal discount to physicians and their families. For further information, address

DRS. S. S. & S. E. STRONG.

WHEELER'S TISSUE PHOSPHATES

Bone-Calcium Phosphate $Ca_3 2P.O._4$, Sodium Phosphate $Na_2 H.P.O._4$, Ferrous Phosphate $Fe_2 2P.O._4$, Trihydrogen Phosphate $H_3 P.O._4$.

WHEELER'S COMPOUND ELIXIR OF PHOSPHATES AND CALISAYA. A Nerve Food and Nutritive Tonic, for the treatment of Consumption, Bronchitis, Scrofula, and all forms of Nervous Debility.

The Lactophosphates prepared from the formula of Prof. Dusart, of the University of Paris. Combines with a superior Pemartin Sherry Wine and Aromatics in an agreeable cordial easily assimilable and acceptable to the most irritable stomachs.

Phosphorus, the oxidizing element of the Nerve Centres for the generation of Nerve Force; Lime Phosphate, an agent of Cell Development and Nutrition; Soda Phosphate, an excitant of Functional Activity of Liver and Pancreas, and Corrective of Acid Fermentation in the Alimentary Canal; Iron, the Oxidizing Constituent of the Blood for the Generation of Heat and Motion; Phosphoric Acid, Tonic in Sexual Debility; Alkaloids of Calisaya, Anti-Malarial and Febrifuge; Extract of Wild Cherry, uniting with tonic power the property of Calming Irritation and Diminishing Nervous Excitement.

THE SUPERIORITY OF THE ELIXIR consists in uniting with the Phosphates the special properties of the Cinchona and Prunus, of Subduing Fever and Allaying Irritation of the Mucous Membrane of the Alimentary Canal, which adapts it to the successful treatment of Stomach Derangements and all diseases of Faulty Nutrition, the outcome of Indigestion. Malassimilation of Food, and *failure of supply* of these essential elements of Nerve Force and Tissue Repair.

The special indication of this combination of Phosphates in Spinal Affections, Caries, Necrosis, Ununited Fractures Marasmus, Poorly Developed Children, Retarded Dentition, Alcohol, Opium, Tobacco Habits, Gestation and Lactation, to promote Development, etc., and as a *physiological restorative* in Sexual Debility, and all used up conditions of the Nervous System, should receive the careful attention of good therapeutists.

There is no strychnia in this preparation, but when indicated, the Liquor Strychniæ of the U. S. Dispensatory may be added, each fluid drachm of the solution to a pound bottle of the Elixir making the 64th of a grain to a half fluid ounce, an ordinary dose, a combination of a wide range of usefulness.

DOSE—For an adult, one tablespoonful three times a day, after eating; from seven to twelve years of age, one dessertspoonful; from two to seven, one teaspoonful. For infants, from five to twenty drops, according to age.

Prepared at the Chemical Laboratory of T. B. WHEELER, M. D., Montreal, D. C.

Put up in pound bottles and sold by all Druggists at One Dollar.

Since the introduction—1870—of the substance known as **COSMOLINE** (Unguentum Petrolei) to the College of Pharmacy in Philadelphia, by the late Professor Parrish, who was one of the very first to recognize its merits, it has become very widely known and variously used by the Physicians, Surgeons, and Pharmacists of all schools throughout this country and abroad. Pure Petroleum will not oxidize, but the processes resorted to by many, in order to obtain special products from petroleum, introduce properties that will oxidize in ordinary temperatures, and develop other objections with age. Such products may be used in the arts, but they were decided years ago to be exceedingly irritating and otherwise interfering as surgical dressings or bases for ointments. The Manufacturers of **COSMOLINE** (Unguentum Petrolei) took advantage of the possibility of producing an article which would not only not become rancid, but also one which would be absolutely free from those properties which affected the ordinary residuums and products of the petroleum still. Notwithstanding numerous other petroleum preparations of variable merit and ostensibly for the same purpose, have since been offered, **COSMOLINE** (Unguentum Petrolei) has continued to increase steadily in professional favor. **COSMOLINE** (Unguentum Petrolei) was not recommended to the profession at large until the leading Physicians and Pharmacists of Philadelphia were thoroughly satisfied of its fitness and absolute purity, and since then it has not been changed to meet every speculative fancy, or to compete in price with those preparations of petroleum having some outward resemblance to Cosmoline, but found either deficient in action or positively irritating, owing to chemical agencies used to cheapen the cost of manufacture. It was apparent from its first introduction, that **COSMOLINE** (Unguentum Petrolei) was adapted to a very wide range of uses in Surgery and Pharmacy; and when it was found that its uniformity could invariably be depended upon, it is not surprising that it obtained supremacy over those products which have been varying as commercial experiments, and lacking in all the essential and absolutely pure characteristics needed for a general surgical dressing and base for ointments.

Yours very respectfully,

E. F. HOUGHTON & CO.,

No. 211 South Front St.,

PHILADELPHIA.

SUCCUS ALTERANS.

(McDADE).

SUCCUS ALTERANS is a purely vegetable compound of the preserved juices of Stillingia Sylvatica, Lappa Minor, Phytolacca Decandra Smilax Sarsaparilla, and Xanthoxylum Fraxineum, as collected by DR. GEO. W. MCDADE exclusively for ELI LILLY & CO., and endorsed by DR. J. MARION SIMS.

SUCCUS ALTERANS continues to gain favor from its remarkable Alterative and Tonic properties, *eliminating specific poison from the blood*, and *increasing the proportion of red corpuscles in anæmic patients* to a wonderful degree.

SUCCUS ALTERANS in venereal and cutaneous diseases is fast supplanting Mercury, the Iodides and Arsenic; and is a certain remedy for Mercurialization, Iodism, and the dreadful effects often following the use of Arsenic in skin diseases.

SUCCUS ALTERANS is also strongly recommended for its Tonic and Alterative effects in the myriad forms of scrofulous disease, and in all cases where anæmia is a factor. Such patients rapidly develop a good appetite, sleep soundly, and gain flesh rapidly. Many cases are on record where patients increased ten to twenty-five pounds in weight in a few weeks.

SUCCUS ALTERANS may be given for any length of time without injury to the patient.

SUCCUS ALTERANS is now endorsed by leading members of the medical profession, and in use by many hospitals of note.

SUCCUS ALTERANS is put up only in round amber bottles holding sixteen fluid ounces, which is sufficient for from two to six weeks' treatment.

ANY PHYSICIAN who has not received DR. MCDADE'S latest publication, the MONOGRAPHIA SYPHILITICA for JANUARY, 1887, should send their address, mentioning this journal, and we will mail a copy. It contains a paper, illustrated with colored plates, by Dr. D. H. GOODWILLIE, of New York, on the "Sequelæ of Syphilis," reports of cases in practice, and many other valuable papers.

SUCCUS ALTERANS is supplied by reputable wholesale and retail druggists everywhere. Agency for Great Britain, etc., JOHN M. RICHARDS, 46 HOLBORN VIADUCT, LONDON, E. C.

ELI LILLY & CO., PHARMACEUTICAL CHEMISTS, INDIANAPOLIS, IND., U. S. A.

Chapoteaut's Wine of Peptone.

The Peptone used in the preparation of this Wine is obtained by the action of Sheep Pepsine on Beef of the best quality. Being pure and neutral, it is entirely assimilable, containing neither Glucose, Albumen, nor Chloride of Sodium; for this reason it is the only preparation used in the laboratory of Mr. Pasteur for the culture of microscopic liquids.

Each wineglassful of Chapoteaut's Wine contains the Peptone of ten grammes of Beef, and has, besides, the digestive properties of Pepsine.

It may be used for the following cases: Anæmia, Dyspepsia, Debility, D'staste of Food, Inaction of the Digestive Organs, Convalescence, Alimentation for Wet Nurses, Children, and the Aged; Phthisis, Persons Weakened by Fever, Dysentery, and by patients having been operated upon for Cancerous Affections.

DOSE—One or two small wineglassfuls after meals.

DEPOTS: CHAPOTEAUT, 8 RUE VIVIENNE, PARIS—E. FOUGERA & CO., 30 N. WILLIAM ST., NEW YORK

MIDY'S SANTAL.

Midy's Essence of Santal is used with success in place of Copaiba and Cubebs, being harmless even in large doses. No matter what the color or amount of the secretion may be, the discharges are reduced and relief is obtained in forty-eight hours. No unpleasant effect is caused by its use, such as diarrhœa, eructations, or indigestion, and not giving to the Urine any odor.

In cases of Inflammation of the Bladder it acts rapidly, and in two or three days the bloody emission is suppressed t is used with success in Chronic Catarrh, rendering the urine clear at once.

DEPOTS: MIDY, CHEMIST, 110 FAUBOURG ST. HONORE, PARIS—E. FOUGERA & CO., 30 N. WILLIAM ST.

GRIMAULT & CO.'S IODIZED SYRUP OF HORSE-RADISH.

This Syrup is a close combination of Iodine with the juices of antiscorbutic plants. It is very palatable, and is easily digested. It is a powerful auxiliary in cases of Scrofula, Rachitism, Goitres, Suppuration of the Glands of the Neck; Dandruff, and Eruptions of the Skin. Each tablespoonful contains one and a half grains of Iodine, so intimately combined as to be insensible to the action of starch.

COCA

CORDIAL.

—A—

PALATABLE PREPARATION

—OF—

Coca Erythroxylon,

CONTAINING

In an agreeable vehicle the active medicinal principle, free from the bitter astringent constituents of the drug.

THE SEDATIVE, tonic, and stimulant effects of Coca Erythroxolon and its preparations, and their wide application in medical practice, are now too well known to the medical profession to need extended comment.

Coca has been extensively used with gratifying success for the relief of morbid conditions depending on nervous exhaustion, in the nervous irritability following excesses of any kind, in neurasthenia, to facilitate digestion in dyspepsia, to relieve the morbid depresion of spirits resulting from exhausting mental labor, in nausea and vomiting of reflex origin, and in the treatment of the alcohol and opium habits.

In a great variety of affections it has proved itself to be a drug ranking in therapeutic importance with opium and quinine.

The Coca Cordial presents the drug in a palatable form, commending it especially to the large class of persons of delicate nervous organization, for whom it is most often indicated.

In its preparation the astringent and bitter constituents of Coca, which are not essential to its medicinal action, have been eliminated, while care has been taken to retain unchanged the active principle cocaine. One fluid-ounce of the cordial represents 60 grains of coca leaves of good quality, the vehicle employed being an agreeable cordial of a rich vinous flavor.

☞ We shall be pleased to send on application a circular more fully descriptive of Coca Cordial and its application, and we trust physicians will communicate to us the results of their experience in the use of this preparation, so far as it is likely to be of general interest to the profession.

PARKE, DAVIS & CO.,

Manufacturing Chemists,

New York: 60 Maiden Lane, 21 Liberty Street.

DETROIT, MICH.

30,000 PHYSICIANS
NOW PRESCRIBE

HYDROLEINE

(HYDRATED OIL,)

For Consumption and Wasting Diseases. It Produces Immediate Increase in Flesh and Weight.

FORMULA.

Each Dose of Two Teaspoonfuls, equal to 120 Drops, contains:

Pure Cod Liver Oil	80 m. (drops)	Soda	½ Grain.
Distilled Water	35 "	Boric Acid	½ "
Soluble Pancreatin	5 Grains.	Hyocholic Acid	½ "

DOSE:

Two teaspoonfuls alone, or with twice the quantity of water, to be taken thrice daily after meals.

Hydroleine (Hydrated Oil) is not a simple alkaline emulsion of oleum morrhua, but a hydro-pancreated preparation containing acids and a medicum of soda. Pancreatin is the digestive principle of fatty foods, and, in the soluble form here used, completely saponifies the oleaginous material so necessary to the reparative process in all wasting diseases.

Lautenbach's researches on the function of the liver would show the beautiful adjustment of therapeutics in preparation of Hydroleine, furnishing, as it does, the acid and soda necessary to prevent self-poisoning by reabsorption of morbid tubercular detritus and purulent matters into the general circulation.

Each bottle in nutritive value exceeds ten times the same bulk of cod liver oil. It is economical in use and certain in result.

Sold at all Drug Stores at $1.00 per Bottle.

The principles upon which this discovery is based have been described in a treatise on "The Digestion and Assimilation of Fats in the Human Body," by H. C. BARTLETT, Ph. D., F. C. S., and the experiments which were made, together with cases illustrating the effect of Hydrated Oil in practice, are concisely stated in a Treatise on "Consumption and Wasting Diseases," by G. OVEREND DREWRY, M. D.

Copies of these Works sent free on Application.

WM. F. KIDDER & CO., 83 John Street, New York.

Agents for U. S.

Also exclusive Agents for SVAPNIA, or Bigelow's purified Opium, in SCALES and HALF-GRAIN GRANULES.

THE BEST ANTISEPTIC.

FOR BOTH INTERNAL AND EXTERNAL USE.

LISTERINE.

***FORMULA.**—Listerine is the essential antiseptic constituent of Thyme, Eucalyptus, Baptisia, Gaultheria, and Mentha Arvensis, in combination. Each fluid drachm also contains two grains of refined and purified Benzo-boracic Acid.*

***DOSE.**—Internally: One teaspoonful three or more times a day (as indicated), either full strength, or diluted, as necessary for varied conditions.*

☞ LISTERINE is a well-proven antiseptic agent—an anti-zymotic—especially adapted to internal use, and to make and maintain surgical cleanliness—asepsis—in the treatment of all parts of the human body, whether by spray, irrigation, atomization, or simple local application, and therefore characterized by its particular adaptability to the field of

PREVENTIVE MEDICINE—INDIVIDUAL PROPHYLAXIS.

Physicians interested in LISTERINE will please send us their address, and receive by return mail our new and complete pamphlet of 36 quarto pages, embodying:

A TABULATED EXHIBIT of the action of LISTERINE upon inert Laboratory Compounds.

FULL AND EXHAUSTIVE REPORTS and Clinical Observations from all sources, confirming the utility of LISTERINE as a General Antiseptic for both internal and external use; and particularly

MICROSCOPIC OBSERVATIONS, showing the comparative value and availability of various antiseptics in the treatment of Diseases of the Oral Cavity, by W. D. MILLER, A. B., Ph. D., D. D. S., Prof. of Operative and Clinical Dentistry, University of Berlin, from whose deductions LISTERINE appears to be the most acceptable prophylactic for the care and preservation of the teeth.

SCOTT'S EMULSION

OF PURE COD LIVER OIL WITH HYPOPHOSPHITES OF LIME AND SODA.

THE STANDARD EMULSION OF COD LIVER OIL.

The ONLY Preparation of its class that will not SEPARATE nor SPOIL in any climate.

IT IS MADE FROM THE PUREST NORWEGIAN COD LIVER OIL, COMBINED WITH CHEMICALLY PURE HYPOPHOSPHITES AND GLYCERINE.

Acknowledged by leading Physicians in the U. S. and many other Countries to be the most ELEGANT most PALATABLE and EASILY DIGESTED preparation in the World, and can be tolerated longer by children and persons with delicate stomachs than any other.

WE ASK A CAREFUL COMPARATIVE TEST WITH ANY OR ALL SIMILAR PREPARATIONS.

FORMULA: 50 per cent. of Pure Cod Liver Oil, 6 grs. of the Hypophosphites of Lime, and 3 grs. of the Hypophosphite of Soda to a fluid ounce. Emulsified with mucilage and Glycerine.

S. & B's BUCKTHORN CORDIAL, RHAMNUS FRANGULA.

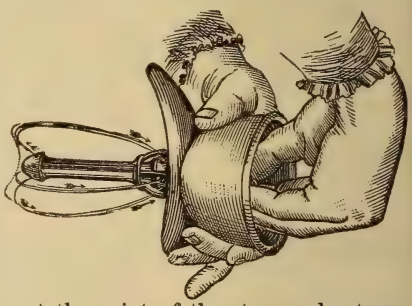
Is giving universal satisfaction to the profession, for its mild but certain and efficient cathartic action. It seems to be *almost a specific* for *habitual constipation*, and we are constantly in receipt of the most flattering reports regarding it. The care we use in its preparation—having the bark always the proper age, and properly exhausted—makes it always reliable in its action. Be sure and specify S. & B. Buckthorn Cordial.

To those who have for any reason never yet tried these preparations, we will be pleased to send samples free by express.

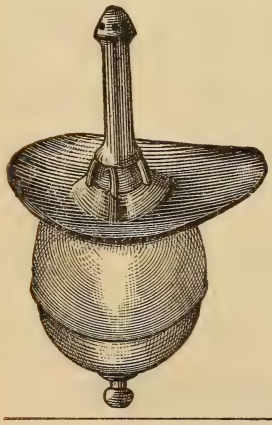
SCOTT & BOWNE, Mfg. Chemists, 132 & 134 S. 5th Ave., N. Y.

"PALLAS" SYRINGE.

VAGINAL AND RECTAL.



A MOST PERFECT and simply constructed Syringe for medicating and irrigating the vaginal cavity. The novel bulb of this Syringe, when doubled upon itself, as shown in the cut, will cause no fluid to be left, as is so apt to happen with the ordinary bulbs, and when filled will contain just enough fluid for the expansion of the vaginal folds. The hard rubber labial shield, with its plug, when firmly pressed against the labia, will both prevent spilling and soiling of linen, and the fluid can therefore be kept in circulation and in contact with the parts by repeating the pumping motion of the bulb. It will also be noticed that the fluid escapes as a spray from the large holes at the point of the stem and returns through the holes at the root of same, which is provided with hard rubber screen-bars, preventing the folds from interfering with the rapid return of the fluid into the bulb. In filling the bulb, a couple of turns will unscrew it. In handsome case, satin lined. Retail price, $3.75. To physicians, $3.00.



CHRISTIAN JENSEN & CO.,

PHILADELPHIA, PA.

COLDEN'S Liquid Beef Tonic.

Established 15 Years.
OBSERVE the NAME.
Beware of Imitations.

ORIGINAL LABEL:
"Colden's Liebig's Liquid Extract of Beef and Tonic Invigorator."

An Invaluable Aid in Medical Practice.

Differs Essentially from all other Beef Tonics.

COLDEN'S Liquid Beef Tonic is endorsed by scores of physicians, who are growing to realize more and more its importance in repairing, in accordance with the principles of dietetics, the **waste which disease entails.** It consists of the extract of Beef (by Baron Liebig's process) spirit rendered non-injurious to the most delicate stomach by extraction of the Fusel Oil, soluble Citrate of Iron, Cinchona, Gentian and other bitter tonics. An official analysis of this preparation by the eminent Chemist, ARTHUR HILL HASSALL, M. D., F. R. S., and an endorsement by the late SIR ERASMUS WILSON, F. R. S., is printed on the label of each bottle.

As a **blood food,** and a **reliable tonic** in all cases of debility and weakness, Malarial Fever, Anæmia, Chlorosis, Incipient Consumption, etc., it is the best preparation ever used. It acts directly on the sentient Gastric Nerves, stimulating the follicles to secretion, and gives to weakened individuals that first prerequisite to improvement—an appetite. It strengthens the nervous system when unstrung by disease, and has been employed with remarkable success as a remedy for Drunkenness and the Opium Habit.

Its Range of Action Embraces all Cases of Debility.

In order that physicians may form some idea of the nature of its ingredients, I will upon application in person, or by letter (enclosing a card), send a sample bottle of COLDEN'S LIQUID BEEF TONIC to any physician in regular standing, in the United States. Please ask your Dispensing Druggist (if he has not already a supply) to order it. In prescribing this preparation, physicians should be particular to mention "COLDEN'S"—*viz.:* ***"Ext. carnis, fl. comp. (Colden's.)"*** It is put up in pint bottles, and can be had of Wholesale and Retail Druggists generally throughout the United States.

C. N. CRITTENTON, Sole Agent, 115 Fulton St. New-York.

GLENN'S Sulphur Soap.

ALL physicians know that ***skin diseases*** are more or less constitutional, or dependent upon some specific poison in the blood, which if eradicated by internal treatment needs something to remove its appearance from the surface. Experience has proved that the best possible aid in the accomplishment of this end is obtained by the use of ***Sulphur in soap.*** GLENN'S SULPHUR SOAP is the best combination of its kind, and the one now generally used. It is for sale by all Druggists, at **25** cents a cake, or 3 cakes for **60** cents.

CONSTANTINE'S PINE TAR SOAP

Has been on trial among physicians for very many years as a toilet Soap and Healing Agent, and its superior virtues have been unanimously conceded **in all cases where the use of tar is indicated.** Unsolicited expressions of its excellence have been received from the Medical Faculty generally. IT IS THE BEST TAR SOAP MADE. None genuine unless stamped "A. Constantine's Persian Healing Pine-Tar Soap." For sale by all Druggists.

Samples of either of the above-named Soaps will be sent free upon application in person or by letter (enclosing card) to any physician in regular standing in the United States. C. N. Crittenton, 115 Fulton Street, New York. Please mention "THE MEDICAL AND SURGICAL REPORTER."

COMBINATIONS FOR
HORSFORD'S ACID PHOSPHATE.

As the "Acid Phosphate" of Prof. Horsford is more extensively used, one of its characteristic qualities, that of an adjuvant, becomes better known and appreciated. The experience of physicians of the various schools, shows that it combines readily and very effectively with a great variety of other remedial agents. It is a superior substitute for the officinal Phos. Acid. Dil., as it acts more effectively, and does not produce the irritation sometimes noticed upon the exhibition of that remedy.

Below we give a series of prescriptions in combination with Horsford's Acid Phosphate, and believe them worthy the careful consideration of medical practitioners. These prescriptions are the result of careful study, and they serve to show the wide usefulness of Prof. Horsford's excellent preparation.

***These combinations are largely used by the profession.**

*ACID PHOSPHATE WITH STRYCHNIA.

℞. Horsford's Acid Phosphate, f℥viij.
Strychninæ Sulph., gr. j.
M.

Sig.—Half to one teaspoonful in a glass of water.

ACID PHOSPHATE WITH QUININE.

℞. Horsford's Acid Phosphate, f℥ss.
Quininæ Sulp., gr. xvj.
Syrupi Simplicis, f℥ij.
Aquæ, f℥vss.
M.

Sig.—A tablespoonful in a wine glass of water.

ACID PHOSPHATE AND EMULSION OF COD-LIVER OIL.

℞. Emul. Olei Morrhuæ 50 %., f℥vij.
Horsford's Acid Phosphate, f℥j.
M.

Sig.—A tablespoonful.

*ACID PHOSPHATE WITH WINE OF PEPSIN.

℞. Vini Pepsinæ, f℥vj.
Horsford's Acid Phosphate, f℥ij.
M.

Sig.—A dessertspoonful in water.

ACID PHOSPHATE WITH ELIXIR OF IRON AND QUININE.

℞. Elix. Ferri et Quininæ,
Horsford's Acid Phos., āā f℥iij.
M.

Sig.—A teaspoonful in water.

*ACID PHOSPHATE WITH TINCTURE NUX VOMICA AND COMPOUND TINCTURE OF GENTIAN.

℞. Horsford's Acid Phosphate, f℥vj.
Tinct. Nucis Vom., f℥j.
Tinct. Gentianæ Comp., f℥ij.
Syrupi Simplicis, f℥iij.
M.

Sig.—A tablespoonful in water.

We do not prepare the Acid Phosphate in any of the above combinations.

☞**Physicians** who have not used HORSFORD'S ACID PHOSPHATE, and who wish to test it, **will be furnished with a sample, without expense,** except express charges, on application to

HAS RECEIVED THE

HIGHEST AWARD

LONDON, 1884,

AND IS SUPPLIED UNDER

ROYAL WARRANT

TO

H. R. H. THE PRINCE OF WALES.

ANNUAL SALE, 10 MILLIONS.

Of all Grocers, Druggists & Min. Wat. Dealers.

BEWARE OF IMITATIONS.

Friedrichshall.

THE WELL-KNOWN APERIENT MINERAL WATER.

IMPORTANT NOTICE.

By reason of an improved method of caption, by which dilution is avoided, FRIEDRICHSHALL WATER will be found now to be of ***considerably greater strength*** and ***efficacy*** than heretofore.

The ordinary dose is a large wineglassful (4 ounces), taken fasting. Most efficacious and more acceptable to the palate when heated or mixed with an equal quantity of very hot water.

"*The most suitable aperient for prolonged use.*"—***Prof. SEEGEN.***

"*After twenty years' use I appreciate it as highly as ever.*"—

Prof. VIRCHOW.

OF ALL DRUGGISTS AND MINERAL WATER DEALERS.

SAVORY & MOORE beg to call the attention of the Profession to some of their Special Preparations, the purity and uniform strength of which are guaranteed.

Pancreatic Emulsion. In Consumption, Wasting, LOSS OF THE POWER OF DIGESTION AND ASSIMILATION, this pure drug is the MOST POTENT REMEDY. This is now attested by the published records of numerous medical men, extracts of which accompany each bottle.

Peptodyn, the New Digestive, is a combination of the whole of the digestive secretions, forming an invaluable remedy in the treatment of all forms of Dyspepsia, and all diseases arising from imperfect nutrition. Peptodyn is intended as a general promoter of digestion for persons not necessarily considered in bad health; thus, when taken about a quarter of an hour after a meal, it will be found to assist digestion in a remarkable manner, and prevent the discomfort which often follows the partaking of a full meal by persons in good health.

Pancreatine Powder, for Indigestion and Loss of APPETITE. This palatable and popular remedy effects the digestion and assimilation of all food, especially of FATTY SUBSTANCES, and is therefore invaluable to patients who are unable to digest Cod Liver Oil, and who are thus deprived of its nourishing and invigorating properties.

Gelatine Discs for Hypodermic Use—Of Morphia, CODEIA, ERGOTINE, ATROPIA, STRYCHNIA, APOMORPHIA, etc. The chief features of these discs are their instant solubility, by which hypodermic solutions can be instantly obtained of uniform and reliable strengths; they keep good for an unlimited period in their dry state, and are extremely portable. (Prepared in accordance with Dr. Sansom's recommendation.)
In tubes, each containing 25 discs.

Etherodine (Substitute for Chlorodyne). A clear, bright fluid, pleasant to the taste, readily miscible with water or any suitable menstruum. The therapeutical properties of ETHERODINE are identical with those of CHLORODYNE, but the former is an elegant preparation, and more convenient for use.

Gelatine Discs for Ophthalmic Purposes.
"Much smaller doses of medicaments such as Atropine, Calabar Bean Extract, Sulphate of Zinc, Morphia, etc., etc., suffice to produce a marked effect by this form of application, than when drops are introduced."—*The Lancet.*
In tubes, each containing 100 discs.

Gelatine Lamels for Internal Administration, consist of thin, pliable, and, in most cases, transparent sheets of uniform thickness, accurately divided into squares by raised lines, each square containing an exact dose of the medicine with which the sheet is impregnated.
In sheets, each consisting of 24 squares.

Datura Tatula, for Asthma, Hay Fever, and Chronic BRONCHITIS. Recommended by the Profession as a remedy of great power and usefulness in cases of short and difficult breathing, spasmodic coughing, etc. The most convenient forms for use are—
Datura Tatula Cigars. Datura Tatula—prepared for use by means of a pipe.
Datura Tatula Cigarettes. Datura Tatula Pastilles—for Inhalation.

SAVORY & MOORE, 143 New Bond Street, London.
Agents for America, E. FOUGERA & CO., New York.

THREE MORE MEDALS IN 1886,

The recent International Expositions at Edinburgh and Liverpool, and the American Institute, New York, each awarded us the Highest Silver Medal, which swells our list to about

THIRTY-FIVE GOLD, SILVER AND BRONZE MEDALS

FROM ALL PARTS OF THE WORLD.

THE REASON FOR IT IS PLAIN.

We make but one quality, and that the best. WE SCRUPULOUSLY CONFORM TO THE PHARMACOPŒIAL, or other recognized standards, in the incorporation of medicinal ingredients. We command perfect skill in manipulation, we use pure and superior fabrics, our packages are neat, elegant, and convenient, and our prices are not only uniform, but the most reasonable that can be placed on honest goods of the first quality.

THE STATUS OF THE WHOLE PLASTER BUSINESS

is well shown by the analyses of Belladonna Plasters, the leading article on the list of spread goods, made in March, 1886 by Dr. Albert B. Prescott, Prof. of Chemistry at the University of Michigan, and President of the American Chemical Society, from goods purchased by him in open market. The analyses were made by the same process, in parallel operations, for the quantity of total Belladonna alkaloids, estimated as atropine, and show our Belladonna plaster to contain 0.543 of a grain of alkaloid, which represents the strength of a plaster made after the standard prescribed by the U. S. P. from the highest grade of belladonna root. The same analyses showed the next highest belladonna plaster to contain but 0.264 grains of alkaloid, or less than half U. S. P. strength; while the several other brands examined contained from 0.230 grains to 0.045 grains, proving the S. & J. plaster to contain more than twice as much belladonna as the one approaching nearest to it, the rest falling below the line of any valid comparison, a number having scarcely a trace of belladonna alkaloid.

IN FURTHER PROOF OF OUR DESIRE AND PURPOSE

to maintain, and, if possible, to enhance, the high standard and reputation of our goods, we cite the fact that we have recently erected one of the most complete and best equipped laboratories in the United States, and we shall hereafter manufacture every medicinal extract incorporated in our specialties, and can guarantee, through our own analyses, the strength and quality of all drugs we employ; thus, also, ensuring the perfect uniformity of all our products. For many years, physicians have preferred our goods because they always found them therapeutically reliable, as others were not; and our new departure will set up a stronger safeguard than ever against cheap and worthless plasters and dressings.

WE HAVE ESTABLISHED THE STANDARD.

Failing to make goods equal to ours, and which would sell on their merits, our competitors have heretofore striven to introduce their goods to the notice of the trade and the medical profession by imitating our trade-marks, packages, circulars, and price lists. Now, certain plaster makers have evidently found it necessary to adopt more desperate tactics, since we learn from retailers in Pennsylvania and New Jersey that jobbing-house salesmen have solicited them to buy other goods when ours were indicated on their order. In one case the salesmen said the house he represented no longer stocked our goods; in another, that we no longer made some of the articles desired. On inquiry, we learn that the representatives of these desperate plaster manufacturers offered these men a personal consideration to perform this dishonorable service. In one or two cases a direct money bribe was tendered and refused. The whole scheme shows to what straits our competitors are reduced, and indicates clearly the necessity for physicians specifying "S. & J." goods when prescribing, if they would be assured of obtaining the therapeutic results expected from medicinal plasters, or the strict reliability of goods for surgical use.

NOTABLE POINTS

RELATIVE TO

Lactated Food.

IT IS A COOKED FOOD.

By the use of high steam heat the gluten flour used is partially torrefied. This is done while the flour is dry, and during the process it is in constant motion, which insures perfect cooking to every particle.

Routh says, (Infant Feeding, page 380) that by this process, "the starch granules are rendered more separable, the gluten is reduced to a more porous condition, readily acted on by the gastric juice, and as an aliment, therefore, is more nutritious and digestible."

IT IS A PREDIGESTED FOOD.

"You state that it is self-digestive as regards the conversion of insoluble starch into soluble dextrine and maltose. My experiments with it lead me to hold that this is correct." J. MILNER FOTHERGILL.

IT CONTAINS NO UNCHANGED STARCH.

By the peculiar process of manufacture, every particle of the gluten flour is subjected to the action of the malto-diastase, and by it all the starch contained is transformed into soluble carbo-hydrates.

Professor CARL SEILER says, "Examination has proved that all the starch granules are converted, as shown by their behavior to polarized light."

NO CANE SUGAR USED.

The basis of Lactated Food is the pure sugar of milk made by the improved processes of the American Milk Sugar Co. The great value of this article has been shown conclusively. Cane sugar is not used in the composition or preparation of the Food on account of its liability to cause irritation by reason of the acetic fermentation which it creates in the stomach. Milk sugar never causes this fermentation or irritation.

IT IS NON-IRRITATING.

By reason of the fact that Lactated Food is partially digested in process of Preparation, it is assimilated by the feeblest stomach, and no undigested particles pass into the bowels to irritate, and thus cause troublesome and dangerous bowel disorders.

IT IS HIGHLY NUTRITIOUS.

The nutritive elements of Lactated Food are derived from the three great cereals, Wheat, Barley, and Oats. From the Wheat is taken the pure gluten, the most nourishing substance known for the muscles and tissues; from the Barley, all the soluble albuminoid and extractive matter resulting from the most careful malting: and from the Oat, the strengthening properties for which it is so well known. The result is a food which never disappoints, and under which the feeble child or invalid rapidly rallies.

FOR CHOLERA INFANTUM.

It is the chief reliance of many eminent practitioners, and it is the safest food in summer for all young or delicate children.

Another important consideration is its low price, it being much more economical than other foods. We make four sizes, selling for 25 cents, 50 cents, $1 00, and $2.50. *A dollar can will furnish one hundred and fifty meals for an infant.*

If any physician that has not yet made a trial of the Lactated Food will write us, we will send a package of our regular size, postpaid, without charge, with the understanding that it will be given a careful trial as soon as possible.

We shall use every precaution to maintain the high standard of this Food, and to insure perfect satisfaction to the profession in its use.

DR. RABUTEAU'S

[Laureate of the Institute of France]

DRAGEES, ELIXIR, AND SYRUP OF IRON.

"The experiments made in the hospitals of Paris have demonstrated that *Dr. Rabuteau's Drageés, Elixir, and Syrup* regenerate the red globules of the blood with a rapidity never observed with the use of the other ferruginous preparations. These results have been proved by the various *Compi-Globules.*

"The ferruginous preparations of *Dr. Rabuteau* do not cause any constipation, and are perfectly tolerated by the weakest persons."—*Gazette des Hopitaux.*

Dr. Rabuteau's Elixir is prescribed when some difficulty is experienced in swallowing the Dragees; it is especially adapted to weak persons, whose digestive functions need strengthening or stimulating.

Dr. Rabuteau's Syrup is especially prepared for children, who take it readily because of its agreeable taste.

A sample of Rabuteau's Dragees will be sent free to any Physician mentioning *The St. Louis Medical and Surgical Journal.*

Prepared by CLINN & Co., Pharmacists, Paris.

E. FOUGERA & Co., Agents for the United States.

Ducro's Alimentary Elixir,

A COMBINATION UNITING THE PROPERTIES OF

ALCOHOLIC STIMULANTS AND RAW MEAT

This preparation, which has been used with great success in the hospitals of Paris, since 1868, is adapted to the treatment of all diseases requiring the administration, in a small volume, of a tonic able to stimulate and support the vital forces, as *Pulmonary Phthisis, Depression and Nervous Debility, Adynamia, Malarious Cachexia,* etc.

Prepared by EMILE DURIEZ & Co., Successors to DUCRO & CIE, Paris.

KIRKWOOD'S INHALER,

This is the only complete, reliable, and effective inhaler in use, arranged for the direct application of Muriate of Ammonia and other remedial agents in the state of vapor to the diseased parts of the air passages in the treatment of catarrh and diseases of the throat and lungs. No heat or warm liquids required in its use.

It is entirely different from the various frail, cheap instruments that have been introduced.

KIRKWOOD'S INHALER is accompanied by testimonials of the highest professional character, together with carefully-prepared formulas for use.

Retail Price, complete, $2.50.

☞A liberal discount allowed to the trade and profession.

☞For descriptive pamphlets or other information, address

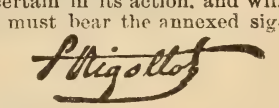
E. FOUGERA & CO., 30 North William Street, New York.

Rigollot's Mustard Paper

Is one of the most important and useful discoveries of the age. It is the only preparation which has been adopted by the civil and military hospitals, and the armies and navies of France and England, and which has obtained a medal at the Centennial Exposition at Philadelphia. All other mustard plasters or leaves, of whatever name, are but imitations of the original.

Physicians will find it the most reliable sinapism, prompt and certain in its action, and will therefore always prescribe it. Every sheet, in order to be genuine, must bear the annexed signature of the inventor.

Sold in tin boxes containing 10 sheets, also 25 and 100 sheets, by all respectable chemists throughout the world.



E. FOUGERA & CO., New York Depositaries.

TAMAR INDIEN GRILLON.

A laxative, refreshing, and medicated Fruit Lozenge, very agreeable to take, and never causing irritation. Its physiological action assures the immediate relief and effectual cure of

CONSTIPATION,

HÆMORRHOIDS, BILE, CEREBRAL CONGESTION, HEADACHE, LOSS OF APPETITE, INTESTINAL OBSTRUCTIONS, ETC.,

by augmenting the peristaltic movement of the intestine without producing undue secretion to the liquids. Unlike pills and the usual purgatives, it does not predispose to intestinal sluggishness, and the same dose always produces the same effect, that is to say, never needs increasing.

It is recommended by the most eminent physicians of Paris, notably Drs. BELIN and TARDIEU, who prescribe it constantly for the above complaints, and with most marked success.

Paris: E. GRILLON, 27 Rue Rambuteau.

SOLD BY ALL DRUGGISTS.

PRIVATE SCHOOL FOR THE DEAF.

Deaf Children Taught to Speak and Educated through Lip Reading. Aural Training and Defective Speech treated and improved. A Kindergarten Department for Deaf Children from three to six years old. A Training Class for Teachers of Articulation.

School re-opens September 20, 1886, at No. 16 South Broad Street (opposite Public Buildings), Philadelphia, Pa.

Directions to Parents of Deaf Children for their Treatment from Infancy in order that they may learn Speech and Lip Reading, furnished free on application to **MARY S. GARRETT, Principal.**

Carl L. Jensen

Sole Originator of

Pepsin in Scales

OR

"Crystal" Pepsin

2039 Green St.
Philadelphia

Physicians desirous of obtaining the genuine article, when prescribing Scale Pepsin or "Cryst." Pepsin, will not alone lend their aid and encouragement to the inventor, but will benefit themselves and patients as well, by simply prescribing this Pepsin thus: "Jensen's Pepsin," drawing a heavy line under the name "Jensen."

The profession generally takes it for granted that druggists are well aware that the physicians never intend to prescribe the imitations of preparations of established merits, which are brought to light solely through the knowledge and technicalities of the inventor or originator, acquired by protracted study and experiments. Imitations have never yet been known to supersede the article imitated, but furnish most convincing testimony to the worth of the article counterfeited. I am continually improving this valuable preparation. Besides its enormous digestive strength, it possesses a keeping quality not before found in any Pepsin preparation, owing to its being of a brittle, scaly texture, reduced to the shape of small granular fragments, it is perfectly soluble and pulverizes easily. It contains no foreign matter like preparations of other make, as Pepsin Manufacturers, heretofore, could not accomplish this without adding large quantities of either starch or sugar of milk.

Physicians who have not yet tried this preparation, or who have been imposed upon, will meet with gratifying results by simply prescribing this Pepsin, thus: "Jensen's Pepsin," as it will prevent substitutions.

Samples promptly forwarded, post-paid.

Faithfully **CARL L. JENSEN.**

In corresponding with Advertisers, please mention THE MEDICAL AND SURGICAL REPORTER.

CELERINA

NERVE-TONIC, STIMULANT AND ANTISPASMODIC.

FORMULA.—Every Fluid-Drachm represents FIVE grains EACH—Celery, Coca, Kola, Viburnum and Aromatics.

INDICATIONS.—Impotency, Spermatorrhea, Loss of Nerve-Power (so usual with Lawyers, Preachers, Writers and Business Men), Nervous Headache, Neuralgia, Paralysis, Dysmenorrhea, Hysteria, Opium-Habit, Inebriety, Prostatitis, Dyspepsia, and ALL LANGUID or DEBILITATED conditions of the System.—*Indispensable to restore a patient after alcoholic excess.*

DOSE.—One or two teaspoonfuls three or more times a day, as directed by the Physician.

ALETRIS CORDIAL

UTERINE TONIC AND RESTORATIVE.

PREPARED FROM THE ALETRIS FARINOSA OR TRUE UNICORN.

INDICATIONS.—Amenorrhea, Dysmenorrhea, Leucorrhea, Prolapsus Uteri, Sterility, to PREVENT Miscarriage, Etc.

DOSE.—One teaspoonful three or four times a day.

Unrivaled as a Uterine Tonic in Irregular, Painful, Suppressed and Excessive Menstruation,

IT RESTORES NORMAL ACTION TO THE UTERUS, AND IMPARTS VIGOR TO THE ENTIRE UTERINE SYSTEM.

☞Where Women have aborted during previous Pregnancies, or in any case where abortion is feared, the Aletris Cordial is indicated, and should be continuously administered during entire gestation.

ACID MANNATE

A MILD, SAFE AND PLEASANT APERIENT.

Prepared from Manna, Purified Cathartic Acid, and Fruit Juices.

INDICATIONS.—Constipation, Biliousness, Congestions, Etc. **INDISPENSABLE AS AN APERIENT FOR WOMEN DURING PREGNANCY.** In teaspoonful doses, 3 times a day, it favors the SECRETION and EXCRETION of bile, and gradually removes the congested and torpid states of the liver, and keeps the bowels in a regular and soluble condition.

DOSE.—ONE or MORE teaspoonfuls as directed by the Physician.

S. H. KENNEDY'S
CONCENTRATED EXTRACT OF
PINUS CANADENSIS

DARK A NON-ALCOHOLIC LIQUID. WHITE

A MOST VALUABLE NON-IRRITATING MUCOUS ASTRINGENT.

INDICATIONS.—Albuminuria, Diarrhea, Dysentery, Night-Sweats, Hemorrhages, Profuse Expectoration, Catarrh, Sore Throat, Leucorrhea, and other Vaginal Diseases, Piles, Sores, Ulcers, Burns, Scalds, Gonorrhea, Gleet, Etc.

When Used as an Injection, to Avoid Staining of Linen, the WHITE Pinus should be Used.

Recommended by DR. J. MARION SIMS, and other Prominent Physicians.

CLINICAL MANUAL OF DISEASES OF THE EAR.

By LAURENCE TURNBULL, M. D., Ph.G., President of the Subsection of Otology of the British Medical Association at Cork. Second Revised Edition. In One Octavo Volume of over 500 pages. With 114 Illustrations. $4.00.

"The second edition of this most excellent treatise, published so shortly after the appearance of the first, attests the favor it has met with from the profession. This edition is improved, enlarged, and more fully illustrated. The author's experience in this department of medicine fits him especially for the preparation of such a work. We commend the work, not only to the specialist, but to the general practitioner, as one of the best treatises yet issued upon diseases of the ear."—*Nashville (Tenn.) Journal of Medicine and Surgery.*

ESTABLISHED 1855.

DRS. STRONG'S REMEDIAL INSTITUTE,

SARATOGA SPRINGS, NEW YORK,

Receives persons recommended to it by their home physicians for Treatment, Change, Rest or Recreation, and places them under well-regulated hygienic conditions, so helpful in the treatment of chronic invalids or the overtaxed.

For Treatment: In addition to the ordinary remedial agents, it employs Turkish, Russian, Roman, Sulphur, Electro-Thermal, the French Douche (Charcot's), and all Hydropathic Baths; Vacuum Treatment, Swedish Movements, Massage, Pneumatic Cabinet, Inhalations of Medicated, Compressed, and Rarefied Air; Electricity in various forms, Thermo-Cautery, Calisthenics, and Saratoga Waters, under the direction of a staff of educated physicians.

For Change: This Institution is located in a phenomenally dry, tonic, and quiet atmosphere, in the lower arc of the Adirondack Zone, and within the "Snow Belt."

For Rest: The Institution offers a well-regulated, quiet home, heated by steam and thoroughly ventilated. With cheering influences and avoiding the depressing atmosphere of invalidism.

For Recreation: To prevent introspection, are household sports at all seasons of the year, and in winter tobogganing, elegant sleighing, etc.; in summer, croquet, lawn-tennis, etc.

Private professional references furnished upon application. Physicians are invited to inspect the Institution at their convenience. A liberal discount to physicians and their families. For further information, address

DRS. S. S. & S. E. STRONG.

WHEELER'S TISSUE PHOSPHATES

Bone-Calcium Phosphate $Ca_3 2P.O._4$, Sodium Phosphate $Na_2 H.P.O._4$, Ferrous Phosphate $Fe_2 P.O._4$, Trihydrogen Phosphate $H_3 P.O._4$.

WHEELER'S COMPOUND ELIXIR OF PHOSPHATES AND CALISAYA. A Nerve Food and Nutritive Tonic, for the treatment of Consumption, Bronchitis, Scrofula, and all forms of Nervous Debility.

The Lactophosphates prepared from the formula of Prof. Dusart, of the University of Paris. Combines with a superior Pemartin Sherry Wine and Aromatics in an agreeable cordial easily assimilable and acceptable to the most irritable stomachs.

Phosphorus, the oxidizing element of the Nerve Centres for the generation of Nerve Force; Lime Phosphate, an agent of Cell Development and Nutrition; Soda Phosphate, an excitant of Functional Activity of Liver and Pancreas, and Corrective of Acid Fermentation in the Alimentary Canal; Iron, the Oxidizing Constituent of the Blood for the Generation of Heat and Motion; Phosphoric Acid, Tonic in Sexual Debility; Alkaloids of Calisaya, Anti-Malarial and Febrifuge; Extract of Wild Cherry, uniting with tonic power the property of Calming Irritation and Diminishing Nervous Excitement.

THE SUPERIORITY OF THE ELIXIR consists in uniting with the Phosphates the special properties of the Cinchona and Prunus, of Subduing Fever and Allaying Irritation of the Mucous Membrane of the Alimentary Canal, which adapts it to the successful treatment of Stomach Derangements and all diseases of Faulty Nutrition, the outcome of Indigestion. Malassimilation of Food, and *failure of supply* of these essential elements of Nerve Force and Tissue Repair.

The special indication of this combination of Phosphates in Spinal Affections, Caries, Necrosis, Ununited Fractures Marasmus, Poorly Developed Children, Retarded Dentition, Alcohol, Opium, Tobacco Habits, Gestation and Lactation, to promote Development, etc., and as a *physiological restorative* in Sexual Debility, and all used up conditions of the Nervous System, should receive the careful attention of good therapeutists.

There is no strychnia in this preparation, but when indicated, the Liquor Strychniæ of the U. S. Dispensatory may be added, each fluid drachm of the solution to a pound bottle of the Elixir making the 64th of a grain to a half fluid ounce, an ordinary dose, a combination of a wide range of usefulness.

DOSE—For an adult, one tablespoonful three times a day, after eating; from seven to twelve years of age, one dessertspoonful; from two to seven, one teaspoonful. For infants, from five to twenty drops, according to age.

Prepared at the Chemical Laboratory of T. B. WHEELER, M. D., Montreal, D. C.
Put up in pound bottles and sold by all Druggists at One Dollar.

REDUCED PRICE! FROM $5.00 to $3.00.

THE PHYSICIAN'S COMPLETE SINGLE-PAGED RECORD AND CASH BOOK.

BY D. M. BARR, M. D.

Large Folio, Bound in Strong Cloth, 160 Pages, Best Quality Ledger Paper.

The few remaining copies of this most excellent physician's account and cash book will be sold at the reduced price of *Three Dollars*.

It has received the highest testimonials from expert book-keepers, for simplicity and accuracy. Address

D. G. BRINTON,
115 South Seventh Street, Philadelphia.

BUFFALO LITHIA WATER,

FOR GOUTY, RHEUMATIC, AND RENAL AFFECTIONS.

ROBERTS BARTHOLOW, M. A., M. D., LL. D., Prof. of Materia Medica and General Therapeuties in the Jefferson Medical College of Philadelphia. See his "Materia Medica and Therapeutics."

"Buffalo Lithia Spring of Virginia contains well-defined traces of Lithia, and is Alkaline. This has been used with great advantage in Gouty, Rheumatic, and Renal Affections." * * * * * * * * * * "There is little doubt that the continuous use of Alkaline Waters for a long period will cause the solution of Uric Acid Renal Calculi. For this purpose those Alkaline Waters rich in POTASSA are preferable."

This water has a large percentage of the CARBONATE OF POTASSA, making it rich in valuable Alkali.

Dr. Wm. A. Hammond, of New York, Surgeon-General U. S. Army (retired), Professor of Diseases of the Mind and Nervous System in the University of New York, etc.

"I have for some time made use of the Buffalo Lithia Water in cases of affections of the Nervous System complicated with Bright's Disease of the Kidneys, or with a Gouty Diathesis. The results have been eminently satisfactory. Lithia has for many years been a favorite remedy with me in like cases, but the Buffalo Water certainly acts better than any extemporaneous solution of the Lithia Salts, and is, moreover, better borne by the stomach. I also often prescribe it in those cases of Cerebral Hyperæmia, resulting from over mental work—in which the condition called Nervous Dyspepsia exists—and generallly with marked benefit."

Dr. Robert Battey, of Georgia, Suggester of Battey's Operation, Member of the American Medical Association, etc.

"I would state that I have been using the Buffalo Lithia Water, No. 2, in my practice for three years past, in cases of Chronic Inflammation of the Bladder, whether induced by Stone, by Enlarged Prostate in the aged, or by Neglected Gonorrhœa, and have secured excellent results, which encourages me to prescribe it for the future."

Dr. Hunter McGuire, Richmond, Virginia, late Professor of Surgery, Medical College of Virginia.

"Buffalo Lithia Water, Spring No. 2, as an Alkaline Diuretic, is invaluable. In Uric Acid Gravel, and, indeed, in diseases generally dependent upon a Uric Acid Diathesis, it is a remedy of extraordinary potency. I have prescribed it in cases of Rheumatic Gout, which had resisted the ordinary remedies, with wonderfully good results. I have used it also in my own case, being a great sufferer from this malady, and have derived more benefit from it than from any other remedy."

Dr. Alfred L. Loomis, of New York, Professor of Institutes and Practice of Medicine, Medical Department University of New York.

"For the past four years I have used the Buffalo Lithia Water in the treatment of Chronic Interstitial Nephritis occurring in Gouty and Rheumatic subjects, with the most marked benefit. In all Gouty and Rheumatic Affections I regard it as highly efficacious."

Dr. Harvey L. Byrd, of Baltimore, President and Professor of Obstetrics and Diseases of Women and Children, in the Baltimore Medical College, formerly Professor of Practical Medicine, etc.

"I have witnessed the best results from the action of the Buffalo Lithia Water, Spring No. 2, in Chronic Gout, Rheumatic Gout, Rheumatism, Gravel, and Stone in the Bladder, and I do not hesitate to express the opinion that in all diseases depending upon or having their origin in Uric Acid Diathesis, it is unsurpassed, if, indeed, it is equaled by any water thus far known to the profession.

"It has an ascertained value in Bright's Disease. A knowledge of its action in that disease thus far would seem to warrant the belief that it would, in many instances, at least in its early stages, arrest it entirely; and in its more advanced stages prove a decided comfort and palliative."

Water, in cases of one dozen half gallon bottles, $5.00 per case, at the Springs. Testimonials sent free on application. The Virginia Buffalo Lithia Springs Company have no longer control of this water. To get it **FRESH**, order directly of or from parties who deal directly with

THOMAS F. GOODE, Prop. Buffalo Lithia Springs, Va.

CHERRY MALT PHOSPHITES.

W. C. JACOBS, Manager.

This preparation is believed to be the only Malt Extract continuously acceptable to the stomach. The attention of those who have ceased prescribing other extracts of malt because of excessive sweetness is specially called to this.

CHERRY MALT PHOSPHITES is a combination of Wild Cherry, the condensed extract of the important Cereals and the Elixir of the Hypophosphites. Its flavor is delicious, and it is medicinally invaluable in all cases of General and Nervous Debility, Dyspepsia, Imperfect Nutrition, Impure Blood, Wasting Diseases of Children and Adults. It is extensively prescribed in European countries, and has received the cordial endorsement of the leading practitioners of this country.

PRICE $1.00 PER BOTTLE.

To Physicians not familiar with its merits, who will pay express charges, we will send a full-sized bottle *free*.

COSMOLINE

Unguentum Petrolei

Prepared by E F Houghton & Co Philadelphia U S A

Put up in 1, 5, 10, 25, 50, and 100-lb. cans. Samples furnished on application. The post-office laws forbid anything of an oleaginous nature being sent through the mail.

In chemical composition, Cosmoline (Unguentum Petrolei) is an oleaginous hydrocarbon, corresponding to the heavy petroleum oils, and containing a large amount of the paraffines and olefines of the formulæ $C_{16}H_{34}$ and $C_{16}H_{32}$. It contains but a small percentage of the paraffines and olefines corresponding to the formulæ C_7H_{16} and C_7H_{14}, respectively, and the offensive and irritating properties of the crude oil have been carefully removed. In the process of purification, no acids, alkalies, or other chemicals are employed, and no injurious additions of any kind are made to the natural product. The result is a semi-solid, translucent substance, with a faint odor and unctuous feel.

Cosmoline (Unguentum Petrolei) melts at about 100° Fah. (38° Cent.); and boils at about 625° Fah. (329° Cent.); its specific gravity is about 0.875 at 60° Fah.

As it contains no oxydizable or organic matter capable of change by putrefaction or fermentation, and is absolutely without affinity for moisture, it offers to the profession an admirable unguent, which can never decompose, ferment, or become rancid in any climate or temperature.

PHILADELPHIA, July 10, 1880.

MESSRS. E. F. HOUGHTON & Co.: I have for a number of years made extensive use of Cosmoline (Unguentum Petrolei), and consider it a most valuable article for surgical purposes. Either as a dressing by itself, or as a vehicle for the application of medicaments, it is greatly superior to lard or other fatty matters, especially by reason of its non-liability to change by time or temperature.

Yours truly, JOHN H. PACKARD, M. D.

1031 WALNUT STREET, PHILADELPHIA.

MESSRS. E. F. HOUGHTON & Co.: I have used extensively Cosmoline (Unguentum Petrolei) both in Dispensary and private practice, with very great satisfaction. As a vehicle in making ointments it is invaluable, and far superior to lard, for the reason that it will not become rancid or undergo chemical change like the latter, when exposed to the atmosphere. I cannot too highly commend it as an application in various skin diseases. Yours truly, JOHN V. SHOEMAKER, A. M., M. D.,

Physician to the Pennsylvania Free Dispensary for Skin Disease.

208 WEST 34TH STREET, NEW YORK.

MESSRS. E. F. HOUGHTON & Co.—*Gents:* I fully appreciate the value of your Cosmoline, or Unguentum Petrolei, and prescribe it frequently in ointments. Fluid Cosmoline I have used constantly for several years, as a lubricant of urethral sounds. It is the cleanest oil I know of for this purpose.

Yours truly, GEO. HENRY FOX.

STAUFER'S
HARD RUBBER SPECULUMS GUARANTEED.

Prices, Single, $2.50
Series encased, 12.00

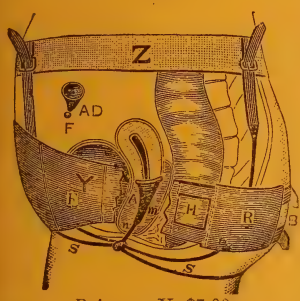
The engraving shows the shape, conductor and case so complete, that scarcely any description is necessary. For compactness there is but one conductor stem, on which each size of bulb screws. Speculums and case are all of the best quality hard rubber, and do not break from ordinary falling. Dental red enamelled inside. The mouth is polished very smooth, and shaped so that the cervix can be brought in entirely by rotation. And when brought in can be rotated to bring into view all the parts. The vaginal portion of the uterus can be seen as clearly as if located externally. When obtained, single, No. 2, is the most useful, since it reveals fully the point of the cervix in almost all multipara, and freely enters, when the position is correct, in many nullipara.

Guarantee.—One or two speculums are guaranteed; thus when returned sound and in the original wooden boxes, within six months of purchase, the money will be refunded without any deduction.

Plates.—The *First* contains 16 engravings and groups of engravings, illustrating the uterine examining instruments. *Second* contains 17 engravings and groups of engravings, illustrating the uterine replacing and supporting instruments.

Catalogue.—The catalogue comprises over 150 sizes and styles of uterine examining and supporting instruments, of which the hard rubber parts are exchanged and interchanged at cost, without limit of time. It also contains full directions and explanations for the use of this series of hard rubber gynecological instruments; together with common information collected through many years to simplify this line of treatment.

STAUFER'S
SPRING STEM UTERINE SUPPORTERS.
GUARANTEED.



Price, on Y, $7.00
" " Z, 6.00

The engraving shows the Spring Stem Cup, which consists of over a dozen sizes. The series contains Spring Stem Balls, Spring Stem Levers, for Anteversions and Retroversions. also Spring Stem Cup with posterior projections, all of assorted sizes.

Explanation.—The stem is screwed on cup A, and when unscrewed, the spring is put in tube *m*, or taken out when it needs cleaning. Thus the coil spring lays between the cup and base *n*. When there is pressure from above, or below, or both, the spring is compressed and again stretches out at the first opportunity. The movement of the base stem *n*, is governed by a slot and pin through tube *m*.

A D.—Represents the cup transformed into a self-sustaining cup, virtually an instrument of double capacity. In most cases after the uterus is held in "health line" for a time by external support, contraction of the walls of the vagina takes place, and it is sufficient at night or until forced down next day by bodily exertion, against which the stem and bandage guards if applied in time.

Belt Y.—The manner in which belt Y, sets on the abdomen is shown in above engraving. The widest or lifting part is in front. Over each hip as seen at H, are two elastics, and on large belts three. It closes on the back by buckling at B. It is of fine sateen outside, fine lining inside, and a slight stiffening between, and stayed with soft whalebones. Accurate hip measure is to be taken over a thin undergarment; since it needs to fit with a space of one or two inches apart on the back, for the buckle straps to draw. The perineal attachments are short and buckle at F and R.

Belt Z. This is an elastic waist strap and carries any supporter of this series. Yet the common difficulty presents itself, where long and slender attachments are used, that they do not govern the internal part so efficiently as on the low grasping abdominal supporter Y.

The Series.—This series of imstruments has been invented as cases presented themselves, requiring different styles and sizes of instruments, without change of proprietor, until it has reached its present efficiency.

Guarantee.—The money lost by purchasing uterine supporters, unscientifically constructed, of irritating material, or limited in deficiency of sizes, and in consequence loss of families in practice, has set a large portion of the medical profession against the mechanical support of the uterus. By these conditions the risk of the first purchase by a physician of a stem and bandage supporter of this series is obviated. After the first purchase the instruments are supposed to be known, yet the guarantee is extended by special contract in doubtful cases.

Refunding.—On return of the hard rubber part or parts within six months of purchase, Five Dollars of the purchase money will be refunded. The belt remains with the patient as an abdominal supporter and only risk.

The above Guarantee and Refunding is secured when the Instruments are obtained through this Office. Any other Instrument of STAUFER'S SERIES is also obtained through this Office at Catalogue Prices, and Catalogue free, on application.

Prof SFBaird
1445 Mass

New Medicaments for Bronchitis and other Respiratory Affections.

CHEKEN.
(Myrtus Chekan.)

THIS PLANT, indigenous to Chili, was introduced to the profession by Dr. Murrell, the famous English therapeutist and collaborator of Ringer. Dr. Murrell found Cheken to be of great value in chronic cough, especially in the "winter cough" of elderly people.

An extensive trial of this remedy has not only confirmed Dr. Murrell's observations, but has widened the range of the therapeutic application of Cheken so that at the present time it is looked upon, on account of its alterative and demulcent properties, as an indispensable addition to "cough mixtures," particularly in those intractable cases of long standing which have assumed a subacute or chronic course. The dose of the fluid extract which we manufacture is from 1 to 2 fluidrachms.

TEREBENE.

TO DR. MURRELL the profession is indebted for the introduction of another remedy which seems to be almost a specific in winter cough or chronic bronchitis, than which there are few more annoying maladies. Terebene facilitates expectoration, relieves the cough and shortness of breath, and also the acidity and flatulency which so often accompany bronchitis. Dr. Murrell, in *British Med. Journal*, Dec. 12th, 1885, states that he has employed Terebene in 114 cases of winter cough, with the most gratifying results.

We furnish *Terebene Pure; Terebene Inhalant* after Murrell's formula, and *Soluble Elastic Capsules Terebene*, each containing 10 minims.

YERBA SANTA.
(Eriodictyon Californicum.)

YERBA SANTA is a demulcent expectorant in harassing cough. Both in hospital and private practice this remedy has been subjected to a thorough trial, and the reports of its use are unanimous in according it a high place among remedial agents in the treatment of the distressing cough accompanying inflammatory affections of the respiratory mucous membrane. Its action has been likened to the combined action of ipecac and balsam of Peru, but it possesses, in addition, through its resinous principles, an action which is wanting in these valuable drugs in irritative bronchitis.

LIPPIA MEXICANA.

IN ITS native habitat this remedy was long known to possess medicinal virtue in the treatment of coughs. Its popular use led to a scientific investigation of its claims which has resulted in its general introduction to the medical profession, and a clinical test of its merits by physicians has confirmed the popular opinion of its value. Alone or in combination with other remedies, such as Yerba Santa, Cheken, etc., it has been found most serviceable in controlling cough.

Working Bulletins and Circulars fully descriptive of above remedies, together with reprints of Dr. Murrell's articles on winter cough, will be mailed on application.

SPECIFY (BATTLE) WHEN PRESCRIBING OUR PREPARATIONS.

BROMIDIA

THE HYPNOTIC.

FORMULA.—
Every Fluid drachm contains 15 grains EACH of pure Chloral Hydrat. and purified Brom. Pot., and one-eighth grain EACH, of gen. imp. ext. Cannabis Ind. and Hyoscyam.

Dose.—One-half to one fluid drachm in WATER or SYRUP every hour until sleep is produced.

Indications.—
Sleeplessness, Nervousness, Neuralgia, Headache, Convulsions, Colic, Mania, Epilepsy, Irritability, etc. In the restlessness and delirium of fevers, it is absolutely nvaluable.

IT DOES NOT LOCK UP THE SECRETIONS.

PAPINE

THE ANODYNE.

Papine is the Anodyne or pain-relieving principle of Opium, the Narcotic and Convulsive elements being eliminated. It has less tendency to cause Nausea, Vomiting, Constipation, etc.

Indications.—
Same as Opium or Morphia.

Dose.—(ONE FLUID DRACHM)—represents the Anodyne principle of one-eighth grain of Morphia.

IODIA

THE ALTERATIVE AND UTERINE TONIC.

FORMULA.—
Iodia is a combination of Active Principles obtained from the Green Roots of STILLINGIA, HELONIAS, SAXIFRAGA, Menispermum, and Aromatics. Each fluid drachm also contains five grains IOD. POTAS. and three grains PHOS. IRON.

Dose.—One or two fluid drachms (more or less, as indicated,) three times a day, before meals.

Indications.—
Syphilitic, Scrofulous and Cutaneous Diseases, Dysmenorrhœa, Menorrhagia, Leucorrhœa, Amenorrhœa, Impaired Vitality, Habitual Abortions, and General Uterine Debility.

SESSIONS OF 1887-88.

The REGULAR SESSION begins on Wednesday, September 21, 1887, and ends about the middle of March, 1888. During this Session, in addition to the regular didactic lectures, two or three hours are daily allotted to clinical instruction. Attendance upon at least two regular courses of lectures is required for graduation.

The SPRING SESSION consists of recitations, clinical lectures and exercises, and didactic lectures on special subjects. This Session begins about the middle of March and continues until the middle of June. During this Session, daily recitations in all the departments are held by a corps of Examiners appointed by the Faculty.

The CARNEGIE LABORATORY is open during the collegiate year, for instruction in microscopical examinations of urine, practical demonstrations in medical and surgical pathology, and lessons in normal histology and pathology, including bacteriology.

For the annual Circular and Catalogue, giving requirements for graduation and other information, address Prof. AUSTIN FLINT, Secretary, Bellevue Hospital Medical College, foot of East 26th Street, New York City.

30,000 PHYSICIANS
NOW PRESCRIBE

HYDROLEINE

(HYDRATED OIL,)

For Consumption and Wasting Diseases. It Produces Immediate Increase in Flesh and Weight.

FORMULA.

Each Dose of Two Teaspoonfuls, equal to 120 Drops, contains:

Pure Cod Liver Oil	80 m. (drops)	Soda	½ Grain.
Distilled Water	35 "	Boric Acid	½ "
Soluble Pancreatin	5 Grains.	Hyocholic Acid	⅛ "

DOSE:

Two teaspoonfuls alone, or with twice the quantity of water, to be taken thrice daily after meals.

Hydroleine (Hydrated Oil) is not a simple alkaline emulsion of oleum morrhua, but a hydro-pancreated preparation containing acids and a medicum of soda. Pancreatin is the digestive principle of fatty foods, and, in the soluble form here used, completely saponifies the oleaginous material so necessary to the reparative process in all wasting diseases.

Lautenbach's researches on the function of the liver would show the beautiful adjustment of therapeutics in preparation of Hydroleine, furnishing, as it does, the acid and soda necessary to prevent self-poisoning by reabsorption of morbid tubercular detritus and purulent matters into the general circulation.

Each bottle in nutritive value exceeds ten times the same bulk of cod liver oil. **It is economical in use and certain in result.**

Sold at all Drug Stores at $1.00 per Bottle.

The principles upon which this discovery is based have been described in a treatise on "The Digestion and Assimilation of Fats in the Human Body," by H. C. BARTLETT, Ph. D., F. C. S., and the experiments which were made, together with cases illustrating the effect of Hydrated Oil in practice, are concisely stated in a Treatise on "Consumption and Wasting Diseases," by G. OVEREND DREWRY, M. D.

Copies of these Works sent free on Application.

HYDRASTIS

AND ITS PREPARATIONS.

The WM. S. MERRELL CHEMICAL CO. of Cincinnati—"The largest consumers of Golden Seal Root in the world" (see "Drugs and Medicines of North America")—offer to the medical profession, through the drug trade, the following well-known and highly approved preparations of this leading American drug.

FLUID HYDRASTIS.

A neutral solution of all the active medicinal constituents, forming a perfectly clear solution with alcohol, glycerin, syrup, or water. May be properly and profitably substituted for the Fluid Extract of the U. S. P. in the manufacture of syrup, wine or tincture.

COLORLESS HYDRASTIS.

A neutral solution of the White Alkaloid alone—without color or stain.

SULPHATE HYDRASTIA—CRYSTALLIZED.

[SULPHATE BERBERINA.]

This is the Sulphate of Yellow Alkaloid, which we present in crystals to guard against the substitution of impure and unskillful preparations in a powdered form.

Subsequent to its introduction by us under its present commercial title, this salt was identified as Berberina by Mahla, Durand and others. To avoid confusion with the Alkaloid Bebeerine and its salts, and to fully establish its identity, we continue the name by which it was originally introduced.

SOLUTION BISMUTH AND HYDRASTIA,

A neutral solution of the double Citrate of Bismuth and Hydrastia (White Alkaloid); each fluid drachm containing 2½ grains of the double salt.

Represented in New York City by

IMPORTANT NOTICE.

By reason of an improved method of caption, by which dilution is avoided, FRIEDRICHSHALL WATER will be found now to be of ***considerably greater strength*** and ***efficacy*** than heretofore.

The ordinary dose is a large wineglassful (4 ounces), taken fasting. Most efficacious and more acceptable to the palate when heated or mixed with an equal quantity of very hot water.

"*The most suitable aperient for prolonged use.*"—***Prof. SEEGEN.***

"*After twenty years' use I appreciate it as highly as ever.*"—***Prof. VIRCHOW.***

CELERINA

NERVE-TONIC, STIMULANT AND ANTISPASMODIC.

FORMULA.—Every Fluid-Drachm represents FIVE grains EACH—Celery, Coca, Kola, Viburnum and Aromatics.

INDICATIONS.—Impotency, Spermatorrhea, Loss of Nerve-Power (so usual with Lawyers, Preachers, Writers and Business Men), Nervous Headache, Neuralgia, Paralysis, Dysmenorrhea, Hysteria, Opium-Habit, Inebriety, Prostatitis, Dyspepsia, and ALL LANGUID or DEBILITATED conditions of the System.—*Indispensable to restore a patient after alcoholic excess.*

DOSE.—One or two teaspoonfuls three or more times a day, as directed by the Physician.

ALETRIS CORDIAL

UTERINE TONIC AND RESTORATIVE.

PREPARED FROM THE ALETRIS FARINOSA OR TRUE UNICORN.

INDICATIONS.—Amenorrhea, Dysmenorrhea, Leucorrhea, Prolapsus Uteri, Sterility, to PREVENT Miscarriage, Etc.

DOSE.—One teaspoonful three or four times a day.

Unrivaled as a Uterine Tonic in Irregular, Painful, Suppressed and Excessive Menstruation,

IT RESTORES NORMAL ACTION TO THE UTERUS, AND IMPARTS VIGOR TO THE ENTIRE UTERINE SYSTEM.

☞Where Women have aborted during previous Pregnancies, or in any case where abortion is feared, the Aletris Cordial is indicated, and should be continuously administered during entire gestation.

ACID MANNATE

A MILD, SAFE AND PLEASANT APERIENT.

Prepared from Manna, Purified Cathartic Acid, and Fruit Juices.

INDICATIONS.—Constipation, Biliousness, Congestions, Etc. **INDISPENSABLE** AS AN APERIENT FOR WOMEN DURING PREGNANCY. In teaspoonful doses, 3 times a day, it favors the SECRETION and EXCRETION of bile, and gradually removes the congested and torpid states of the liver, and keeps the bowels in a regular and soluble condition.

DOSE.—ONE or MORE teaspoonfuls as directed by the Physician.

S. H. KENNEDY'S
CONCENTRATED EXTRACT OF
PINUS CANADENSIS

DARK A NON-ALCOHOLIC LIQUID. WHITE

A MOST VALUABLE NON-IRRITATING MUCOUS ASTRINGENT.

INDICATIONS.—Albuminuria, Diarrhea, Dysentery, Night-Sweats, Hemorrhages, Profuse Expectoration, Catarrh, Sore Throat, Leucorrhea, and other Vaginal Diseases, Piles, Sores, Ulcers, Burns, Scalds, Gonorrhea, Gleet, Etc.

When Used as an Injection, to Avoid Staining of Linen, the WHITE Pinus should be Used.

Recommended by DR. J. MARION SIMS, and other Prominent Physicians.

PACKER'S TAR SOAP.

ABSOLUTELY PURE AND NON-IRRITATING.

MADE FROM VEGETABLE OILS, PINE TAR, AND GLYCERINE.

A perfect soap should be made from pure and sweet oils, and clean, well-washed alkalies. Such is **Packer's Tar Soap.** It is combined with distilled **pine-tar,** and hence has had the most gratifying effects in the treatment of Dermatic Diseases, as chafing, eczema, erythema, seborrhea, herpes, etc.

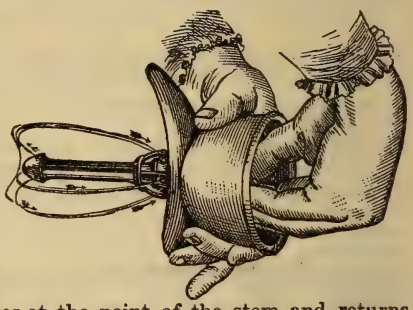
As a Disinfectant, Antiseptic, and Detergent, it is admirably adapted for use in ulcers, foul wounds, fetid discharges, bed sores, and similar conditions. For the bath, toilet, and shampoo, it is unrivaled. 25 cents per cake, from Druggists.

It is supplied to Hospitals, Asylums, and Physicians, in one pound bars, at reasonable prices.

P. O. Box 2985. **THE PACKER MFG. CO., 100 Fulton St., New York.**

"PALLAS" SYRINGE.

VAGINAL AND RECTAL.



A MOST PERFECT and simply constructed Syringe for medicating and irrigating the vaginal cavity. The novel bulb of this Syringe, when doubled upon itself, as shown in the cut, will cause no fluid to be left, as is so apt to happen with the ordinary bulbs, and when filled will contain just enough fluid for the expansion of the vaginal folds. The hard rubber labial shield, with its plug, when firmly pressed against the labia, will both prevent spilling and soiling of linen, and the fluid can therefore be kept in circulation and in contact with the parts by repeating the pumping motion of the bulb. It will also be noticed that the fluid escapes as a spray from the large holes at the point of the stem and returns through the holes at the root of same, which is provided with hard rubber screen-bars, preventing the folds from interfering with the rapid return of the fluid into the bulb. In filling the bulb, a couple of turns will unscrew it. In handsome case, satin lined. Retail price, $3.75. To physicians, $3.00.

NOTABLE POINTS

RELATIVE TO

Lactated Food.

IT IS A COOKED FOOD.

By the use of high steam heat the gluten flour used is partially torrefied. This is done while the flour is dry, and during the process it is in constant motion, which insures perfect cooking to every particle.

Routh says, (Infant Feeding, page 380) that by this process, "the starch granules are rendered more separable, the gluten is reduced to a more porous condition, readily acted on by the gastric juice, and as an aliment, therefore, is more nutritious and digestible."

IT IS A PREDIGESTED FOOD.

"You state that it is self-digestive as regards the conversion of insoluble starch into soluble dextrine and maltose. My experiments with it lead me to hold that this is correct." J. MILNER FOTHERGILL.

IT CONTAINS NO UNCHANGED STARCH.

By the peculiar process of manufacture, every particle of the gluten flour is subjected to the action of the malto-diastase, and by it all the starch contained is transformed into soluble carbo-hydrates.

Professor CARL SEILER says, "Examination has proved that all the starch granules are converted, as shown by their behavior to polarized light."

NO CANE SUGAR USED.

The basis of Lactated Food is the pure sugar of milk made by the improved processes of the American Milk Sugar Co. The great value of this article has been shown conclusively. Cane sugar is not used in the composition or preparation of the Food on account of its liability to cause irritation by reason of the acetic fermentation which it creates in the stomach. Milk sugar never causes this fermentation or irritation.

IT IS NON-IRRITATING.

By reason of the fact that Lactated Food is partially digested in process of Preparation, it is assimilated by the feeblest stomach, and no undigested particles pass into the bowels to irritate, and thus cause troublesome and dangerous bowel disorders.

IT IS HIGHLY NUTRITIOUS.

The nutritive elements of Lactated Food are derived from the three great cereals, Wheat, Barley, and Oats. From the Wheat is taken the pure gluten, the most nourishing substance known for the muscles and tissues; from the Barley, all the soluble albuminoid and extractive matter resulting from the most careful malting; and from the Oat, the strengthening properties for which it is so well known. The result is a food which never disappoints, and under which the feeble child or invalid rapidly rallies.

FOR CHOLERA INFANTUM.

It is the chief reliance of many eminent practitioners, and it is the safest food in summer for all young or delicate children.

Another important consideration is its low price, it being much more economical than other foods. We make four sizes, selling for 25 cents, 50 cents, $1.00, and $2.50. *A dollar can will furnish one hundred and fifty meals for an infant.*

If any physician that has not yet made a trial of the Lactated Food will write us, we will send a package of our regular size, postpaid, without charge, with the understanding that it will be given a careful trial as soon as possible.

We shall use every precaution to maintain the high standard of this Food, and to insure perfect satisfaction to the profession in its use.

"THE PERFECTION DOUCHE," Box 7, Albany, N. Y.

ESTABLISHED 1855.

DRS. STRONG'S REMEDIAL INSTITUTE,

SARATOGA SPRINGS, NEW YORK,

Receives persons recommended to it by their home physicians for Treatment, Change, Rest or Recreation, and places them under well-regulated hygienic conditions, so helpful in the treatment of chronic invalids or the overtaxed.

For Treatment: In addition to the ordinary remedial agents, it employs Turkish, Russian, Roman, Sulphur, Electro-Thermal, the French Douche (Charcot's), and all Hydropathic Baths; Vacuum Treatment, Swedish Movements, Massage, Pneumatic Cabinet, Inhalations of Medicated, Compressed, and Rarefied Air; Electricity in various forms, Thermo-Cautery, Calisthenics, and Saratoga Waters, under the direction of a staff of educated physicians.

For Change: This Institution is located in a phenomenally dry, tonic, and quiet atmosphere, in the lower arc of the Adirondack Zone, and within the "Snow Belt."

For Rest: The Institution offers a well-regulated, quiet home, heated by steam and thoroughly ventilated. With cheering influences and avoiding the depressing atmosphere of invalidism.

For Recreation: To prevent introspection, are household sports at all seasons of the year, and in winter tobogganing, elegant sleighing, etc.; in summer, croquet, lawn-tennis, etc.

Private professional references furnished upon application. Physicians are invited to inspect the Institution at their convenience. A liberal discount to physicians and their families. For further information, address

DRS. S. S. & S. E. STRONG.

WHEELER'S TISSUE PHOSPHATES

Bone-Calcium Phosphate $Ca_3 2P.O._4$, Sodium Phosphate $Na_2 H.P.O._4$, Ferrous Phosphate $Fe_2 2P.O._4$, Trihydrogen Phosphate $H_3 P.O._4$.

WHEELER'S COMPOUND ELIXIR OF PHOSPHATES AND CALISAYA. A Nerve Food and Nutritive Tonic, for the treatment of Consumption, Bronchitis, Scrofula, and all forms of Nervous Debility.

The Lactophosphates prepared from the formula of Prof. Dusart, of the University of Paris. Combines with a superior Pemartin Sherry Wine and Aromatics in an agreeable cordial easily assimilable and acceptable to the most irritable stomachs.

Phosphorus, the oxidizing element of the Nerve Centres for the generation of Nerve Force; Lime Phosphate, an agent of Cell Development and Nutrition; Soda Phosphate, an excitant of Functional Activity of Liver and Pancreas, and Corrective of Acid Fermentation in the Alimentary Canal; Iron, the Oxidizing Constituent of the Blood for the Generation of Heat and Motion; Phosphoric Acid, Tonic in Sexual Debility; Alkaloids of Calisaya, Anti-Malarial and Febrifuge; Extract of Wild Cherry, uniting with tonic power the property of Calming Irritation and Diminishing Nervous Excitement.

THE SUPERIORITY OF THE ELIXIR consists in uniting with the Phosphates the special properties of the Cinchona and Prunus, of Subduing Fever and Allaying Irritation of the Mucous Membrane of the Alimentary Canal, which adapts it to the successful treatment of Stomach Derangements and all diseases of Faulty Nutrition, the outcome of Indigestion. Malassimilation of Food, and *failure of supply* of these essential elements of Nerve Force and Tissue Repair.

The special indication of this combination of Phosphates in Spinal Affections, Caries, Necrosis, Ununited Fractures Marasmus, Poorly Developed Children, Retarded Dentition, Alcohol, Opium, Tobacco Habits, Gestation and Lactation, to promote Development, etc., and as a *physiological restorative* in Sexual Debility, and all used up conditions of the Nervous System, should receive the careful attention of good therapeutists.

There is no strychnia in this preparation, but when indicated, the Liquor Strychniæ of the U. S. Dispensatory may be added, each fluid drachm of the solution to a pound bottle of the Elixir making the 64th of a grain to a half fluid ounce, an ordinary dose, a combination of a wide range of usefulness.

DOSE—For an adult, one tablespoonful three times a day, after eating; from seven to twelve years of age, one dessertspoonful; from two to seven, one teaspoonful. For infants, from five to twenty drops, according to age.

Prepared at the Chemical Laboratory of T. B. WHEELER, M. D., Montreal, D. C.

Put up in pound bottles and sold by all Druggists at One Dollar.

MATHEY-CAYLUS' GLUTEN

SILVER

1854

CAPSULES

OF

PURE COPAIBA AND OTHER MEDICINES.

SILVER

1854

Adapted and recommended for the cure recent or chronic Gleets, Fluor Albus, etc., etc.

The MATHEY-CAYLUS' CAPSULES, *coated with gluten*, present the most perfect mode for administering Copaiba, Cubebs, Norway Tar, Turpentine, and other remedies, the disagreeable odor and taste of which are often a hindrance to their use. This mode of preparing capsules, which has been approved by the Academy of Medicine, has been recommended in their clinical lectures by eminent Professors in the hospitals of Paris, as well as in those of New York and London.

By the first physicians of the hospitals of Paris, London, and New York.

SPECIAL ADVANTAGES OF MATHEY-CAYLUS' GLUTEN CAPSULES.—Being formed of thin, transparent, and readily assimilated coating, they so cover and disguise the medicine to be given, that it can be taken without disgust, but with ease. In this respect, they differ widely from the gelatine capsules, which have a hard, thick coating, which swells beyond measure, in the stomach, are hard to be swallowed, and when is of great importance, they create disturbance in the digestive functions.

The special advantage of the coating of gluten consists in the fact that, notwithstanding its extra thinness, and although it softens under the action of the gastric juice, it can pass the stomach without breaking, and only in the intestines is the medicinal matter liberated; this accounts for the fact that Mathey-Caylus' Capsules never cause the nausea, eructations, and dyspeptic symptoms, which are complained of by many persons using other preparations.

Finally, their regular ovoid form, which is so favorable to swallowing, their pleasant appearance, which dispels all disgust, and the advantage of being entirely free from taste and smell, recommend the use of these capsules even to the most delicate persons.

Thankful to the Medical Profession for the liberal patronage heretofore bestowed upon us, we hope that they will continue their favors, and we are convinced that they will never have any reason to regret the generous welcome they have given to our preparations.

MATHEY-CAYLUS' CAPSULES are never sold, except in bottles having the following inscription printed in the glass: MATHEY-CAYLUS A PARIS. And each bottle contains 64 capsules, making them the cheapest capsules in the market.

The following different kinds of Mathey-Caylus' Gluten Capsules are now offered:

COPAIBA AND TANNIC ACID,
COPAIBA AND S. N. OF BISMUTH,
COPAIBA AND CATECHU,
COPAIBA AND MAGNESIA,
COPAIBA, CUBEBS AND ALUM,
COPAIBA, CUBEBS AND RHATANY,
COPAIBA AND RHATANY,
COPAIBA AND CITRATE OF IRON,
COPAIBA AND CUBEBS,
COPAIBA PURE,
COPAIBA, CUBEBS AND CARB. OF IRON,
VENICE TURPENTINE, NORWAY TAR, PURIFIED,
CUBEBS AND TURPENTINE,
CUBEBS AND TANNATE OF IRON,
CUBEBS AND ALUM,
CUBEBS PURE,
COPAIBA AND MATICO,
COPAIBA, IRON AND OIL OF SANDAL,
COPAIBA AND OIL OF SANDAL,
COPAIBA, PEPSIN AND BISMUTH,
COPAIBA AND TAR,
COPAIBA, CUBEBS AND OIL OF SANDAL.

TANRET'S PELLETIERINE

For the Treatment of Tape-Worm (Tænia Solium.)

This New Tænifuge, the Active Alkaloid of Pomegranate Bark, has of late come into extensive use in France for the treatment of Tape-Worm (Tænia Solium). The results of numerous experiments with it at the Marine Hospitals of Toulon, St. Mandrier, etc., and in the Hospitals of Paris, St. Antoine, La Charite, Necker, Beaujon, etc., have all been most satisfactory. Doctor Dujardin Beaumetz, Member of the Academy of Medicine, and Prof. Labouibene, in their report to the Society of Therapeutics, have given it their unqualified approval after the most searching experiments. This preparation is pleasant to administer, and if certain preliminaries are observed success will be insured.

Sold only in Bottles containing one dose.

TANRET'S ERGOTININE.

ALKALOID AND ACTIVE PRINCIPLE OF SPURRED RYE.

This is a well defined Alkaloid that must not be confounded with Ergotine or other extracts; it is given in doses of from ¼ to ½ Milligramme (1-240th to 1-120th of a grain), in all cases where Ergot is indicated, viz.: Flooding, Post-partum Hemorrhages, Metrorrhagia, etc., etc.

It is put up in the following forms:

Syrup Containing ¼ Milligramme to each teaspoonful; Dose from 1 to 6 teaspoonsfuls per day.

Solution for hypodermic purposes, Containing 1 Milligramme to each cubic Centimeter; Dose, from 8 to 10 drops.

The Institute of France has awarded one of its Prizes to Mr. Chas. Tanret for the discovery of these Alkaloids.

Tanret's Pelletierine and Ergotinine are only prepared by Mr. Chas. Tanret, Laureate of the Institute of France, 66 Rue du Rempart, Paris.

Sole Agents for the United States, E. FOUGERA & CO., 30 North William St., N. Y.

PAMPHLET ON PELLETIERINE AND ERGOTININE SENT ON APPLICATION.

BOUDAULT'S PEPSINE

The Only Pepsine Used in the Hospitals of Paris for the Last 30 Years.

Unlike the various substitutes which, in most cases, are but unscientific or incompatible compounds, forced upon the Medical Profession as aids to digestion by extensive advertising, but which, when submitted to the proper tests, are found to be useless as digestive agents, Pepsine is constantly gaining in the esteem of the careful practitioner.

Since the introduction of Pepsine by Boudault and Corvisart, in 1854, the original BOUDAULT'S PEPSINE HAS BEEN AT ALL TIMES CONSIDERED THE BEST, as is attested by the awards it has received at the Expositions of 1867, 1868, 1872, 1873, in 1876 at the Centennial Exposition of Philadelphia, and in 1878 at the Paris Exposition.

The most reliable tests, carefully applied, will satisfy every one that BOUDAULT'S PEPSINE HAS A MUCH HIGHER DIGESTIVE POWER than the best Pepsines now before the Profession, and is therefore especially worthy of their attention.

BOUDAULT'S PEPSINE is prepared in the form of Pepsine Acid and Pepsine Neutral. It is sold in bottles of one ounce, with a measure containing exactly five grains; also in bottles of 4, 8, and 16 ounces for dispensing.

BOUDAULT'S WINE OF PEPSINE.

Formula of Dr. Corvisart.

The taste of Pepsine being perfectly disguised in this Wine, it may be recommended to persons who have difficulty in taking Pepsine in the form of powder. This Wine is tested so that a tablespoonful of it is equal in digestive power to ten grains of Boudault's Pepsine in powder. Sold only in 8 oz. Bottles.

Agents for the United States, E. FOUGERA & CO., New York.

FLUID

32° Fah. 0° Cent.

Fluid Cosmoline [*Petroleol*] is a fixed oil of Petroleum, a pure hydro-carbon prepared expressly for medical use. From it all the volatile and otherwise offensive properties of the crude Petroleum have been separated, without the aid of chemicals. Perfectly indifferent to atmospheric action, it remains inalterable in any climate. It is neutral in reaction, bland, soothing, cooling, and may therefore be applied to the most sensitive conditions without irritation. Flowing at 32° Fahr., it may be used may be warmed to any temperature the body can endure. It will be found excellent to relax the skin, to protect irritated surfaces from the air, and to use as a constituent in liniments, ointments and plasters, where an emollient is needed. For these and many other purposes, obvious to the medical profession, it will be found superior to olive oil, or to any vegetable or animal oils, which undergo decomposition and turn rancid. It contains no foreign ingredient.

SAMPLES FURNISHED UPON APPLICATION.

PETROLEOL

Is put up in 1-lb., 5-lb., 10-lb., 25-lb., 50-lb. and 100-lb. Cans.

FELLOWS'

HYPO-PHOS-PHITES

(SYR: HYPOPHOS: COMP: FELLOWS)

Contains **The Essential Elements** to the Animal Organization—Potash and Lime;
The **Oxydizing Agents**—Iron and Manganese;
The **Tonics**—Quinine and Strychnine;
And the **Vitalizing Constituent**—Phosphorus,
Combined in the form of a Syrup, with *slight alkaline reaction.*

It Differs in Effect from all others, being pleasant to taste, acceptable to the stomach, and harmless under prolonged use.

It has Sustained a High Reputation in America and England for efficiency in the treatment of Pulmonary Tuberculosis, Chronic Bronchitis, and other affections of the respiratory organs, and is employed also in various nervous and debilitating dis eases with success.

Its Curative Properties are largely attributable to Stimulant, Tonic, and Nutritive qualities, whereby the various organic functions are recruited.

In Cases where innervating constitutional treatment is applied, and tonic treatment is desirable, this preparation will be found to act with safety and satisfaction.

Its Action is Prompt; stimulating the appetite and the digestion, it promotes assimilation, and enters directly into the circulation with the food products.

The Prescribed Dose produces a feeling of buoyancy, removing depression or melancholy, and hence is of great value in the treatment of MENTAL AND NERVOUS AFFECTIONS.

From its exerting a double tonic effect and influencing a healthy flow of the secretions, its use is indicated in a wide range of diseases.

Prepared by JAMES I. FELLOWS, Chemist,

48 VESEY STREET, NEW YORK.

Circulars Sent to Physicians on Application.

FOR SALE BY ALL DRUGGISTS.

SUCCUS ALTERANS.

(McDADE).

SUCCUS ALTERANS is a purely vegetable compound of the preserved juices of Stillingia Sylvatica, Lappa Minor, Phytolacca Decandra Smilax Sarsaparilla, and Xanthoxylum Fraxineum, as collected by DR. GEO. W. MCDADE exclusively for ELI LILLY & CO., and endorsed by DR. J. MARION SIMS.

SUCCUS ALTERANS continues to gain favor from its remarkable Alterative and Tonic properties, *eliminating specific poison from the blood*, and *increasing the proportion of red corpuscles in anæmic patients* to a wonderful degree.

SUCCUS ALTERANS in venereal and cutaneous diseases is fast supplanting Mercury, the Iodides and Arsenic; and is a certain remedy for Mercurialization, Iodism, and the dreadful effects often following the use of Arsenic in skin diseases.

SUCCUS ALTERANS is also strongly recommended for its Tonic and Alterative effects in the myriad forms of scrofulous disease, and in all cases where anæmia is a factor. Such patients rapidly develop a good appetite, sleep soundly, and gain flesh rapidly. Many cases are on record where patients increased ten to twenty-five pounds in weight in a few weeks.

SUCCUS ALTERANS may be given for any length of time without injury to the patient.

SUCCUS ALTERANS is now endorsed by leading members of the medical profession, and in use by many hospitals of note.

SUCCUS ALTERANS is put up only in round amber bottles holding sixteen fluid ounces, which is sufficient for from two to six weeks' treatment.

ANY PHYSICIAN who has not received DR. MCDADE'S latest publication, the MONOGRAPHIA SYPHILITICA for JANUARY, 1887, should send their address, mentioning this journal, and we will mail a copy. It contains a paper, illustrated with colored plates, by Dr. D. H. GOODWILLIE, of New York, on the "Sequelæ of Syphilis," reports of cases in practice, and many other valuable papers.

SUCCUS ALTERANS is supplied by reputable wholesale and retail druggists everywhere. Agency for Great Britain, etc., JOHN M. RICHARDS, 46 HOLBORN VIADUCT, LONDON, E. C.

ELI LILLY & CO., PHARMACEUTICAL CHEMISTS, INDIANAPOLIS, IND., U. S. A.

Chapoteaut's Wine of Peptone.

The Peptone used in the preparation of this Wine is obtained by the action of Sheep Pepsine on Beef of the best quality. Being pure and neutral, it is entirely assimilable, containing neither Glucose, Albumen, nor Chloride of Sodium; for this reason it is the only preparation used in the laboratory of Mr. Pasteur for the culture of microscopic liquids.

Each wineglassful of Chapoteaut's Wine contains the Peptone of ten grammes of Beef, and has, besides, the digestive properties of Pepsine.

It may be used for the following cases: Anæmia, Dyspepsia, Debility, Distaste of Food, Inaction of the Digestive Organs, Convalescence, Alimentation for Wet Nurses, Children, and the Aged; Phthisis, Persons Weakened by Fever, Dysentery, and by patients having been operated upon for Cancerous Affections.

DOSE—One or two small wineglassfuls after meals.

DEPOTS: CHAPOTEAUT, 8 RUE VIVIENNE, PARIS—E. FOUGERA & CO., 30 N. WILLIAM ST., NEW YORK

MIDY'S SANTAL.

Midy's Essence of Santal is used with success in place of Copaiba and Cubebs, being harmless even in large doses. No matter what the color or amount of the secretion may be, the discharges are reduced and relief is obtained in forty-eight hours. No unpleasant effect is caused by its use, such as diarrhœa, eructations, or indigestion, and not giving to the Urine any odor.

In cases of Inflammation of the Bladder it acts rapidly, and in two or three days the bloody emission is suppressed it is used with success in Chronic Catarrh, rendering the urine clear at once.

DEPOTS: MIDY, CHEMIST, 110 FAUBOURG ST. HONORE, PARIS—E. FOUGERA & CO., 30 N. WILLIAM ST.

GRIMAULT & CO.'S IODIZED SYRUP OF HORSE-RADISH.

This Syrup is a close combination of Iodine with the juices of antiscorbutic plants. It is very palatable, and is easily digested. It is a powerful auxiliary in cases of Scrofula, Rachitism, Goitres, Suppuration of the Glands of the Neck, Dandruff, and Eruptions of the Skin. Each tablespoonful contains one and a half grains of Iodine, so intimately combined as to be insensible to the action of starch.

GRIMAULT & CO., PHARMACISTS, 8 RUE VIVIENNE, PARIS—E. FOUGERA & CO., NEW YORK.

Smithsonian Institute

Concentrated Palatable Nutrients.

PEPTONIZED EXTRACT OF BEEF.

Contains all the nutritive constituents of beef.

The superiority of this preparation over other extracts of beef depends upon:

1. The large proportion of albuminoids which it contains.
2. The fact that its albuminoid constituents are chiefly in the form of peptones, insuring rapid absorption and ready assimilation.
3. Its appetizing flavor.
4. Its perfect and ready solubility in water.

The uses of such a preparation are obvious. It is a concentrated, and at the same time an easily assimilated food, useful in all cases of acute disease where sustaining treatment is indicated, and especially valuable in convalescence, and in chronic conditions of inanition or malnutrition, particularly where the functions of the stomach are not well performed.

One part of the Peptonized Extract of Beef may be said to be the equivalent of eight parts of fresh beef. One teaspoonful (about one-half ounce) will make a pint of excellent beef tea.

A like quantity added to a pint of vegetable soup communicates to it a rich flavor, and converts it into a highly nutritious food.

It may be employed in a still more concentrated form, if desired, but from half an ounce to one ounce of the extract is as much as it is generally advisable to give at one time.

POWDER OF BEEF.

A concentrated food of the highest nutritive value.

It represents in an exceedingly concentrated form the total nutritive value of the beef.

It is tasteless, and can be taken for a longer time than the various extracts of beef, beef juices, etc., without exciting nausea.

It is not only more readily digested and assimilated, but also incomparably easier of administration than other concentrated aliments, and may be added to water, milk, or wine, or beaten up with the yolk of an egg.

Drs. Debove and Dujardin-Beaumetz, of Paris, France, Dr. Lauder Brunton, of London, England, Dr. Henry B. Millard, of New York City, and many others, have given Powder of Beef a most thorough trial, and report that it is a most valuable adjuvant in the treatment of dyspepsia, indigestion, gastritis, ulcer of the stomach, tuberculosis, and in all chronic wasting diseases accompanied by enfeeblement of the digestive and assimilative functions.

PURE POWDERED BONE.

For the treatment of such affections as nervous exhaustion, rickets, and all diseases depending upon a lack of the proper supply of the inorganic elements of the tissues, it is believed that Pure Powdered Bone will be found invaluable.

It has the exact chemical composition required for a true nerve and bone food.

Its mechanical construction is such as to aid digestion to the greatest possible degree.

It is tasteless and odorless.

It is miscible with all ordinary foods in the proportions required, without detection.

It is inexpensive, and therefor adapted for general use.

☞ Send for descriptive circulars, which will be mailed free on application.

PARKE, DAVIS & CO.,

Manufacturing Chemists,

New York: {60 Maiden Lane, 21 Liberty Street.

DETROIT, MICH.

30,000 PHYSICIANS
NOW PRESCRIBE

HYDROLEINE

(HYDRATED OIL,)

For Consumption and Wasting Diseases. It Produces Immediate Increase in Flesh and Weight.

FORMULA.

Each Dose of Two Teaspoonfuls, equal to 120 Drops, contains:

Pure Cod Liver Oil	80 m. (drops)	Soda	½ Grain.
Distilled Water	35 "	Boric Acid	½ "
Soluble Pancreatin	5 Grains.	Hyocholic Acid	¼ "

DOSE:

Two teaspoonfuls alone, or with twice the quantity of water, to be taken thrice daily after meals.

Hydroleine (Hydrated Oil) is not a simple alkaline emulsion of oleum morrhua, but a hydro-pancreated preparation containing acids and a medicum of soda. Pancreatin is the digestive principle of fatty foods, and, in the soluble form here used, completely saponifies the oleaginous material so necessary to the reparative process in all wasting diseases.

Lautenbach's researches on the function of the liver would show the beautiful adjustment of therapeutics in preparation of Hydroleine, furnishing, as it does, the acid and soda necessary to prevent self-poisoning by reabsorption of morbid tubercular detritus and purulent matters into the general circulation.

Each bottle in nutritive value exceeds ten times the same bulk of cod liver oil. It is economical in use and certain in result.

Sold at all Drug Stores at $1.00 per Bottle.

The principles upon which this discovery is based have been described in a treatise on "The Digestion and Assimilation of Fats in the Human Body," by H. C. BARTLETT, Ph. D., F. C. S., and the experiments which were made, together with cases illustrating the effect of Hydrated Oil in practice, are concisely stated in a Treatise on "Consumption and Wasting Diseases," by G. OVEREND DREWRY, M. D.

Copies of these Works sent free on Application.

WM. F. KIDDER & CO., 83 John Street, New York.

Agents for U. S.

Also exclusive Agents for SVAPNIA, or Bigelow's purified Opium, in SCALES and HALF-GRAIN GRANULES.

DISEASES OF THE URIC ACID DIATHESIS.

LAMBERT'S

LITHIATED HYDRANGEA.

KIDNEY ALTERATIVE—ANTI-LITHIC.

Formula.—Each fluid drachm of "Lithiated Hydrangea" represents thirty grains of FRESH HYDRANGEA and three grains of CHEMICALLY PURE Benzo-Salicylate of Lithia. Prepared by our improved process of osmosis, it is INVARIABLY of DEFINITE and UNIFORM therapeutic strength, and hence can be depended upon in clinical practice.

Dose.—One or two teaspoonfuls four times a day (preferably between meals).

Urinary Calculus, Gout, Rheumatism, Bright's Disease, Diabetes, Cystitis, Hæmaturia Albuminuria, and Vesical Irritations generally.

WE have had prepared for the convenience of Physicians Dietetic Notes, *suggesting the articles of food to be allowed or prohibited in several of these diseases.*

These Dietetic Notes have been bound in the form of small perforated slips for Physicians to distribute to their patients. Mailed gratis upon request, together with our latest compilation of case reports and clinical observations, bearing upon the treatment of this class of Diseases.

LAMBERT PHARMACAL COMPANY,

116 OLIVE STREET, ST. LOUIS.

RHEUMATISM.

DIETETIC NOTE.—A fruit and vegetable diet is most favorable for patients with chromic rheumatic troubles.

Allowed.—Beef and mutton in moderation, with horse-radish as a relish; fish and eggs, green vegetables and fruit, especially lemons. The skimmed milk diet has been advocated by some authors.

Avoid.—Starchy and saccharine food; all malt liquors, wines, and coffee.

SCOTT'S EMULSION

OF PURE COD LIVER OIL WITH HYPOPHOSPHITES OF LIME AND SODA.

THE STANDARD EMULSION OF COD LIVER OIL.

The ONLY Preparation of its class that will not SEPARATE nor SPOIL in any climate.

IT IS MADE FROM THE PUREST NORWEGIAN COD LIVER OIL, COMBINED WITH CHEMICALLY PURE HYPOPHOSPHITES AND GLYCERINE.

Acknowledged by leading Physicians in the U. S. and many other Countries to be the most ELEGANT most PALATABLE and EASILY DIGESTED preparation in the World, and can be tolerated longer by Children and persons with delicate stomachs than any other.

WE ASK A CAREFUL COMPARATIVE TEST WITH ANY OR ALL SIMILAR PREPARATIONS.

FORMULA: 50 per cent, of Pure Cod Liver Oil, 6 grs. of the Hypophosphites of Lime, and 3 grs. of the Hypophosphite of Soda to a fluid ounce. Emulsified with mucilage and Glycerine.

S. & B's BUCKTHORN CORDIAL, RHAMNUS FRANGULA.

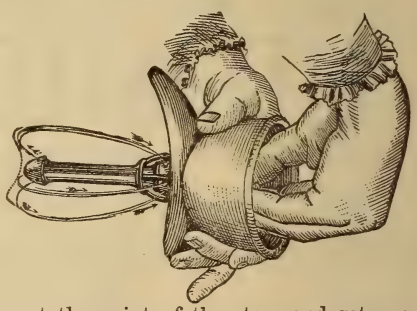
Is giving universal satisfaction to the profession, for its mild but certain and efficient cathartic action. It seems to be *almost* a *specific* for *habitual constipation*, and we are constantly in receipt of the most flattering reports regarding it. The care we use in its preparation—having the bark always the proper age, and properly exhausted—makes it always reliable in its action. Be sure and specify S. & B. Buckthorn Cordial.

To those who have for any reason never yet tried these preparations, we will be pleased to send samples free by express.

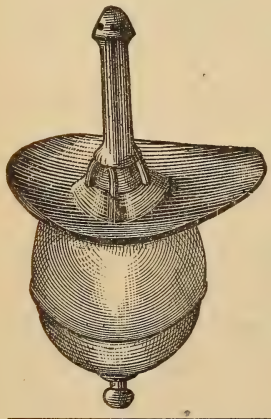
SCOTT & BOWNE, Mfg. Chemists, 132 & 134 S. 5th Ave., N. Y.

"PALLAS" SYRINGE.

VAGINAL AND RECTAL.



A MOST PERFECT and simply constructed Syringe for medicating and irrigating the vaginal cavity. The novel bulb of this Syringe, when doubled upon itself, as shown in the cut, will cause no fluid to be left, as is so apt to happen with the ordinary bulbs, and when filled will contain just enough fluid for the expansion of the vaginal folds. The hard rubber labial shield, with its plug, when firmly pressed against the labia, will both prevent spilling and soiling of linen, and the fluid can therefore be kept in circulation and in contact with the parts by repeating the pumping motion of the bulb. It will also be noticed that the fluid escapes as a spray from the large holes at the point of the stem and returns through the holes at the root of same, which is provided with hard rubber screen-bars, preventing the folds from interfering with the rapid return of the fluid into the bulb. In filling the bulb, a couple of turns will unscrew it. In handsome case, satin lined. Retail price, $3.75. To physicians, $3.00.



CHRISTIAN JENSEN & CO.,

2207 Fairmount Avenue,

PHILADELPHIA, PA.

COLDEN'S Liquid Beef Tonic.

Established 15 Years.
OBSERVE the NAME.
Beware of Imitations.

ORIGINAL LABEL:
"Colden's Liebig's Liquid Extract of Beef and Tonic Invigorator."

An Invaluable Aid in Medical Practice.

Differs Essentially from all other Beef Tonics.

COLDEN'S Liquid Beef Tonic is endorsed by scores of physicians, who are growing to realize more and more its importance in repairing, in accordance with the principles of dietetics, the **waste which disease entails.** It consists of the extract of Beef (by Baron Liebig's process) spirit rendered non-injurious to the most delicate stomach by extraction of the Fusel Oil, soluble Citrate of Iron, Cinchona, Gentian and other bitter tonics. An official analysis of this preparation by the eminent Chemist, ARTHUR HILL HASSALL, M. D., F. R. S., and an endorsement by the late SIR ERASMUS WILSON, F. R. S., is printed on the label of each bottle.

As a **blood food,** and a **reliable tonic** in all cases of debility and weakness, Malarial Fever, Anæmia, Chlorosis, Incipient Consumption, etc., it is the best preparation ever used. It acts directly on the sentient Gastric Nerves, stimulating the follicles to secretion, and gives to weakened individuals that first prerequisite to improvement—an appetite. It strengthens the nervous system when unstrung by disease, and has been employed with remarkable success as a remedy for Drunkenness and the Opium Habit.

Its Range of Action Embraces all Cases of Debility.

In order that physicians may form some idea of the nature of its ingredients, I will upon application in person, or by letter (enclosing a card), send a sample bottle of COLDEN'S LIQUID BEEF TONIC to any physician in regular standing, in the United States. Please ask your Dispensing Druggist (if he has not already a supply) to order it. In prescribing this preparation, physicians should be particular to mention "COLDEN'S"—*viz.:* **"*Ext. carnis, fl. comp. (Colden's.)*"** It is put up in pint bottles, and can be had of Wholesale and Retail Druggists generally throughout the United States.

C. N. CRITTENTON, Sole Agent, 115 Fulton St. New-York.

GLENN'S Sulphur Soap.

ALL physicians know that ***skin diseases*** are more or less constitutional, or dependent upon some specific poison in the blood, which if eradicated by internal treatment needs something to remove its appearance from the surface. Experience has proved that the best possible aid in the accomplishment of this end is obtained by the use of ***Sulphur in soap.*** GLENN'S SULPHUR SOAP is the best combination of its kind, and the one now generally used. It is for sale by all Druggists, at **25** cents a cake, or 3 cakes for **60** cents.

CONSTANTINE'S PINE TAR SOAP

Has been on trial among physicians for very many years as a toilet Soap and Healing Agent, and its superior virtues have been unanimously conceded **in all cases where the use of tar is indicated.** Unsolicited expressions of its excellence have been received from the Medical Faculty generally. IT IS THE BEST TAR SOAP MADE. None genuine unless stamped "A. Constantine's Persian Healing Pine-Tar Soap." For sale by all Druggists.

Samples of either of the above-named Soaps will be sent free upon application in person or by letter (enclosing card) to any physician in regular standing in the United States. C. N. Crittenton, 115 Fulton Street, New York. Please mention "THE MEDICAL AND SURGICAL REPORTER."

TABLETS.

For Gastric and Intestinal Indigestion.

PANCREATIC TABLETS.
(FAIRCHILD.)

Each Tablet contains three grains of the Pure Extractum Pancreatis.

COMPOUND PANCREATIC TABLETS.
(FAIRCHILD.)

Each Tablet contains:
Extractum Pancreatis ..... gr. 2
Bismuth Subnitrate, Squibb's ..... gr. 3
Powdered Ipecac.....gr. 1-10

PEPSINE TABLETS.
(FAIRCHILD.)

Each Tablet contains one grain of our Pure Pepsine in Scales, combines with acids and appropriate aromatics.

PEPSINE AND BISMUTH TABLETS.
(FAIRCHILD.)

Each Tablet contains one grain of Pure Pepsine (Fairchild's), and two grains of Bismuth Subnitrate (Squibb's).

PEPSINE AND DIASTASE.
(FAIRCHILD.)

In Tablets, each containing two grains.

PEPSINE, BISMUTH & PANCREATIC TABLETS.
(FAIRCHILD.)

Each Tablet contains:
Pepsine (Fairchild).....1½ gr.
Ext. Pancreatis (Fairchild) ..... 1½ gr.
Bismuth Subnitrate (Squibb) .....2 gr.

PEPTONATE OF IRON.
(Fairchild.)

In Tablets, each containing three grains,
The Peptonate of Iron is considered to be the most readily assimilable of all the forms of iron.

Descriptive Pamphlets of these Preparations to be had gratis upon demand.

FAIRCHILD BROS. & FOSTER,
82 & 84 Fulton Street, New York.

Infantile Atrophy.

"INFANTILE ATROPHY, or the slow wasting which is a familiar symptom in hand-fed babies, is one of the commonest causes of death in early infancy."

"INFANTILE ATROPHY is the consequence of insufficient nourishment. The child wastes because he is starved. But it is not to actual lack of feeding that the starvation is usually to be ascribed. A baby fed from a breast which secretes milk poor in quality and insufficient for the child's support, will, of course, grow slowly thinner; but an infant supplied largely with farinaceous compounds, from which his feeble digestive organs fail to derive even a minimum of nourishment, will waste with startling rapidity."

"Mellin's Food may be used from the first, and is almost always well digested. Farinaceous matters, unless guarded by malt, as in Mellin's Food, should not be given to a child younger than six months."

From "Disease in Children," by Eustace Smith, M. D., F. R. C. P., London, England.

A sample of Mellin's Food, sufficient for trial, will be sent free to any Physician desiring it.

BEWARE OF IMITATIONS.

Friedrichshall.

THE WELL-KNOWN APERIENT MINERAL WATER.

IMPORTANT NOTICE.

By reason of an improved method of caption, by which dilution is avoided, FRIEDRICHSHALL WATER will be found now to be of ***considerably greater strength*** and ***efficacy*** than heretofore.

The ordinary dose is a large wineglassful (4 ounces), taken fasting. Most efficacious and more acceptable to the palate when heated or mixed with an equal quantity of very hot water.

"The most suitable aperient for prolonged use."—***Prof. SEEGEN.***

"After twenty years' use I appreciate it as highly as ever."—

Prof. VIRCHOW.

OF ALL DRUGGISTS AND MINERAL WATER DEALERS.

SAVORY & MOORE beg to call the attention of the Profession to some of their Special Preparations, the purity and uniform strength of which are guaranteed.

Pancreatic Emulsion. In Consumption, Wasting, LOSS OF THE POWER OF DIGESTION AND ASSIMILATION, this pure drug is the MOST POTENT REMEDY. This is now attested by the published records of numerous medical men, extracts of which accompany each bottle.

Peptodyn, the New Digestive, is a combination of the whole of the digestive secretions, forming an invaluable remedy in the treatment of all forms of Dyspepsia, and all diseases arising from imperfect nutrition. Peptodyn is intended as a general promoter of digestion for persons not necessarily considered in bad health; thus, when taken about a quarter of an hour after a meal, it will be found to assist digestion in a remarkable manner, and prevent the discomfort which often follows the partaking of a full meal by persons in good health.

Pancreatine Powder, for Indigestion and Loss of APPETITE. This palatable and popular remedy effects the digestion and assimilation of all food, especially of FATTY SUBSTANCES, and is therefore invaluable to patients who are unable to digest Cod Liver Oil, and who are thus deprived of its nourishing and invigorating properties.

Gelatine Discs for Hypodermic Use—Of Morphia, CODEIA, ERGOTINE, ATROPIA, STRYCHNIA, APOMORPHIA, etc. The chief features of these discs are their instant solubility, by which hypodermic solutions can be instantly obtained of uniform and reliable strengths; they keep good for an unlimited period in their dry state, and are extremely portable. (Prepared in accordance with Dr. Sansom's recommendation.)
In tubes, each containing 25 discs.

Etherodine (Substitute for Chlorodyne). A clear, bright fluid, pleasant to the taste, readily miscible with water or any suitable menstruum. The therapeutical properties of ETHERODINE are identical with those of CHLORODYNE, but the former is an elegant preparation, and more convenient for use.

Gelatine Discs for Ophthalmic Purposes.
"Much smaller doses of medicaments such as Atropine, Calabar Bean Extract, Sulphate of Zinc, Morphia, etc., etc., suffice to produce a marked effect by this form of application, than when drops are introduced."—*The Lancet.*
In tubes, each containing 100 discs.

Gelatine Lamels for Internal Administration, consist of thin, pliable, and, in most cases, transparent sheets of uniform thickness, accurately divided into squares by raised lines, each square containing an exact dose of the medicine with which the sheet is impregnated.
In sheets, each consisting of 24 squares.

Datura Tatula, for Asthma, Hay Fever, and Chronic BRONCHITIS. Recommended by the Profession as a remedy of great power and usefulness in cases of short and difficult breathing, spasmodic coughing, etc. The most convenient forms for use are—
Datura Tatula Cigars. Datura Tatula—prepared for use by means of a pipe.
Datura Tatula Cigarettes. Datura Tatula Pastilles—for Inhalation.

SAVORY & MOORE, 143 New Bond Street, London.
Agents for America, E. FOUGERA & CO., New York.

In corresponding with Advertisers, please mention THE MEDICAL AND SURGICAL REPORTER.

THREE MORE MEDALS IN 1886.

The recent International Expositions at Edinburgh and Liverpool, and the American Institute, New York, each awarded us the Highest Silver Medal, which swells our list to about

THIRTY-FIVE GOLD, SILVER AND BRONZE MEDALS

FROM ALL PARTS OF THE WORLD.

THE REASON FOR IT IS PLAIN.

We make but one quality, and that the best. WE SCRUPULOUSLY CONFORM TO THE PHARMACOPŒIAL, or other recognized standards, in the incorporation of medicinal ingredients. We command perfect skill in manipulation, we use pure and superior fabrics, our packages are neat, elegant, and convenient, and our prices are not only uniform, but the most reasonable that can be placed on honest goods of the first quality.

THE STATUS OF THE WHOLE PLASTER BUSINESS

is well shown by the analyses of Belladonna Plasters, the leading article on the list of spread goods, made in March, 1886 by Dr. Albert B. Prescott, Prof. of Chemistry at the University of Michigan, and President of the American Chemical Society, from goods purchased by him in open market. The analyses were made by the same process, in parallel operations, for the quantity of total Belladonna alkaloids, estimated as atropine, and show our Belladonna plaster to contain 0.543 of a grain of alkaloid, which represents the strength of a plaster made after the standard prescribed by the U. S. P. from the highest grade of belladonna root. The same analyses showed the next highest belladonna plaster to contain but 0.264 grains of alkaloid, or less than half U. S. P. strength; while the several other brands examined contained from 0.230 grains to 0.045 grains, proving the S. & J. plaster to contain more than twice as much belladonna as the one approaching nearest to it, the rest falling below the line of any valid comparison, a number having scarcely a trace of belladonna alkaloid.

IN FURTHER PROOF OF OUR DESIRE AND PURPOSE

to maintain, and, if possible, to enhance, the high standard and reputation of our goods, we cite the fact that we have recently erected one of the most complete and best equipped laboratories in the United States, and we shall hereafter manufacture every medicinal extract incorporated in our specialties, and can guarantee, through our own analyses, the strength and quality of all drugs we employ; thus, also, ensuring the perfect uniformity of all our products. For many years, physicians have preferred our goods because they always found them therapeutically reliable, as others were not; and our new departure will set up a stronger safeguard than ever against cheap and worthless plasters and dressings.

WE HAVE ESTABLISHED THE STANDARD.

Failing to make goods equal to ours, and which would sell on their merits, our competitors have heretofore striven to introduce their goods to the notice of the trade and the medical profession by imitating our trade-marks, packages, circulars, and price lists. Now, certain plaster makers have evidently found it necessary to adopt more desperate tactics, since we learn from retailers in Pennsylvania and New Jersey that jobbing-house salesmen have solicited them to buy other goods when ours were indicated on their order. In one case the salesmen said the house he represented no longer stocked our goods; in another, that we no longer made some of the articles desired. On inquiry, we learn that the representatives of these desperate plaster manufacturers offered these men a personal consideration to perform this dishonorable service. In one or two cases a direct money bribe was tendered and refused. The whole scheme shows to what straits our competitors are reduced, and indicates clearly the necessity for physicians specifying "S. & J." goods when prescribing, if they would be assured of obtaining the therapeutic results expected from medicinal plasters, or the strict reliability of goods for surgical use.

NOTABLE POINTS

RELATIVE TO

Lactated Food.

IT IS A COOKED FOOD.

By the use of high steam heat the gluten flour used is partially torrefied. This is done while the flour is dry, and during the process it is in constant motion, which insures perfect cooking to every particle.

Routh says, (Infant Feeding, page 380) that by this process, "the starch granules are rendered more separable, the gluten is reduced to a more porous condition, readily acted on by the gastric juice, and as an aliment, therefore, is more nutritious and digestible."

IT IS A PREDIGESTED FOOD.

"You state that it is self-digestive as regards the conversion of insoluble starch into soluble dextrine and maltose. My experiments with it lead me to hold that this is correct." J. MILNER FOTHERGILL.

IT CONTAINS NO UNCHANGED STARCH.

By the peculiar process of manufacture, every particle of the gluten flour is subjected to the action of the malto-diastase, and by it all the starch contained is transformed into soluble carbo-hydrates.

Professor CARL SEILER says, "Examination has proved that all the starch granules are converted, as shown by their behavior to polarized light."

NO CANE SUGAR USED.

The basis of Lactated Food is the pure sugar of milk made by the improved processes of the American Milk Sugar Co. The great value of this article has been shown conclusively. Cane sugar is not used in the composition or preparation of the Food on account of its liability to cause irritation by reason of the acetic fermentation which it creates in the stomach. Milk sugar never causes this fermentation or irritation.

IT IS NON-IRRITATING.

By reason of the fact that Lactated Food is partially digested in process of Preparation, it is assimilated by the feeblest stomach, and no undigested particles pass into the bowels to irritate, and thus cause troublesome and dangerous bowel disorders.

IT IS HIGHLY NUTRITIOUS.

The nutritive elements of Lactated Food are derived from the three great cereals, Wheat, Barley, and Oats. From the Wheat is taken the pure gluten, the most nourishing substance known for the muscles and tissues; from the Barley, all the soluble albuminoid and extractive matter resulting from the most careful malting; and from the Oat, the strengthening properties for which it is so well known. The result is a food which never disappoints, and under which the feeble child or invalid rapidly rallies.

FOR CHOLERA INFANTUM.

It is the chief reliance of many eminent practitioners, and it is the safest food in summer for all young or delicate children.

Another important consideration is its low price, it being much more economical than other foods. We make four sizes, selling for 25 cents, 50 cents, $1 00, and $2.50. *A dollar can will furnish one hundred and fifty meals for an infant.*

If any physician that has not yet made a trial of the Lactated Food will write us, we will send a package of our regular size, postpaid, without charge, with the understanding that it will be given a careful trial as soon as possible.

We shall use every precaution to maintain the high standard of this Food, and to insure perfect satisfaction to the profession in its use.

DR. RABUTEAU'S

[Laureate of the Institute of France]

DRAGEES, ELIXIR, AND SYRUP OF IRON.

"The experiments made in the hospitals of Paris have demonstrated that *Dr. Rabuteau's Dragees, Elixir, and Syrup* regenerate the red globules of the blood with a rapidity never observed with the use of the other ferruginous preparations. These results have been proved by the various *Compi-Globules.*

"The ferruginous preparations of *Dr. Rabuteau* do not cause any constipation, and are perfectly tolerated by the weakest persons."—*Gazette des Hopitaux.*

Dr. Rabuteau's Elixir is prescribed when some difficulty is experienced in swallowing the Dragees; it is especially adapted to weak persons, whose digestive functions need strengthening or stimulating.

Dr. Rabuteau's Syrup is especially prepared for children, who take it readily because of its agreeable taste.

A sample of Rabuteau's Dragees will be sent free to any Physician mentioning *The St. Louis Medical and Surgical Journal.*

Prepared by CLINN & Co., Pharmacists, Paris.

E. FOUGERA & Co., Agents for the United States.

Ducro's Alimentary Elixir,

A COMBINATION UNITING THE PROPERTIES OF

ALCOHOLIC STIMULANTS AND RAW MEAT

This preparation, which has been used with great success in the hospitals of Paris, since 1868, is adapted to the treatment of all diseases requiring the administration, in a small volume, of a tonic able to stimulate and support the vital forces, as *Pulmonary Phthisis, Depression and Nervous Debility, Adynamia, Malarious Cachexia,* etc.

Prepared by EMILE DURIEZ & Co., Successors to DUCRO & CIE, Paris.

KIRKWOOD'S INHALER,

This is the only complete, reliable, and effective inhaler in use, arranged for the direct application of Muriate of Ammonia and other remedial agents in the state of vapor to the diseased parts of the air passages in the treatment of catarrb and diseases of the throat and lungs. No heat or warm liquids required in its use.

It is entirely different from the various frail, cheap instruments that have been introduced.

KIRKWOOD'S INHALER is accompanied by testimonials of the highest professional character, together with carefully-prepared formulas for use.

Retail Price, complete, $2.50.

☞A liberal discount allowed to the trade and profession.

☞For descriptive pamphlets or other information, address

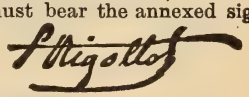
E. FOUGERA & CO., 30 North William Street, New York.

Rigollot's Mustard Paper

Is one of the most important and useful discoveries of the age. It is the only preparation which has been adopted by the civil and military hospitals, and the armies and navies of France and England, and which has obtained a medal at the Centennial Exposition at Philadelphia. All other mustard plasters or leaves, of whatever name, are but imitations of the original.

Physicians will find it the most reliable sinapism, prompt and certain in its action, and will therefore always prescribe it. Every sheet, in order to be genuine, must bear the annexed signature of the inventor.

Sold in tin boxes containing 10 sheets, also 25 and 100 sheets, by all respectable chemists throughout the world.



E. FOUGERA & CO., New York Depositaries.

TAMAR INDIEN GRILLON.

A laxative, refreshing, and medicated Fruit Lozenge, very agreeable to take, and never causing irritation. Its physiological action assures the immediate relief and effectual cure of

CONSTIPATION,

HÆMORRHOIDS, BILE,
CEREBRAL CONGESTION, HEADACHE,
LOSS OF APPETITE,
INTESTINAL OBSTRUCTIONS, ETC.,

by augmenting the peristaltic movement of the intestine without producing undue secretion to the liquids. Unlike pills and the usual purgatives, it does not predispose to intestinal sluggishness, and the same dose always produces the same effect, that is to say, never needs increasing.

It is recommended by the most eminent physicians of Paris, notably Drs. BELIN and TARDIEU, who prescribe it constantly for the above complaints, and with most marked success.

Paris: E. GRILLON, 27 Rue Rambuteau.

SOLD BY ALL DRUGGISTS.

PRIVATE SCHOOL FOR THE DEAF.

Deaf Children Taught to Speak and Educated through Lip Reading. Aural Training and Defective Speech treated and improved. A Kindergarten Department for Deaf Children from three to six years old. A Training Class for Teachers of Articulation.

School re-opens September 20, 1886, at No. 16 South Broad Street (opposite Public Buildings), Philadelphia, Pa.

Directions to Parents of Deaf Children for their Treatment from Infancy in order that they may learn Speech and Lip Reading, furnished free on application to **MARY S. GARRETT, Principal.**

WHEELER'S TISSUE PHOSPHATES

Bone-Calcium Phosphate $Ca_3 2P.O._4$, Sodium Phosphate $Na_2 H.P.O._4$, Ferrous Phosphate $Fe_3 2P.O._4$, Trihydrogen Phosphate $H_3 P.O._4$.

WHEELER'S COMPOUND ELIXIR OF PHOSPHATES AND CALISAYA. A Nerve Food and Nutritive Tonic, for the treatment of Consumption, Bronchitis, Scrofula, and all forms of Nervous Debility.

The Lactophosphates prepared from the formula of Prof. Dusart, of the University of Paris. Combines with a superior Pemartin Sherry Wine and Aromatics in an agreeable cordial easily assimilable and acceptable to the most irritable stomachs.

Phosphorus, the oxidizing element of the Nerve Centres for the generation of Nerve Force; Lime Phosphate, an agent of Cell Development and Nutrition; Soda Phosphate, an excitant of Functional Activity of Liver and Pancreas, and Corrective of Acid Fermentation in the Alimentary Canal; Iron, the Oxidizing Constituent of the Blood for the Generation of Heat and Motion; Phosphoric Acid, Tonic in Sexual Debility; Alkaloids of Calisaya, Anti-Malarial and Febrifuge; Extract of Wild Cherry, uniting with tonic power the property of Calming Irritation and Diminishing Nervous Excitement.

THE SUPERIORITY OF THE ELIXIR consists in uniting with the Phosphates the special properties of the Cinchona and Prunus, of Subduing Fever and Allaying Irritation of the Mucous Membrane of the Alimentary Canal, which adapts it to the successful treatment of Stomach Derangements and all diseases of Faulty Nutrition, the outcome of Indigestion. Malassimilation of Food, and *failure of supply* of these essential elements of Nerve Force and Tissue Repair.

The special indication of this combination of Phosphates in Spinal Affections, Caries, Necrosis, Ununited Fractures Marasmus, Poorly Developed Children, Retarded Dentition, Alcohol, Opium, Tobacco Habits, Gestation and Lactation, to promote Development, etc., and as a *physiological restorative* in Sexual Debility, and all used up conditions of the Nervous System, should receive the careful attention of good therapeutists.

There is no strychnia in this preparation, but when indicated, the Liquor Strychniæ of the U. S. Dispensatory may be added, each fluid drachm of the solution to a pound bottle of the Elixir making the 64th of a grain to a half fluid ounce, an ordinary dose, a combination of a wide range of usefulness.

DOSE—For an adult, one tablespoonful three times a day, after eating; from seven to twelve years of age, one dessertspoonful; from two to seven, one teaspoonful. For infants, from five to twenty drops, according to age.

Prepared at the Chemical Laboratory of T. B. WHEELER, M. D., Montreal, D. C.

Put up in pound bottles and sold by all Druggists at One Dollar.

LEVIS'S METALLIC SPLINTS.

FLEXIBLE, PERFORATED, NICKEL-PLATED, Conformable to every size and condition of Limbs. VERY LIGHT, INDESTRUCTIBLE, and INEXPENSIVE. The complete set consists of 21 pieces in a neat, compact case. Full descriptive circulars sent on application. ☞ PRICE, $15.00 Per Set. ☜

CELERINA

NERVE-TONIC, STIMULANT AND ANTISPASMODIC.

FORMULA.—Every Fluid-Drachm represents FIVE grains EACH—Celery, Coca, Kola, Viburnum and Aromatics.

INDICATIONS.—Impotency, Spermatorrhea, Loss of Nerve-Power (so usual with Lawyers, Preachers, Writers and Business Men), Nervous Headache, Neuralgia, Paralysis, Dysmenorrhea, Hysteria, Opium-Habit, Inebriety, Prostatitis, Dyspepsia, and ALL LANGUID or DEBILITATED conditions of the System.—*Indispensable to restore a patient after alcoholic excess.*

DOSE.—One or two teaspoonfuls three or more times a day, as directed by the Physician.

ALETRIS CORDIAL

UTERINE TONIC AND RESTORATIVE.

PREPARED FROM THE ALETRIS FARINOSA OR TRUE UNICORN.

INDICATIONS.—Amenorrhea, Dysmenorrhea, Leucorrhea, Prolapsus Uteri, Sterility, to PREVENT Miscarriage, Etc.

DOSE.—One teaspoonful three or four times a day.

Unrivaled as a Uterine Tonic in Irregular, Painful, Suppressed and Excessive Menstruation.

IT RESTORES NORMAL ACTION TO THE UTERUS, AND IMPARTS VIGOR TO THE ENTIRE UTERINE SYSTEM.

☞Where Women have aborted during previous Pregnancies, or in any case where abortion is feared, the Aletris Cordial is indicated, and should be continuously administered during entire gestation.

ACID MANNATE

A MILD, SAFE AND PLEASANT APERIENT.

☞ Prepared from Manna, Purified Cathartic Acid, and Fruit Juices. ☜

INDICATIONS.—Constipation, Biliousness, Congestions, Etc. INDISPENSABLE AS AN APERIENT FOR WOMEN DURING PREGNANCY. In teaspoonful doses, 3 times a day, it favors the SECRETION and EXCRETION of bile, and gradually removes the congested and torpid states of the liver, and keeps the bowels in a regular and soluble condition.

DOSE.—ONE or MORE teaspoonfuls as directed by the Physician.

S. H. KENNEDY'S
CONCENTRATED EXTRACT OF
PINUS CANADENSIS
DARK — A NON-ALCOHOLIC LIQUID. — WHITE

A MOST VALUABLE NON-IRRITATING MUCOUS ASTRINGENT.

INDICATIONS.—Albuminuria, Diarrhea, Dysentery, Night-Sweats, Hemorrhages, Profuse Expectoration, Catarrh, Sore Throat, Leucorrhea, and other Vaginal Diseases, Piles, Sores, Ulcers, Burns, Scalds, Gonorrhea, Gleet, Etc.

When Used as an Injection, to Avoid Staining of Linen, the WHITE Pinus should be Used.

Recommended by DR. J. MARION SIMS, and other Prominent Physicians.

BUFFALO LITHIA WATER,

FOR GOUTY, RHEUMATIC, AND RENAL AFFECTIONS.

ROBERTS BARTHOLOW, M. A., M. D., LL. D., Prof. of Materia Medica and General Therapeutics in the Jefferson Medical College of Philadelphia. See his "Materia Medica and Therapeutics."

"Buffalo Lithia Spring of Virginia contains well-defined traces of Lithia, and is Alkaline. This has been used with great advantage in Gouty, Rheumatic, and Renal Affections." * * * * * * * * * "There is little doubt that the continuous use of Alkaline Waters for a long period will cause the solution of Uric Acid Renal Calculi. For this purpose those Alkaline Waters rich in POTASSA are preferable."

This water has a large percentage of the CARBONATE OF POTASSA, making it rich in valuable Alkali.

Dr. Wm. A. Hammond, of New York, Surgeon-General U. S. Army (retired), Professor of Diseases of the Mind and Nervous System in the University of New York, etc.

"I have for some time made use of the Buffalo Lithia Water in cases of affections of the Nervous System complicated with Bright's Disease of the Kidneys, or with a Gouty Diathesis. The results have been eminently satisfactory. Lithia has for many years been a favorite remedy with me in like cases, but the Buffalo Water certainly acts better than any extemporaneous solution of the Lithia Salts, and is, moreover, better borne by the stomach. I also often prescribe it in those cases of Cerebral Hyperæmia, resulting from over mental work—in which the condition called Nervous Dyspepsia exists—and generallly with marked benefit."

Dr. Robert Battey, of Georgia, Suggester of Battey's Operation, Member of the American Medical Association, etc.

"I would state that I have been using the Buffalo Lithia Water, No. 2, in my practice for three years past, in cases of Chronic Inflammation of the Bladder, whether induced by Stone, by Enlarged Prostate in the aged, or by Neglected Gonorrhœa, and have secured excellent results, which encourages me to prescribe it for the future."

Dr. Hunter McGuire, Richmond, Virginia, late Professor of Surgery, Medical College of Virginia.

"Buffalo Lithia Water, Spring No. 2, as an Alkaline Diuretic, is invaluable. In Uric Acid Gravel, and, indeed, in diseases generally dependent upon a Uric Acid Diathesis, it is a remedy of extraordinary potency. I have prescribed it in cases of Rheumatic Gout, which had resisted the ordinary remedies, with wonderfully good results. I have used it also in my own case, being a great sufferer from this malady, and have derived more benefit from it than from any other remedy."

Dr. Alfred L. Loomis, of New York, Professor of Institutes and Practice of Medicine, Medical Department University of New York.

"For the past four years I have used the Buffalo Lithia Water in the treatment of Chronic Interstitial Nephritis occurring in Gouty and Rheumatic subjects, with the most marked benefit. In all Gouty and Rheumatic Affections I regard it as highly efficacious."

Dr. Harvey L. Byrd, of Baltimore, President and Professor of Obstetrics and Diseases of Women and Children, in the Baltimore Medical College, formerly Professor of Practical Medicine, etc.

"I have witnessed the best results from the action of the Buffalo Lithia Water, Spring No. 2, in Chronic Gout, Rheumatic Gout, Rheumatism, Gravel, and Stone in the Bladder, and I do not hesitate to express the opinion that in all diseases depending upon or having their origin in Uric Acid Diathesis, it is unsurpassed, if, indeed, it is equaled by any water thus far known to the profession.

"It has an ascertained value in Bright's Disease. A knowledge of its action in that disease thus far would seem to warrant the belief that it would, in many instances, at least in its early stages, arrest it entirely; and in its more advanced stages prove a decided comfort and palliative."

Water, in cases of one dozen half gallon bottles, $5.00 per case, at the Springs. Testimonials sent free on application. The Virginia Buffalo Lithia Springs Company have no longer control of this water. To get it **FRESH,** order directly of or from parties who deal directly with

THOMAS F. GOODE, Prop. Buffalo Lithia Springs, Va.

WATER FOR SALE BY

FRED. BROWN, or J. F. HAYES, Philadelphia.

Since the introduction—1870—of the substance known as **COSMOLINE** (Unguentum Petrolei) to the College of Pharmacy in Philadelphia, by the late Professor Parrish, who was one of the very first to recognize its merits, it has become very widely known and variously used by the Physicians, Surgeons, and Pharmacists of all schools throughout this country and abroad. Pure Petroleum will not oxidize, but the processes resorted to by many, in order to obtain special products from petroleum, introduce properties that will oxidize in ordinary temperatures, and develop other objections with age. Such products may be used in the arts, but they were decided years ago to be exceedingly irritating and otherwise interfering as surgical dressings or bases for ointments. The Manufacturers of **COSMOLINE** (Unguentum Petrolei) took advantage of the possibility of producing an article which would not only not become rancid, but also one which would be absolutely free from those properties which affected the ordinary residuums and products of the petroleum still. Notwithstanding numerous other petroleum preparations of variable merit and ostensibly for the same purpose, have since been offered, **COSMOLINE** (Unguentum Petrolei) has continued to increase steadily in professional favor. **COSMOLINE** (Unguentum Petrolei) was not recommended to the profession at large until the leading Physicians and Pharmacists of Philadelphia were thoroughly satisfied of its fitness and absolute purity, and since then it has not been changed to meet every speculative fancy, or to compete in price with those preparations of petroleum having some outward resemblance to Cosmoline, but found either deficient in action or positively irritating, owing to chemical agencies used to cheapen the cost of manufacture. It was apparent from its first introduction, that **COSMOLINE** (Unguentum Petrolei) was adapted to a very wide range of uses in Surgery and Pharmacy; and when it was found that its uniformity could invariably be depended upon, it is not surprising that it obtained supremacy over those products which have been varying as commercial experiments, and lacking in all the essential and absolutely pure characteristics needed for a general surgical dressing and base for ointments.

Yours very respectfully,

E. F. HOUGHTON & CO.,

No. 211 South Front St.,

PHILADELPHIA.

Compressed Tablet Triturates,

Combining Absolute Accuracy of Dose,

Convenience in Administration, Speedy Disintegration, and Consequent Rapid Absorption,

THEREBY INSURING

THE MOST EFFECTIVE RESULTS.

WE feel confident that few physicians will prescribe any of the more powerful remedies, such as Aconite, Morphia, Digitalis, Arsenic, etc., either in powders or in solutions, when fully aware of the advantages presented by our TRITURATES, their accuracy and convenience in administration, coupled with the absolute freedom from danger in prescribing, always attending to a greater or less extent the dispensing of dangerous drugs, in the form of powders, drops, or larger doses in solutions.

The TRITURATES are absolutely exact, and will keep indefinitely; they can be readily swallowed with a mouthful of water, or, if smaller doses be required for infants, the tablet can be reduced to a fine powder by simply crushing with a knife, or the thumb nail.

Our circular (which it will give us pleasure to forward) gives in detail all the claim we make for this series of preparations, together with a list of all the combinations. It embraces almost every drug in popular demand, and the doses are so graduated as to meet almost every indication. The following are a few of the active agents in almost every-day use:

ACONITE,	DIGITALIN,	LITHIA,
ACONITINE,	ELATERIUM,	MORPHINE,
ALOIN,	ESERINE,	NUX VOMICA,
ANTIMONY,	EYT. CANNABIS INDICA,	OPIUM,
APOMORPHIA,	EXT. COLOCYNTH COMP.	PILOCARPINE,
ARSENIC,	EXT. IGNATIA,	PODOPHYLLIN,
ATROPINE,	EXT. IPECAC,	RED IODIDE MERCURY,
BELLADONNA,	ETX. PILOCARPUS,	SALTS OF IRON,
CALOMEL,	GREEN IODID. MERCURY	SANTONINE,
COCAINE,	GELSEMIUM,	STRYCHNINE,
CODEINE,	HOMATROPINE,	ZINC PHOSPHIDE,
CORROSIVE SUBLIMATE	HYOSCYAMUS,	VERATRUM VIRIDE.

We shall be glad to send samples of these Triturates to any physician who may desire to try them in his practice.

Complete lists, with prices, etc., of all our preparations, will be sent by mail on application.

JOHN WYETH & BROTHER,

PHILADELPHIA.

Smithsonian Institute

CASCARA CORDIAL.

IN HABITUAL CONSTIPATION.

The great desideratum in the treatment of chronic constipation has heretofore been a remedy which possessed not only a temporary specific action on the bowels, but which would be followed by no reaction and no repression of secretion, and which could be administered for a sufficient length of time to permit of restoration of normal function; a remedy which would not only alleviate temporarily the existing mal-condition, but permanently remove the cause upon which it depended for its continuance, and thus effect a radical cure. The extensive trial of Cascara Sagrada by physicians of this country and Europe has shown it to be the drug that most fully meets all these indications. It has been added to the British Pharmacopœia, and its efficacy is attested by all physicians who have given it a trial. Cascara Cordial is prepared to disguise the inherent bitter principle of the drug, and without detracting from its medicinal value, render it acceptable to the most fastidious palate.

AS A VEHICLE FOR NAUSEOUS MEDICINES.

Cascara Cordial has become widely known to the profession. It not only effectually disguises the taste of such inherently bitter medicines as Quinine, but on account of its laxative properties, is a most valuable adjuvant or corrigent to any prescription containing drugs, such as iron, the continued administration of which tends to constipate. It will be seen that Cascara Cordial has a wide range of utility as an agreeable laxative excipient.

TO DISPEL THE ACUTE EFFECTS OF ALCOHOL AND OPIUM ABUSE.

From letters received from physicians, we are led to call the attention of the profession to the use of Cascara Cordial by those addicted to the alcohol and opium habits. The headache and gastric irritation following excessive indulgence in alcohol is avoided by adding a little Cascara Cordial to the alcoholic stimulant taken, or by taking a full dose of the cordial on retiring, after too free indulgence. The severe constipation also often attending indulgence in opium may be relieved by the systematic administration of Cascara Cordial.

We can not assume the responsibility for lack of success physicians may meet with in prescribing the many imitations and spurious varieties of Cascara on the market, and would request those wishing a genuine and reliable preparation to specify P. D. & Co's.

☞ **Samples furnished on application, to those physicians who will pay express charges.**

DETROIT, MICH.

A NEW EMMENAGOGUE.

The following is an abstract from a letter written by one of the most prominent gynæcologists of the country, to another:

"Thus far no perfect emmenagogue has been discovered, but I regard the manganese as the best I have met with. It should be styled a regulator of menstruation rather than a pure emmenagogue, for it is useful in the absence of the menses, irregularity of their recurrence, and even in excess of flow.

"The preparation which I now employ is McKesson & Robbins' pills of the binoxide of manganese. Of this preparation I give two grains three times a day throughout the month and during the period.

"I also employ manganese in chlorosis and anæmia, and I think that by its use I obtain better results than I have heretofore done by iron." (See *Medical Record* of March 6th, page 274.)

Specify McK. & R.'s Pills Manganese Binoxide.

Important additions to McK. & R.'s list of Gelatine Coated Pills:

McK. & R. *Cascara Sagrada* and *Nux Vomica*: Ext. Cas. Sagr. gr. ii; Ext. Nux Vom. gr. 1-5.

McK. & R. Cascara Sagrada, Nux Vomica and Belladonna: Ext. Cas. Sag. gr. ii; Ext. Nucis Vom. gr. 1-8; Ext. Bellad. gr. 1-16.

McK. & R. Hydrobromide of Hyoscin 1-100 gr.

McK. & R. Binoxide of Manganese 2 grs.

McK. & R. Valerianate of Quinine ½, 1, 2, and 3 grs.

McK. & R. Valerianates Iron, Quinine, and Zinc: Ferri Valer., Quin. Valer., Zinci Valer., āā gr. i.

McK. & R. Oleate of Manganese 20 per cent. May be used to advantage when the pills cannot be administered.

Always specify McK. & R's.

COCAINE.

Although only eighteen months have elapsed since Koller's announcement of his discovery of the anæsthetic properties of this alkaloid, Cocaine already ranks among the most important agents of the practitioner. In general and dental surgery, ophthalmology, laryngology and general therapeutics, its value is everywhere attested.

We began its manufacture immediately after the announcement of Dr. Koller, and samples of our product were submitted to many noted specialists for their experiments, and the results were highly gratifying. The demand for our manufacture of the salt, solutions, and oleates, has continued to increase, and we desire to express our sincere thanks to the medical, pharmaceutical, and dental professions for their kind encouragement as shown in their recognition of the merits of our preparations. Our appreciation of this will be shown in our constant efforts to supply all their requirements in chemicals and pharmaceuticals, of a quality worthy of their entire confidence.

Special quotations on Terebene and Cocaine for specified quantities. Very respectfully,

McKESSON & ROBBINS.

TEREBENE.

McKESSON & ROBBINS

WERE THE FIRST IN THIS COUNTRY TO MANUFACTURE THIS VALUABLE REMEDY FOR

Winter Cough, Bronchial and Chest Affections, Flatulency, Acidity, and other forms of Dyspepsia.

It may be used as an inhalation, or taken internally in doses of five or six drops on sugar every four hours, gradually increasing the dose to twenty minims.

Terebene was brought to the notice of the medical profession as far back as 1873, by M. Riban, who read a series of papers on this and similar substances before the Pharmaceutical Society of Paris. It has lately been brought into prominence by Dr. Wm. Murrell, of London, who has given it in over 114 cases; he has also notes of its value in 81 out of 94 cases. Dr. Murrell says that much of the Terebene now being sold may be described as inferior, and to this fact he ascribes some irritating effects noted in a few of his cases.

We would therefore caution the physician in prescribing and the druggist in ordering to, in all cases,

SESSIONS OF 1887-88.

The REGULAR SESSION begins on Wednesday, September 21, 1887, and ends about the middle of March, 1888. During this Session, in addition to the regular didactic lectures, two or three hours are daily allotted to clinical instruction. Attendance upon at least two regular courses of lectures is required for graduation.

The SPRING SESSION consists of recitations, clinical lectures and exercises, and didactic lectures on special subjects. This Session begins about the middle of March and continues until the middle of June. During this Session, daily recitations in all the departments are held by a corps of Examiners appointed by the Faculty.

The CARNEGIE LABORATORY is open during the collegiate year, for instruction in microscopical examinations of urine, practical demonstrations in medical and surgical pathology, and lessons in normal histology and pathology, including bacteriology.

For the annual Circular and Catalogue, giving requirements for graduation and other information, address Prof. AUSTIN FLINT, Secretary, Bellevue Hospital Medical College, foot of East 26th Street, New York City.

D. LANDRETH & SONS, Philadelphia.

30,000 PHYSICIANS
NOW PRESCRIBE
HYDROLEINE
(HYDRATED OIL,)
For Consumption and Wasting Diseases. It Produces Immediate Increase in Flesh and Weight.

FORMULA.

Each Dose of Two Teaspoonfuls, equal to 120 Drops, contains:

Pure Cod Liver Oil	80 m. (drops)	Soda	½ Grain.
Distilled Water	35 "	Boric Acid	¼ "
Soluble Pancreatin	5 Grains.	Hyocholic Acid	⅛ "

DOSE:

Two teaspoonfuls alone, or with twice the quantity of water, to be taken thrice daily after meals.

Hydroleine (Hydrated Oil) is not a simple alkaline emulsion of oleum morrhua, but a hydro-pancreated preparation containing acids and a medicum of soda. Pancreatin is the digestive principle of fatty foods, and, in the soluble form here used, completely saponifies the oleaginous material so necessary to the reparative process in all wasting diseases.

Lautenbach's researches on the function of the liver would show the beautiful adjustment of therapeutics in preparation of Hydroleine, furnishing, as it does, the acid and soda necessary to prevent self-poisoning by reabsorption of morbid tubercular detritus and purulent matters into the general circulation.

Each bottle in nutritive value exceeds ten times the same bulk of cod liver oil. It is economical in use and certain in result.

Sold at all Drug Stores at $1.00 per Bottle.

The principles upon which this discovery is based have been described in a treatise on "The Digestion and Assimilation of Fats in the Human Body," by H. C. BARTLETT, Ph. D., F. C. S., and the experiments which were made, together with cases illustrating the effect of Hydrated Oil in practice, are concisely stated in a Treatise on "Consumption and Wasting Diseases," by G. OVEREND DREWRY, M. D.

Copies of these Works sent free on Application.

WM. F. KIDDER & CO., 83 John Street, New York.

Agents for U. S.

Also exclusive Agents for SVAPNIA, or Bigelow's purified Opium, in SCALES and HALF-GRAIN GRANULES.

TAMAR INDIEN GRILLON.

A laxative, refreshing, and medicated Fruit Lozenge, very agreeable to take, and never causing irritation. Its physiological action assures the immediate relief and effectual cure of

CONSTIPATION,

HÆMORRHOIDS, BILE,
CEREBRAL CONGESTION, HEADACHE,
LOSS OF APPETITE,
INTESTINAL OBSTRUCTIONS, ETC.,

by augmenting the peristaltic movement of the intestine without producing undue secretion of the liquids. Unlike pills and the usual purgatives, it does not predispose to intestinal sluggishness, and the same dose always produces the same effect, that is to say, never needs increasing.

It is recommended by the most eminent physicians of Paris, notably Drs. BELIN and TARDIEU, who prescribe it constantly for the above complaints, and with most marked success.

Paris: E. GRILLON, 27 Rue Rambuteau.

SOLD BY ALL DRUGGISTS.

COMBINATIONS FOR
HORSFORD'S ACID PHOSPHATE.

As the "Acid Phosphate" of Prof. Horsford is more extensively used, one of its characteristic qualities, that of an adjuvant, becomes better known and appreciated. The experience of physicians of the various schools, shows that it combines readily and very effectively with a great variety of other remedial agents. It is a superior substitute for the officinal Phos. Acid. Dil., as it acts more effectively, and does not produce the irritation sometimes noticed upon the exhibition of that remedy.

Below we give a series of prescriptions in combination with Horsford's Acid Phosphate, and believe them worthy the careful consideration of medical practitioners. These prescriptions are the result of careful study, and they serve to show the wide usefulness of Prof. Horsford's excellent preparation.

***These combinations are largely used by the profession.**

*ACID PHOSPHATE WITH STRYCHNIA.

℞. Horsford's Acid Phosphate, f℥viij.
Strychninæ Sulph., gr. j.
M.

Sig.—Half to one teaspoonful in a glass of water.

ACID PHOSPHATE WITH QUININE.

℞. Horsford's Acid Phosphate, f℥ss.
Quininæ Sulp., gr. xvj.
Syrupi Simplicis, f℥ij.
Aquæ, f℥vss.
M.

Sig.—A tablespoonful in a wine glass of water.

ACID PHOSPHATE AND EMULSION OF COD-LIVER OIL.

℞. Emul. Olei Morrhuæ 50 %., f℥vij.
Horsford's Acid Phosphate, f℥j.
M.

Sig.—A tablespoonful.

*ACID PHOSPHATE WITH WINE OF PEPSIN.

℞. Vini Pepsinæ, f℥vj.
Horsford's Acid Phosphate, f℥ij.
M.

Sig.—A dessertspoonful in water.

ACID PHOSPHATE WITH ELIXIR OF IRON AND QUININE.

℞. Elix. Ferri et Quininæ,
Horsford's Acid Phos., āā f℥iij.
M.

Sig.—A teaspoonful in water.

*ACID PHOSPHATE WITH TINCTURE NUX VOMICA AND COMPOUND TINCTURE OF GENTIAN.

℞. Horsford's Acid Phosphate, f℥vj.
Tinct. Nucis Vom., f℥j.
Tinct. Gentianæ Comp., f℥ij.
Syrupi Simplicis, f℥iij.
M.

Sig.—A tablespoonful in water.

We do not prepare the Acid Phosphate in any of the above combinations.

☞**Physicians** who have not used HORSFORD'S ACID PHOSPHATE, and who wish to test it, **will be furnished with a sample, without expense,** except express charges, on application to

CELERINA

NERVE-TONIC, STIMULANT AND ANTISPASMODIC.

FORMULA.—Every Fluid-Drachm represents FIVE grains EACH—Celery, Coca, Kola, Viburnum and Aromatics.

INDICATIONS.—Impotency, Spermatorrhea, Loss of Nerve-Power (so usual with Lawyers, Preachers, Writers and Business Men), Nervous Headache, Neuralgia, Paralysis, Dysmenorrhea, Hysteria, Opium-Habit, Inebriety, Prostatitis, Dyspepsia, and ALL LANGUID or DEBILITATED conditions of the System.—*Indispensable to restore a patient after alcoholic excess.*

DOSE.—One or two teaspoonfuls three or more times a day, as directed by the Physician.

ALETRIS CORDIAL

UTERINE TONIC AND RESTORATIVE.

PREPARED FROM THE ALETRIS FARINOSA OR TRUE UNICORN.

INDICATIONS.—Amenorrhea, Dysmenorrhea, Leucorrhea, Prolapsus Uteri, Sterility, to PREVENT Miscarriage, Etc.

DOSE.—One teaspoonful three or four times a day.

Unrivaled as a Uterine Tonic in Irregular, Painful, Suppressed and Excessive Menstruation,

IT RESTORES NORMAL ACTION TO THE UTERUS, AND IMPARTS VIGOR TO THE ENTIRE UTERINE SYSTEM.

☞Where Women have aborted during previous Pregnancies, or in any case where abortion is feared, the Aletris Cordial is indicated, and should be continuously administered during entire gestation.

ACID MANNATE

A MILD, SAFE AND PLEASANT APERIENT.

☞ Prepared from Manna, Purified Cathartic Acid, and Fruit Juices. ☜

INDICATIONS.—Constipation, Biliousness, Congestions, Etc. **INDISPENSABLE AS AN APERIENT FOR WOMEN DURING PREGNANCY.** In teaspoonful doses, 3 times a day, it favors the SECRETION and EXCRETION of bile, and gradually removes the congested and torpid states of the liver, and keeps the bowels in a regular and soluble condition.

DOSE.—ONE or MORE teaspoonfuls as directed by the Physician.

S. H. KENNEDY'S
CONCENTRATED EXTRACT OF
PINUS CANADENSIS

DARK — A NON-ALCOHOLIC LIQUID. — WHITE

A MOST VALUABLE NON-IRRITATING MUCOUS ASTRINGENT.

INDICATIONS.—Albuminuria, Diarrhea, Dysentery, Night-Sweats, Hemorrhages, Profuse Expectoration, Catarrh, Sore Throat, Leucorrhea, and other Vaginal Diseases, Piles, Sores, Ulcers, Burns, Scalds, Gonorrhea, Gleet, Etc.

When Used as an Injection, to Avoid Staining of Linen, the WHITE Pinus should be Used.

Recommended by DR. J. MARION SIMS, and other Prominent Physicians.

RIO CHEMICAL CO., ST. LOUIS: LONDON: PARIS.

Samples FREE to any Physician who will pay Express charges, and mention this Journal.

PACKER'S TAR SOAP.

ABSOLUTELY PURE AND NON-IRRITATING.

MADE FROM VEGETABLE OILS, PINE TAR, AND GLYCERINE.

A perfect soap should be made from pure and sweet oils, and clean, well-washed alkalies. Such is **Packer's Tar Soap.** It is combined with distilled **pine-tar,** and hence has had the most gratifying effects in the treatment of Dermatic Diseases, as chafing, eczema, erythema, seborrhea, herpes, etc.

As a Disinfectant, Antiseptic, and Detergent, it is admirably adapted for use in ulcers, foul wounds, fetid discharges, bed sores, and similar conditions. For the bath, toilet, and shampoo, it is unrivaled. 25 cents per cake, from Druggists.

It is supplied to Hospitals, Asylums, and Physicians, in one pound bars, at reasonable prices.

P. O. Box 2985. **THE PACKER MFG. CO., 100 Fulton St., New York.**

Lactated Food

Is not "the only" Food,

BUT IT IS

THE BEST FOOD,
THE CHEAPEST FOOD,
THE HEALTH GIVING FOOD.

For young Infants, it will prove a safe substitute for mother's milk; for the Invalid, or Dyspeptic, it is of great value. Hundreds who have used it recommend it as

The Most Palatable,
The Most Nutritious,
The Most Digestible,
OF ANY of the PREPARED FOODS.

It is a Cooked Food:
A Predigested Food:
A Non-Irritating Food.

CRYING BABIES

are made
GOOD NATURED, HEALTHY, HEARTY,
by its use.

Babies do not cry if they are satisfied, and they cannot be satisfied if they are not properly nourished by their food, or if it produces irritation of stomach or bowels.

Very many mothers cannot properly nourish their children, and the milk of many mothers produces bad effects in the child because of constitutional disease or weakness.

For all such cases there is a remedy in

LACTATED FOOD.

150 MEALS for an Infant for $1.00.
EASILY AND QUICKLY PREPARED.

Send for circulars and pamphlets giving testimony of Physicians and Mothers, which will amply prove every statement we make.

To Every Physician

who has not yet made a trial of the Lactated Food, we will send a package of our regular size, post-paid, without charge, upon application, with the understanding that it will be given a careful trial as soon as possible.

We shall use every precaution to maintain the high standard of this food, and to insure perfect satisfaction to the profession in its use.

WHEELER'S TISSUE PHOSPHATES

Bone-Calcium Phosphate $Ca_3 2P.O._4$, Sodium Phosphate $Na_2 H.P.O._4$, Ferrous Phosphate $Fe_3 2P.O._4$, Trihydrogen Phosphate $H_3 P.O._4$.

WHEELER'S COMPOUND ELIXIR OF PHOSPHATES AND CALISAYA. A Nerve Food and Nutritive Tonic, for the treatment of Consumption, Bronchitis, Scrofula, and all forms of Nervous Debility.

The Lactophosphates prepared from the formula of Prof. Dusart, of the University of Paris. Combines with a superior Pemartin Sherry Wine and Aromatics in an agreeable cordial easily assimilable and acceptable to the most irritable stomachs.

Phosphorus, the oxidizing element of the Nerve Centres for the generation of Nerve Force; Lime Phosphate, an agent of Cell Development and Nutrition; Soda Phosphate, an excitant of Functional Activity of Liver and Pancreas, and Corrective of Acid Fermentation in the Alimentary Canal; Iron, the Oxidizing Constituent of the Blood for the Generation of Heat and Motion; Phosphoric Acid, Tonic in Sexual Debility; Alkaloids of Calisaya, Anti-Malarial and Febrifuge; Extract of Wild Cherry, uniting with tonic power the property of Calming Irritation and Diminishing Nervous Excitement.

THE SUPERIORITY OF THE ELIXIR consists in uniting with the Phosphates the special properties of the Cinchona and Prunus, of Subduing Fever and Allaying Irritation of the Mucous Membrane of the Alimentary Canal, which adapts it to the successful treatment of Stomach Derangements and all diseases of Faulty Nutrition, the outcome of Indigestion Malassimilation of Food, and *failure of supply* of these essential elements of Nerve Force and Tissue Repair.

The special indication of this combination of Phosphates in Spinal Affections, Caries, Necrosis, Ununited Fractures Marasmus, Poorly Developed Children, Retarded Dentition, Alcohol, Opium, Tobacco Habits, Gestation and Lactation, to promote Development, etc., and as a *physiological restorative* in Sexual Debility, and all used up conditions of the Nervous System, should receive the careful attention of good therapeutists.

There is no strychnia in this preparation, but when indicated, the Liquor Strychniæ of the U. S. Dispensatory may be added, each fluid drachm of the solution to a pound bottle of the Elixir making the 64th of a grain to a half fluid ounce, an ordinary dose, a combination of a wide range of usefulness.

DOSE—For an adult, one tablespoonful three times a day, after eating; from seven to twelve years of age, one dessert spoonful; from two to seven, one teaspoonful. For infants, from five to twenty drops, according to age.

Prepared at the Chemical Laboratory of T. B. WHEELER, M. D., Montreal, D. C.

Put up in pound bottles and sold by all Druggists at One Dollar.

LEVIS'S METALLIC SPLINTS.

FLEXIBLE, PERFORATED, NICKEL-PLATED, Conformable to every size and condition of Limbs. VERY LIGHT, INDESTRUCTIBLE, and INEXPENSIVE. The complete set consists of 21 pieces in a neat, compact case. Full descriptive circulars sent on application. ☞ PRICE, $15.00 Per Set. ☜

MATHEY-CAYLUS' GLUTEN

SILVER

1854

CAPSULES

OF

PURE COPAIBA AND OTHER MEDICINES.

SILVER

1854

Adapted and recommended for the cure recent or chronic Gleets, Fluor Albus, etc., etc.

The MATHEY-CAYLUS' CAPSULES, *coated with gluten*, present the most perfect mode for administering Copaiba, Cubebs, Norway Tar, Turpentine, and other remedies, the disagreeable odor and taste of which are often a hindrance to their use. This mode of preparing capsules, which has been approved by the Academy of Medicine, has been recommended in their clinical lectures by eminent Professors in the hospitals of Paris, as well as in those of New York and London.

By the first physicians of the hospitals of Paris, London, and New York.

SPECIAL ADVANTAGES OF MATHEY-CAYLUS' GLUTEN CAPSULES.—Being formed of thin, transparent, and readily assimilated coating, they so cover and disguise the medicine to be given, that it can be taken without disgust, but with ease. In this respect, they differ widely from the gelatine capsules, which have a hard, thick coating, which swells beyond measure, in the stomach, are hard to be swallowed, and which is of great importance, they create disturbance in the digestive functions.

The special advantage of the coating of gluten consists in the fact that, notwithstanding its extra thinness, and although it softens under the action of the gastric juice, it can pass the stomach without breaking, and only in the intestines is the medicinal matter liberated; this accounts for the fact that Mathey-Caylus' Capsules never cause the nausea, eructations, and dyspeptic symptoms, which are complained of by many persons using other preparations.

Finally, their regular ovoid form, which is so favorable to swallowing, their pleasant appearance, which dispels all disgust, and the advantage of being entirely free from taste and smell, recommend the use of these capsules even to the most delicate persons.

Thankful to the Medical Profession for the liberal patronage heretofore bestowed upon us, we hope that they will continue their favors, and we are convinced that they will never have any reason to regret the generous welcome they have given to our preparations.

MATHEY-CAYLUS' CAPSULES are never sold, except in bottles having the following inscription printed in the glass: MATHEY-CAYLUS A PARIS. And each bottle contains 64 capsules, making them the cheapest capsules in the market.

The following different kinds of Mathey-Caylus' Gluten Capsules are now offered:

COPAIBA AND TANNIC ACID,
COPAIBA AND S. N. OF BISMUTH,
COPAIBA AND CATECHU,
COPAIBA AND MAGNESIA,
COPAIBA, CUBEBS AND ALUM,
COPAIBA, CUBEBS AND RHATANY,
COPAIBA AND RHATANY,
COPAIBA AND CITRATE OF IRON,
COPAIBA AND CUBEBS,
COPAIBA PURE,
COPAIBA, CUBEBS AND CARB. OF IRON,
VENICE TURPENTINE, NORWAY TAR, PURIFIED,
CUBEBS AND TURPENTINE,
CUBEBS AND TANNATE OF IRON,
CUBEBS AND ALUM,
CUBEBS PURE,
COPAIBA AND MATICO,
COPAIBA, IRON AND OIL OF SANDAL,
COPAIBA AND OIL OF SANDAL,
COPAIBA, PEPSIN AND BISMUTH,
COPAIBA AND TAR,
COPAIBA, CUBEBS AND OIL OF SANDAL.

TANRET'S PELLETIERINE

For the Treatment of Tape-Worm (Tænia Solium.)

This New Tænifuge, the Active Alkaloid of Pomegranate Bark, has of late come into extensive use in France for the treatment of Tape-Worm (Tænia Solium). The results of numerous experiments with it at the Marine Hospitals of Toulon, St. Mandrier, etc., and in the Hospitals of Paris, St. Antoine, La Charite, Necker, Beaujon, etc., have all been most satisfactory. Doctor Dujardin Beaumetz, Member of the Academy of Medicine, and Prof. Laboulbene, in their report to the Society of Therapeutics, have given it their unqualified approval after the most searching experiments. This preparation is pleasant to administer, and if certain preliminaries are observed success will be insured.

Sold only in Bottles containing one dose.

TANRET'S ERGOTININE.

ALKALOID AND ACTIVE PRINCIPLE OF SPURRED RYE.

This is a well defined Alkaloid that must not be confounded with Ergotine or other extracts; it is given in doses of from ¼ to ½ Milligramme (1-240th to 1-120th of a grain), in all cases where Ergot is indicated, viz.: Flooding, Post-partum Hemorrhages, Metrorrhagia, etc., etc.

It is put up in the following forms:

Syrup Containing ¼ Milligramme to each teaspoonful; DOSE from 1 to 6 teaspoonsfuls per day.

Solution for hypodermic purposes, Containing 1 Milligramme to each cubic Centimeter; DOSE, from 3 to 10 drops.

The Institute of France has awarded one of its Prizes to Mr. Chas. Tanret for the discovery of these Alkaloids.

Tanret's Pelletierine and Ergotinine are only prepared by Mr. Chas. Tanret, Laureate of the Institute of France, 64 Rue du Rempart, Paris.

Sole Agents for the United States, E. FOUGERA & CO., 30 North William St., N. Y.

PAMPHLET ON PELLETIERINE AND ERGOTININE SENT ON APPLICATION.

BOUDAULT'S PEPSINE

The Only Pepsine Used in the Hospitals of Paris for the Last 30 Years.

Unlike the various substitutes which, in most cases, are but unscientific or incompatible compounds, forced upon the Medical Profession as aids to digestion by extensive advertising, but which, when submitted to the proper tests, are found to be useless as digestive agents, Pepsine is constantly gaining in the esteem of the careful practitioner.

Since the introduction of Pepsine by Boudault and Corvisart, in 1854, the original BOUDAULT'S PEPSINE HAS BEEN AT ALL TIMES CONSIDERED THE BEST, as is attested by the awards it has received at the Expositions of 1867, 1868, 1872, 1873, in 1876 at the Centennial Exposition of Philadelphia, and in 1878 at the Paris Exposition.

The most reliable tests, carefully applied, will satisfy every one that BOUDAULT'S PEPSINE HAS A MUCH HIGHER DIGESTIVE POWER than the best Pepsines now before the Profession, and is therefore especially worthy of their attention.

BOUDAULT'S PEPSINE is prepared in the form of Pepsine Acid and Pepsine Neutral. It is sold in bottles of on unce, with a measure containing exactly five grains; also in bottles of 4, 8, and 16 ounces for dispensing.

BOUDAULT'S WINE OF PEPSINE.

Formula of Dr. Corvisart.

The taste of Pepsine being perfectly disguised in this Wine, it may be recommended to persons who have difficulty in taking Pepsine in the form of powder. This Wine is tested so that a tablespoonful of it is equal in digestive power to ten grains of Boudault's Pepsine in powder. Sold only in 8 oz. Bottles.

SPECIFY (BATTLE) WHEN PRESCRIBING OUR PREPARATIONS.

BROMIDIA

THE HYPNOTIC.

FORMULA.—
Every Fluid drachm contains 15 grains EACH of pure Chloral Hydrat. and purified Brom. Pot., and one-eighth grain EACH, of gen. imp. ext. Cannabis Ind. and Hyoscyam.

Dose.—One-half to one fluid drachm in WATER or SYRUP every hour until sleep is produced.

Indications.—
Sleeplessness, Nervousness, Neuralgia, Headache, Convulsions, Colic, Mania, Epilepsy, Irritability, etc. In the restlessness and delirium of fevers, it is absolutely invaluable.

IT DOES NOT LOCK UP THE SECRETIONS.

PAPINE

THE ANODYNE.

Papine is the Anodyne or pain-relieving principle of Opium, the Narcotic and Convulsive elements being eliminated. It has less tendency to cause Nausea, Vomiting, Constipation, etc.

Indications.—
Same as Opium or Morphia.

Dose.—(ONE FLUID DRACHM)—represents the Anodyne principle of one-eighth grain of Morphia.

IODIA

THE ALTERATIVE AND UTERINE TONIC.

FORMULA.—
Iodia is a combination of Active Principles obtained from the Green Roots of STILLINGIA, HELONIAS, SAXIFRAGA, Menispermum, and Aromatics. Each fluid drachm also contains five grains IOD. POTAS. and three grains PHOS. IRON.

Dose.—One or two fluid drachms (more or less, as indicated,) three times a day, before meals.

Indications.—
Syphilitic, Scrofulous and Cutaneous Diseases, Dysmenorrhœa, Menorrhagia, Leucorrhœa, Amenorrhœa, Impaired Vitality, Habitual Abortions, and General Uterine Debility.

SPECIFY (BATTLE) WHEN PRESCRIBING OUR PREPARATIONS.

Registered COSMOLINE Trade Mark.

Unguentum Petrolei

Prepared by E.F.Houghton & Co. Philadelphia, U.S.A.

Put up in 1, 5, 10, 25, 50, and 100-lb. cans. Samples furnished on application. The post-office laws forbid anything of an oleaginous nature being sent through the mail.

In chemical composition, Cosmoline (Unguentum Petrolei) is an oleaginous hydrocarbon, corresponding to the heavy petroleum oils, and containing a large amount of the paraffines and olefines of the formulæ $C_{16}H_{34}$ and $C_{16}H_{32}$. It contains but a small percentage of the paraffines and olefines corresponding to the formulæ C_7H_{16} and C_7H_{14}, respectively, and the offensive and irritating properties of the crude oil have been carefully removed. In the process of purification, no acids, alkalies, or other chemicals are employed, and no injurious additions of any kind are made to the natural product. The result is a semi-solid, translucent substance, with a faint odor and unctuous feel.

Cosmoline (Unguentum Petrolei) melts at about 100° Fah. (38° Cent.); and boils at about 625° Fah. (329° Cent.); its specific gravity is about 0.875 at 60° Fah.

As it contains no oxydizable or organic matter capable of change by putrefaction or fermentation, and is absolutely without affinity for moisture, it offers to the profession an admirable unguent, which can never decompose, ferment, or become rancid in any climate or temperature.

PHILADELPHIA, July 10, 1880.

MESSRS. E. F. HOUGHTON & Co.: I have for a number of years made extensive use of Cosmoline (Unguentum Petrolei), and consider it a most valuable article for surgical purposes. Either as a dressing by itself, or as a vehicle for the application of medicaments, it is greatly superior to lard or other fatty matters, especially by reason of its non-liability to change by time or temperature.

Yours truly, JOHN H. PACKARD, M. D.

1031 WALNUT STREET, PHILADELPHIA.

MESSRS. E. F. HOUGHTON & Co.: I have used extensively Cosmoline (Unguentum Petrolei) both in Dispensary and private practice, with very great satisfaction. As a vehicle in making ointments it is invaluable, and far superior to lard, for the reason that it will not become rancid or undergo chemical change like the latter, when exposed to the atmosphere. I cannot too highly commend it as an application in various skin diseases. Yours truly, JOHN V. SHOEMAKER, A. M., M. D.,

Physician to the Pennsylvania Free Dispensary for Skin Disease.

208 WEST 34TH STREET, NEW YORK.

MESSRS. E. F. HOUGHTON & Co.—*Gents:* I fully appreciate the value of your Cosmoline, or Unguentum Petrolei, and prescribe it frequently in ointments. Fluid Cosmoline I have used constantly for several years, as a lubricant of urethral sounds. It is the cleanest oil I know of for this purpose.

Yours truly, GEO. HENRY FOX.

ELIXIR PURGANS (LILLY).

ELIXIR PURGANS (LILLY) reliably stimulates the dormant liver without undue irritation, and has gentle yet positive effect upon the alimentary tract. In HABITUAL CONSTIPATION, so common in WOMEN AND CHILDREN, it will be found particularly useful. Its endorsement at Bellevue and many other prominent hospitals east and west, as well as its employment in general practice by the most eminent medical men, confirms the experience of years in its use.

Each Teaspoonful Represents

Rhamnus Purshiana, -	10 grs.
Euonymus Atropur., -	8 grs.
Cassia Acutifolia (purif.)	10 grs.
Iris Versicolor, - - -	4 grs.
Hyoscyamus Niger, -	2 grs.
Aromatics, etc.	

IN PRESCRIBING, PLEASE BE CAREFUL TO WRITE

ELIXIR PURGANS (LILLY).

THAT OTHER PREPARATIONS MAY NOT BE SUBSTITUTED.

AS A BRISK **CATHARTIC,** 1 to 2 Tablespoonfuls.

AS A **LAXATIVE,** 1 to 2 Teaspoonfuls.

AS AN **APERIENT,** 1-2 to 1 Teaspoonful.

HIGHLY RECOMMENDED.

We take pleasure in endorsing the ELIXIR PURGANS (LILLY) as prepared from the above formula, for in it we find a near approach to positive *perfection* in the form of a *Liquid Cathartic*, and, from our experience with the preparation, can highly recommend it to the profession.

PRICE PER PINT BOTTLE, ONE DOLLAR.

ELI LILLY & CO., PHARMACEUTICAL CHEMISTS, INDIANAPOLIS, IND., U. S. A.

Chapoteaut's Wine of Peptone.

The Peptone used in the preparation of this Wine is obtained by the action of Sheep Pepsine on Beef of the best quality. Being pure and neutral, it is entirely assimilable, containing neither Glucose, Albumen, nor Chloride of Sodium; for this reason it is the only preparation used in the laboratory of Mr. Pasteur for the culture of microscopic liquids.

Each wineglassful of Chapoteaut's Wine contains the Peptone of ten grammes of Beef, and has, besides, the digestive properties of Pepsine.

It may be used for the following cases: Anæmia, Dyspepsia, Debility, Distaste of Food, Inaction of the Digestive Organs, Convalescence, Alimentation for Wet Nurses, Children, and the Aged; Phthisis, Persons Weakened by Fever, Dysentery, and by patients having been operated upon for Cancerous Affections.

DOSE—One or two small wineglassfuls after meals.

DEPOTS: CHAPOTEAUT, 8 RUE VIVIENNE, PARIS—E. FOUGERA & CO., 30 N. WILLIAM ST., NEW YORK

MIDY'S SANTAL.

Midy's Essence of Santal is used with success in place of Copaiba and Cubebs, being harmless even in large doses. No matter what the color or amount of the secretion may be, the discharges are reduced and relief is obtained in forty-eight hours. No unpleasant effect is caused by its use, such as diarrhœa, eructations, or indigestion, and not giving to the Urine any odor.

In cases of Inflammation of the Bladder it acts rapidly, and in two or three days the bloody emission is suppressed t is used with success in Chronic Catarrh, rendering the urine clear at once.

DEPOTS: MIDY, CHEMIST, 110 FAUBOURG ST. HONORE, PARIS—E. FOUGERA & CO., 30 N. WILLIAM ST.

GRIMAULT & CO.'S IODIZED SYRUP OF HORSE-RADISH.

This Syrup is a close combination of Iodine with the juices of antiscorbutic plants. It is very palatable, and is easily digested. It is a powerful auxiliary in cases of Scrofula, Rachitism, Goitres, Suppuration of the Glands of the Neck, Dandruff, and Eruptions of the Skin. Each tablespoonful contains one and a half grains of Iodine, so intimately combined as to be insensible to the action of starch.

GRIMAULT & CO., PHARMACISTS, 8 RUE VIVIENNE, PARIS—E. FOUGERA & CO., NEW YORK

COCA

CORDIAL.

—A—

PALATABLE PREPARATION

—OF—

Coca Erythroxylon,

CONTAINING

In an agreeable vehicle the active medicinal principle, free from the bitter astringent constituents of the drug.

THE SEDATIVE, tonic, and stimulant effects of Coca Erythroxolon and its preparations, and their wide application in medical practice, are now too well known to the medical profession to need extended comment.

Coca has been extensively used with gratifying success for the relief of morbid conditions depending on nervous exhaustion, in the nervous irritability following excesses of any kind, in neurasthenia, to facilitate digestion in dyspepsia, to relieve the morbid depresion of spirits resulting from exhausting mental labor, in nausea and vomiting of reflex origin, and in the treatment of the alcohol and opium habits.

In a great variety of affections it has proved itself to be a drug ranking in therapeutic importance with opium and quinine.

The Coca Cordial presents the drug in a palatable form, commending it especially to the large class of persons of delicate nervous organization, for whom it is most often indicated.

In its preparation the astringent and bitter constituents of Coca, which are not essential to its medicinal action, have been eliminated, while care has been taken to retain unchanged the active principle cocaine. One fluid-ounce of the cordial represents 60 grains of coca leaves of good quality, the vehicle employed being an agreeable cordial of a rich vinous flavor.

☞ We shall be pleased to send on application a circular more fully descriptive of Coca Cordial and its application, and we trust physicians will communicate to us the results of their experience in the use of this preparation, so far as it is likely to be of general interest to the profession.

PARKE, DAVIS & CO.,

Manufacturing Chemists,

New York: { 60 Maiden Lane, 21 Liberty Street.

DETROIT, MICH.

30,000 PHYSICIANS
NOW PRESCRIBE

HYDROLEINE

(HYDRATED OIL,)

For Consumption and Wasting Diseases. It Produces Immediate Increase in Flesh and Weight.

FORMULA.

Each Dose of Two Teaspoonfuls, equal to 120 Drops, contains:

Pure Cod Liver Oil	80 m. (drops)	Soda	½ Grain.
Distilled Water	35 "	Boric Acid	⅛ "
Soluble Pancreatin	5 Grains.	Hyocholic Acid	⅒ "

DOSE:

Two teaspoonfuls alone, or with twice the quantity of water, to be taken thrice daily after meals.

Hydroleine (Hydrated Oil) is not a simple alkaline emulsion of oleum morrhua, but a hydro-pancreated preparation containing acids and a medicum of soda. Pancreatin is the digestive principle of fatty foods, and, in the soluble form here used, completely saponifies the oleaginous material so necessary to the reparative process in all wasting diseases.

Lautenbach's researches on the function of the liver would show the beautiful adjustment of therapeutics in preparation of Hydroleine, furnishing, as it does, the acid and soda necessary to prevent self-poisoning by reabsorption of morbid tubercular detritus and purulent matters into the general circulation.

Each bottle in nutritive value exceeds ten times the same bulk of cod liver oil. It is economical in use and certain in result.

Sold at all Drug Stores at $1.00 per Bottle.

The principles upon which this discovery is based have been described in a treatise on "The Digestion and Assimilation of Fats in the Human Body," by H. C. BARTLETT, Ph. D., F. C. S., and the experiments which were made, together with cases illustrating the effect of Hydrated Oil in practice, are concisely stated in a Treatise on "Consumption and Wasting Diseases," by G. OVEREND DREWRY, M. D.

Copies of these Works sent free on Application.

WM. F. KIDDER & CO., 83 John Street, New York.

Agents for U. S.

Also exclusive Agents for SVAPNIA, or Bigelow's purified Opium, in SCALES and HALF-GRAIN GRANULES.

THE BEST ANTISEPTIC.

FOR BOTH INTERNAL AND EXTERNAL USE.

LISTERINE.

FORMULA.—Listerine is the essential antiseptic constituent of Thyme, Eucalyptus, Baptisia, Gaultheria, and Mentha Arvensis, in combination. Each fluid drachm also contains two grains of refined and purified Benzo-boracic Acid.

DOSE.—Internally: One teaspoonful three or more times a day (as indicated), either full strength, or diluted, as necessary for varied conditions.

LISTERINE is a well-proven antiseptic agent—an anti-zymotic—especially adapted to internal use, and to make and maintain surgical cleanliness—asepsis—in the treatment of all parts of the human body, whether by spray, irrigation, atomization, or simple local application, and therefore characterized by its particular adaptability to the field of

PREVENTIVE MEDICINE—INDIVIDUAL PROPHYLAXIS.

Physicians interested in LISTERINE will please send us their address, and receive by return mail our new and complete pamphlet of 36 quarto pages, embodying:

A TABULATED EXHIBIT of the action of LISTERINE upon inert Laboratory Compounds.

FULL AND EXHAUSTIVE REPORTS and Clinical Observations from all sources, confirming the utility of LISTERINE as a General Antiseptic for both internal and external use; and particularly

MICROSCOPIC OBSERVATIONS, showing the comparative value and availability of various antiseptics in the treatment of Diseases of the Oral Cavity, by W. D. MILLER, A. B., Ph. D., D. D. S., Prof. of Operative and Clinical Dentistry, University of Berlin, from whose deductions LISTERINE appears to be the most acceptable prophylactic for the care and preservation of the teeth.

LAMBERT PHARMACAL COMPANY,

116 OLIVE STREET, ST. LOUIS.

SCOTT'S EMULSION

OF PURE COD LIVER OIL WITH HYPOPHOSPHITES OF LIME AND SODA.

THE STANDARD EMULSION OF COD LIVER OIL.

The ONLY Preparation of its class that will not SEPARATE nor SPOIL in any climate.

IT IS MADE FROM THE PUREST NORWEGIAN COD LIVER OIL, COMBINED WITH CHEMICALLY PURE HYPOPHOSPHITES AND GLYCERINE.

Acknowledged by leading Physicians in the U. S. and many other Countries to be the most ELEGANT most PALATABLE and EASILY DIGESTED preparation in the World, and can be tolerated longer by Children and persons with delicate stomachs than any other.

WE ASK A CAREFUL COMPARATIVE TEST WITH ANY OR ALL SIMILAR PREPARATIONS.

FORMULA: 50 per cent. of Pure Cod Liver Oil, 6 grs. of the Hypophosphites of Lime. and 3 grs. of the Hypophosphite of Soda to a fluid ounce. Emulsified with mucilage and Glycerine.

S. & B's BUCKTHORN CORDIAL, RHAMNUS FRANGULA.

Is giving universal satisfaction to the profession, for its mild but certain and efficient cathartic action. It seems to be *almost* a *specific* for *habitual constipation*, and we are constantly in receipt of the most flattering reports regarding it. The care we use in its preparation—having the bark always the proper age, and properly exhausted—makes it always reliable in its action. Be sure and specify S. & B. Buckthorn Cordial.

To those who have for any reason never yet tried these preparations, we will be pleased to send samples free by express.

SCOTT & BOWNE, Mfg. Chemists, 132 & 134 S. 5th Ave., N. Y.

TAMAR INDIEN GRILLON.

A laxative, refreshing, and medicated Fruit Lozenge, very agreeable to take, and never causing irritation. Its physiological action assures the immediate relief and effectual cure of

CONSTIPATION,

HÆMORRHOIDS, BILE,
CEREBRAL CONGESTION, HEADACHE,
LOSS OF APPETITE,
INTESTINAL OBSTRUCTIONS, ETC.,

by augmenting the peristaltic movement of the intestine without producing undue secretion to the liquids. Unlike pills and the usual purgatives, it does not predispose to intestinal sluggishness, and the same dose always produces the same effect, that is to say, never needs increasing.

It is recommended by the most eminent physicians of Paris, notably Drs. BELIN and TARDIEU, who prescribe it constantly for the above complaints, and with most marked success.

Paris: E. GRILLON, 27 Rue Rambuteau.

SOLD BY ALL DRUGGISTS.

COLDEN'S Liquid Beef Tonic.

Established 15 Years.
OBSERVE the NAME.
Beware of Imitations.

ORIGINAL LABEL:
"Colden's Liebig's Liquid Extract of Beef and Tonic Invigorator."

An Invaluable Aid in Medical Practice.

Differs Essentially from all other Beef Tonics.

COLDEN'S Liquid Beef Tonic is endorsed by scores of physicians, who are growing to realize more and more its importance in repairing, in accordance with the principles of dietetics, the **waste which disease entails.** It consists of the extract of Beef (by Baron Liebig's process) spirit rendered non-injurious to the most delicate stomach by extraction of the Fusel Oil, soluble Citrate of Iron, Cinchona, Gentian and other bitter tonics. An official analysis of this preparation by the eminent Chemist, ARTHUR HILL HASSALL, M. D., F. R. S., and an endorsement by the late SIR ERASMUS WILSON, F. R. S., is printed on the label of each bottle.

As a **blood food,** and a **reliable tonic** in all cases of debility and weakness, Malarial Fever, Anæmia, Chlorosis, Incipient Consumption, etc., it is the best preparation ever used. It acts directly on the sentient Gastric Nerves, stimulating the follicles to secretion, and gives to weakened individuals that first prerequisite to improvement — an appetite. It strengthens the nervous system when unstrung by disease, and has been employed with remarkable success as a remedy for Drunkenness and the Opium Habit.

Its Range of Action Embraces all Cases of Debility.

In order that physicians may form some idea of the nature of its ingredients, I will upon application in person, or by letter (enclosing a card), send a sample bottle of COLDEN'S LIQUID BEEF TONIC to any physician in regular standing, in the United States. Please ask your Dispensing Druggist (if he has not already a supply) to order it. In prescribing this preparation, physicians should be particular to mention "COLDEN'S"—*viz.:* **"*Ext. carnis, fl. comp. (Colden's.)*"** It is put up in pint bottles, and can be had of Wholesale and Retail Druggists generally throughout the United States.

C. N. CRITTENTON, Sole Agent, 115 Fulton St. New-York.

GLENN'S Sulphur Soap.

ALL physicians know that ***skin diseases*** are more or less constitutional, or dependent upon some specific poison in the blood, which if eradicated by internal treatment needs something to remove its appearance from the surface. Experience has proved that the best possible aid in the accomplishment of this end is obtained by the use of ***Sulphur in soap.*** GLENN'S SULPHUR SOAP is the best combination of its kind, and the one now generally used. It is for sale by all Druggists, at **25** cents a cake, or 3 cakes for **60** cents.

CONSTANTINE'S PINE TAR SOAP

Has been on trial among physicians for very many years as a toilet Soap and Healing Agent, and its superior virtues have been unanimously conceded **in all cases where the use of tar is indicated.** Unsolicited expressions of its excellence have been received from the Medical Faculty generally. IT IS THE BEST TAR SOAP MADE. None genuine unless stamped "A. Constantine's Persian Healing Pine-Tar Soap." For sale by all Druggists.

Samples of either of the above-named Soaps will be sent free upon application in person or by letter (enclosing card) to any physician in regular standing in the United States. C. N. Crittenton, 115 Fulton Street, New York. Please mention "THE MEDICAL AND SURGICAL REPORTER."

ESTABLISHED 1852.

HYDRASTIS

AND ITS PREPARATIONS.

The WM. S. MERRELL CHEMICAL CO. of Cincinnati—"The largest consumers of Golden Seal Root in the world" (see "Drugs and Medicines of North America")—offer to the medical profession, through the drug trade, the following well-known and highly approved preparations of this leading American drug.

FLUID HYDRASTIS.

A neutral solution of all the active medicinal constituents, forming a perfectly clear solution with alcohol, glycerin, syrup, or water. May be properly and profitably substituted for the Fluid Extract of the U. S. P. in the manufacture of syrup, wine or tincture.

COLORLESS HYDRASTIS.

A neutral solution of the White Alkaloid alone—without color or stain.

SULPHATE HYDRASTIA—CRYSTALLIZED.

[SULPHATE BERBERINA.]

This is the Sulphate of Yellow Alkaloid, which we present in crystals to guard against the substitution of impure and unskillful preparations in a powdered form.

Subsequent to its introduction by us under its present commercial title, this salt was identified as Berberina by Mahla, Durand and others. To avoid confusion with the Alkaloid Bebeerine and its salts, and to fully establish its identity, we continue the name by which it was originally introduced.

SOLUTION BISMUTH AND HYDRASTIA,

A neutral solution of the double Citrate of Bismuth and Hydrastia (White Alkaloid); each fluid drachm containing 2½ grains of the double salt.

Represented in New York City by

LEHN & FINK, 128 William Street.

Prices Current and Descriptive Circulars cheerfully supplied. Correspondence invited.

THE WELL-KNOWN APERIENT MINERAL WATER.

IMPORTANT NOTICE.

By reason of an improved method of caption, by which dilution is avoided, FRIEDRICHSHALL WATER will be found now to be of ***considerably greater strength*** and ***efficacy*** than heretofore.

The ordinary dose is a large wineglassful (4 ounces), taken fasting. Most efficacious and more acceptable to the palate when heated or mixed with an equal quantity of very hot water.

"*The most suitable aperient for prolonged use.*"—***Prof. SEEGEN.***

"*After twenty years' use I appreciate it as highly as ever.*"—***Prof. VIRCHOW.***

OF ALL DRUGGISTS AND MINERAL WATER DEALERS.

SAVORY & MOORE beg to call the attention of the Profession to some of their Special Preparations, the purity and uniform strength of which are guaranteed.

Pancreatic Emulsion. In Consumption, Wasting, LOSS OF THE POWER OF DIGESTION AND ASSIMILATION, this pure drug is the MOST POTENT REMEDY. This is now attested by the published records of numerous medical men, extracts of which accompany each bottle.

Peptodyn, the New Digestive, is a combination of the whole of the digestive secretions, forming an invaluable remedy in the treatment of all forms of Dyspepsia, and all diseases arising from imperfect nutrition. Peptodyn is intended as a general promoter of digestion for persons not necessarily considered in bad health; thus, when taken about a quarter of an hour after a meal, it will be found to assist digestion in a remarkable manner, and prevent the discomfort which often follows the partaking of a full meal by persons in good health.

Pancreatine Powder, for Indigestion and Loss of APPETITE. This palatable and popular remedy effects the digestion and assimilation of all food, especially of FATTY SUBSTANCES, and is therefore invaluable to patients who are unable to digest Cod Liver Oil, and who are thus deprived of its nourishing and invigorating properties.

Gelatine Discs for Hypodermic Use—Of Morphia, CODEIA, ERGOTINE, ATROPIA, STRYCHNIA, APOMORPHIA, etc. The chief features of these discs are their instant solubility, by which hypodermic solutions can be instantly obtained of uniform and reliable strengths; they keep good for an unlimited period in their dry state, and are extremely portable. (Prepared in accordance with Dr. Sansom's recommendation.)
In tubes, each containing 25 discs.

Etherodine (Substitute for Chlorodyne). A clear, bright fluid, pleasant to the taste, readily miscible with water or any suitable menstruum. The therapeutical properties of ETHERODINE are identical with those of CHLORODYNE, but the former is an elegant preparation, and more convenient for use.

Gelatine Discs for Ophthalmic Purposes.
"Much smaller doses of medicaments such as Atropine, Calabar Bean Extract, Sulphate of Zinc, Morphia, etc., etc., suffice to produce a marked effect by this form of application, than when drops are introduced."—*The Lancet.*
In tubes, each containing 100 discs.

Gelatine Lamels for Internal Administration, consist of thin, pliable, and, in most cases, transparent sheets of uniform thickness, accurately divided into squares by raised lines, each square containing an exact dose of the medicine with which the sheet is impregnated.
In sheets, each consisting of 24 squares.

Datura Tatula, for Asthma, Hay Fever, and Chronic BRONCHITIS. Recommended by the Profession as a remedy of great power and usefulness in cases of short and difficult breathing, spasmodic coughing, etc. The most convenient forms for use are—
Datura Tatula Cigars. Datura Tatula—prepared for use by means of a pipe.
Datura Tatula Cigarettes. Datura Tatula Pastilles—for Inhalation.

SAVORY & MOORE, 143 New Bond Street, London.
Agents for America, E. FOUGERA & CO., New York.

CAUTION TO PHYSICIANS!

That we are the pioneers and leaders in our special department of Pharmacy is well known by intelligent physicians and pharmacists everywhere. We have attained the highest perfection in the manufacture of our goods, and our success has tempted various individuals and corporations, without knowledge or facilities, to enter the field as would-be competitors. It is against these IMITATORS, MOUNTEBANKS, FRAUDS AND CHARLATANS we wish to caution Physicians. The profession, in some instances, we regret to say, find "allies" among unscrupulous druggists, who are base enough to place the reputation of the Physician, as well as the life of his patient, in jeopardy by substituting worthless imitations when our goods are specified in his prescriptions. Hence it is not only important to specify S. & J. on all orders and prescriptions, but also to see that the same are properly filled by Druggists. We conform strictly to the Pharmacopœia or other standard works; we use only the purest medicinal ingredients; we employ none but skilled labor, and that we excel in every branch of our business is attested by repeated analyses, and

Thirty-five Gold, Silver and Bronze Medals from all Parts of the World,

Awarded by impartial juries, composed largely of Physicians and Chemists. Prominent on our list of popular specialties is

ABSORBENT COTTON,

Plain, Cocained, Borated, Salicylated, Hydronaphtholated, Carbolated, Styptic, or of any desired medication. These goods, made from long fibre, are thoroughly carded, full weight, perfect in quality, snow white, highly absorbent, and being free from oil, fat, or alkali, are entirely neutral, and superior in every way to anything that has ever been offered to the profession.

We desire to call the special attention of the profession to

HYDRONAPHTHOL,

The most valuable **Antiseptic** and **Disinfectant** yet obtained from coal tar. In germicidal power it ranks second only to Mercuric Bichloride, and, as it is non-poisonous and non-corrosive, it is preferable to that well-known agent. **Hydronaphthol** is free from the objectionable odor peculiar to Carbolic Acid and other phenols, and is freely soluble in hot water, alcohol, benzine, and the fixed oils. It preserves anatomical and pathological specimens in their natural condition, preventing shrinking or decay. Can be obtained in the form of crystals or incorporated with our absorbent cotton, gauze, jute, lint, or any dressing that can be rendered antiseptic. A book containing full description of this valuable addition to the list of modern antiseptics, will be mailed free to Physicians.

Lactated Food

Is not "the only" Food,

BUT IT IS

THE BEST FOOD,
THE CHEAPEST FOOD,
THE HEALTH GIVING FOOD.

For young Infants, it will prove a safe substitute for mother's milk; for the Invalid, or Dyspeptic, it is of great value. Hundreds who have used it recommend it as

The Most Palatable,
The Most Nutritious,
The Most Digestible,
OF ANY of the PREPARED FOODS.

It is a Cooked Food:
A Predigested Food:
A Non-Irritating Food.

CRYING BABIES

are made
GOOD NATURED, HEALTHY, HEARTY,
by its use.

Babies do not cry if they are satisfied, and they cannot be satisfied if they are not properly nourished by their food. or if it produces irritation of stomach or bowels.

Very many mothers cannot properly nourish their children, and the milk of many mothers produces bad effects in the child because of constitutional disease or weakness.

For all such cases there is a remedy in

LACTATED FOOD.

150 MEALS for an Infant for $1.00.
EASILY AND QUICKLY PREPARED.

Send for circulars and pamphlets giving testimony of Physicians and Mothers, which will amply prove every statement we make.

To Every Physician

who has not yet made a trial of the Lactated Food, we will send a package of our regular size, post-paid, without charge, upon application, with the understanding that it will be given a careful trial as soon as possible.

We shall use every precaution to maintain the high standard of this food, and to insure perfect satisfaction to the profession in its use.

FOUR SIZES:—25c., 50c., $1, $2.50.

Wells, Richardson & Co.,
Burlington, Vt.

—LANDRETH'S SEEDS ARE THE BEST— NORTH, SOUTH, EAST, OR WEST!

Everything of the best. SEEDS and IMPLEMENTS for Farm, Garden, or Country-Seat. Illustrated and Descriptive Catalogues Free upon application. Over 1500 acres under cultivation growing LANDRETH'S Garden Seeds. Founded 1784.

D. LANDRETH & SONS,
Philadelphia.

The best apparatus extant for the convenient and thorough application of hot water in uterine and pelvic diseases. Descriptive circular and prices furnished on application.

DR. RABUTEAU'S

[Laureate of the Institute of France]

DRAGEES, ELIXIR, AND SYRUP OF IRON.

"The experiments made in the hospitals of Paris have demonstrated that *Dr. Rabuteau's Dragees, Elixir, and Syrup* regenerate the red globules of the blood with a rapidity never observed with the use of the other ferruginous preparations. These results have been proved by the various *Compi-Globules.*

"The ferruginous preparations of *Dr. Rabuteau* do not cause any constipation, and are perfectly tolerated by the weakest persons."—*Gazette des Hopitaux.*

Dr. Rabuteau's Elixir is prescribed when some difficulty is experienced in swallowing the Dragees; it is especially adapted to weak persons, whose digestive functions need strengthening or stimulating.

Dr. Rabuteau's Syrup is especially prepared for children, who take it readily because of its agreeable taste.

A sample of Rabuteau's Dragees will be sent free to any Physician mentioning *The St. Louis Medical and Surgical Journal.*

Prepared by CLINN & Co., Pharmacists, Paris.

E. FOUGERA & Co., Agents for the United States.

Ducro's Alimentary Elixir,

A COMBINATION UNITING THE PROPERTIES OF

ALCOHOLIC STIMULANTS AND RAW MEAT

This preparation, which has been used with great success in the hospitals of Paris, since 1868, is adapted to the treatment of all diseases requiring the administration, in a small volume, of a tonic able to stimulate and support the vital forces, as *Pulmonary Phthisis, Depression and Nervous Debility, Adynamia, Malarious Cachexia,* etc.

Prepared by EMILE DURIEZ & Co., Successors to DUCRO & CIE, Paris.

KIRKWOOD'S INHALER,

This is the only complete, reliable, and effective inhaler in use, arranged for the direct application of Muriate of Ammonia and other remedial agents in the state of vapor to the diseased parts of the air passages in the treatment of catarrh and diseases of the throat and lungs. No heat or warm liquids required in its use.

It is entirely different from the various frail, cheap instruments that have been introduced.

KIRKWOOD'S INHALER is accompanied by testimonials of the highest professional character, together with carefully-prepared formulas for use.

Retail Price, complete, $2.50.

☞A liberal discount allowed to the trade and profession.

☞For descriptive pamphlets or other information, address

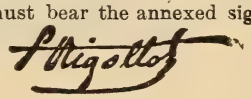
E. FOUGERA & CO., 30 North William Street, New York.

Rigollot's Mustard Paper

Is one of the most important and useful discoveries of the age. It is the only preparation which has been adopted by the civil and military hospitals, and the armies and navies of France and England, and which has obtained a medal at the Centennial Exposition at Philadelphia. All other mustard plasters or leaves, of whatever name, are but imitations of the original.

Physicians will find it the most reliable sinapism, prompt and certain in its action, and will therefore always prescribe it. Every sheet, in order to be genuine, must bear the annexed signature of the inventor.

Sold in tin boxes containing 10 sheets, also 25 and 100 sheets, by all respectable chemists throughout the world.



E. FOUGERA & CO., New York Depositaries.

CHERRY MALT PHOSPHITES.

W. C. JACOBS, Manager.

This preparation is believed to be the only Malt Extract continuously acceptable to the stomach. The attention of those who have ceased prescribing other extracts of malt because of excessive sweetness is specially called to this.

CHERRY MALT PHOSPHITES is a combination of Wild Cherry, the condensed extract of the important Cereals and the Elixir of the Hypophosphites. Its flavor is delicious, and it is medicinally invaluable in all cases of General and Nervous Debility, Dyspepsia, Imperfect Nutrition, Impure Blood, Wasting Diseases of Children and Adults. It is extensively prescribed in European countries, and has received the cordial endorsement of the leading practitioners of this country.

PRICE $1.00 PER BOTTLE.

To Physicians not familiar with its merits, who will pay express charges, we will send a full-sized bottle *free.*

WHEELER'S TISSUE PHOSPHATES

Bone-Calcium Phosphate $Ca_3 2P.O._4$, Sodium Phosphate $Na_2 H.P.O._4$, Ferrous Phosphate $Fe_3 2P.O._4$, Trihydrogen Phosphate $H_3 P.O._4$.

WHEELER'S COMPOUND ELIXIR OF PHOSPHATES AND CALISAYA. A Nerve Food and Nutritive Tonic, for the treatment of Consumption, Bronchitis, Scrofula, and all forms of Nervous Debility.

The Lactophosphates prepared from the formula of Prof. Dusart, of the University of Paris. Combines with a superior Pemartin Sherry Wine and Aromatics in an agreeable cordial easily assimilable and acceptable to the most irritable stomachs.

Phosphorus, the oxidizing element of the Nerve Centres for the generation of Nerve Force; Lime Phosphate, an agent of Cell Development and Nutrition; Soda Phosphate, an excitant of Functional Activity of Liver and Pancreas, and Corrective of Acid Fermentation in the Alimentary Canal; Iron, the Oxidizing Constituent of the Blood for the Generation of Heat and Motion; Phosphoric Acid, Tonic in Sexual Debility; Alkaloids of Calisaya, Anti-Malarial and Febrifuge; Extract of Wild Cherry, uniting with tonic power the property of Calming Irritation and Diminishing Nervous Excitement.

THE SUPERIORITY OF THE ELIXIR consists in uniting with the Phosphates the special properties of the Cinchona and Prunus, of Subduing Fever and Allaying Irritation of the Mucous Membrane of the Alimentary Canal, which adapts it to the successful treatment of Stomach Derangements and all diseases of Faulty Nutrition, the outcome of Indigestion. Malassimilation of Food, and *failure of supply* of these essential elements of Nerve Force and Tissue Repair.

The special indication of this combination of Phosphates in Spinal Affections, Caries, Necrosis, Ununited Fractures Marasmus, Poorly Developed Children, Retarded Dentition, Alcohol, Opium, Tobacco Habits, Gestation and Lactation, to promote Development, etc., and as a *physiological restorative* in Sexual Debility, and all used up conditions of the Nervous System, should receive the careful attention of good therapeutists.

There is no strychnia in this preparation, but when indicated, the Liquor Strychniæ of the U. S. Dispensatory may be added, each fluid drachm of the solution to a pound bottle of the Elixir making the 64th of a grain to a half fluid ounce, an ordinary dose, a combination of a wide range of usefulness.

DOSE—For an adult, one tablespoonful three times a day, after eating; from seven to twelve years of age, one dessertspoonful; from two to seven, one teaspoonful. For infants, from five to twenty drops, according to age.

Prepared at the Chemical Laboratory of T. B. WHEELER, M. D., Montreal, D. C.

Put up in pound bottles and sold by all Druggists at One Dollar.

LEVIS'S METALLIC SPLINTS.

FLEXIBLE, PERFORATED, NICKEL-PLATED, Conformable to every size and condition of Limbs. VERY LIGHT, INDESTRUCTIBLE, and INEXPENSIVE. The complete set consists of **21 pieces** in a neat, compact case. Full descriptive circulars sent on application. ☞ **PRICE, $15.00 Per Set.** ☜

CELERINA

NERVE-TONIC, STIMULANT AND ANTISPASMODIC.

FORMULA.—Every Fluid-Drachm represents FIVE grains EACH—Celery, Coca, Kola, Viburnum and Aromatics.

INDICATIONS.—Impotency, Spermatorrhea, Loss of Nerve-Power (so usual with Lawyers, Preachers, Writers and Business Men), Nervous Headache, Neuralgia, Paralysis, Dysmenorrhea, Hysteria, Opium-Habit, Inebriety, Prostatitis, Dyspepsia, and ALL LANGUID or DEBILITATED conditions of the System.—*Indispensable to restore a patient after alcoholic excess.*

DOSE.—One or two teaspoonfuls three or more times a day, as directed by the Physician.

ALETRIS CORDIAL

UTERINE TONIC AND RESTORATIVE.

PREPARED FROM THE ALETRIS FARINOSA OR TRUE UNICORN.

INDICATIONS.—Amenorrhea, Dysmenorrhea, Leucorrhea, Prolapsus Uteri, Sterility, to PREVENT Miscarriage, Etc.

DOSE.—One teaspoonful three or four times a day.

Unrivaled as a Uterine Tonic in Irregular, Painful, Suppressed and Excessive Menstruation,

IT RESTORES NORMAL ACTION TO THE UTERUS, AND IMPARTS VIGOR TO THE ENTIRE UTERINE SYSTEM.

☞Where Women have aborted during previous Pregnancies, or in any case where abortion is feared, the Aletris Cordial is indicated, and should be continuously administered during entire gestation.

ACID MANNATE

A MILD, SAFE AND PLEASANT APERIENT.

Prepared from Manna, Purified Cathartic Acid, and Fruit Juices.

INDICATIONS.—Constipation, Biliousness, Congestions, Etc. **INDISPENSABLE** AS AN APERIENT FOR WOMEN DURING PREGNANCY. In teaspoonful doses, 3 times a day, it favors the SECRETION and EXCRETION of bile, and gradually removes the congested and torpid states of the liver, and keeps the bowels in a regular and soluble condition.

DOSE.—ONE or MORE teaspoonfuls as directed by the Physician.

S. H. KENNEDY'S
CONCENTRATED EXTRACT OF
PINUS CANADENSIS

DARK A NON-ALCOHOLIC LIQUID. WHITE

A MOST VALUABLE NON-IRRITATING MUCOUS ASTRINGENT.

INDICATIONS.—Albuminuria, Diarrhea, Dysentery, Night-Sweats, Hemorrhages, Profuse Expectoration, Catarrh, Sore Throat, Leucorrhea, and other Vaginal Diseases, Piles, Sores, Ulcers, Burns, Scalds, Gonorrhea, Gleet, Etc.

When Used as an Injection, to Avoid Staining of Linen, the WHITE Pinus should be Used.

Recommended by DR. J. MARION SIMS, and other Prominent Physicians.

RIO CHEMICAL CO., ST. LOUIS: LONDON: PARIS.

Samples FREE to any Physician who will pay Express charges, and mention this Journal.

BUFFALO LITHIA WATER,

FOR GOUTY, RHEUMATIC, AND RENAL AFFECTIONS.

ROBERTS BARTHOLOW, M. A., M. D., LL. D., Prof. of Materia Medica and General Therapeutics in the Jefferson Medical College of Philadelphia. See his "Materia Medica and Therapeutics."

"Buffalo Lithia Spring of Virginia contains well-defined traces of Lithia, and is Alkaline. This has been used with great advantage in Gouty, Rheumatic, and Renal Affections." * * * * * * * * * "There is little doubt that the continuous use of Alkaline Waters for a long period will cause the solution of Uric Acid Renal Calculi. For this purpose those Alkaline Waters rich in POTASSA are preferable."

This water has a large percentage of the CARBONATE OF POTASSA, making it rich in valuable Alkali.

Dr. Wm. A. Hammond, of New York, Surgeon-General U. S. Army (retired), Professor of Diseases of the Mind and Nervous System in the University of New York, etc.

"I have for some time made use of the Buffalo Lithia Water in cases of affections of the Nervous System complicated with Bright's Disease of the Kidneys, or with a Gouty Diathesis. The results have been eminently satisfactory. Lithia has for many years been a favorite remedy with me in like cases, but the Buffalo Water certainly acts better than any extemporaneous solution of the Lithia Salts, and is, moreover, better borne by the stomach. I also often prescribe it in those cases of Cerebral Hyperæmia, resulting from over mental work—in which the condition called Nervous Dyspepsia exists—and generallly with marked benefit."

Dr. Robert Battey, of Georgia, Suggester of Battey's Operation, Member of the American Medical Association, etc.

"I would state that I have been using the Buffalo Lithia Water, No. 2, in my practice for three years past, in cases of Chronic Inflammation of the Bladder, whether induced by Stone, by Enlarged Prostate in the aged, or by Neglected Gonorrhœa, and have secured excellent results, which encourages me to prescribe it for the future."

Dr. Hunter McGuire, Richmond, Virginia, late Professor of Surgery, Medical College of Virginia.

"Buffalo Lithia Water, Spring No. 2, as an Alkaline Diuretic, is invaluable. In Uric Acid Gravel, and, indeed, in diseases generally dependent upon a Uric Acid Diathesis, it is a remedy of extraordinary potency. I have prescribed it in cases of Rheumatic Gout, which had resisted the ordinary remedies, with wonderfully good results. I have used it also in my own case, being a great sufferer from this malady, and have derived more benefit from it than from any other remedy."

Dr. Alfred L. Loomis, of New York, Professor of Institutes and Practice of Medicine, Medical Department University of New York.

"For the past four years I have used the Buffalo Lithia Water in the treatment of Chronic Interstitial Nephritis occurring in Gouty and Rheumatic subjects, with the most marked benefit. In all Gouty and Rheumatic Affections I regard it as highly efficacious."

Dr. Harvey L. Byrd, of Baltimore, President and Professor of Obstetrics and Diseases of Women and Children, in the Baltimore Medical College, formerly Professor of Practical Medicine, etc.

"I have witnessed the best results from the action of the Buffalo Lithia Water, Spring No. 2, in Chronic Gout, Rheumatic Gout, Rheumatism, Gravel, and Stone in the Bladder, and I do not hesitate to express the opinion that in all diseases depending upon or having their origin in Uric Acid Diathesis, it is unsurpassed, if, indeed, it is equaled by any water thus far known to the profession.

"It has an ascertained value in Bright's Disease. A knowledge of its action in that disease thus far would seem to warrant the belief that it would, in many instances, at least in its early stages, arrest it entirely; and in its more advanced stages prove a decided comfort and palliative."

Water, in cases of one dozen half gallon bottles, $5.00 per case, at the Springs. Testimonials sent free on application. The Virginia Buffalo Lithia Springs Company have no longer control of this water. To get it **FRESH,** order directly of or from parties who deal directly with

THOMAS F. GOODE, Prop. Buffalo Lithia Springs, Va.

WATER FOR SALE BY

FRED. BROWN, or J. F. HAYES, Philadelphia.

FLUID

Fluid Cosmoline [*Petroleol*] is a fixed oil of Petroleum, a pure hydro-carbon prepared expressly for medical use. From it all the volatile and otherwise offensive properties of the crude Petroleum have been separated, without the aid of chemicals. Perfectly indifferent to atmospheric action, it remains inalterable in any climate. It is neutral in reaction, bland, soothing, cooling, and may therefore be applied to the most sensitive conditions without irritation. Flowing at 32° Fahr., it may be used may be warmed to any temperature the body can endure. It will be found excellent to relax the skin, to protect irritated surfaces from the air, and to use as a constituent in liniments, ointments and plasters, where an emollient is needed. For these and many other purposes, obvious to the medical profession, it will be found superior to olive oil, or to any vegetable or animal oils, which undergo decomposition and turn rancid. It contains no foreign ingredient.

SAMPLES FURNISHED UPON APPLICATION.

PETROLEOL

Is put up in 1-lb., 5-lb., 10-lb., 25-lb., 50-lb. and 100-lb. Cans.

CHOLERA INFANTUM!

If the Profession will observe the difference between

Carnrick's Soluble Food

FOR INFANTS

and other Foods in the market, they certainly will use no other, especially in the summer season.

☞It is Entirely Different From Any Food that has Ever Been Introduced.

FORMULA.

Equal proportions of the solid constituents of cow's milk and best quality of wheat, the starch of which is converted into Dextrine, in powder form and ready for immediate use. Its chemical composition is almost identical with an average sample of human milk.

DIGESTIBILITY.

The casein of the milk in Carnrick's Soluble Food is sufficiently digested with pancreatine to render it light and flocculent like the casein of human milk, and as easily digested by the infant.

DEXTRINE vs. MALT SUGAR.

The starch in Carnrick's Soluble Food is converted into *dextrine* instead of malt sugar. Dextrine largely stimulates the normal secretions of the stomach and cannot ferment. Malt Sugar foods are in a condition to immediately ferment when ingested by the infant.

CHOLERA INFANTUM.

Prof. Vaughan, who has experimented largely with milk during the past two years, believes that Cholera Infantum is caused in most cases by the use of impure milk; consequently the only perfectly safe Food to use in the summer season is Carnrick's Soluble Food, for unlike all other prepared Foods, it requires no addition of cow's milk.

THE MILK USED IN CARNRICK'S SOLUBLE FOOD.

Those who supply us with milk are not allowed to feed their cows upon sprouts, brewers' grains, slop-feed, or any unsuitable food, and are required to observe the strictest cleanliness and to sign a contract empowering us to refuse their supply at any moment. See copy of contract in our sixty-four-page pamphlet.

THE USE OF POWDERS FOR PEPTONIZING MILK.

Cow's milk cannot be digested in the household by the nurse or mother with any degree of certainty; besides, the same danger arises from the use of impure milk or milk that has undergone a change not perceptible to the taste.

CARNRICK'S SOLUBLE FOOD COMPARED IN PRICE WITH OTHER FOODS FOR INFANTS.

Our Food contains from fifty to one hundred per cent. more nutritive matter than any prepared foods in the market, and is consequently very much less expensive to use. It thoroughly nourishes the child, whilst all other foods must be combined with milk. Carnrick's Soluble Food is put up in half-pound, pound, and five-pound cans.

☞ We will send gratis and post-free on application a sample of CARNRICK'S SOLUBLE FOOD to any physician.

REED & CARNRICK, New York.

Prof SFBaird
1445 Mass ave

New Medicaments for Bronchitis and other Respiratory Affections.

CHEKEN.
(Myrtus Chekan.)

THIS PLANT, indigenous to Chili, was introduced to the profession by Dr. Murrell, the famous English therapeutist and collaborator of Ringer. Dr. Murrell found Cheken to be of great value in chronic cough, especially in the "winter cough" of elderly people.

An extensive trial of this remedy has not only confirmed Dr. Murrell's observations, but has widened the range of the therapeutic application of Cheken so that at the present time it is looked upon, on account of its alterative and demulcent properties, as an indispensable addition to "cough mixtures," particularly in those intractable cases of long standing which have assumed a subacute or chronic course. The dose of the fluid extract which we manufacture is from 1 to 2 fluidrachms.

TEREBENE.

TO DR. MURRELL the profession is indebted for the introduction of another remedy which seems to be almost a specific in winter cough or chronic bronchitis, than which there are few more annoying maladies. Terebene facilitates expectoration, relieves the cough and shortness of breath, and also the acidity and flatulency which so often accompany bronchitis. Dr. Murrell, in *British Med. Journal*, Dec. 12th, 1885, states that he has employed Terebene in 114 cases of winter cough, with the most gratifying results.

We furnish *Terebene Pure; Terebene Inhalant* after Murrell's formula, and *Soluble Elastic Capsules Terebene*, each containing 10 minims.

YERBA SANTA.
(Eriodictyon Californicum.)

YERBA SANTA is a demulcent expectorant in harassing cough. Both in hospital and private practice this remedy has been subjected to a thorough trial, and the reports of its use are unanimous in according it a high place among remedial agents in the treatment of the distressing cough accompanying inflammatory affections of the respiratory mucous membrane. Its action has been likened to the combined action of ipecac and balsam of Peru, but it possesses, in addition, through its resinous principles, an action which is wanting in these valuable drugs in irritative bronchitis.

LIPPIA MEXICANA.

IN ITS native habitat this remedy was long known to possess medicinal virtue in the treatment of coughs. Its popular use led to a scientific investigation of its claims which has resulted in its general introduction to the medical profession, and a clinical test of its merits by physicians has confirmed the popular opinion of its value. Alone or in combination with other remedies, such as Yerba Santa, Cheken, etc., it has been found most serviceable in controlling cough.

Working Bulletins and Circulars fully descriptive of above remedies, together with reprints of Dr. Murrell's articles on winter cough, will be mailed on application.

SESSIONS OF 1887-88.

The REGULAR SESSION begins on Wednesday, September 21, 1887, and ends about the middle of March, 1888. During this Session, in addition to the regular didactic lectures, two or three hours are daily allotted to clinical instruction. Attendance upon at least two regular courses of lectures is required for graduation.

The SPRING SESSION consists of recitations, clinical lectures and exercises, and didactic lectures on special subjects. This Session begins about the middle of March and continues until the middle of June. During this Session, daily recitations in all the departments are held by a corps of Examiners appointed by the Faculty.

The CARNEGIE LABORATORY is open during the collegiate year, for instruction in microscopical examinations of urine, practical demonstrations in medical and surgical pathology, and lessons in normal histology and pathology, including bacteriology.

For the annual Circular and Catalogue, giving requirements for graduation and other information, address Prof. AUSTIN FLINT, Secretary, Bellevue Hospital Medical College, foot of East 26th Street, New York City.

SEELEY'S HARD RUBBER

Philadelphia.

30,000 PHYSICIANS
NOW PRESCRIBE

HYDROLEINE

(HYDRATED OIL,)

For Consumption and Wasting Diseases. It Produces Immediate Increase in Flesh and Weight.

FORMULA.

Each Dose of Two Teaspoonfuls, equal to 120 Drops, contains:

Pure Cod Liver Oil	80 m. (drops)	Soda	½ Grain.
Distilled Water	85 "	Boric Acid	½ "
Soluble Pancreatin	5 Grains.	Hyocholic Acid	⅛ "

DOSE:

Two teaspoonfuls alone, or with twice the quantity of water, to be taken thrice daily after meals.

Hydroleine (Hydrated Oil) is not a simple alkaline emulsion of oleum morrhua, but a hydro-pancreated preparation containing acids and a modicum of soda. Pancreatin is the digestive principle of fatty foods, and, in the soluble form here used, completely saponifies the oleaginous material so necessary to the reparative process in all wasting diseases.

Lautenbach's researches on the function of the liver would show the beautiful adjustment of therapeutics in preparation of Hydroleine, furnishing, as it does, the acid and soda necessary to prevent self-poisoning by reabsorption of morbid tubercular detritus and purulent matters into the general circulation.

Each bottle in nutritive value exceeds ten times the same bulk of cod liver oil. It is economical in use and certain in result.

Sold at all Drug Stores at $1.00 per Bottle.

The principles upon which this discovery is based have been described in a treatise on "The Digestion and Assimilation of Fats in the Human Body," by H. C. BARTLETT, Ph. D., F. C. S., and the experiments which were made, together with cases illustrating the effect of Hydrated Oil in practice, are concisely stated in a Treatise on "Consumption and Wasting Diseases," by G. OVEREND DREWRY, M. D.

Copies of these Works sent free on Application.

Agents for U. S.

Also exclusive Agents for SVAPNIA, or Bigelow's purified Opium, in SCALES and HALF-GRAIN GRANULES.

TAMAR INDIEN GRILLON.

A laxative, refreshing, and medicated Fruit Lozenge, very agreeable to take, and never causing irritation. Its physiological action assures the immediate relief and effectual cure of

CONSTIPATION,

HÆMORRHOIDS, BILE,
CEREBRAL CONGESTION, HEADACHE,
LOSS OF APPETITE,
INTESTINAL OBSTRUCTIONS, ETC.,

by augmenting the peristaltic movement of the intestine without producing undue secretion o the liquids. Unlike pills and the usual purgatives, it does not predispose to intestinal sluggishness, and the same dose always produces the same effect, that is to say, never needs increasing.

It is recommended by the most eminent physicians of Paris, notably Drs. BELIN and TARDIEU, who prescribe it constantly for the above complaints, and with most marked success.

Paris: E. GRILLON, 27 Rue Rambuteau.

Lactated Food

Is not "the only" Food,

BUT IT IS

THE BEST FOOD,
THE CHEAPEST FOOD,
THE HEALTH GIVING FOOD.

For young Infants, it will prove a safe substitute for mother's milk; for the Invalid, or Dyspeptic, it is of great value. Hundreds who have used it recommend it as

The Most Palatable,
The Most Nutritious,
The Most Digestible,
OF ANY of the PREPARED FOODS.

It is a Cooked Food:
A Predigested Food:
A Non-Irritating Food.

CRYING BABIES

are made
GOOD NATURED, HEALTHY, HEARTY,
by its use.

Babies do not cry if they are satisfied, and they cannot be satisfied if they are not properly nourished by their food, or if it produces irritation of stomach or bowels.

Very many mothers cannot properly nourish their children, and the milk of many mothers produces bad effects in the child because of constitutional disease or weakness.

For all such cases there is a remedy in

LACTATED FOOD.

150 MEALS for an Infant for $1.00.
EASILY AND QUICKLY PREPARED.

Send for circulars and pamphlets giving testimony of Physicians and Mothers, which will amply prove every statement we make.

To Every Physician

who has not yet made a trial of the Lactated Food, we will send a package of our regular size, post-paid, without charge, upon application, with the understanding that it will be given a careful trial as soon as possible.

We shall use every precaution to maintain the high standard of this food, and to insure perfect satisfaction to the profession in its use.

FOUR SIZES:—25c., 50c., $1, $2.50.

WHEELER'S TISSUE PHOSPHATES

Bone-Calcium Phosphate $Ca_3 2P.O._4$, Sodium Phosphate $Na_2 H.P.O._4$, Ferrous Phosphate $Fe_3 2P.O._4$, Trihydrogen Phosphate $H_3 P.O._4$.

WHEELER'S COMPOUND ELIXIR OF PHOSPHATES AND CALISAYA. A Nerve Food and Nutritive Tonic, for the treatment of Consumption, Bronchitis, Scrofula, and all forms of Nervous Debility.

The Lactophosphates prepared from the formula of Prof. Dusart, of the University of Paris. Combines with a superior Pemartin Sherry Wine and Aromatics in an agreeable cordial easily assimilable and acceptable to the most irritable stomachs.

Phosphorus, the oxidizing element of the Nerve Centres for the generation of Nerve Force; Lime Phosphate, an agent of Cell Development and Nutrition; Soda Phosphate, an excitant of Functional Activity of Liver and Pancreas, and Corrective of Acid Fermentation in the Alimentary Canal; Iron, the Oxidizing Constituent of the Blood for the Generation of Heat and Motion; Phosphoric Acid, Tonic in Sexual Debility; Alkaloids of Calisaya, Anti-Malarial and Febrifuge; Extract of Wild Cherry, uniting with tonic power the property of Calming Irritation and Diminishing Nervous Excitement.

THE SUPERIORITY OF THE ELIXIR consists in uniting with the Phosphates the special properties of the Cinchona and Prunus, of Subduing Fever and Allaying Irritation of the Mucous Membrane of the Alimentary Canal, which adapts it to the successful treatment of Stomach Derangements and all diseases of Faulty Nutrition, the outcome of Indigestion. Malassimilation of Food, and *failure of supply* of these essential elements of Nerve Force and Tissue Repair.

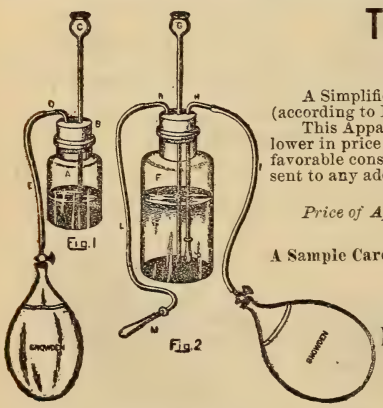
The special indication of this combination of Phosphates in Spinal Affections, Caries, Necrosis, Ununited Fractures Marasmus, Poorly Developed Children, Retarded Dentition, Alcohol, Opium, Tobacco Habits, Gestation and Lactation, to promote Development, etc., and as a *physiological restorative* in Sexual Debility, and all used up conditions of the Nervous System, should receive the careful attention of good therapeutists.

There is no strychnia in this preparation, but when indicated, the Liquor Strychniæ of the U. S. Dispensatory may be added, each fluid drachm of the solution to a pound bottle of the Elixir making the 64th of a grain to a half fluid ounce, an ordinary dose, a combination of a wide range of usefulness.

DOSE—For an adult, one tablespoonful three times a day, after eating; from seven to twelve years of age, one dessertspoonful; from two to seven, one teaspoonful. For infants, from five to twenty drops, according to age.

Prepared at the Chemical Laboratory of T. B. WHEELER, M. D., Montreal, D. C.

Put up in pound bottles and sold by all Druggists at One Dollar.



TREATMENT OF CONSUMPTION.

A Simplified Apparatus for the preparation and introduction of gases into the bowel (according to Dr. Bergeon's method), by Dr. H. N. Bryan, of Philadelphia.

This Apparatus has advantages which others do not possess, and being considerably lower in price than any devised for a similar purpose, it should commend itself to the favorable consideration of the medical profession. An illustrated descriptive circular sent to any address, on application.

Price of Apparatus, complete, in a neat portable Telescopic Case with Handle, **$6.00.**

A Sample Card of the Iron-Dyed Silk (14 sizes) will be sent to any address on application. Price Per Reel, – 10 cts.

WILLIAM SNOWDEN,

Manufacturer, Importer and Exporter of Surgical Instruments,

No. 7 South Eleventh St., Philadelphia.

CELERINA

NERVE-TONIC, STIMULANT AND ANTISPASMODIC.

FORMULA.—Every Fluid-Drachm represents FIVE grains EACH — Celery, Coca, Kola, Viburnum and Aromatics.

INDICATIONS. — Impotency, Spermatorrhea, Loss of Nerve-Power (so usual with Lawyers, Preachers, Writers and Business Men), Nervous Headache, Neuralgia, Paralysis, Dysmenorrhea, Hysteria, Opium-Habit, Inebriety, Prostatitis, Dyspepsia, and ALL LANGUID or DEBILITATED conditions of the System.—*Indispensable to restore a patient after alcoholic excess.*

DOSE.—One or two teaspoonfuls three or more times a day, as directed by the Physician.

ALETRIS CORDIAL

UTERINE TONIC AND RESTORATIVE.

PREPARED FROM THE ALETRIS FARINOSA OR TRUE UNICORN.

INDICATIONS. — Amenorrhea, Dysmenorrhea, Leucorrhea, Prolapsus Uteri, Sterility, to PREVENT Miscarriage, Etc.

DOSE.—One teaspoonful three or four times a day.

Unrivaled as a Uterine Tonic in Irregular, Painful, Suppressed and Excessive Menstruation,

IT RESTORES NORMAL ACTION TO THE UTERUS, AND IMPARTS VIGOR TO THE ENTIRE UTERINE SYSTEM.

☞ Where Women have aborted during previous Pregnancies, or in any case where abortion is feared, the Aletris Cordial is indicated, and should be continuously administered during entire gestation.

ACID MANNATE

A MILD, SAFE AND PLEASANT APERIENT.

☞ Prepared from Manna, Purified Cathartic Acid, and Fruit Juices. ☜

INDICATIONS. — Constipation, Biliousness, Congestions, Etc. **INDISPENSABLE** AS AN APERIENT FOR WOMEN DURING PREGNANCY. In teaspoonful doses, 3 times a day, it favors the SECRETION and EXCRETION of bile, and gradually removes the congested and torpid states of the liver, and keeps the bowels in a regular and soluble condition.

DOSE.—ONE or MORE teaspoonfuls as directed by the Physician.

S. H. KENNEDY'S
CONCENTRATED EXTRACT OF
PINUS CANADENSIS

DARK — A NON-ALCOHOLIC LIQUID. — WHITE

A MOST VALUABLE NON-IRRITATING MUCOUS ASTRINGENT.

INDICATIONS. — Albuminuria, Diarrhea, Dysentery, Night-Sweats, Hemorrhages, Profuse Expectoration, Catarrh, Sore Throat, Leucorrhea, and other Vaginal Diseases, Piles, Sores, Ulcers, Burns, Scalds, Gonorrhea, Gleet, Etc.

When Used as an Injection, to Avoid Staining of Linen, the WHITE Pinus should be Used.

Recommended by DR. J. MARION SIMS, and other Prominent Physicians.

FAIRCHILD BROS. & FOSTER,
82 & 84 Fulton Street, New York.

Infantile Atrophy.

"INFANTILE ATROPHY, or the slow wasting which is a familiar symptom in hand-fed babies, is one of the commonest causes of death in early infancy."

"INFANTILE ATROPHY is the consequence of insufficient nourishment. The child wastes because he is starved. But it is not to actual lack of feeding that the starvation is usually to be ascribed. A baby fed from a breast which secretes milk poor in quality and insufficient for the child's support, will, of course, grow slowly thinner; but an infant supplied largely with farinaceous compounds, from which his feeble digestive organs fail to derive even a minimum of nourishment, will waste with startling rapidity."

"Mellin's Food may be used from the first, and is almost always well digested. Farinaceous matters, unless guarded by malt, as in Mellin's Food, should not be given to a child younger than six months."

From "Disease in Children," by Eustace Smith, M. D., F. R. C. P., London, England.

A sample of Mellin's Food, sufficient for trial, will be sent free to any Physician desiring it.

SPECIFY (BATTLE) WHEN PRESCRIBING OUR PREPARATIONS.

BROMIDIA

THE HYPNOTIC.

FORMULA.—
Every Fluid drachm contains 15 grains EACH of pure Chloral Hydrat. and purified Brom. Pot.. and one-eighth grain EACH, of gen. imp. ext. Cannabis Ind. and Hyoscyam.

Dose.—One-half to one fluid drachm in WATER or SYRUP every hour until sleep is produced.

Indications.—
Sleeplessness, Nervousness, Neuralgia, Headache, Convulsions, Colic, Mania, Epilepsy, Irritability, etc. In the restlessness and delirium of fevers, it is absolutely nvaluable.

IT DOES NOT LOCK UP THE SECRETIONS.

PAPINE

THE ANODYNE.

Papine is the Anodyne or pain-relieving principle of Opium, the Narcotic and Convulsive elements being eliminated. It has less tendency to cause Nausea, Vomiting, Constipation, etc.

Indications.—
Same as Opium or Morphia.

Dose.—(ONE FLUID DRACHM)—represents the Anodyne principle of one-eighth grain of Morphia.

IODIA

THE ALTERATIVE AND UTERINE TONIC.

FORMULA.—
Iodia is a combination of Active Principles obtained from the Green Roots of STILLINGIA, HELONIAS, SAXIFRAGA, Menispermum, and Aromatics. Each fluid drachm also contains five grains IOD. POTAS. and three grains PHOS. IRON.

Dose.—One or two fluid drachms (more or less, as indicated,) three times a day, before meals.

Indications.—
Syphilitic, Scrofulous and Cutaneous Diseases, Dysmenorrhœa, Menorrhagia, Leucorrhœa, Amenorrhœa, Impaired Vitality, Habitual Abortions, and General Uterine Debility.

MATHEY-CAYLUS' GLUTEN

CAPSULES

OF

PURE COPAIBA AND OTHER MEDICINES.

Adapted and recommended for the cure recent or chronic Gleets, Fluor Albus, etc., etc.

The MATHEY-CAYLUS' CAPSULES, *coated with gluten*, present the most perfect mode for administering Copaiba, Cubebs, Norway Tar, Turpentine, and other remedies, the disagreeable odor and taste of which are often a hindrance to their use. This mode of preparing capsules, which has been approved by the Academy of Medicine, has been recommended in their clinical lectures by eminent Professors in the hospitals of Paris, as well as in those of New York and London.

By the first physicians of the hospitals of Paris, London, and New York.

SPECIAL ADVANTAGES OF MATHEY-CAYLUS' GLUTEN CAPSULES.—Being formed of thin, transparent, and readily assimilated coating, they so cover and disguise the medicine to be given, that it can be taken without disgust, but with ease. In this respect, they differ widely from the gelatine capsules, which have a hard, thick coating, which swells beyond measure, in the stomach, are hard to be swallowed, and which is of great importance, they create disturbance in the digestive functions.

The special advantage of the coating of gluten consists in the fact that, notwithstanding its extra thinness, and although it softens under the action of the gastric juice, it can pass the stomach without breaking, and only in the intestines is the medicinal matter liberated; this accounts for the fact that Mathey-Caylus' Capsules never cause the nausea, eructations, and dyspeptic symptoms, which are complained of by many persons using other preparations.

Finally, their regular ovoid form, which is so favorable to swallowing, their pleasant appearance, which dispels all disgust, and the advantage of being entirely free from taste and smell, recommend the use of these capsules even to the most delicate persons.

Thankful to the Medical Profession for the liberal patronage heretofore bestowed upon us, we hope that they will continue their favors, and we are convinced that they will never have any reason to regret the generous welcome they have given to our preparations.

MATHEY-CAYLUS' CAPSULES are never sold, except in bottles having the following inscription printed in the glass: MATHEY-CAYLUS A PARIS. And each bottle contains 64 capsules, making them the cheapest capsules in the market.

The following different kinds of Mathey-Caylus' Gluten Capsules are now offered:

COPAIBA AND TANNIC ACID,
COPAIBA AND S. N. OF BISMUTH,
COPAIBA AND CATECHU,
COPAIBA AND MAGNESIA,
COPAIBA, CUBEBS AND ALUM,
COPAIBA, CUBEBS AND RHATANY,
COPAIBA AND RHATANY,
COPAIBA AND CITRATE OF IRON,
COPAIBA AND CUBEBS,
COPAIBA PURE,
COPAIBA, CUBEBS AND CARB. OF IRON,
VENICE TURPENTINE, NORWAY TAR, PURIFIED,
CUBEBS AND TURPENTINE,
CUBEBS AND TANNATE OF IRON,
CUBEBS AND ALUM,
CUBEBS PURE,
COPAIBA AND MATICO,
COPAIBA, IRON AND OIL OF SANDAL,
COPAIBA AND OIL OF SANDAL,
COPAIBA, PEPSIN AND BISMUTH,
COPAIBA AND TAR,

TANRET'S PELLETIERINE

For the Treatment of Tape-Worm (Tænia Solium.)

This New Tænifuge, the Active Alkaloid of Pomegranate Bark, has of late come into extensive use in France for the treatment of Tape-Worm (Tænia Solium). The results of numerous experiments with it at the Marine Hospitals of Toulon, St. Mandrier, etc., and in the Hospitals of Paris, St. Antoine, La Charite, Necker, Beaujon, etc., have all been most satisfactory. Doctor Dujardin Beaumetz, Member of the Academy of Medicine, and Prof. Laboulbene, in their report to the Society of Therapeutics, have given it their unqualified approval after the most searching experiments. This preparation is pleasant to administer, and if certain preliminaries are observed success will be insured.

Sold only in Bottles containing one dose.

TANRET'S ERGOTININE.

ALKALOID AND ACTIVE PRINCIPLE OF SPURRED RYE.

This is a well defined Alkaloid that must not be confounded with Ergotine or other extracts; it is given in doses of from ¼ to ½ Milligramme (1-240th to 1-120th of a grain), in all cases where Ergot is indicated, viz.: Flooding, Post-partum Hemorrhages, Metrorrhagia, etc., etc.

It is put up in the following forms:

Syrup Containing ¼ Milligramme to each teaspoonful; Dose from 1 to 6 teaspoonsfuls per day.

Solution for hypodermic purposes, Containing 1 Milligramme to each cubic Centimeter; Dose, from 3 to 10 drops.

The Institute of France has awarded one of its Prizes to Mr. Chas. Tanret for the discovery of these Alkaloids.

Tanret's Pelletierine and Ergotinine are only prepared by Mr. Chas. Tanret, Laureate of the Institute of France, 64 Rue du Rempart, Paris.

Sole Agents for the United States, E. FOUGERA & CO., 30 North William St., N. Y.

PAMPHLET ON PELLETIERINE AND ERGOTININE SENT ON APPLICATION.

BOUDAULT'S PEPSINE

The Only Pepsine Used in the Hospitals of Paris for the Last 30 Years.

Unlike the various substitutes which, in most cases, are but unscientific or incompatible compounds, forced upon the Medical Profession as aids to digestion by extensive advertising, but which, when submitted to the proper tests, are found to be useless as digestive agents, Pepsine is constantly gaining in the esteem of the careful practitioner.

Since the introduction of Pepsine by Boudault and Corvisart, in 1854, the original BOUDAULT'S PEPSINE HAS BEEN AT ALL TIMES CONSIDERED THE BEST, as is attested by the awards it has received at the Expositions of 1867, 1868, 1872, 1873, in 1876 at the Centennial Exposition of Philadelphia, and in 1878 at the Paris Exposition.

The most reliable tests, carefully applied, will satisfy every one that BOUDAULT'S PEPSINE HAS A MUCH HIGHER DIGESTIVE POWER than the best Pepsines now before the Profession, and is therefore especially worthy of their attention.

BOUDAULT'S PEPSINE is prepared in the form of Pepsine Acid and Pepsine Neutral. It is sold in bottles of one ounce, with a measure containing exactly five grains; also in bottles of 4, 8, and 16 ounces for dispensing.

BOUDAULT'S WINE OF PEPSINE.

Formula of Dr. Corvisart.

The taste of Pepsine being perfectly disguised in this Wine, it may be recommended to persons who have difficulty in taking Pepsine in the form of powder. This Wine is tested so that a tablespoonful of it is equal in digestive power to ten grains of Boudault's Pepsine in powder. Sold only in 8 oz. Bottles.

Since the introduction—1870—of the substance known as **COSMOLINE** (Unguentum Petrolei) to the College of Pharmacy in Philadelphia, by the late Professor Parrish, who was one of the very first to recognize its merits, it has become very widely known and variously used by the Physicians, Surgeons, and Pharmacists of all schools throughout this country and abroad. Pure Petroleum will not oxidize, but the processes resorted to by many, in order to obtain special products from petroleum, introduce properties that will oxidize in ordinary temperatures, and develop other objections with age. Such products may be used in the arts, but they were decided years ago to be exceedingly irritating and otherwise interfering as surgical dressings or bases for ointments. The Manufacturers of **COSMOLINE** (Unguentum Petrolei) took advantage of the possibility of producing an article which would not only not become rancid, but also one which would be absolutely free from those properties which affected the ordinary residuums and products of the petroleum still. Notwithstanding numerous other petroleum preparations of variable merit and ostensibly for the same purpose, have since been offered, **COSMOLINE** (Unguentum Petrolei) has continued to increase steadily in professional favor. **COSMOLINE** (Unguentum Petrolei) was not recommended to the profession at large until the leading Physicians and Pharmacists of Philadelphia were thoroughly satisfied of its fitness and absolute purity, and since then it has not been changed to meet every speculative fancy, or to compete in price with those preparations of petroleum having some outward resemblance to Cosmoline, but found either deficient in action or positively irritating, owing to chemical agencies used to cheapen the cost of manufacture. It was apparent from its first introduction, that **COSMOLINE** (Unguentum Petrolei) was adapted to a very wide range of uses in Surgery and Pharmacy; and when it was found that its uniformity could invariably be depended upon, it is not surprising that it obtained supremacy over those products which have been varying as commercial experiments, and lacking in all the essential and absolutely pure characteristics needed for a general surgical dressing and base for ointments.

Yours very respectfully,

E. F. HOUGHTON & CO.,

No. 211 South Front St.,

PHILADELPHIA.

FELLOWS'

HYPO-PHOS-PHITES

(SYR: HYPOPHOS: COMP: FELLOWS)

Contains **The Essential Elements** to the Animal Organization—Potash and Lime;
The **Oxydizing Agents**—Iron and Manganese;
The **Tonics**—Quinine and Strychnine;
And the **Vitalizing Constituent**—Phosphorus,
Combined in the form of a Syrup, with *slight alkaline reaction.*

It Differs in Effect from all others, being pleasant to taste, acceptable to the stomach, and harmless under prolonged use.

It has Sustained a High Reputation in America and England for efficiency in the treatment of Pulmonary Tuberculosis, Chronic Bronchitis, and other affections of the respiratory organs, and is employed also in various nervous and debilitating dis eases with success.

Its Curative Properties are largely attributable to Stimulant, Tonic, and Nutritive qualities, whereby the various organic functions are recruited.

In Cases where innervating constitutional treatment is applied, and tonic treatment is desirable, this preparation will be found to act with safety and satisfaction.

Its Action is Prompt; stimulating the appetite and the digestion, it promotes assimilation, and enters directly into the circulation with the food products.

The Prescribed Dose produces a feeling of buoyancy, removing depression or melancholy, and hence is of great value in the treatment of MENTAL AND NERVOUS AFFECTIONS.

From its exerting a double tonic effect and influencing a healthy flow of the secretions, its use is indicated in a wide range of diseases.

DUSART'S SYRUP AND WINE OF LACTO-PHOSPHATE OF LIME,

The properties of which are scientifically founded on physiological experiments, and have received the sanction of several years' successful trial by the French and English medical profession, as producing durable reconstituent effects in all cases of *Cachexia* or *Adynamia*, when, nutrition has been impaired by acute or chronic complaints.

As an article of diet it acts as general excitant of all the nutritive functions, insures digestion, brings back or increases the appetite, enriches the milk of the mother, and generally improves the vital energies. As a medicament it is chiefly used in convalescence, teething, rickets, and imperfect growth, dyspepsia, various nervous diseases, wounds, fractures, and all complaints of the osseous system.

Dusart's Syrup of Lacto-Phosphate of Lime and Iron is a ferruginous medicament specially invaluable in the above cases, when complicated with anæmia.

Dusart's work on the "Physiological and Therapeutic Action of Phosphate of Lime" will be sent to any physician on application to Messrs. E. FOUGERA & Co.

PARIS: L. DUSART, 8 Rue Vivienne. NEW YORK: E. FOUGERA & CO., Importing Pharmacists.

CHAPOTEAUT'S MORRHUOL.

Morrhuol contains all the active curative principles of Cod-Liver Oil, except the fatty part. It represents twenty-five times its weight of brown Cod-Liver Oil, and is dispensed in small round capsules containing each twenty centigrammes, thus equal to five grammes of Cod-Liver Oil. The daily dose is of two or three capsules for children, and from three to six for adults, to be taken before the chief meals.

PARIS: P. CHAPOTEAUT, 8 Rue Vivienne. NEW YORK: FOUGERA & CO.

Smithsonian Institute
E I B Johnson 2588

Concentrated Palatable Nutrients.

PEPTONIZED EXTRACT OF BEEF.

Contains all the nutritive constituents of beef.

The superiority of this preparation over other extracts of beef depends upon:

1. The large proportion of albuminoids which it contains.
2. The fact that its albuminoid constituents are chiefly in the form of peptones, insuring rapid absorption and ready assimilation.
3. Its appetizing flavor.
4. Its perfect and ready solubility in water.

The uses of such a preparation are obvious. It is a concentrated, and at the same time an easily assimilated food, useful in all cases of acute disease where sustaining treatment is indicated, and especially valuable in convalescence, and in chronic conditions of inanition or malnutrition, particularly where the functions of the stomach are not well performed.

One part of the Peptonized Extract of Beef may be said to be the equivalent of eight parts of fresh beef. One teaspoontul (about one-half ounce) will make a pint of excellent beef tea.

A like quantity added to a pint of vegetable soup communicates to it a rich flavor, and converts it into a highly nutritious food.

It may be employed in a still more concentrated form, if desired, but from half an ounce to one ounce of the extract is as much as it is generally advisable to give at one time.

POWDER OF BEEF.

A concentrated food of the highest nutritive value.

It represents in an exceedingly concentrated form the total nutritive value of the beef.

It is tasteless, and can be taken for a longer time than the various extracts of beef, beef juices, etc., without exciting nausea.

It is not only more readily digested and assimilated, but also incomparably easier of administration than other concentrated aliments, and may be added to water, milk, or wine, or beaten up with the yolk of an egg.

Drs. Debove and Dujardin-Beaumetz, of Paris, France, Dr. Lauder Brunton, of London, England, Dr. Henry B. Millard, of New York City, and many others, have given Powder of Beef a most thorough trial, and report that it is a most valuable adjuvant in the treatment of dyspepsia, indigestion, gastritis, ulcer of the stomach, tuberculosis, and in all chronic wasting diseases accompanied by enfeeblement of the digestive and assimilative functions.

PURE POWDERED BONE.

For the treatment of such affections as nervous exhaustion, rickets, and all diseases depending upon a lack of the proper supply of the inorganic elements of the tissues, it is believed that Pure Powdered Bone will be found invaluable.

It has the exact chemical composition required for a true nerve and bone food.

Its mechanical construction is such as to aid digestion to the greatest possible degree.

It is tasteless and odorless.

It is miscible with all ordinary foods in the proportions required, without detection.

It is inexpensive, and therefor adapted for general use.

PARKE, DAVIS & CO.,

Manufacturing Chemists,

New York: { 60 Maiden Lane, 21 Liberty Street.

DETROIT, MICH.

30,000 PHYSICIANS
NOW PRESCRIBE

HYDROLEINE

(HYDRATED OIL,)

For Consumption and Wasting Diseases. It Produces Immediate Increase in Flesh and Weight.

FORMULA.

Each Dose of Two Teaspoonfuls, equal to 120 Drops, contains:

Pure Cod Liver Oil	80 m. (drops)	Soda	½ Grain.
Distilled Water	35 "	Boric Acid	¼ "
Soluble Pancreatin	5 Grains.	Hycholic Acid	⅛ "

DOSE:

Two teaspoonfuls alone, or with twice the quantity of water, to be taken thrice daily after meals.

Hydroleine (Hydrated Oil) is not a simple alkaline emulsion of oleum morrhua, but a hydro-pancreated preparation containing acids and a medicum of soda. Pancreatin is the digestive principle of fatty foods, and, in the soluble form here used, completely saponifies the oleaginous material so necessary to the reparative process in all wasting diseases.

Lautenbach's researches on the function of the liver would show the beautiful adjustment of therapeutics in preparation of Hydroleine, furnishing, as it does, the acid and soda necessary to prevent self-poisoning by reabsorption of morbid tubercular detritus and purulent matters into the general circulation.

Each bottle in nutritive value exceeds ten times the same bulk of cod liver oil. It is economical in use and certain in result.

Sold at all Drug Stores at $1.00 per Bottle.

The principles upon which this discovery is based have been described in a treatise on "The Digestion and Assimilation of Fats in the Human Body," by H. C. BARTLETT, Ph. D., F. C. S., and the experiments which were made, together with cases illustrating the effect of Hydrated Oil in practice, are concisely stated in a Treatise on "Consumption and Wasting Diseases," by G. OVEREND DREWRY, M. D.

Copies of these Works sent free on Application.

WM. F. KIDDER & CO., 83 John Street, New York.
Agents for U. S.

Also exclusive Agents for SVAPNIA, or Bigelow's purified Opium, in SCALES and HALF-GRAIN GRANULES.

DISEASES OF THE URIC ACID DIATHESIS.

LAMBERT'S

LITHIATED HYDRANGEA.

KIDNEY ALTERATIVE—ANTI-LITHIC.

Formula.—Each fluid drachm of "Lithiated Hydrangea" represents thirty grains of FRESH HYDRANGEA and three grains of CHEMICALLY PURE Benzo-Salicylate of Lithia. Prepared by our improved process of osmosis, it is INVARIABLY of DEFINITE and UNIFORM therapeutic strength, and hence can be depended upon in clinical practice.

Dose.—One or two teaspoonfuls four times a day (preferably between meals).

Urinary Calculus, Gout, Rheumatism, Bright's Disease, Diabetes, Cystitis, Hæmaturia Albuminuria, and Vesical Irritations generally.

WE have had prepared for the convenience of Physicians **Dietetic Notes,** *suggesting the articles of food to be allowed or prohibited in several of these diseases.*

These Dietetic Notes have been bound in the form of small perforated slips for Physicians to distribute to their patients. Mailed gratis upon request, together with our latest compilation of case reports and clinical observations, bearing upon the treatment of this class of Diseases.

LAMBERT PHARMACAL COMPANY,
116 OLIVE STREET, ST. LOUIS.

RHEUMATISM.

DIETETIC NOTE.—A fruit and vegetable diet is most favorable for patients with chromic rheumatic troubles.

Allowed.—Beef and mutton in moderation, with horse-radish as a relish; fish and eggs, green vegetables and fruit, especially lemons. The skimmed milk diet has been advocated by some authors.

Avoid.—Starchy and saccharine food; all malt liquors, wines, and coffee.

SCOTT'S EMULSION

OF PURE COD LIVER OIL WITH HYPOPHOSPHITES OF LIME AND SODA.

THE STANDARD EMULSION OF COD LIVER OIL.

The ONLY Preparation of its class that will not SEPARATE nor SPOIL in any climate.

IT IS MADE FROM THE PUREST NORWEGIAN COD LIVER OIL, COMBINED WITH CHEMICALLY PURE HYPOPHOSPHITES AND GLYCERINE.

Acknowledged by leading Physicians in the U. S. and many other Countries to be the most ELEGANT most PALATABLE and EASILY DIGESTED preparation in the World, and can be tolerated longer by children and persons with delicate stomachs than any other.

WE ASK A CAREFUL COMPARATIVE TEST WITH ANY OR ALL SIMILAR PREPARATIONS.

FORMULA: 50 per cent. of Pure Cod Liver Oil, 6 grs. of the Hypophosphites of Lime. and 3 grs. of the Hypophosphite of Soda to a fluid ounce. Emulsified with mucilage and Glycerine.

S. & B's BUCKTHORN CORDIAL, RHAMNUS FRANGULA.

Is giving universal satisfaction to the profession, for its mild but certain and efficient cathartic action. It seems to be *almost* a *specific* for *habitual constipation*, and we are constantly in receipt of the most flattering reports regarding it. The care we use in its preparation—having the bark always the proper age, and properly exhausted—makes it always reliable in its action. Be sure and specify S. & B. Buckthorn Cordial.

To those who have for any reason never yet tried these preparations, we will be pleased to send samples free by express.

SCOTT & BOWNE, Mfg. Chemists, 132 & 134 S. 5th Ave., N. Y.

TAMAR INDIEN GRILLON.

A laxative, refreshing, and medicated Fruit Lozenge, very agreeable to take, and never causing irritation. Its physiological action assures the immediate relief and effectual cure of

CONSTIPATION,

HÆMORRHOIDS, BILE,
CEREBRAL CONGESTION, HEADACHE,
LOSS OF APPETITE,
INTESTINAL OBSTRUCTIONS, ETC.,

by augmenting the peristaltic movement of the intestine without producing undue secretion of the liquids. Unlike pills and the usual purgatives, it does not predispose to intestinal sluggishness, and the same dose always produces the same effect, that is to say, never needs increasing.

It is recommended by the most eminent physicians of Paris, notably Drs. BELIN and TARDIEU, who prescribe it constantly for the above complaints, and with most marked success.

Paris: E. GRILLON, 27 Rue Rambuteau.

SOLD BY ALL DRUGGISTS.

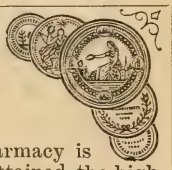
CAUTION TO PHYSICIANS!



That we are the pioneers and leaders in our special department of Pharmacy is well known by intelligent physicians and pharmacists everywhere. We have attained the highest perfection in the manufacture of our goods, and our success has tempted various individuals and corporations, without knowledge or facilities, to enter the field as would-be competitors. It is against these IMITATORS, MOUNTEBANKS, FRAUDS AND CHARLATANS we wish to caution Physicians. The profession, in some instances, we regret to say, find "allies" among unscrupulous druggists, who are base enough to place the reputation of the Physician, as well as the life of his patient, in jeopardy by substituting worthless imitations when our goods are specified in his prescriptions. Hence it is not only important to specify S. & J. on all orders and prescriptions, but also to see that the same are properly filled by Druggists. We conform strictly to the Pharmacopœia or other standard works; we use only the purest medicinal ingredients; we employ none but skilled labor, and that we excel in every branch of our business is attested by repeated analyses, and

Thirty-five Gold, Silver and Bronze Medals from all Parts of the World,

Awarded by impartial juries, composed largely of Physicians and Chemists. Prominent on our list of popular specialties is

ABSORBENT COTTON,

Plain, Cocained, Borated, Salicylated, Hydronaphtholated, Carbolated, Styptic, or of any desired medication. These goods, made from long fibre, are thoroughly carded, full weight, perfect in quality, snow white, highly absorbent, and being free from oil, fat, or alkali, are entirely neutral, and superior in every way to anything that has ever been offered to the profession.

We desire to call the special attention of the profession to

HYDRONAPHTHOL,

The most valuable **Antiseptic** and **Disinfectant** yet obtained from coal tar. In germicidal power it ranks second only to Mercuric Bichloride, and, as it is non-poisonous and non-corrosive, it is preferable to that well-known agent. **Hydronaphthol** is free from the objectionable odor peculiar to Carbolic Acid and other phenols, and is freely soluble in hot water, alcohol, benzine, and the fixed oils. It preserves anatomical and pathological specimens in their natural condition, preventing shrinking or decay. Can be obtained in the form of crystals or incorporated with our absorbent cotton, gauze, jute, lint, or any dressing that can be rendered antiseptic. A book containing full description of this valuable addition to the list of modern antiseptics, will be mailed free to Physicians.

Lactated Food

Is not "the only" Food,

BUT IT IS

THE BEST FOOD,
THE CHEAPEST FOOD,
THE HEALTH GIVING FOOD.

For young Infants, it will prove a safe substitute for mother's milk; for the Invalid, or Dyspeptic, it is of great value. Hundreds who have used it recommend it as

The Most Palatable,
The Most Nutritious,
The Most Digestible,
OF ANY of the PREPARED FOODS.

It is a Cooked Food:
A Predigested Food:
A Non-Irritating Food.

CRYING BABIES

are made
GOOD NATURED, HEALTHY, HEARTY,
by its use.

Babies do not cry if they are satisfied, and they cannot be satisfied if they are not properly nourished by their food. or if it produces irritation of stomach or bowels.

Very many mothers cannot properly nourish their children, and the milk of many mothers produces bad effects in the child because of constitutio al disease or weakness.

For all such cases there is a remedy in

LACTATED FOOD.

150 MEALS for an Infant for $1.00.
EASILY AND QUICKLY PREPARED.

Send for circulars and pamphlets giving testimony of Physicians and Mothers, which will amply prove every statement we make.

To Every Physician

who has not yet made a trial of the Lactated Food, we will send a package of our regular size, post-paid, without charge, upon application, with the understanding that it will be given a careful trial as soon as possible.

We shall use every precaution to maintain the high standard of this food, and to insure perfect satisfaction to the profession in its use.

FOUR SIZES:—25c., 50c., $1, $2.50.

DR. RABUTEAU'S

[Laureate of the Institute of France]

DRAGEES, ELIXIR, AND SYRUP OF IRON.

"The experiments made in the hospitals of Paris have demonstrated that *Dr. Rabuteau's Dragees, Elixir, and Syrup* regenerate the red globules of the blood with a rapidity never observed with the use of the other ferruginous preparations. These results have been proved by the various *Compi-Globules.*

"The ferruginous preparations of *Dr. Rabuteau* do not cause any constipation, and are perfectly tolerated by the weakest persons."—*Gazette des Hopitaux.*

Dr. Rabuteau's Elixir is prescribed when some difficulty is experienced in swallowing the Dragees; it is especially adapted to weak persons, whose digestive functions need strengthening or stimulating.

Dr. Rabuteau's Syrup is especially prepared for children, who take it readily because of its agreeable taste.

A sample of Rabuteau's Dragees will be sent free to any Physician mentioning *The St. Louis Medical and Surgical Journal.*

Prepared by CLINN & Co., Pharmacists, Paris.

Ducro's Alimentary Elixir,

A COMBINATION UNITING THE PROPERTIES OF

ALCOHOLIC STIMULANTS AND RAW MEAT

This preparation, which has been used with great success in the hospitals of Paris, since 1868, is adapted to the treatment of all diseases requiring the administration, in a small volume, of a tonic able to stimulate and support the vital forces, as *Pulmonary Phthisis, Depression and Nervous Debility, Adynamia, Mularious Cachexia,* etc.

Prepared by EMILE DURIEZ & Co., Successors to DUCRO & CIE, Paris.

KIRKWOOD'S INHALER,

This is the only complete, reliable, and effective inhaler in use, arranged for the direct application of Muriate of Ammonia and other remedial agents in the state of vapor to the diseased parts of the air passages in the treatment of catarrb and diseases of the throat and lungs. No heat or warm liquids required in its use.

It is entirely different from the various frail, cheap instruments that have been introduced.

KIRKWOOD'S INHALER is accompanied by testimonials of the highest professional character, together with carefully-prepared formulas for use.

Retail Price, complete, $2.50.

☞A liberal discount allowed to the trade and profession.

☞For descriptive pamphlets or other information, address

E. FOUGERA & CO., 30 North William Street, New York.

Rigollot's Mustard Paper

Is one of the most important and useful discoveries of the age. It is the only preparation which has been adopted by the civil and military hospitals, and the armies and navies of France and England, and which has obtained a medal at the Centennial Exposition at Philadelphia. All other mustard plasters or leaves, of whatever name, are but imitations of the original.

Physicians will find it the most reliable sinapism, prompt and certain in its action, and will therefore always prescribe it. Every sheet, in order to be genuine, must bear the annexed signature of the inventor.

Sold in tin boxes containing 10 sheets, also 25 and 100 sheets, by all respectable chemists throughout the world.

Rigollot

SECOND EDITION, REVISED AND ENLARGED, WITH NEW ILLUSTRATIONS.

32mo. Cloth. 75 Cents.

OUTLINE OF CONTENTS: Obstructions to Respiration, Foreign Bodies in the Eye, Ear, and Nose, Fits or Seizures, Injuries to the Brain, Effects of Heat and Cold, Sprains, Dislocations, Fractures, Wounds, Railroad and Machinery Accidents, Hemorrhages, Transportation of Injured Persons, Poisons and their Antidotes, Domestic Emergencies, Signs of Death, Proper Supplies for Emergencies, Surgical and Medicine Cases, etc., Doses and Uses of Medicines, etc.

PRESS NOTICES.

"The Chapter on the Control of Hemorrhage deserves special mention. * * * This little book should be found in every house."—*Medical Bulletin.*

"It is a book that no family ought to be without."—*Boston Herald.*

"A very instructive little book. It ought to be read once or twice each year."—*St. Louis Medical and Surgical Journal.*

"A COMPLETE GUIDE FOR SUDDEN EMERGENCIES. * * * Its style is reassuring and calm, so that people who turn to it will find their nerves steadied. * * * A deal of excellent and soothing advice."—*Philadelphia Ledger.*

"THOROUGHLY PLAIN AND PRACTICAL."—*N. Y. Tribune.*

*** Physicians will find useful advice in this volume when suddenly called to attend cases of poisoning or accidents by violence. It is a good book to recommend to the Heads of Families, Superintendents of Manufactories, Mines and Industrial Works.

It will be sent by express, prepaid, upon receipt of 75 cents.

Address *DRS. RANDOLPH & DULLES,*

P. O. Box 843. Office of Medical and Surgical Reporter, PHILADELPHIA, PA.

THE PHYSICIAN'S

DAILY POCKET RECORD AND VISITING LIST.

By S. W. BUTLER, M. D. TWENTY-FIRST YEAR.

A New Revised Edition for 1887, with Metric Posological Table, &c., strongly bound in Dark Morocco, with Pocket for Blanks, and a Patent Steel Spring.

THIS VISITING LIST has been a favorite for many years. It is "perpetual" in arrangement, and may be used continuously one full year from the date of the first entry. Besides the Posological Table, it contains Tables of Doses for Hypodermic Injections, Inhalation, Suppositories, &c.; Directions for the treatment of Poisoning, Drowning, and other emergencies; Simple Directions for Testing the Urine; Obstetric Record, Cash Record, &c.

☞ This RECORD has met with the Highest Praise from those who have made use of it.

PRICES.

Editions for Thirty Patients Daily, Patent Clasp, ... *$1.50*
Editions for Sixty Patients Daily, Patent Clasp, ... *$2.00*

☞ **The Name of the Purchaser will be Stamped in Gilt Letters, on the Back, for Ten Cents Extra.**

A reduction of 50 cents on these prices will be made to subscribers to THE MEDICAL AND SURGICAL REPORTER and QUARTERLY COMPENDIUM when taken together.

MEDICAL AND SURGICAL REPORTER,

COLDEN'S Liquid Beef Tonic.

Established 15 Years.
OBSERVE the NAME.
Beware of Imitations.

ORIGINAL LABEL:
"Colden's Liebig's Liquid Extract of Beef and Tonic Invigorator."

An Invaluable Aid in Medical Practice.

Differs Essentially from all other Beef Tonics.

COLDEN'S Liquid Beef Tonic is endorsed by scores of physicians, who are growing to realize more and more its importance in repairing, in accordance with the principles of dietetics, the **waste which disease entails.** It consists of the extract of Beef (by Baron Liebig's process) spirit rendered non-injurious to the most delicate stomach by extraction of the Fusel Oil, soluble Citrate of Iron, Cinchona, Gentian and other bitter tonics. An official analysis of this preparation by the eminent Chemist, ARTHUR HILL HASSALL, M. D., F. R. S., and an endorsement by the late SIR ERASMUS WILSON, F. R. S., is printed on the label of each bottle.

As a **blood food,** and a **reliable tonic** in all cases of debility and weakness, Malarial Fever, Anæmia, Chlorosis, Incipient Consumption, etc., it is the best preparation ever used. It acts directly on the sentient Gastric Nerves, stimulating the follicles to secretion, and gives to weakened individuals that first prerequisite to improvement—an appetite. It strengthens the nervous system when unstrung by disease, and has been employed with remarkable success as a remedy for Drunkenness and the Opium Habit.

Its Range of Action Embraces all Cases of Debility.

In order that physicians may form some idea of the nature of its ingredients, I will upon application in person, or by letter (enclosing a card), send a sample bottle of COLDEN'S LIQUID BEEF TONIC to any physician in regular standing, in the United States. Please ask your Dispensing Druggist (if he has not already a supply) to order it. In prescribing this preparation, physicians should be particular to mention "COLDEN'S"—*viz.:* **"*Ext. carnis, fl. comp. (Colden's.)*"** It is put up in pint bottles, and can be had of Wholesale and Retail Druggists generally throughout the United States.

C. N. CRITTENTON, Sole Agent, 115 Fulton St. New-York.

GLENN'S Sulphur Soap.

ALL physicians know that ***skin diseases*** are more or less constitutional, or dependent upon some specific poison in the blood, which if eradicated by internal treatment needs something to remove its appearance from the surface. Experience has proved that the best possible aid in the accomplishment of this end is obtained by the use of ***Sulphur in soap.*** GLENN'S SULPHUR SOAP is the best combination of its kind, and the one now generally used. It is for sale by all Druggists, at **25** cents a cake, or 3 cakes for **60** cents.

CONSTANTINE'S PINE TAR SOAP

Has been on trial among physicians for very many years as a toilet Soap and Healing Agent, and its superior virtues have been unanimously conceded **in all cases where the use of tar is indicated.** Unsolicited expressions of its excellence have been received from the Medical Faculty generally. IT IS THE BEST TAR SOAP MADE. None genuine unless stamped "A. Constantine's Persian Healing Pine-Tar Soap." For sale by all Druggists.

Samples of either of the above-named Soaps will be sent free upon application in person or by letter (enclosing card) to any physician in regular standing in the United States. C. N. Crittenton, 115 Fulton Street, New York. Please mention "THE MEDICAL AND SURGICAL REPORTER."

HORSFORD'S ACID PHOSPHATE,

(LIQUID.)

Prepared according to the directions of Prof E. N. HORSFORD, of Cambridge, Mass. Universally prescribed and recommended by physicians of all schools.

As a Substitute for Lemons or Lime Juice.

Acidulated drinks are refreshing at all seasons, but the constant use of lemons is apt to interfere with the regular action of the bowels. Horsford's Acid Phosphate, with water and sugar only, makes the purest and most wholesome lemonade, and at the same time one of the safest and finest curatives known. It thoroughly quenches thirst, prevents derangement of the stomach and bowels, aids digestion, cures lassitude, relieves the exhaustion following excessive physical or mental labor, and invigorates the system. Many prominent physicians have used Horsford's Acid Phosphate in their practice, and give it their unqualified approval.

We have received a very large number of letters from physicians of the highest standing, in all parts of the country, relating their experience with the Acid Phosphate, and speaking of it in high terms of commendation.

Physicians desiring to test Horsford's Acid Phosphate will be furnished a sample without expense, except express charges. Pamphlet free.

PROF. HORSFORD'S BAKING PREPARATIONS

are made of the Acid Phosphate in powdered form. They restore the phosphates that are taken from the flour in bolting. Descriptive pamphlet sent free.

Friedrichshall.

THE WELL-KNOWN APERIENT MINERAL WATER.

IMPORTANT NOTICE.

By reason of an improved method of caption, by which dilution is avoided, FRIEDRICHSHALL WATER will be found now to be of ***considerably greater strength*** and ***efficacy*** than heretofore.

The ordinary dose is a large wineglassful (4 ounces), taken fasting. Most efficacious and more acceptable to the palate when heated or mixed with an equal quantity of very hot water.

"The most suitable aperient for prolonged use."—***Prof. SEEGEN.***

"After twenty years' use I appreciate it as highly as ever."—

Prof. VIRCHOW.

OF ALL DRUGGISTS AND MINERAL WATER DEALERS.

SAVORY & MOORE beg to call the attention of the Profession to some of their Special Preparations, the purity and uniform strength of which are guaranteed.

Pancreatic Emulsion. In Consumption, Wasting, LOSS OF THE POWER OF DIGESTION AND ASSIMILATION, this pure drug is the MOST POTENT REMEDY. This is now attested by the published records of numerous medical men, extracts of which accompany each bottle.

Peptodyn, the New Digestive, is a combination of the whole of the digestive secretions, forming an invaluable remedy in the treatment of all forms of Dyspepsia, and all diseases arising from imperfect nutrition. Peptodyn is intended as a general promoter of digestion for persons not necessarily considered in bad health; thus, when taken about a quarter of an hour after a meal, it will be found to assist digestion in a remarkable manner, and prevent the discomfort which often follows the partaking of a full meal by persons in good health.

Pancreatine Powder, for Indigestion and Loss of APPETITE. This palatable and popular remedy effects the digestion and assimilation of all food, especially of FATTY SUBSTANCES, and is therefore invaluable to patients who are unable to digest Cod Liver Oil, and who are thus deprived of its nourishing and invigorating properties.

Gelatine Discs for Hypodermic Use—Of Morphia, CODEIA, ERGOTINE, ATROPIA, STRYCHNIA, APOMORPHIA, etc. The chief features of these discs are their instant solubility, by which hypodermic solutions can be instantly obtained of uniform and reliable strengths; they keep good for an unlimited period in their dry state, and are extremely portable. (Prepared in accordance with Dr. Sansom's recommendation.)
In tubes, each containing 25 discs.

Etherodine (Substitute for Chlorodyne). A clear, bright fluid, pleasant to the taste, readily miscible with water or any suitable menstruum. The therapeutical properties of ETHERODINE are identical with those of CHLORODYNE, but the former is an elegant preparation, and more convenient for use.

Gelatine Discs for Ophthalmic Purposes.
"Much smaller doses of medicaments such as Atropine, Calabar Bean Extract, Sulphate of Zinc, Morphia, etc., etc., suffice to produce a marked effect by this form of application, than when drops are introduced."—*The Lancet.*
In tubes, each containing 100 discs.

Gelatine Lamels for Internal Administration, consist of thin, pliable, and, in most cases, transparent sheets of uniform thickness, accurately divided into squares by raised lines, each square containing an exact dose of the medicine with which the sheet is impregnated.
In sheets, each consisting of 24 squares.

Datura Tatula, for Asthma, Hay Fever, and Chronic BRONCHITIS. Recommended by the Profession as a remedy of great power and usefulness in cases of short and difficult breathing, spasmodic coughing, etc. The most convenient forms for use are—
Datura Tatula Cigars. Datura Tatula—prepared for use by means of a pipe.
Datura Tatula Cigarettes. Datura Tatula Pastilles—for Inhalation.

SAVORY & MOORE, 143 New Bond Street, London.

WHEELER'S TISSUE PHOSPHATES

Bone-Calcium Phosphate $Ca_3 2P.O._4$, Sodium Phosphate $Na_2 H.P.O._4$, Ferrous Phosphate $Fe_3 2P.O._4$, Trihydrogen Phosphate $H_3 P.O._4$.

WHEELER'S COMPOUND ELIXIR OF PHOSPHATES AND CALISAYA. A Nerve Food and Nutritive Tonic, for the treatment of Consumption, Bronchitis, Scrofula, and all forms of Nervous Debility.

The Lactophosphates prepared from the formula of Prof. Dusart, of the University of Paris. Combines with a superior Pemartin Sherry Wine and Aromatics in an agreeable cordial easily assimilable and acceptable to the most irritable stomachs.

Phosphorus, the oxidizing element of the Nerve Centres for the generation of Nerve Force; Lime Phosphate, an agent of Cell Development and Nutrition; Soda Phosphate, an excitant of Functional Activity of Liver and Pancreas, and Corrective of Acid Fermentation in the Alimentary Canal; Iron, the Oxidizing Constituent of the Blood for the Generation of Heat and Motion; Phosphoric Acid, Tonic in Sexual Debility; Alkaloids of Calisaya, Anti-Malarial and Febrifuge; Extract of Wild Cherry, uniting with tonic power the property of Calming Irritation and Diminishing Nervous Excitement.

THE SUPERIORITY OF THE ELIXIR consists in uniting with the Phosphates the special properties of the Cinchona and Prunus, of Subduing Fever and Allaying Irritation of the Mucous Membrane of the Alimentary Canal, which adapts it to the successful treatment of Stomach Derangements and all diseases of Faulty Nutrition, the outcome of Indigestion. Malassimilation of Food, and *failure of supply* of these essential elements of Nerve Force and Tissue Repair.

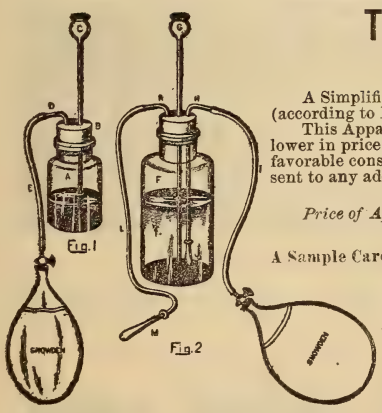
The special indication of this combination of Phosphates in Spinal Affections, Caries, Necrosis, Ununited Fractures Marasmus, Poorly Developed Children, Retarded Dentition, Alcohol, Opium, Tobacco Habits, Gestation and Lactation, to promote Development, etc., and as a *physiological restorative* in Sexual Debility, and all used up conditions of the Nervous System, should receive the careful attention of good therapeutists.

There is no strychnia in this preparation, but when indicated, the Liquor Strychniæ of the U. S. Dispensatory may be added, each fluid drachm of the solution to a pound bottle of the Elixir making the 64th of a grain to a half fluid ounce, an ordinary dose, a combination of a wide range of usefulness.

DOSE—For an adult, one tablespoonful three times a day, after eating; from seven to twelve years of age, one dessertspoonful; from two to seven, one teaspoonful. For infants, from five to twenty drops, according to age.

Prepared at the Chemical Laboratory of T. B. WHEELER, M. D., Montreal, D. C.

Put up in pound bottles and sold by all Druggists at One Dollar.



TREATMENT OF CONSUMPTION.

A Simplified Apparatus for the preparation and introduction of gases into the bowel (according to Dr. Bergeon's method), by Dr. H. N. Bryan, of Philadelphia.

This Apparatus has advantages which others do not possess, and being considerably lower in price than any devised for a similar purpose, it should commend itself to the favorable consideration of the medical profession. An illustrated descriptive circular sent to any address, on application.

Price of Apparatus, complete, in a neat portable Telescopic Case with Handle, **$6.00.**

A Sample Card of the Iron-Dyed Silk (14 sizes) will be sent to any address on application. Price Per Reel, - 10 cts.

WILLIAM SNOWDEN,

Manufacturer, Importer and Exporter of Surgical Instruments,

No. 7 South Eleventh St., Philadelphia.

CELERINA

NERVE-TONIC, STIMULANT AND ANTISPASMODIC.

FORMULA.—Every Fluid-Drachm represents FIVE grains EACH—Celery, Coca, Kola, Viburnum and Aromatics.

INDICATIONS.—Impotency, Spermatorrhea, Loss of Nerve-Power (so usual with Lawyers, Preachers, Writers and Business Men), Nervous Headache, Neuralgia, Paralysis, Dysmenorrhea, Hysteria, Opium-Habit, Inebriety, Prostatitis, Dyspepsia, and ALL LANGUID or DEBILITATED conditions of the System.—*Indispensable to restore a patient after alcoholic excess.*

DOSE.—One or two teaspoonfuls three or more times a day, as directed by the Physician.

ALETRIS CORDIAL

UTERINE TONIC AND RESTORATIVE.

PREPARED FROM THE ALETRIS FARINOSA OR TRUE UNICORN.

INDICATIONS.—Amenorrhea, Dysmenorrhea, Leucorrhea, Prolapsus Uteri, Sterility, to PREVENT Miscarriage, Etc.

DOSE.—One teaspoonful three or four times a day.

Unrivaled as a Uterine Tonic in Irregular, Painful, Suppressed and Excessive Menstruation,

IT RESTORES NORMAL ACTION TO THE UTERUS, AND IMPARTS VIGOR TO THE ENTIRE UTERINE SYSTEM.

☞Where Women have aborted during previous Pregnancies, or in any case where abortion is feared, the Aletris Cordial is indicated, and should be continuously administered during entire gestation.

ACID MANNATE

A MILD, SAFE AND PLEASANT APERIENT.

Prepared from Manna, Purified Cathartic Acid, and Fruit Juices.

INDICATIONS.—Constipation, Biliousness, Congestions, Etc. INDISPENSABLE AS AN APERIENT FOR WOMEN DURING PREGNANCY. In teaspoonful doses, 3 times a day, it favors the SECRETION and EXCRETION of bile, and gradually removes the congested and torpid states of the liver, and keeps the bowels in a regular and soluble condition.

DOSE.—ONE or MORE teaspoonfuls as directed by the Physician.

S. H. KENNEDY'S
CONCENTRATED EXTRACT OF
PINUS CANADENSIS

DARK — A NON-ALCOHOLIC LIQUID. — WHITE

A MOST VALUABLE NON-IRRITATING MUCOUS ASTRINGENT.

INDICATIONS.—Albuminuria, Diarrhea, Dysentery, Night-Sweats, Hemorrhages, Profuse Expectoration, Catarrh, Sore Throat, Leucorrhea, and other Vaginal Diseases, Piles, Sores, Ulcers, Burns, Scalds, Gonorrhea, Gleet, Etc.

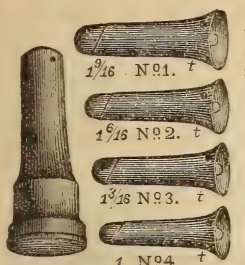
When Used as an Injection, to Avoid Staining of Linen, the WHITE Pinus should be Used.

Recommended by DR. J. MARION SIMS, and other Prominent Physicians.

RIO CHEMICAL CO., ST. LOUIS: LONDON: PARIS.

Samples FREE to any Physician who will pay Express charges, and mention this Journal.

STAUFER'S
HARD RUBBER SPECULUMS GUARANTEED.



Prices, Single, $2.50
Series encased, 12.00

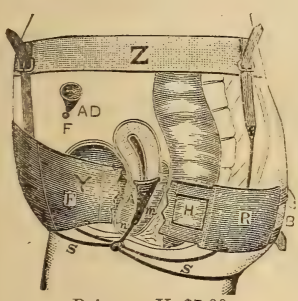
The engraving shows the shape, conductor and case so complete, that scarcely any description is necessary. For compactness there is but one conductor stem, on which each size of bulb screws. Speculums and case are all of the best quality hard rubber, and do not break from ordinary falling. Dental red enamelled inside. The mouth is polished very smooth, and shaped so that the cervix can be brought in entirely by rotation. And when brought in can be rotated to bring into view all the parts. The vaginal portion of the uterus can be seen as clearly as if located externally. When obtained, single, No. 2, is the most useful, since it reveals fully the point of the cervix in almost all multipara, and freely enters, when the position is correct, in many nullipara.

Guarantee.—One or two speculums are guaranteed; thus when returned sound and in the original wooden boxes, within six months of purchase, the money will be refunded without any deduction.

Plates.—The *First* contains 16 engravings and groups of engravings, illustrating the uterine examining instruments. *Second* contains 17 engravings and groups of engravings, illustrating the uterine replacing and supporting instruments.

Catalogue.—The catalogue comprises over 150 sizes and styles of uterine examining and supporting instruments, of which the hard rubber parts are exchanged and interchanged at cost, without limit of time. It also contains full directions and explanations for the use of this series of hard rubber gynecological instruments; together with common information collected through many years to simplify this line of treatment.

STAUFER'S
SPRING STEM UTERINE SUPPORTERS.
GUARANTEED.



Price, on Y, $7.00
" " Z, 6.00

The engraving shows the Spring Stem Cup, which consists of over a dozen sizes. The series contains Spring Stem Balls, Spring Stem Levers, for Anteversions and Retroversions. also Spring Stem Cup with posterior projections, all of assorted sizes.

Explanation.—The stem is screwed on cup A, and when unscrewed, the spring is put in tube *m*, or taken out when it needs cleaning. Thus the coil spring lays between the cup and base *n*. When there is pressure from above, or below, or both, the spring is compressed and again stretches out at the first opportunity. The movement of the base stem *n*, is governed by a slot and pin through tube *m*.

A D.—Represents the cup transformed into a self-sustaining cup, virtually an instrument of double capacity. In most cases after the uterus is held in "health line" for a time by external support, contraction of the walls of the vagina takes place, and it is sufficient at night or until forced down next day by bodily exertion, against which the stem and bandage guards if applied in time.

Belt Y.—The manner in which belt Y, sets on the abdomen is shown in above engraving. The widest or lifting part is in front. Over each hip as seen at H, are two elastics, and on large belts three. It closes on the back by buckling at B. It is of fine sateen outside, fine lining inside, and a slight stiffening between, and stayed with soft whalebones. Accurate hip measure is to be taken over a thin undergarment; since it needs to fit with a space of one or two inches apart on the back, for the buckle straps to draw. The perineal attachments are short and buckle at F and R.

Belt Z.—This is an elastic waist strap and carries any supporter of this series. Yet the common difficulty presents itself, where long and slender attachments are used, that they do not govern the internal part so efficiently as on the low grasping abdominal supporter Y.

The Series.—This series of imstruments has been invented as cases presented themselves, requiring different styles and sizes of instruments, without change of proprietor, until it has reached its present efficiency.

Guarantee.—The money lost by purchasing uterine supporters, unscientifically constructed, of irritating material, or limited in deficiency of sizes, and in consequence loss of families in practice, has set a large portion of the medical profession against the mechanical support of the uterus. By these conditions the risk of the first purchase by a physician of a stem and bandage supporter of this series is obviated. After the first purchase the instruments are supposed to be known, yet the guarantee is extended by special contract in doubtful cases.

Refunding.—On return of the hard rubber part or parts within six months of purchase, Five Dollars of the purchase money will be refunded. The belt remains with the patient as an abdominal supporter and only risk.

The above Guarantee and Refunding is secured when the Instrnments are obtained through this Office. Any other Instrument of STAUFER'S SERIES is also obtained through this Office at Catalogue Prices, and Catalogue free, on application.

BUFFALO LITHIA WATER,

FOR GOUTY, RHEUMATIC, AND RENAL AFFECTIONS.

ROBERTS BARTHOLOW, M. A., M. D., LL. D., Prof. of Materia Medica and General Therapeuties in the Jefferson Medical College of Philadelphia. See his "Materia Medica and Therapeutics."

"Buffalo Lithia Spring of Virginia contains well-defined traces of Lithia, and is Alkaline. This has been used with great advantage in Gouty, Rheumatic, and Renal Affections." * * * * * * * * * **"There is little doubt that the continuous use of Alkaline Waters for a long period will cause the solution of Uric Acid Renal Calculi. For this purpose those Alkaline Waters rich in POTASSA are preferable."**

This water has a large percentage of the CARBONATE OF POTASSA, making it rich in valuable Alkali.

Dr. Wm. A. Hammond, of New York, Surgeon-General U. S. Army (retired), Professor of Diseases of the Mind and Nervous System in the University of New York, etc.

"I have for some time made use of the Buffalo Lithia Water in cases of affections of the Nervous System complicated with Bright's Disease of the Kidneys, or with a Gouty Diathesis. The results have been eminently satisfactory. Lithia has for many years been a favorite remedy with me in like cases, but the Buffalo Water certainly acts better than any extemporaneous solution of the Lithia Salts, and is, moreover, better borne by the stomach. I also often prescribe it in those cases of Cerebral Hyperæmia, resulting from over mental work—in which the condition called Nervous Dyspepsia exists—and generallly with marked benefit."

Dr. Robert Battey, of Georgia, Suggester of Battey's Operation, Member of the American Medical Association, etc.

"I would state that I have been using the Buffalo Lithia Water, No. 2, in my practice for three years past, in cases of Chronic Inflammation of the Bladder, whether induced by Stone, by Enlarged Prostate in the aged, or by Neglected Gonorrhœa, and have secured excellent results, which encourages me to prescribe it for the future."

Dr. Hunter McGuire, Richmond, Virginia, late Professor of Surgery, Medical College of Virginia.

"Buffalo Lithia Water, Spring No. 2, as an Alkaline Diuretic, is invaluable. In Uric Acid Gravel, and, indeed, in diseases generally dependent upon a Uric Acid Diathesis, it is a remedy of extraordinary potency. I have prescribed it in cases of Rheumatic Gout, which had resisted the ordinary remedies, with wonderfully good results. I have used it also in my own case, being a great sufferer from this malady, and have derived more benefit from it than from any other remedy."

Dr. Alfred L. Loomis, of New York, Professor of Institutes and Practice of Medicine, Medical Department University of New York.

"For the past four years I have used the Buffalo Lithia Water in the treatment of Chronic Interstitial Nephritis occurring in Gouty and Rheumatic subjects, with the most marked benefit. In all Gouty and Rheumatic Affections I regard it as highly efficacious."

Dr. Harvey L. Byrd, of Baltimore, President and Professor of Obstetrics and Diseases of Women and Children, in the Baltimore Medical College, formerly Professor of Practical Medicine, etc.

"I have witnessed the best results from the action of the Buffalo Lithia Water, Spring No. 2, in Chronic Gout, Rheumatic Gout, Rheumatism, Gravel, and Stone in the Bladder, and I do not hesitate to express the opinion that in all diseases depending upon or having their origin in Uric Acid Diathesis, it is unsurpassed, if, indeed, it is equaled by any water thus far known to the profession.

"It has an ascertained value in Bright's Disease. A knowledge of its action in that disease thus far would seem to warrant the belief that it would, in many instances, at least in its early stages, arrest it entirely; and in its more advanced stages prove a decided comfort and palliative."

Water, in cases of one dozen half gallon bottles, $5.00 per case, at the Springs. Testimonials sent free on application. The Virginia Buffalo Lithia Springs Company have no longer control of this water. To get it **FRESH,** order directly of or from parties who deal directly with

THOMAS F. GOODE, Prop. Buffalo Lithia Springs, Va.

WATER FOR SALE BY

FRED. BROWN, or J. F. HAYES, Philadelphia.

Put up in 1, 5, 10, 25, 50, and 100-lb. cans. Samples furnished on application. The post-office laws forbid anything of an oleaginous nature being sent through the mail.

In chemical composition, Cosmoline (Unguentum Petrolei) is an oleaginous hydrocarbon, corresponding to the heavy petroleum oils, and containing a large amount of the paraffines and olefines of the formulæ $C_{16}H_{34}$ and $C_{16}H_{32}$. It contains but a small percentage of the paraffines and olefines corresponding to the formulæ C_7H_{16} and C_7H_{14}, respectively, and the offensive and irritating properties of the crude oil have been carefully removed. In the process of purification, no acids, alkalies, or other chemicals are employed, and no injurious additions of any kind are made to the natural product. The result is a semi-solid, translucent substance, with a faint odor and unctuous feel.

Cosmoline (Unguentum Petrolei) melts at about 100° Fah. (38° Cent.); and boils at about 625° Fah. (329° Cent.); its specific gravity is about 0.875 at 60° Fah.

As it contains no oxydizable or organic matter capable of change by putrefaction or fermentation, and is absolutely without affinity for moisture, it offers to the profession an admirable unguent, which can never decompose, ferment, or become rancid in any climate or temperature.

PHILADELPHIA, July 10, 1880.

MESSRS. E. F. HOUGHTON & Co.: I have for a number of years made extensive use of Cosmoline (Unguentum Petrolei), and consider it a most valuable article for surgical purposes. Either as a dressing by itself, or as a vehicle for the application of medicaments, it is greatly superior to lard or other fatty matters, especially by reason of its non-liability to change by time or temperature.

Yours truly, JOHN H. PACKARD, M. D.

1031 WALNUT STREET, PHILADELPHIA.

MESSRS. E. F. HOUGHTON & Co.: I have used extensively Cosmoline (Unguentum Petrolei) both in Dispensary and private practice, with very great satisfaction. As a vehicle in making ointments it is invaluable, and far superior to lard, for the reason that it will not become rancid or undergo chemical change like the latter, when exposed to the atmosphere. I cannot too highly commend it as an application in various skin diseases. Yours truly, JOHN V. SHOEMAKER, A. M., M. D.,

Physician to the Pennsylvania Free Dispensary for Skin Disease.

208 WEST 34TH STREET, NEW YORK.

MESSRS. E. F. HOUGHTON & Co.—*Gents:* I fully appreciate the value of your Cosmoline, or Unguentum Petrolei, and prescribe it frequently in ointments. Fluid Cosmoline I have used constantly for several years, as a lubricant of urethral sounds. It is the cleanest oil I know of for this purpose.

Yours truly, GEO. HENRY FOX.

Compressed Tablet Triturates,

Combining Absolute Accuracy of Dose,

Convenience in Administration, Speedy Disintegration, and Consequent Rapid Absorption,

THEREBY INSURING

THE MOST EFFECTIVE RESULTS.

WE feel confident that few physicians will prescribe any of the more powerful remedies, such as Aconite, Morphia, Digitalis, Arsenic, etc., either in powders or in solutions, when fully aware of the advantages presented by our TRITURATES, their accuracy and convenience in administration, coupled with the absolute freedom from danger in prescribing, always attending to a greater or less extent the dispensing of dangerous drugs, in the form of powders, drops, or larger doses in solutions.

The TRITURATES are absolutely exact, and will keep indefinitely; they can be readily swallowed with a mouthful of water, or, if smaller doses be required for infants, the tablet can be reduced to a fine powder by simply crushing with a knife, or the thumb nail.

Our circular (which it will give us pleasure to forward) gives in detail all the claim we make for this series of preparations, together with a list of all the combinations. It embraces almost every drug in popular demand, and the doses are so graduated as to meet almost every indication. The following are a few of the active agents in almost every-day use:

ACONITE,	DIGITALIN,	LITHIA,
ACONITINE,	ELATERIUM,	MORPHINE,
ALOIN,	ESERINE,	NUX VOMICA,
ANTIMONY,	EYT. CANNABIS INDICA,	OPIUM,
APOMORPHIA,	EXT. COLOCYNTH COMP.	PILOCARPINE,
ARSENIC,	EXT. IGNATIA,	PODOPHYLLIN,
ATROPINE,	EXT. IPECAC,	RED IODIDE MERCURY,
BELLADONNA,	ETX. PILOCARPUS,	SALTS OF IRON,
CALOMEL,	GREEN IODID. MERCURY	SANTONINE,
COCAINE,	GELSEMIUM,	STRYCHNINE,
CODEINE,	HOMATROPINE,	ZINC PHOSPHIDE,
CORROSIVE SUBLIMATE	HYOSCYAMUS,	VERATRUM VIRIDE.

We shall be glad to send samples of these Triturates to any physician who may desire to try them in his practice.

Complete lists, with prices, etc., of all our preparations, will be sent by mail on application.

JOHN WYETH & BROTHER,

PHILADELPHIA.

Smithsonian Institute

CASCARA CORDIAL

IN HABITUAL CONSTIPATION.

The great desideratum in the treatment of chronic constipation has heretofore been a remedy which possessed not only a temporary specific action on the bowels, but which would be followed by no reaction and no repression of secretion, and which could be administered for a sufficient length of time to permit of restoration of normal function; a remedy which would not only alleviate temporarily the existing mal-condition, but permanently remove the cause upon which it depended for its continuance, and thus effect a radical cure. The extensive trial of Cascara Sagrada by physicians of this country and Europe has shown it to be the drug that most fully meets all these indications. It has been added to the British Pharmacopœia, and its efficacy is attested by all physicians who have given it a trial. Cascara Cordial is prepared to disguise the inherent bitter principle of the drug, and without detracting from its medicinal value, render it acceptable to the most fastidious palate.

AS A VEHICLE FOR NAUSEOUS MEDICINES.

Cascara Cordial has become widely known to the profession. It not only effectually disguises the taste of such inherently bitter medicines as Quinine, but on account of its laxative properties, is a most valuable adjuvant or corrigent to any prescription containing drugs, such as iron, the continued administration of which tends to constipate. It will be seen that Cascara Cordial has a wide range of utility as an agreeable laxative excipient.

TO DISPEL THE ACUTE EFFECTS OF ALCOHOL AND OPIUM ABUSE.

From letters received from physicians, we are led to call the attention of the profession to the use of Cascara Cordial by those addicted to the alcohol and opium habits. The headache and gastric irritation following excessive indulgence in alcohol is avoided by adding a little Cascara Cordial to the alcoholic stimulant taken, or by taking a full dose of the cordial on retiring, after too free indulgence. The severe constipation also often attending indulgence in opium may be relieved by the systematic administration of Cascara Cordial.

We can not assume the responsibility for lack of success physicians may meet with in prescribing the many imitations and spurious varieties of Cascara on the market, and would request those wishing a genuine and reliable preparation to specify P. D. & Co's.

☞ **Samples furnished on application, to those physicians who will pay express charges.**

DETROIT, MICH.

A NEW EMMENAGOGUE.

The following is an abstract from a letter written by one of the most prominent gynæcologists of the country, to another:

"Thus far no perfect emmenagogue has been discovered, but I regard the manganese as the best I have met with. It should be styled a regulator of menstruation rather than a pure emmenagogue, for it is useful in the absence of the menses, irregularity of their recurrence, and even in excess of flow.

"The preparation which I now employ is McKesson & Robbins' pills of the binoxide of manganese. Of this preparation I give two grains three times a day throughout the month and during the period.

"I also employ manganese in chlorosis and anæmia, and I think that by its use I obtain better results than I have heretofore done by iron." (See *Medical Record* of March 6th, page 274.)

Specify McK. & R.'s Pills Manganese Binoxide.

Important additions to McK. & R.'s list of Gelatine Coated Pills:

McK. & R. *Cascara Sagrada* and *Nux Vomica*: Ext. Cas. Sagr. gr. ii; Ext. Nux Vom. gr. 1-5.

McK. & R. Cascara Sagrada, Nux Vomica and Belladonna: Ext. Cas. Sag. gr. ii; Ext. Nucis Vom. gr. 1-8; Ext. Bellad. gr. 1-16.

McK. & R. Hydrobromide of Hyoscin 1-100 gr.

McK. & R. Binoxide of Manganese 2 grs.

McK. & R. Valerianate of Quinine ½, 1, 2, and 3 grs.

McK. & R. Valerianates Iron, Quinine, and Zinc: Ferri Valer., Quin. Valer., Zinci Valer., āā gr. i.

McK. & R. Oleate of Manganese 20 per cent. May be used to advantage when the pills cannot be administered.

Always specify McK. & R's.

COCAINE.

Although only eighteen months have elapsed since Koller's announcement of his discovery of the anæsthetic properties of this alkaloid, Cocaine already ranks among the most important agents of the practitioner. In general and dental surgery, ophthalmology, laryngology and general therapeutics, its value is everywhere attested.

We began its manufacture immediately after the announcement of Dr. Koller, and samples of our product were submitted to many noted specialists for their experiments, and the results were highly gratifying. The demand for our manufacture of the salt, solutions, and oleates, has continued to increase, and we desire to express our sincere thanks to the medical, pharmaceutical, and dental professions for their kind encouragement as shown in their recognition of the merits of our preparations. Our appreciation of this will be shown in our constant efforts to supply all their requirements in chemicals and pharmaceuticals, of a quality worthy of their entire confidence.

Special quotations on Terebene and Cocaine for specified quantities. Very respectfully,

McKESSON & ROBBINS.

TEREBENE.

McKESSON & ROBBINS

WERE THE FIRST IN THIS COUNTRY TO MANUFACTURE THIS VALUABLE REMEDY FOR

Winter Cough, Bronchial and Chest Affections, Flatulency, Acidity, and other forms of Dyspepsia.

It may be used as an inhalation, or taken internally in doses of five or six drops on sugar every four hours, gradually increasing the dose to twenty minims.

Terebene was brought to the notice of the medical profession as far back as 1873, by M. Riban, who read a series of papers on this and similar substances before the Pharmaceutical Society of Paris. It has lately been brought into prominence by Dr. Wm. Murrell, of London, who has given it in over 114 cases; he has also notes of its value in 81 out of 94 cases. Dr. Murrell says that much of the Terebene now being sold may be described as inferior, and to this fact he ascribes some irritating effects noted in a few of his cases.

We would therefore caution the physician in prescribing and the druggist in ordering to, in all cases,

BALTIMORE. NEW YORK. BOSTON.

BELLEVUE HOSPITAL MEDICAL COLLEGE,
CITY OF NEW YORK.

SESSIONS OF 1887-88.

The REGULAR SESSION begins on Wednesday, September 21, 1887, and ends about the middle of March, 1888. During this Session, in addition to the regular didactic lectures, two or three hours are daily allotted to clinical instruction. Attendance upon at least two regular courses of lectures is required for graduation.

The SPRING SESSION consists of recitations, clinical lectures and exercises, and didactic lectures on special subjects. This Session begins about the middle of March and continues until the middle of June. During this Session, daily recitations in all the departments are held by a corps of Examiners appointed by the Faculty.

The CARNEGIE LABORATORY is open during the collegiate year, for instruction in microscopical examinations of urine, practical demonstrations in medical and surgical pathology, and lessons in normal histology and pathology, including bacteriology.

For the annual Circular and Catalogue, giving requirements for graduation and other information, address Prof. AUSTIN FLINT, Secretary, Bellevue Hospital Medical College, foot of East 26th Street, New York City.

ACCIDENTS and EMERGENCIES.

What to do First in Accidents and Emergencies.

A Manual explaining the Immediate Treatment of Surgical and other Injuries.

By CHARLES W. DULLES, M. D.,

Fellow of the College of Physicians, of Philadelphia; Surgical Registrar to the Hospital of the University of Pennsylvania; Surgeon to the out-door department of the Presbyterian Hospital in Philadelphia; etc.

SECOND EDITION, REVISED AND ENLARGED, WITH NEW ILLUSTRATIONS.

32mo. Cloth. 75 Cents.

OUTLINE OF CONTENTS: Obstructions to Respiration, Foreign Bodies in the Eye, Ear, and Nose, Fits or Seizures, Injuries to the Brain, Effects of Heat and Cold, Sprains, Dislocations, Fractures, Wounds, Railroad and Machinery Accidents, Hemorrhages, Transportation of Injured Persons, Poisons and their Antidotes, Domestic Emergencies, Signs of Death, Proper Supplies for Emergencies, Surgical and Medicine Cases, etc., Doses and Uses of Medicines, etc.

PRESS NOTICES.

"The Chapter on the Control of Hemorrhage deserves special mention. * * * This little book should be found in every house."—*Medical Bulletin.*

"It is a book that no family ought to be without."—*Boston Herald.*

"A very instructive little book. It ought to be read once or twice each year."—*St. Louis Medical and Surgical Journal.*

"A COMPLETE GUIDE FOR SUDDEN EMERGENCIES. * * * Its style is reassuring and calm, so that people who turn to it will find their nerves steadied. * * * A deal of excellent and soothing advice."—*Philadelphia Ledger.*

"THOROUGHLY PLAIN AND PRACTICAL."—*N. Y. Tribune.*

*** Physicians will find useful advice in this volume when suddenly called to attend cases of poisoning or accidents by violence. It is a good book to recommend to the Heads of Families, Superintendents of Manufactories, Mines and Industrial Works.

It will be sent by mail, prepaid, upon receipt of 75 cents.

P. O. Box 843. Office of Medical and Surgical Reporter, PHILADELPHIA, PA.

30,000 PHYSICIANS
NOW PRESCRIBE

HYDROLEINE

(HYDRATED OIL,)

For Consumption and Wasting Diseases. It Produces Immediate Increase in Flesh and Weight.

FORMULA.

Each Dose of Two Teaspoonfuls, equal to 120 Drops, contains:

Pure Cod Liver Oil	80 m. (drops)	Soda	⅛ Grain.
Distilled Water	35 "	Boric Acid	⅛ "
Soluble Pancreatin	5 Grains.	Hyocholic Acid	⅛ "

DOSE:

Two teaspoonfuls alone, or with twice the quantity of water, to be taken thrice daily after meals.

Hydroleine (Hydrated Oil) is not a simple alkaline emulsion of oleum morrhua, but a hydro-pancreated preparation containing acids and a medicum of soda. Pancreatin is the digestive principle of fatty foods, and, in the soluble form here used, completely saponifies the oleaginous material so necessary to the reparative process in all wasting diseases.

Lautenbach's researches on the function of the liver would show the beautiful adjustment of therapeutics in preparation of Hydroleine, furnishing, as it does, the acid and soda necessary to prevent self-poisoning by reabsorption of morbid tubercular detritus and purulent matters into the general circulation.

Each bottle in nutritive value exceeds ten times the same bulk of cod liver oil. It is economical in use and certain in result.

Sold at all Drug Stores at $1.00 per Bottle.

The principles upon which this discovery is based have been described in a treatise on "The Digestion and Assimilation of Fats in the Human Body," by H. C. BARTLETT, Ph. D., F. C. S., and the experiments which were made, together with cases illustrating the effect of Hydrated Oil in practice, are concisely stated in a Treatise on "Consumption and Wasting Diseases," by G. OVEREND DREWRY, M. D.

Copies of these Works sent free on Application.

WM. F. KIDDER & CO., 83 John Street, New York.

Agents for U. S.

Also exclusive Agents for SVAPNIA, or Bigelow's purified Opium, in SCALES and HALF-GRAIN GRANULES.

TAMAR INDIEN GRILLON.

A laxative, refreshing, and medicated Fruit Lozenge, very agreeable to take, and never causing irritation. Its physiological action assures the immediate relief and effectual cure of

CONSTIPATION,

HÆMORRHOIDS, BILE,
CEREBRAL CONGESTION, HEADACHE,
LOSS OF APPETITE,
INTESTINAL OBSTRUCTIONS, ETC.,

by augmenting the peristaltic movement of the intestine without producing undue secretion to the liquids. Unlike pills and the usual purgatives, it does not predispose to intestinal sluggishness, and the same dose always produces the same effect, that is to say, never needs increasing.

It is recommended by the most eminent physicians of Paris, notably Drs. BELIN and TARDIEU, who prescribe it constantly for the above complaints, and with most marked success.

Paris: E. GRILLON, 27 Rue Rambuteau.

SOLD BY ALL DRUGGISTS.

Lactated Food

Is not "the only" Food,

BUT IT IS

THE BEST FOOD,
THE CHEAPEST FOOD,
THE HEALTH GIVING FOOD.

For young Infants, it will prove a safe substitute for mother's milk; for the Invalid, or Dyspeptic, it is of great value. Hundreds who have used it recommend it as

The Most Palatable,
The Most Nutritious,
The Most Digestible,
OF ANY of the PREPARED FOODS.

It is a Cooked Food:
A Predigested Food:
A Non-Irritating Food.

CRYING BABIES

are made
GOOD NATURED, HEALTHY, HEARTY,
by its use.

Babies do not cry if they are satisfied, and they cannot be satisfied if they are not properly nourished by their food, or if it produces irritation of stomach or bowels.

Very many mothers cannot properly nourish their children, and the milk of many mothers produces bad effects in the child because of constitutional disease or weakness.

For all such cases there is a remedy in

LACTATED FOOD.

WHEELER'S TISSUE PHOSPHATES

Bone-Calcium Phosphate $Ca_3 2P.O._4$, Sodium Phosphate $Na_2H.P.O._4$, Ferrous Phosphate $Fe_3 2P.O._4$, Trihydrogen Phosphate $H_3P.O._4$.

WHEELER'S COMPOUND ELIXIR OF PHOSPHATES AND CALISAYA. A Nerve Food and Nutritive Tonic, for the treatment of Consumption, Bronchitis, Scrofula, and all forms of Nervous Debility.

The Lactophosphates prepared from the formula of Prof. Dusart, of the University of Paris. Combines with a superior Pemartin Sherry Wine and Aromatics in an agreeable cordial easily assimilable and acceptable to the most irritable stomachs.

Phosphorus, the oxidizing element of the Nerve Centres for the generation of Nerve Force; Lime Phosphate, an agent of Cell Development and Nutrition; Soda Phosphate, an excitant of Functional Activity of Liver and Pancreas, and Corrective of Acid Fermentation in the Alimentary Canal; Iron, the Oxidizing Constituent of the Blood for the Generation of Heat and Motion; Phosphoric Acid, Tonic in Sexual Debility; Alkaloids of Calisaya, Anti-Malarial and Febrifuge; Extract of Wild Cherry, uniting with tonic power the property of Calming Irritation and Diminishing Nervous Excitement.

THE SUPERIORITY OF THE ELIXIR consists in uniting with the Phosphates the special properties of the Cinchona and Prunus, of Subduing Fever and Allaying Irritation of the Mucous Membrane of the Alimentary Canal, which adapt it to the successful treatment of Stomach Derangements and all diseases of Faulty Nutrition, the outcome of Indigestion, Malassimilation of Food, and *failure of supply* of these essential elements of Nerve Force and Tissue Repair.

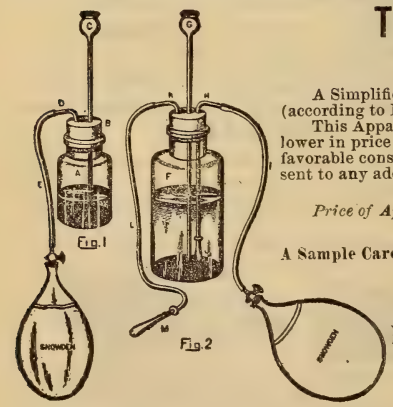
The special indication of this combination of Phosphates in Spinal Affections, Caries, Necrosis, Ununited Fractures, Marasmus, Poorly Developed Children, Retarded Dentition, Alcohol, Opium, Tobacco Habits, Gestation and Lactation, to promote Development, etc., and as a *physiological restorative* in Sexual Debility, and all used up conditions of the Nervous System, should receive the careful attention of good therapeutists.

There is no strychnia in this preparation, but when indicated, the Liquor Strychniæ of the U. S. Dispensatory may be added, each fluid drachm of the solution to a pound bottle of the Elixir making the 64th of a grain to a half fluid ounce, an ordinary dose, a combination of a wide range of usefulness.

DOSE—For an adult, one tablespoonful three times a day, after eating; from seven to twelve years of age, one dessertspoonful; from two to seven, one teaspoonful. For infants, from five to twenty drops, according to age.

Prepared at the Chemical Laboratory of T. B. WHEELER, M. D., Montreal, D. C.

Put up in pound bottles and sold by all Druggists at One Dollar.



TREATMENT OF CONSUMPTION.

A Simplified Apparatus for the preparation and introduction of gases into the bowel (according to Dr. Bergeon's method), by Dr. H. N. Bryan, of Philadelphia.

This Apparatus has advantages which others do not possess, and being considerably lower in price than any devised for a similar purpose, it should commend itself to the favorable consideration of the medical profession. An illustrated descriptive circular sent to any address, on application.

Price of Apparatus, complete, in a neat portable Telescopic Case with Handle, **$6.00.**

A Sample Card of the Iron-Dyed Silk (14 sizes) will be sent to any address on application. Price Per Reel, – 10 cts.

WILLIAM SNOWDEN,

Manufacturer, Importer and Exporter of Surgical Instruments,

No. 7 South Eleventh St., Philadelphia.

CELERINA

NERVE-TONIC, STIMULANT AND ANTISPASMODIC.

FORMULA.—Every Fluid-Drachm represents FIVE grains EACH — Celery, Coca, Kola, Viburnum and Aromatics.

INDICATIONS. — Impotency, Spermatorrhea, Loss of Nerve-Power (so usual with Lawyers, Preachers, Writers and Business Men), Nervous Headache, Neuralgia, Paralysis, Dysmenorrhea, Hysteria, Opium-Habit, Inebriety, Prostatitis, Dyspepsia, and ALL LANGUID or DEBILITATED conditions of the System.—*Indispensable to restore a patient after alcoholic excess.*

DOSE.—One or two teaspoonfuls three or more times a day, as directed by the Physician.

ALETRIS CORDIAL

UTERINE TONIC AND RESTORATIVE.

PREPARED FROM THE ALETRIS FARINOSA OR TRUE UNICORN.

INDICATIONS. — Amenorrhea, Dysmenorrhea, Leucorrhea, Prolapsus Uteri, Sterility, to PREVENT Miscarriage, Etc.

DOSE.—One teaspoonful three or four times a day.

Unrivaled as a Uterine Tonic in Irregular, Painful, Suppressed and Excessive Menstruation,

IT RESTORES NORMAL ACTION TO THE UTERUS, AND IMPARTS VIGOR TO THE ENTIRE UTERINE SYSTEM.

☞Where Women have aborted during previous Pregnancies, or in any case where abortion is feared, the Aletris Cordial is indicated, and should be continuously administered during entire gestation.

ACID MANNATE

A MILD, SAFE AND PLEASANT APERIENT.

Prepared from Manna, Purified Cathartic Acid, and Fruit Juices.

INDICATIONS. — Constipation, Biliousness, Congestions, Etc. **INDISPENSABLE AS AN APERIENT FOR WOMEN DURING PREGNANCY.** In teaspoonful doses, 3 times a day, it favors the SECRETION and EXCRETION of bile, and gradually removes the congested and torpid states of the liver, and keeps the bowels in a regular and soluble condition.

DOSE.—ONE or MORE teaspoonfuls as directed by the Physician.

S. H. KENNEDY'S
CONCENTRATED EXTRACT OF
PINUS CANADENSIS
DARK — A NON-ALCOHOLIC LIQUID. — WHITE

A MOST VALUABLE NON-IRRITATING MUCOUS ASTRINGENT.

INDICATIONS. — Albuminuria, Diarrhea, Dysentery, Night-Sweats, Hemorrhages, Profuse Expectoration, Catarrh, Sore Throat, Leucorrhea, and other Vaginal Diseases, Piles, Sores, Ulcers, Burns, Scalds, Gonorrhea, Gleet, Etc.

When Used as an Injection, to Avoid Staining of Linen, the WHITE Pinus should be Used.

Recommended by DR. J. MARION SIMS, and other Prominent Physicians.

The WM. S. MERRELL CHEMICAL CO. of Cincinnati—"The largest consumers of Golden Seal Root in the world" (see "Drugs and Medicines of North America")—offer to the medical profession, through the drug trade, the following well-known and highly approved preparations of this leading American drug.

FLUID HYDRASTIS.

A neutral solution of all the active medicinal constituents, forming a perfectly clear solution with alcohol, glycerin, syrup, or water. May be properly and profitably substituted for the Fluid Extract of the U. S. P. in the manufacture of syrup, wine or tincture.

COLORLESS HYDRASTIS.

A neutral solution of the White Alkaloid alone—without color or stain.

SULPHATE HYDRASTIA—CRYSTALLIZED.

[SULPHATE BERBERINA.]

This is the Sulphate of Yellow Alkaloid, which we present in crystals to guard against the substitution of impure and unskillful preparations in a powdered form.

Subsequent to its introduction by us under its present commercial title, this salt was identified as Berberina by Mahla, Durand and others. To avoid confusion with the Alkaloid Bebeerine and its salts, and to fully establish its identity, we continue the name by which it was originally introduced.

SOLUTION BISMUTH AND HYDRASTIA,

A neutral solution of the double Citrate of Bismuth and Hydrastia (White Alkaloid); each fluid drachm containing 2½ grains of the double salt.

Represented in New York City by

LEHN & FINK, 128 William Street.

SPECIFY (BATTLE) WHEN PRESCRIBING OUR PREPARATIONS.

BROMIDIA

THE HYPNOTIC.

FORMULA.—
Every Fluid drachm contains 15 grains EACH of pure Chloral Hydrat. and purified Brom. Pot., and one-eighth grain EACH, of gen. imp. ext. Cannabis Ind. and Hyoscyam.

Dose.—One-half to one fluid drachm in WATER or SYRUP every hour until sleep is produced.

Indications.—
Sleeplessness, Nervousness, Neuralgia, Headache, Convulsions, Colic, Mania, Epilepsy, Irritability, etc. In the restlessness and delirium of fevers, it is absolutely nvaluable.

IT DOES NOT LOCK UP THE SECRETIONS.

PAPINE

THE ANODYNE.

Papine is the Anodyne or pain-relieving principle of Opium, the Narcotic and Convulsive elements being eliminated. It has less tendency to cause Nausea, Vomiting, Constipation, etc.

Indications.—
Same as Opium or Morphia.

Dose.—(ONE FLUID DRACHM)—represents the Anodyne principle of one-eighth grain of Morphia.

IODIA

THE ALTERATIVE AND UTERINE TONIC.

FORMULA.—
Iodia is a combination of Active Principles obtained from the Green Roots of STILLINGIA, HELONIAS, SAXIFRAGA, Menispermum, and Aromatics. Each fluid drachm also contains five grains IOD. POTAS. and three grains PHOS. IRON.

Dose.—One or two fluid drachms (more or less, as indicated,) three times a day, before meals.

Indications.—
Syphilitic, Scrofulous and Cutaneous Diseases, Dysmenorrhœa, Menorrhagia, Leucorrhœa, Amenorrhœa, Impaired Vitality, Habitual Abortions, and General Uterine Debility.

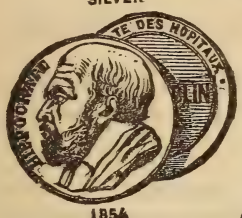
MATHEY-CAYLUS' GLUTEN

SILVER



1854

CAPSULES

OF

PURE COPAIBA AND OTHER MEDICINES.

SILVER

1854

Adapted and recommended for the cure recent or chronic Gleets, Fluor Albus, etc., etc.

The MATHEY-CAYLUS' CAPSULES, *coated with gluten*, present the most perfect mode for administering Copaiba, Cubebs, Norway Tar, Turpentine, and other remedies, the disagreeable odor and taste of which are often a hindrance to their use. This mode of preparing capsules, which has been approved by the Academy of Medicine, has been recommended in their clinical lectures by eminent Professors in the hospitals of Paris, as well as in those of New York and London.

By the first physicians of the hospitals of Paris, London, and New York.

SPECIAL ADVANTAGES OF MATHEY-CAYLUS' GLUTEN CAPSULES.—Being formed of thin, transparent, and readily assimilated coating, they so cover and disguise the medicine to be given, that it can be taken without disgust, but with ease. In this respect, they differ widely from the gelatine capsules, which have a hard, thick coating, which swells beyond measure, in the stomach, are hard to be swallowed. and what is of great importance, they create disturbance in the digestive functions.

The special advantage of the coating of gluten consists in the fact that, notwithstanding its extra thinness, and although it softens under the action of the gastric juice, it can pass the stomach without breaking, and only in the intestines is the medicinal matter liberated; this accounts for the fact that Mathey-Caylus' Capsules never cause the nausea, eructations, and dyspeptic symptoms, which are complained of by many persons using other preparations.

Finally, their regular ovoid form, which is so favorable to swallowing, their pleasant appearance, which dispels all disgust, and the advantage of being entirely free from taste and smell, recommend the use of these capsules even to the most delicate persons.

Thankful to the Medical Profession for the liberal patronage heretofore bestowed upon us, we hope that they will continue their favors, and we are convinced that they will never have any reason to regret the generous welcome they have given to our preparations.

MATHEY-CAYLUS' CAPSULES are never sold, except in bottles having the following inscription printed in the glass: MATHEY-CAYLUS A PARIS. And each bottle contains 64 capsules, making them the cheapest capsules in the market.

The following different kinds of Mathey-Caylus' Gluten Capsules are now offered:

COPAIBA AND TANNIC ACID,
COPAIBA AND S. N. OF BISMUTH,
COPAIBA AND CATECHU,
COPAIBA AND MAGNESIA,
COPAIBA, CUBEBS AND ALUM,
COPAIBA, CUBEBS AND RHATANY,
COPAIBA AND RHATANY,
COPAIBA AND CITRATE OF IRON,
COPAIBA AND CUBEBS,
COPAIBA PURE,
COPAIBA, CUBEBS AND CARB. OF IRON,
VENICE TURPENTINE, NORWAY TAR, PURIFIED,
CUBEBS AND TURPENTINE,
CUBEBS AND TANNATE OF IRON,
CUBEBS AND ALUM,
CUBEBS PURE,
COPAIBA AND MATICO,
COPAIBA, IRON AND OIL OF SANDAL,
COPAIBA AND OIL OF SANDAL,
COPAIBA, PEPSIN AND BISMUTH,
COPAIBA AND TAR,
COPAIBA, CUBEBS AND OIL OF SANDAL.

TANRET'S PELLETIERINE

For the Treatment of Tape-Worm (Tænia Solium.)

This New Tænifuge, the Active Alkaloid of Pomegranate Bark, has of late come into extensive use in France for the treatment of Tape-Worm (Tænia Solium). The results of numerous experiments with it at the Marine Hospitals of Toulon, St. Mandrier, etc., and in the Hospitals of Paris, St. Antoine, La Charite, Necker, Beaujon, etc., have all been most satisfactory. Doctor Dujardin Beaumetz, Member of the Academy of Medicine, and Prof. Laboulbene, in their report to the Society of Therapeutics, have given it their unqualified approval after the most searching experiments. This preparation is pleasant to administer, and if certain preliminaries are observed success will be insured.

Sold only in Bottles containing one dose.

TANRET'S ERGOTININE.

ALKALOID AND ACTIVE PRINCIPLE OF SPURRED RYE.

This is a well defined Alkaloid that must not be confounded with Ergotine or other extracts; it is given in doses of from ¼ to ½ Milligramme (1-240th to 1-120th of a grain), in all cases where Ergot is indicated, viz.: Flooding, Post-partum Hemorrhages, Metrorrhagia, etc., etc.

It is put up in the following forms:

Syrup Containing ¼ Milligramme to each teaspoonful; Dose from 1 to 6 teaspoonsfuls per day.

Solution for hypodermic purposes, Containing 1 Milligramme to each cubic Centimeter; Dose, from 8 to 10 drops.

The Institute of France has awarded one of its Prizes to Mr. Chas. Tanret for the discovery of these Alkaloids.

Tanret's Pelletierine and Ergotinine are only prepared by Mr. Chas. Tanret, Laureate of the Institute of France, 64 Rue du Rempart, Paris.

Sole Agents for the United States, E. FOUGERA & CO., 30 North William St., N. Y.

PAMPHLET ON PELLETIERINE AND ERGOTININE SENT ON APPLICATION.

BOUDAULT'S PEPSINE

The Only Pepsine Used in the Hospitals of Paris for the Last 30 Years.

Unlike the various substitutes which, in most cases, are but unscientific or incompatible compounds, forced upon the Medical Profession as aids to digestion by extensive advertising, but which, when submitted to the proper tests, are found to be useless as digestive agents, Pepsine is constantly gaining in the esteem of the careful practitioner.

Since the introduction of Pepsine by Boudault and Corvisart, in 1854, the original BOUDAULT'S PEPSINE HAS BEEN AT ALL TIMES CONSIDERED THE BEST, as is attested by the awards it has received at the Expositions of 1867, 1868, 1872, 1873, in 1876 at the Centennial Exposition of Philadelphia, and in 1878 at the Paris Exposition.

The most reliable tests, carefully applied, will satisfy every one that BOUDAULT'S PEPSINE HAS A MUCH HIGHER DIGESTIVE POWER than the best Pepsines now before the Profession, and is therefore especially worthy of heir attention.

BOUDAULT'S PEPSINE is prepared in the form of Pepsine Acid and Pepsine Neutral. It is sold in bottles of on ounce, with a measure containing exactly five grains; also in bottles of 4, 8, and 16 ounces for dispensing.

BOUDAULT'S WINE OF PEPSINE.

Formula of Dr. Corvisart.

The taste of Pepsine being perfectly disguised in this Wine, it may be recommended to persons who have difficulty in taking Pepsine in the form of powder. This Wine is tested so that a tablespoonful of it is equal in digestive power to ten grains of Boudault's Pepsine in powder. Sold only in 8 oz. Bottles.

Agents for the United States, E. FOUGERA & CO., New York.

UNIVERSITY OF MARYLAND.

SCHOOL OF MEDICINE.

Eighty-first Annual Announcement 1887-88. The next regular session will begin October 3d, 1887. A full course of didactic lectures, with ample clinical and dissecting-room facilities.

ESTABLISHED 1855.

DRS. STRONG'S REMEDIAL INSTITUTE,

SARATOGA SPRINGS, NEW YORK,

Receives persons recommended to it by their home physicians for Treatment, Change, Rest or Recreation, and places them under well-regulated hygienic conditions, so helpful in the treatment of chronic invalids or the overtaxed.

For Treatment: In addition to the ordinary remedial agents, it employs Turkish, Russian, Roman, Sulphur, Electro-Thermal, the French Douche (Charcot's), and all Hydropathic Baths; Vacuum Treatment, Swedish Movements, Massage, Pneumatic Cabinet, Inhalations of Medicated, Compressed, and Rarefied Air; Electricity in various forms, Thermo-Cautery, Calisthenics, and Saratoga Waters, under the direction of a staff of educated physicians.

For Change: The Institution is located in a phenomenally dry, tonic, and quiet atmosphere, in the lower arc of the Adirondack Zone, and within the "Snow Belt."

For Rest: The Institution offers a well-regulated, quiet home, heated by steam and thoroughly ventilated. With cheering influences and avoiding the depressing atmosphere of invalidism.

For Recreation: To prevent introspection, are household sports at all seasons of the year, and in winter tobogganing, elegant sleighing, etc.; in summer, croquet, lawn-tennis, etc.

Private professional references furnished upon application. Physicians are invited to inspect the Institution at their convenience. A liberal discount to physicians and their families. For further information, address

DRS. S. S. & S. E. STRONG.

EYE INSTRUMENTS FOR SALE.

A lot of very valuable and practical eye instruments, which were the property of an ophthalmologist recently deceased, may be examined and purchased cheap (singly or in a lot) at office of

CHOLERA INFANTUM!

If the Profession will observe the difference between

Carnrick's Soluble Food

FOR INFANTS

and other Foods in the market, they certainly will use no other, especially in the summer season.

It is Entirely Different From Any Food that has Ever Been Introduced.

FORMULA.

Equal proportions of the solid constituents of cow's milk and best quality of wheat, the starch of which is converted into Dextrine, in powder form and ready for immediate use. Its chemical composition is almost identical with an average sample of human milk.

DIGESTIBILITY.

The casein of the milk in Carnrick's Soluble Food is sufficiently digested with pancreatine to render it light and flocculent like the casein of human milk, and as easily digested by the infant.

DEXTRINE vs. MALT SUGAR.

The starch in Carnrick's Soluble Food is converted into *dextrine* instead of malt sugar. Dextrine largely stimulates the normal secretions of the stomach and cannot ferment. Malt Sugar foods are in a condition to immediately ferment when ingested by the infant.

CHOLERA INFANTUM.

Prof. Vaughan, who has experimented largely with milk during the past two years, believes that Cholera Infantum is caused in most cases by the use of impure milk; consequently the only perfectly safe Food to use in the summer season is Carnrick's Soluble Food, for unlike all other prepared Foods, it requires no addition of cow's milk.

THE MILK USED IN CARNRICK'S SOLUBLE FOOD.

Those who supply us with milk are not allowed to feed their cows upon sprouts, brewers' grains, slop-feed, or any unsuitable food, and are required to observe the strictest cleanliness and to sign a contract empowering us to refuse their supply at any moment. See copy of contract in our sixty-four-page pamphlet.

THE USE OF POWDERS FOR PEPTONIZING MILK.

Cow's milk cannot be digested in the household by the nurse or mother with any degree of certainty; besides, the same danger arises from the use of impure milk or milk that has undergone a change not perceptible to the taste.

CARNRICK'S SOLUBLE FOOD COMPARED IN PRICE WITH OTHER FOODS FOR INFANTS.

Our Food contains from fifty to one hundred per cent. more nutritive matter than any prepared foods in the market, and is consequently very much less expensive to use. It thoroughly nourishes the child, whilst all other foods must be combined with milk. Carnrick's Soluble Food is put up in half-pound, pound, and five-pound cans.

☞ We will send gratis and post-free on application a sample of CARNRICK'S SOLUBLE FOOD to any physician.

REED & CARNRICK, New York.

FLUID

32° Fah. 0° Cent.

Fluid Cosmoline [*Petroleol*] is a fixed oil of Petroleum, a pure hydro-carbon prepared expressly for medical use. From it all the volatile and otherwise offensive properties of the crude Petroleum have been separated, without the aid of chemicals. Perfectly indifferent to atmospheric action, it remains inalterable in any climate. It is neutral in reaction, bland, soothing, cooling, and may therefore be applied to the most sensitive conditions without irritation. Flowing at 32° Fahr., it may be used may be warmed to any temperature the body can endure. It will be found excellent to relax the skin, to protect irritated surfaces from the air, and to use as a constituent in liniments, ointments and plasters, where an emollient is needed. For these and many other purposes, obvious to the medical profession, it will be found superior to olive oil, or to any vegetable or animal oils, which undergo decomposition and turn rancid. It contains no foreign ingredient.

SAMPLES FURNISHED UPON APPLICATION.

ELIXIR PURGANS (LILLY).

ELIXIR PURGANS (LILLY) reliably stimulates the dormant liver without undue irritation, and has gentle yet positive effect upon the alimentary tract. In HABITUAL CONSTIPATION, so common in WOMEN AND CHILDREN, it will be found particularly useful. Its endorsement at Bellevue and many other prominent hospitals east and west, as well as its employment in general practice by the most eminent medical men, confirms the experience of years in its use.

Each Teaspoonful Represents

Rhamnus Purshiana, -	10 grs.
Euonymus Atropur., -	8 grs.
Cassia Acutifolia (purif.)	10 grs.
Iris Versicolor, - - -	4 grs.
Hyoscyamus Niger, -	2 grs.
Aromatics, etc.	

IN PRESCRIBING, PLEASE BE CAREFUL TO WRITE

ELIXIR PURGANS (LILLY).

THAT OTHER PREPARATIONS MAY NOT BE SUBSTITUTED.

AS A BRISK CATHARTIC, 1 to 2 Tablespoonfuls.

AS A LAXATIVE, 1 to 2 Teaspoonfuls.

AS AN APERIENT, 1-2 to 1 Teaspoonful.

HIGHLY RECOMMENDED.

We take pleasure in endorsing the ELIXIR PURGANS (LILLY) as prepared from the above formula, for in it we find a near approach to positive *perfection* in the form of a *Liquid Cathartic*, and, from our experience with the preparation, can highly recommend it to the profession.

ELI LILLY & CO., PHARMACEUTICAL CHEMISTS, INDIANAPOLIS, IND., U. S. A.

DUSART'S SYRUP AND WINE OF LACTO-PHOSPHATE OF LIME.

The properties of which are scientifically founded on physiological experiments, and have received the sanction of several years' successful trial by the French and English medical profession, as producing durable reconstituent effects in all cases of *Cachexia* or *Adynamia*, when, nutrition has been impaired by acute or chronic complaints.

As an article of diet it acts as general excitant of all the nutritive functions, insures digestion, brings back or increases the appetite, enriches the milk of the mother, and generally improves the vital energies. As a medicament it is chiefly used in convalescence, teething, rickets, and imperfect growth, dyspepsia, various nervous diseases, wounds, fractures, and all complaints of the osseous system.

Dusart's Syrup of Lacto-Phosphate of Lime and Iron is a ferruginous medicament specially invaluable in the above cases, when complicated with anæmia.

Dusart's work on the "Physiological and Therapeutic Action of Phosphate of Lime" will be sent to any physician on application to Messrs. E. FOUGERA & CO.

PARIS: L. DUSART, 8 Rue Vivienne. NEW YORK: E. FOUGERA & CO., Importing Pharmacists.

CHAPOTEAUT'S MORRHUOL.

Morrhuol contains all the active curative principles of Cod-Liver Oil, except the fatty part. It represents twenty-five times its weight of brown Cod-Liver Oil, and is dispensed in small round capsules containing each twenty centigrammes, thus equal to five grammes of Cod-Liver Oil. The daily dose is of two or three capsules for children, and from three to six for adults, to be taken before the chief meals.

COCA

CORDIAL.

—A—

PALATABLE PREPARATION

—OF—

Coca Erythroxylon,

CONTAINING

In an agreeable vehicle the active medicinal principle, free from the bitter astringent constituents of the drug.

THE SEDATIVE, tonic, and stimulant effects of Coca Erythroxolon and its preparations, and their wide application in medical practice, are now too well known to the medical profession to need extended comment.

Coca has been extensively used with gratifying success for the relief of morbid conditions depending on nervous exhaustion, in the nervous irritability following excesses of any kind, in neurasthenia, to facilitate digestion in dyspepsia, to relieve the morbid depresion of spirits resulting from exhausting mental labor, in nausea and vomiting of reflex origin, and in the treatment of the alcohol and opium habits.

In a great variety of affections it has proved itself to be a drug ranking in therapeutic importance with opium and quinine.

The Coca Cordial presents the drug in a palatable form, commending it especially to the large class of persons of delicate nervous organization, for whom it is most often indicated.

In its preparation the astringent and bitter constituents of Coca, which are not essential to its medicinal action, have been eliminated, while care has been taken to retain unchanged the active principle cocaine. One fluid-ounce of the cordial represents 60 grains of coca leaves of good quality, the vehicle employed being an agreeable cordial of a rich vinous flavor.

☞ **We shall be pleased to send on application a circular more fully descriptive of Coca Cordial and its application, and we trust physicians will communicate to us the results of their experience in the use of this preparation, so far as it is likely to be of general interest to the profession.**

PARKE, DAVIS & CO.,

Manufacturing Chemists,

New York: { 60 Maiden Lane, 21 Liberty Street.

DETROIT, MICH.

CAUTION TO PHYSICIANS!

That we are the pioneers and leaders in our special department of Pharmacy is well known by intelligent physicians and pharmacists everywhere. We have attained the highest perfection in the manufacture of our goods, and our success has tempted various individuals and corporations, without knowledge or facilities, to enter the field as would-be competitors. It is against these IMITATORS, MOUNTEBANKS, FRAUDS AND CHARLATANS we wish to caution Physicians. The profession, in some instances, we regret to say, find "allies" among unscrupulous druggists, who are base enough to place the reputation of the Physician, as well as the life of his patient, in jeopardy by substituting worthless imitations when our goods are specified in his prescriptions. Hence it is not only important to specify S. & J. on all orders and prescriptions, but also to see that the same are properly filled by Druggists. We conform strictly to the Pharmacopœia or other standard works; we use only the purest medicinal ingredients; we employ none but skilled labor, and that we excel in every branch of our business is attested by repeated analyses, and

Thirty-five Gold, Silver and Bronze Medals from all Parts of the World,

Awarded by impartial juries, composed largely of Physicians and Chemists. Prominent on our list of popular specialties is

ABSORBENT COTTON,

Plain, Cocained, Borated, Salicylated, Hydronaphtholated, Carbolated, Styptic, or of any desired medication. These goods, made from long fibre, are thoroughly carded, full weight, perfect in quality, snow white, highly absorbent, and being free from oil, fat, or alkali, are entirely neutral, and superior in every way to anything that has ever been offered to the profession.

We desire to call the special attention of the profession to

HYDRONAPHTHOL,

The most valuable **Antiseptic** and **Disinfectant** yet obtained from coal tar. In germicidal power it ranks second only to Mercuric Bichloride, and, as it is non-poisonous and non-corrosive, it is preferable to that well-known agent. **Hydronaphthol** is free from the objectionable odor peculiar to Carbolic Acid and other phenols, and is freely soluble in hot water, alcohol, benzine, and the fixed oils. It preserves anatomical and pathological specimens in their natural condition, preventing shrinking or decay. Can be obtained in the form of crystals or incorporated with our absorbent cotton, gauze, jute, lint, or any dressing that can be rendered antiseptic. A book containing full description of this valuable addition to the list of modern antiseptics, will be mailed free to Physicians.

Lactated Food

Is not "the only" Food,

BUT IT IS

THE BEST FOOD,
THE CHEAPEST FOOD,
THE HEALTH GIVING FOOD.

For young Infants, it will prove a safe substitute for mother's milk; for the Invalid, or Dyspeptic, it is of great value. Hundreds who have used it recommend it as

The Most Palatable,
The Most Nutritious,
The Most Digestible,
OF ANY of the PREPARED FOODS.

It is a Cooked Food:
A Predigested Food:
A Non-Irritating Food.

CRYING BABIES

are made
GOOD NATURED, HEALTHY, HEARTY,
by its use.

Babies do not cry if they are satisfied, and they cannot be satisfied if they are not properly nourished by their food, or if it produces irritation of stomach or bowels.

Very many mothers cannot properly nourish their children, and the milk of many mothers produces bad effects in the child because of constitutional disease or weakness.

For all such cases there is a remedy in

LACTATED FOOD.

150 MEALS for an Infant for $1.00.
EASILY AND QUICKLY PREPARED.

Send for circulars and pamphlets giving testimony of Physicians and Mothers, which will amply prove every statement we make.

To Every Physician

who has not yet made a trial of the Lactated Food, we will send a package of our regular size, post-paid, without charge, upon application, with the understanding that it will be given a careful trial as soon as possible.

We shall use every precaution to maintain the high standard of this food, and to insure perfect satisfaction to the profession in its use.

FOUR SIZES:—25c., 50c., $1, $2.50.

DR. RABUTEAU'S

[Laureate of the Institute of France]

DRAGEES, ELIXIR, AND SYRUP OF IRON.

"The experiments made in the hospitals of Paris have demonstrated that *Dr. Rabuteau's Dragees, Elixir, and Syrup* regenerate the red globules of the blood with a rapidity never observed with the use of the other ferruginous preparations. These results have been proved by the various *Compt-Globules.*

"The ferruginous preparations of *Dr. Rabuteau* do not cause any constipation, and are perfectly tolerated by the weakest persons."—*Gazette des Hopitaux.*

Dr. Rabuteau's Elixir is prescribed when some difficulty is experienced in swallowing the Dragees; it is especially adapted to weak persons, whose digestive functions need strengthening or stimulating.

Dr. Rabuteau's Syrup is especially prepared for children, who take it readily because of its agreeable taste.

A sample of Rabuteau's Dragees will be sent free to any Physician mentioning *The St. Louis Medical and Surgical Journal.*

Prepared by CLINN & Co., Pharmacists, Paris.

E. FOUGERA & Co., Agents for the United States.

Ducro's Alimentary Elixir,

A COMBINATION UNITING THE PROPERTIES OF

ALCOHOLIC STIMULANTS AND RAW MEAT

This preparation, which has been used with great success in the hospitals of Paris, since 1868, is adapted to the treatment of all diseases requiring the administration, in a small volume, of a tonic able to stimulate and support the vital forces, as *Pulmonary Phthisis, Depression and Nervous Debility, Adynamia, Mularious Cachexia,* etc.

Prepared by EMILE DURIEZ & Co., Successors to DUCRO & CIE, Paris.

KIRKWOOD'S INHALER,

This is the only complete, reliable, and effective inhaler in use, arranged for the direct application of Muriate of Ammonia and other remedial agents in the state of vapor to the diseased parts of the air passages in the treatment of catarrh and diseases of the throat and lungs. No heat or warm liquids required in its use.

It is entirely different from the various frail, cheap instruments that have been introduced.

KIRKWOOD'S INHALER is accompanied by testimonials of the highest professional character, together with carefully-prepared formulas for use.

Retail Price, complete, $2.50.

☞A liberal discount allowed to the trade and profession.

☞For descriptive pamphlets or other information, address

E. FOUGERA & CO., 30 North William Street, New York.

Rigollot's Mustard Paper

Is one of the most important and useful discoveries of the age. It is the only preparation which has been adopted by the civil and military hospitals, and the armies and navies of France and England, and which has obtained a medal at the Centennial Exposition at Philadelphia. All other mustard plasters or leaves, of whatever name, are but imitations of the original.

Physicians will find it the most reliable sinapism, prompt and certain in its action, and will therefore always prescribe it. Every sheet, in order to be genuine, must bear the annexed signature of the inventor.

Sold in tin boxes containing 10 sheets, also 25 and 100 sheets, by all respectable chemists throughout the world.

Rigollot

E. FOUGERA & CO., New York Depositaries.

ACCIDENTS and EMERGENCIES.

What to do First in Accidents and Emergencies.

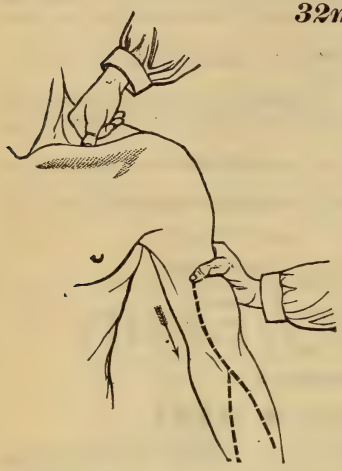
A Manual explaining the Immediate Treatment of Surgical and other Injuries.

By CHARLES W. DULLES, M. D.,

Fellow of the College of Physicians, of Philadelphia; Surgical Registrar to the Hospital of the University of Pennsylvania; Surgeon to the out-door department of the Presbyterian Hospital in Philadelphia; etc.

SECOND EDITION, REVISED AND ENLARGED, WITH NEW ILLUSTRATIONS.

32mo. Cloth. 75 Cents.



OUTLINE OF CONTENTS: Obstructions to Respiration, Foreign Bodies in the Eye, Ear, and Nose, Fits or Seizures, Injuries to the Brain, Effects of Heat and Cold, Sprains, Dislocations, Fractures, Wounds, Railroad and Machinery Accidents, Hemorrhages, Transportation of Injured Persons, Poisons and their Antidotes, Domestic Emergencies, Signs of Death, Proper Supplies for Emergencies, Surgical and Medicine Cases, etc., Doses and Uses of Medicines, etc.

PRESS NOTICES.

"The Chapter on the Control of Hemorrhage deserves special mention. * * * This little book should be found in every house."—*Medical Bulletin.*

"It is a book that no family ought to be without."—*Boston Herald.*

"A very instructive little book. It ought to be read once or twice each year."—*St. Louis Medical and Surgical Journal.*

"A COMPLETE GUIDE FOR SUDDEN EMERGENCIES. * * * Its style is reassuring and calm, so that people who turn to it will find their nerves steadied. * * * A deal of excellent and soothing advice."—*Philadelphia Ledger.*

"THOROUGHLY PLAIN AND PRACTICAL."—*N. Y. Tribune.*

*** Physicians will find useful advice in this volume when suddenly called to attend cases of poisoning or accidents by violence. It is a good book to recommend to the Heads of Families, Superintendents of Manufactories, Mines and Industrial Works.

It will be sent by mail, prepaid, upon receipt of 75 cents.

Address ***DRS. RANDOLPH & DULLES,***

P. O. Box 843. Office of Medical and Surgical Reporter, PHILADELPHIA, PA.

THE PHYSICIAN'S

DAILY POCKET RECORD AND VISITING LIST.

By S. W. BUTLER, M. D. TWENTY-FIRST YEAR.

Edition for 1887, with Metric, Posological Table, &c., bound in Dark Morocco, with Pocket for Blanks, and Patent Steel Spring.

THIS VISITING LIST has been a favorite for many years. It is "perpetual" in arrangement, and may be used continuously one full year from date. Besides the Posological Table, it contains Tables of Doses for Hypodermic Injections, Inhalation, Suppositories, &c.; Directions for the treatment of Poisoning, Drowning, and other emergencies; Simple Directions for Testing the Urine; Obstetric Record, Cash Record, &c.

PRICES.

For Thirty Patients Daily, ... *$1.50*
For Sixty Patients Daily, ... *$2.00*

☞ **The Name of the Purchaser will be Stamped on the Back, in Gilt Letters, for Ten Cents Extra.**

A reduction of 50 cents on these prices will be made to subscribers to THE MEDICAL AND SURGICAL REPORTER and QUARTERLY COMPENDIUM when all are taken together.

Address,

Drs. RANDOLPH & DULLES,

P. O. Box 843. N. E. Cor. 13th and Walnut Streets,

Philadelphia, Pa.

COLDEN'S Liquid Beef Tonic.

Established 15 Years.
OBSERVE the NAME.
Beware of Imitations.

ORIGINAL LABEL:
"Colden's Liebig's Liquid Extract of Beef and Tonic Invigorator."

An Invaluable Aid in Medical Practice.

Differs Essentially from all other Beef Tonics.

COLDEN'S Liquid Beef Tonic is endorsed by scores of physicians, who are growing to realize more and more its importance in repairing, in accordance with the principles of dietetics, the **waste which disease entails.** It consists of the extract of Beef (by Baron Liebig's process) spirit rendered non-injurious to the most delicate stomach by extraction of the Fusel Oil, soluble Citrate of Iron, Cinchona, Gentian and other bitter tonics. An official analysis of this preparation by the eminent Chemist, ARTHUR HILL HASSALL, M. D., F. R. S., and an endorsement by the late SIR ERASMUS WILSON, F. R. S., is printed on the label of each bottle.

As a **blood food,** and a **reliable tonic** in all cases of debility and weakness, Malarial Fever, Anæmia, Chlorosis, Incipient Consumption, etc., it is the best preparation ever used. It acts directly on the sentient Gastric Nerves, stimulating the follicles to secretion, and gives to weakened individuals that first prerequisite to improvement—an appetite. It strengthens the nervous system when unstrung by disease, and has been employed with remarkable success as a remedy for Drunkenness and the Opium Habit.

Its Range of Action Embraces all Cases of Debility.

In order that physicians may form some idea of the nature of its ingredients, I will upon application in person, or by letter (enclosing a card), send a sample bottle of COLDEN'S LIQUID BEEF TONIC to any physician in regular standing, in the United States. Please ask your Dispensing Druggist (if he has not already a supply) to order it. In prescribing this preparation, physicians should be particular to mention "COLDEN'S"—*viz.:* "***Ext. carnis, fl. comp. (Colden's.)***" It is put up in pint bottles, and can be had of Wholesale and Retail Druggists generally throughout the United States.

C. N. CRITTENTON, Sole Agent, 115 Fulton St. New-York.

GLENN'S Sulphur Soap.

ALL physicians know that ***skin diseases*** are more or less constitutional, or dependent upon some specific poison in the blood, which if eradicated by internal treatment needs something to remove its appearance from the surface. Experience has proved that the best possible aid in the accomplishment of this end is obtained by the use of ***Sulphur in soap.*** GLENN'S SULPHUR SOAP is the best combination of its kind, and the one now generally used. It is for sale by all Druggists, at **25** cents a cake, or 3 cakes for **60** cents.

CONSTANTINE'S PINE TAR SOAP

Has been on trial among physicians for very many years as a toilet Soap and Healing Agent, and its superior virtues have been unanimously conceded **in all cases where the use of tar is indicated.** Unsolicited expressions of its excellence have been received from the Medical Faculty generally. IT IS THE BEST TAR SOAP MADE. None genuine unless stamped "A. Constantine's Persian Healing Pine-Tar Soap." For sale by all Druggists.

Samples of either of the above-named Soaps will be sent free upon application in person or by letter (enclosing card) to any physician in regular standing in the United States. C. N. Crittenton, 115 Fulton Street, New York. Please mention "THE MEDICAL AND SURGICAL REPORTER."

"They Belong Together."

THE

QUARTERLY COMPENDIUM OF MEDICAL SCIENCE,

(July Number now in Press.)

A Supplement to the **Medical and Surgical Reporter**, containing yearly about 600 pages of valuable matter which has not appeared in the **Reporter.**

Issued every 3 months. Each number about 150 pages. Ought to be taken by every subscriber to the **Reporter !**

Friedrichshall.

THE WELL-KNOWN APERIENT MINERAL WATER.

IMPORTANT NOTICE.

By reason of an improved method of caption, by which dilution is avoided, FRIEDRICHSHALL WATER will be found now to be of ***considerably greater strength*** and ***efficacy*** than heretofore.

The ordinary dose is a large wineglassful (4 ounces), taken fasting. Most efficacious and more acceptable to the palate when heated or mixed with an equal quantity of very hot water.

"*The most suitable aperient for prolonged use.*"—***Prof. SEEGEN.***

"*After twenty years' use I appreciate it as highly as ever.*"—

Prof. VIRCHOW.

OF ALL DRUGGISTS AND MINERAL WATER DEALERS.

SAVORY & MOORE beg to call the attention of the Profession to some of their Special Preparations, the purity and uniform strength of which are guaranteed.

Pancreatic Emulsion. In Consumption, Wasting, LOSS OF THE POWER OF DIGESTION AND ASSIMILATION, this pure drug is the MOST POTENT REMEDY. This is now attested by the published records of numerous medical men, extracts of which accompany each bottle.

Peptodyn, the New Digestive, is a combination of the whole of the digestive secretions, forming an invaluable remedy in the treatment of all forms of Dyspepsia, and all diseases arising from imperfect nutrition. Peptodyn is intended as a general promoter of digestion for persons not necessarily considered in bad health; thus, when taken about a quarter of an hour after a meal, it will be found to assist digestion in a remarkable manner, and prevent the discomfort which often follows the partaking of a full meal by persons in good health.

Pancreatine Powder, for Indigestion and Loss of APPETITE. This palatable and popular remedy effects the digestion and assimilation of all food, especially of FATTY SUBSTANCES, and is therefore invaluable to patients who are unable to digest Cod Liver Oil, and who are thus deprived of its nourishing and invigorating properties.

Gelatine Discs for Hypodermic Use—Of Morphia, CODEIA, ERGOTINE, ATROPIA, STRYCHNIA, APOMORPHIA, etc. The chief features of these discs are their instant solubility, by which hypodermic solutions can be instantly obtained of uniform and reliable strengths; they keep good for an unlimited period in their dry state, and are extremely portable. (Prepared in accordance with Dr. Sansom's recommendation.)
In tubes, each containing 25 discs.

Etherodine (Substitute for Chlorodyne). A clear, bright fluid, pleasant to the taste, readily miscible with water or any suitable menstruum. The therapeutical properties of ETHERODINE are identical with those of CHLORODYNE, but the former is an elegant preparation, and more convenient for use.

Gelatine Discs for Ophthalmic Purposes.
"Much smaller doses of medicaments such as Atropine, Calabar Bean Extract, Sulphate of Zinc, Morphia, etc., etc., suffice to produce a marked effect by this form of application, than when drops are introduced."—*The Lancet.*
In tubes, each containing 100 discs.

Gelatine Lamels for Internal Administration, consist of thin, pliable, and, in most cases, transparent sheets of uniform thickness, accurately divided into squares by raised lines, each square containing an exact dose of the medicine with which the sheet is impregnated.
In sheets, each consisting of 24 squares.

Datura Tatula, for Asthma, Hay Fever, and Chronic BRONCHITIS. Recommended by the Profession as a remedy of great power and usefulness in cases of short and difficult breathing, spasmodic coughing, etc. The most convenient forms for use are—
Datura Tatula Cigars. Datura Tatula—prepared for use by means of a pipe.
Datura Tatula Cigarettes. Datura Tatula Pastilles—for Inhalation.

SAVORY & MOORE, 143 New Bond Street, London.
Agents for America, E. FOUGERA & CO., New York.

THE

WESTERN PENNSYLVANIA MEDICAL COLLEGE,

SESSIONS OF 1887–88.

Spring Session begins second Tuesday in April, ends last week in June. Course: Didactic and Clinical Lectures, Recitations and Laboratory Practice. Fee, $25.00. (*Credited on General Ticket to those who attend during the ensuing Regular Session.*) Matriculation Fee (*good for year*), $5.00. *Regular Session* begins Tuesday, September 27th, 1887, and ends in last week of March, 1888. Four Didactic Lectures daily, and *two hours daily* devoted to *Clinical* instruction. *Practical Courses* in *Chemistry and Microscopy*. Attendance upon two *Regular Courses* requisite to graduation: *A three years' Graded Course also provided*. College Building, new and commodious, ample accommodations for 250 Students. The College Dispensary, and the *Western Pennsylvania Hospital* adjoining (200 beds), afford unexcelled opportunities for *Clinical* Study.

Fee for Regular Course	$100.00.
Dissection Fee (including material)	10.00.
Graduation Fee	25.00.

WHEELER'S TISSUE PHOSPHATES

Bone-Calcium Phosphate $Ca_3 2P.O._4$, Sodium Phosphate $Na_2H.P.O._4$, Ferrous Phosphate $Fe_3 2P.O._4$, Trihydrogen Phosphate $H_3P.O._4$.

WHEELER'S COMPOUND ELIXIR OF PHOSPHATES AND CALISAYA. A Nerve Food and Nutritive Tonic, for the treatment of Consumption, Bronchitis, Scrofula, and all forms of Nervous Debility.

The Lactophosphates prepared from the formula of Prof. Dusart, of the University of Paris. Combines with a superior Pemartin Sherry Wine and Aromatics in an agreeable cordial easily assimilable and acceptable to the most irritable stomachs.

Phosphorus, the oxidizing element of the Nerve Centres for the generation of Nerve Force; Lime Phosphate, an agent of Cell Development and Nutrition; Soda Phosphate, an excitant of Functional Activity of Liver and Pancreas, and Corrective of Acid Fermentation in the Alimentary Canal; Iron, the Oxidizing Constituent of the Blood for the Generation of Heat and Motion; Phosphoric Acid, Tonic in Sexual Debility; Alkaloids of Calisaya, Anti-Malarial and Febrifuge; Extract of Wild Cherry, uniting with tonic power the property of Calming Irritation and Diminishing Nervous Excitement.

THE SUPERIORITY OF THE ELIXIR consists in uniting with the Phosphates the special properties of the Cinchona and Prunus, of Subduing Fever and Allaying Irritation of the Mucous Membrane of the Alimentary Canal, which adapts it to the successful treatment of Stomach Derangements and all diseases of Faulty Nutrition, the outcome of Indigestion. Malassimilation of Food, and *failure of supply* of these essential elements of Nerve Force and Tissue Repair.

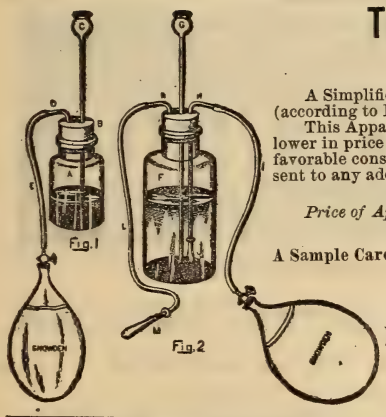
The special indication of this combination of Phosphates in Spinal Affections, Caries, Necrosis, Ununited Fractures Marasmus, Poorly Developed Children, Retarded Dentition, Alcohol, Opium, Tobacco Habits, Gestation and Lactation, to promote Development, etc., and as a *physiological restorative* in Sexual Debility, and all used up conditions of the Nervous System, should receive the careful attention of good therapeutists.

There is no strychnia in this preparation, but when indicated, the Liquor Strychniæ of the U. S. Dispensatory may be added, each fluid drachm of the solution to a pound bottle of the Elixir making the 64th of a grain to a half fluid ounce, an ordinary dose, a combination of a wide range of usefulness.

DOSE—For an adult, one tablespoonful three times a day, after eating; from seven to twelve years of age, one dessertspoonful; from two to seven, one teaspoonful. For infants, from five to twenty drops, according to age.

Prepared at the Chemical Laboratory of T. B. WHEELER, M. D., Montreal, D. C.

Put up in pound bottles and sold by all Druggists at One Dollar.



TREATMENT OF CONSUMPTION.

A Simplified Apparatus for the preparation and introduction of gases into the bowel (according to Dr. Bergeon's method), by Dr. H. N. Bryan, of Philadelphia.

This Apparatus has advantages which others do not possess, and being considerably lower in price than any devised for a similar purpose, it should commend itself to the favorable consideration of the medical profession. An illustrated descriptive circular sent to any address, on application.

Price of Apparatus, complete, in a neat portable Telescopic Case with Handle, **$6.00.**

A Sample Card of the Iron-Dyed Silk (14 sizes) will be sent to any address on application. Price Per Reel, - 10 cts.

WILLIAM SNOWDEN,

Manufacturer, Importer and Exporter of Surgical Instruments,

No. 7 South Eleventh St., Philadelphia.

CELERINA

NERVE-TONIC, STIMULANT AND ANTISPASMODIC.

FORMULA.—Every Fluid-Drachm represents FIVE grains EACH — Celery, Coca, Kola, Viburnum and Aromatics.

INDICATIONS.—Impotency, Spermatorrhea, Loss of Nerve-Power (so usual with Lawyers, Preachers, Writers and Business Men), Nervous Headache, Neuralgia, Paralysis, Dysmenorrhea, Hysteria, Opium-Habit, Inebriety, Prostatitis, Dyspepsia, and ALL LANGUID or DEBILITATED conditions of the System.—*Indispensable to restore a patient after alcoholic excess.*

DOSE.—One or two teaspoonfuls three or more times a day, as directed by the Physician.

ALETRIS CORDIAL

UTERINE TONIC AND RESTORATIVE.

PREPARED FROM THE ALETRIS FARINOSA OR TRUE UNICORN.

INDICATIONS.—Amenorrhea, Dysmenorrhea, Leucorrhea, Prolapsus Uteri, Sterility, to PREVENT Miscarriage, Etc.

DOSE.—One teaspoonful three or four times a day.

Unrivaled as a Uterine Tonic in Irregular, Painful, Suppressed and Excessive Menstruation,

IT RESTORES NORMAL ACTION TO THE UTERUS, AND IMPARTS VIGOR TO THE ENTIRE UTERINE SYSTEM.

☞ Where Women have aborted during previous Pregnancies, or in any case where abortion is feared, the Aletris Cordial is indicated, and should be continuously administered during entire gestation.

ACID MANNATE

A MILD, SAFE AND PLEASANT APERIENT.

Prepared from Manna, Purified Cathartic Acid, and Fruit Juices.

INDICATIONS.—Constipation, Biliousness, Congestions, Etc. INDISPENSABLE AS AN APERIENT FOR WOMEN DURING PREGNANCY. In teaspoonful doses, 3 times a day, it favors the SECRETION and EXCRETION of bile, and gradually removes the congested and torpid states of the liver, and keeps the bowels in a regular and soluble condition.

DOSE.—ONE or MORE teaspoonfuls as directed by the Physician.

S. H. KENNEDY'S
CONCENTRATED EXTRACT OF
PINUS CANADENSIS
DARK — A NON-ALCOHOLIC LIQUID. — WHITE

A MOST VALUABLE NON-IRRITATING MUCOUS ASTRINGENT.

INDICATIONS.—Albuminuria, Diarrhea, Dysentery, Night-Sweats, Hemorrhages, Profuse Expectoration, Catarrh, Sore Throat, Leucorrhea, and other Vaginal Diseases, Piles, Sores, Ulcers, Burns, Scalds, Gonorrhea, Gleet, Etc.

When Used as an Injection, to Avoid Staining of Linen, the WHITE Pinus should be Used.

Recommended by DR. J. MARION SIMS, and other Prominent Physicians.

RIO CHEMICAL CO., ST. LOUIS: LONDON: PARIS.

Samples FREE to any Physician who will pay Express charges, and mention this Journal.

BUFFALO LITHIA WATER,

FOR GOUTY, RHEUMATIC, AND RENAL AFFECTIONS.

ROBERTS BARTHOLOW, M. A., M. D., LL. D., Prof. of Materia Medica and General Therapeuties in the Jefferson Medical College of Philadelphia. See his "Materia Medica and Therapeutics."

"Buffalo Lithia Spring of Virginia contains well-defined traces of Lithia, and is Alkaline. This has been used with great advantage in Gouty, Rheumatic, and Renal Affections." * * * * * * * * * **"There is little doubt that the continuous use of Alkaline Waters for a long period will cause the solution of Uric Acid Renal Calculi. For this purpose those Alkaline Waters rich in POTASSA are preferable."**

This water has a large percentage of the CARBONATE OF POTASSA, making it rich in valuable Alkali.

Dr. Wm. A. Hammond, of New York, Surgeon-General U. S. Army (retired), Professor of Diseases of the Mind and Nervous System in the University of New York, etc.

"I have for some time made use of the Buffalo Lithia Water in cases of affections of the Nervous System complicated with Bright's Disease of the Kidneys, or with a Gouty Diathesis. The results have been eminently satisfactory. Lithia has for many years been a favorite remedy with me in like cases, but the Buffalo Water certainly acts better than any extemporaneous solution of the Lithia Salts, and is, moreover, better borne by the stomach. I also often prescribe it in those cases of Cerebral Hyperæmia, resulting from over mental work—in which the condition called Nervous Dyspepsia exists—and generallly with marked benefit."

Dr. Robert Battey, of Georgia, Suggester of Battey's Operation, Member of the American Medical Association, etc.

"I would state that I have been using the Buffalo Lithia Water, No. 2, in my practice for three years past, in cases of Chronic Inflammation of the Bladder, whether induced by Stone, by Enlarged Prostate in the aged, or by Neglected Gonorrhœa, and have secured excellent results, which encourages me to prescribe it for the future."

Dr. Hunter McGuire, Richmond, Virginia, late Professor of Surgery, Medical College of Virginia.

"Buffalo Lithia Water, Spring No. 2, as an Alkaline Diuretic, is invaluable. In Uric Acid Gravel, and, indeed, in diseases generally dependent upon a Uric Acid Diathesis, it is a remedy of extraordinary potency. I have prescribed it in cases of Rheumatic Gout, which had resisted the ordinary remedies, with wonderfully good results. I have used it also in my own case, being a great sufferer from this malady, and have derived more benefit from it than from any other remedy."

Dr. Alfred L. Loomis, of New York, Professor of Institutes and Practice of Medicine, Medical Department University of New York.

"For the past four years I have used the Buffalo Lithia Water in the treatment of Chronic Interstitial Nephritis occurring in Gouty and Rheumatic subjects, with the most marked benefit. In all Gouty and Rheumatic Affections I regard it as highly efficacious."

Dr. Harvey L. Byrd, of Baltimore, President and Professor of Obstetrics and Diseases of Women and Children, in the Baltimore Medical College, formerly Professor of Practical Medicine, etc.

"I have witnessed the best results from the action of the Buffalo Lithia Water, Spring No. 2, in Chronic Gout, Rheumatic Gout, Rheumatism, Gravel, and Stone in the Bladder, and I do not hesitate to express the opinion that in all diseases depending upon or having their origin in Uric Acid Diathesis, it is unsurpassed, if, indeed, it is equaled by any water thus far known to the profession.

"It has an ascertained value in Bright's Disease. A knowledge of its action in that disease thus far would seem to warrant the belief that it would, in many instances, at least in its early stages, arrest it entirely; and in its more advanced stages prove a decided comfort and palliative."

Water, in cases of one dozen half gallon bottles, $5.00 per case, at the Springs. Testimonials sent free on application. The Virginia Buffalo Lithia Springs Company have no longer control of this water. To get it **FRESH,** order directly of or from parties who deal directly with

THOMAS F. GOODE, Prop. Buffalo Lithia Springs, Va.

WATER FOR SALE BY

FRED. BROWN, or J. F. HAYES, Philadelphia.

Since the introduction—1870—of the substance known as **COSMOLINE** (Unguentum Petrolei) to the College of Pharmacy in Philadelphia, by the late Professor Parrish, who was one of the very first to recognize its merits, it has become very widely known and variously used by the Physicians, Surgeons, and Pharmacists of all schools throughout this country and abroad. Pure Petroleum will not oxidize, but the processes resorted to by many, in order to obtain special products from petroleum, introduce properties that will oxidize in ordinary temperatures, and develop other objections with age. Such products may be used in the arts, but they were decided years ago to be exceedingly irritating and otherwise interfering as surgical dressings or bases for ointments. The Manufacturers of **COSMOLINE** (Unguentum Petrolei) took advantage of the possibility of producing an article which would not only not become rancid, but also one which would be absolutely free from those properties which affected the ordinary residuums and products of the petroleum still. Notwithstanding numerous other petroleum preparations of variable merit and ostensibly for the same purpose, have since been offered, **COSMOLINE** (Unguentum Petrolei) has continued to increase steadily in professional favor. **COSMOLINE** (Unguentum Petrolei) was not recommended to the profession at large until the leading Physicians and Pharmacists of Philadelphia were thoroughly satisfied of its fitness and absolute purity, and since then it has not been changed to meet every speculative fancy, or to compete in price with those preparations of petroleum having some outward resemblance to Cosmoline, but found either deficient in action or positively irritating, owing to chemical agencies used to cheapen the cost of manufacture. It was apparent from its first introduction, that **COSMOLINE** (Unguentum Petrolei) was adapted to a very wide range of uses in Surgery and Pharmacy; and when it was found that its uniformity could invariably be depended upon, it is not surprising that it obtained supremacy over those products which have been varying as commercial experiments, and lacking in all the essential and absolutely pure characteristics needed for a general surgical dressing and base for ointments.

Yours very respectfully,

E. F. HOUGHTON & CO.,

No. 211 South Front St.,

PHILADELPHIA.

ELIXIR PURGANS (LILLY).

ELIXIR PURGANS (LILLY) reliably stimulates the dormant liver without undue irritation, and has gentle yet positive effect upon the alimentary tract. In HABITUAL CONSTIPATION, so common in WOMEN AND CHILDREN, it will be found particularly useful. Its endorsement at Bellevue and many other prominent hospitals east and west, as well as its employment in general practice by the most eminent medical men, confirms the experience of years in its use.

Each Teaspoonful Represents	
Rhamnus Purshiana, -	10 grs.
Euonymus Atropur., -	8 grs.
Cassia Acutifolia (purif.)	10 grs.
Iris Versicolor, - - -	4 grs.
Hyoscyamus Niger, -	2 grs.
Aromatics, etc.	

IN PRESCRIBING, PLEASE BE CAREFUL TO WRITE

ELIXIR PURGANS (LILLY).

THAT OTHER PREPARATIONS MAY NOT BE SUBSTITUTED.

AS A BRISK **CATHARTIC,** 1 to 2 Tablespoonfuls.

AS A **LAXATIVE,** 1 to 2 Teaspoonfuls.

AS AN **APERIENT,** 1-2 to 1 Teaspoonful.

HIGHLY RECOMMENDED.

We take pleasure in endorsing the ELIXIR PURGANS (LILLY) as prepared from the above formula, for in it we find a near approach to positive *perfection* in the form of a *Liquid Cathartic*, and, from our experience with the preparation, can highly recommend it to the profession.

CHERRY MALT PHOSPHITES.

W. C. JACOBS,
Manager.

This preparation is believed to be the only Malt Extract continuously acceptable to the stomach. The attention of those who have ceased prescribing other extracts of malt because of excessive sweetness is specially called to this.

CHERRY MALT PHOSPHITES is a combination of Wild Cherry, the condensed extract of the important Cereals and the Elixir of the Hypophosphites. Its flavor is delicious, and it is medicinally invaluable in all cases of General and Nervous Debility, Dyspepsia, Imperfect Nutrition, Impure Blood, Wasting Diseases of Children and Adults. It is extensively prescribed in European countries, and has received the cordial endorsement of the leading practitioners of this country.

PRICE $1.00 PER BOTTLE.

To Physicians not familiar with its merits, who will pay express charges, we will send a full-sized bottle *free.*

Please mention this journal.

LIEBIG'S LIQUID FOOD,

A Concentrated Extract of Beef possessing both tonic and nutrient properties.

MANUFACTURED ONLY BY THE

LIEBIG PHARMACAL CO., N. Y.

Smith Institute

ELIGIBLE

Anodynes and Hypnotics.

Fluid Extract Jamaica Dogwood

(Piscidia Erythrina) is both an anodyne and hypnotic. It speedily relieves pain, and secures quiet, refreshing sleep. It is free from disagreeable after-affects. Where opium is contraindicated it will be found indispensable.

CHLORANODYNE

We have prepared as an improvement upon the well-known proprietary preparation Chlorodyne. It is happy combination of well-known sedatives, anodynes, and antispamodics, and is deservedly popular. It is especially serviceable in acute inflammations, as of the gastro-intestinal tract, colic, dysentery, etc.

Cerebral Sedative Compound

Is a valuable hypnotic. We prepare two forms of it. One containing potassium bromide, choral hydrate, gelsemium and opium. In the second, henbane is substituted for the opium.

Descriptive circulars, giving formulæ, furnished on request.
